Q. Now, with respect to the dates of these photographs, what is the fact as to whether that booklet contains photographs that were taken from 1941 back to 1938, and, perhaps, before?

A. That is correct, sir.

Q. And are some of those photographs photostatic copies of photographs which were taken under your supervision and direction?

A. They are.

Q. Did you cause that book to be compiled?

A. I did.

Q. Is what you have said about the photographs, their make-up and compilation, as well as what you have said about the making and entry of the computations in Exhibits 68, 69, and 70 true in respect to Exhibit 71, for identification?

A. It is true, sir.

3514 Q. Did you cause this particular exhibit to be compiled because of the proximity of these particular service stations to the six Ned's service stations in Detroit?

A. I did.

Q. And do the divider tabs which bear the addresses of Ned's stations have behind them, in each instance, the stations which are particularly tributary to that particular Ned's station?

A. They do.

Mr. Hanley: I offer Exhibit 71, for identification, in evidence.

Mr. Austin: Are there any pictures here of Ned's stations?

The Witness: I don't believe so.

Trial Examiner Ballinger: Off the record.

(A discussion ensued off the record.)

Trial Examiner Ballinger: On the record.

Mr. Austin: Is there any price on here that is intended to indicate in any way what Ned's was charging at his station on the dates that these photographs were taken?

The Witness: Only the prevailing retail price.

Mr. Austin: Is this intended to indicate that Ned's was charging the prevailing retail price on any date that is given here?

3515 The Witness: No.

Mr. Austin: The same objections, your Honor, I understand there is nothing in here that differs in character from the other exhibit.

Mr. Hanley: That is true, except this book was made up as was testified to and contains pictures of a number of years and the division by company in the proximity of Ned's.

Trial Examiner Ballinger: Same ruling. Respondent's Exhibit 71, containing pages 1 to 56, both inclusive, for identification, is admitted in evidence.

(The document referred to, heretofore marked, for identification, "RESPONDENT'S EXHIBIT 71," was received in evidence.)

Mr. Hanley: Now, if your Honor please, I have extracted, as I indicated to the Court, the other material which we propose to offer as a part of these volumes, and I shall make the offer with such foundation as we think may be necessary, and that, together with a map and some other short exhibits, will conclude this witness, so far as I know, now.

I would like to defer that until after the lunch hour, if it is agreeable to your Honor. I promise everybody I won't take much time on these offers of this additional material.

3516 I might do this, your Honor, before adjournment.

Your Honor will recall that there was requested of the Respondent that we furnish the Court with a list of companies referred to in this lawsuit, together with their brand names, and we did furnish one, I think it was marked Exhibit 63, for identification.

Exhibit 63, offered on May 7th, is withdrawn, and there is now offered by Respondent, in its place, Exhibits 63-A, 63-B, and 63-C, as substitute exhibits.

(The documents referred to were marked, for identification, "Respondent's Exhibits 63-A, 63-B, and 63-C.")

Mr. Hanley: Certain other suggestions were made by the Court, and we took the exhibit home, and we have drafted it now in line with those suggestions, and, if agreeable, we will offer it in evidence at this time.

Trial Examiner Ballinger: Off the record.

(A discussion ensued off the record.)

Trial Examiner Ballinger: On the record.

Mr. Austin: What is the division space here supposed to indicate, Mr. Raupagh? There is quite a space there.

Is that intended to indicate a difference between this list and this page?

Trial Examiner Ballinger: Referring to the first page.

3517 Mr. Austin: Yes.

Examination on Voir Dire by Mr. Austin.

Q. Perhaps it is majors and non-majors.

A. No. There is a difference between those. These listed after the space, on the first page, are principally jobbers, but they are major brand gasolines. We had nothing in mind in doing that.

Q. I wondered. Wasn't that space left there—are these all refiners above the space, or is there any reason for that space being there?

A. There is no particular reason for it.

Q. Did it just get there by accident?

A. That's it, as far as I know. They are all refiners up there—

Q. You didn't mean that all these companies listed on all three of these pages are majors, did you?

A. No.

Q. You made a statement just now—

A. The balance of them on this page 1 are majors; on this first page.

Q. By majors, do you mean major brands? Are you referring to the 12 that you listed as major brands?

Mr. Hanley: Judge, I don't think so much of this 3518 cross-examination on this exhibit. We are offering it at the request of the Court to advise the Court for his convenience of the brand names of gasoline offered for sale by the various companies referred to in this action and doing business in the Detroit area. They have all been referred to here and explained by the witness, and all in the world we are seeking to do with this is to comply with the request of the Court that "X" Company calls his gasoline "Y", and we don't want to get back into the discussion of the nature of these various companies in the offer of this exhibit.

It means nothing to us. I would rather withdraw it than have it on the record, but the Court requested it and we are glad to serve, if it will be a convenience. I don't want to get involved or have the witness get involved in any cross-examination of the nature of these oil companies. We have been all over it in detail.

Mr. Austin: I didn't mean to go further. The only thing I meant to ask was on the space; what that meant.

Mr. Hanley: I don't have the faintest idea. Some stenographer had that notion, and that's what happened.

Mr. Austin: And in answering that, Mr. Raupagh said something, perhaps inadvertently, below the space being majors. Unless that is stricken, I wanted to

3519 ask him about that.

Mr. Hanley: I think the whole cross-examination should be stricken. I move to strike all of Mr. Austin's cross-examination on this offer, the entire cross-examination.

Mr. Austin: I consent to that.

Trial Examiner Ballinger: The cross-examination is stricken.

Mr. Austin: The questions I asked were only prompted by the conversation we got into, and I quite agree that the whole thing was probably unnecessary, as long as the arrangement itself has no significance.

Trial Examiner Ballinger: I understand now there is no objection?

Mr. Austin: That's right.

Trial Examiner Ballinger: The document marked Respondent's Exhibit 63-A, B, and C, for identification, is admitted in evidence.

(The document referred to, heretofore marked, for identification, "RESPONDENT'S EXHIBIT 63-A, B, and C," was received in evidence.)

Mr. Hanley: I now move for an adjournment, if your Honor please.

Trial Examiner Ballinger: Off the record.

(A discussion ensued off the record.)

Trial Examiner Ballinger: On the record.

3520 The motion of counsel for the Respondent is granted, and now, at 12:20 P. M., the hearing stands in recess until 2 P. M.

(Whereupon at 12:20 P. M., a recess was taken, to reconvene at 2 o'clock P. M.)

3521 Afternoon Session

2 P. M.

Trial Examiner Ballinger: Come to order. You may proceed.

Mr. Hanley: I would like to have four more booklets marked, if your Honor please.

Trial Examiner Ballinger: The reporter will mark the booklets respectively Respondent's Exhibits 72—

Mr. Hanley: That will consist of 18 pages.

Trial Examiner Ballinger: —pages one to eighteen; Exhibit 73—

Mr. Hanley: That will consist of 17 pages.

Trial Examiner Ballinger: —pages 1 to 17; Respondent's Exhibit 74—

Mr. Hanley: Which consists of pages 1 to 57.

Trial Examiner Ballinger: —pages 1 to 57; Respondent's Exhibit 75—

Mr. Hanley: Will consist of 22 pages.

Trial Examiner Ballinger: —pages 1 to 22, for identification.

(The documents referred to, marked, for identification, "Respondent's Exhibits 72, 73, 74, and 75.")

P. A. RAUPAGH thereupon resumed the stand, and testified further as follows:

3522 *Direct Examination (Resumed) by Mr. Hanley.*

Q. Mr. Raupagh, you are familiar are you not with the books which your office had prepared and from which the photographic exhibits, numbered 68, 69, 70, and 71 were extracted this morning?

A. Yes, sir.

Q. Are you familiar with the material that was left in those books?

A. Yes, sir.

Q. I now hand you what have been marked Exhibits 72, 73, 74, and 75, which are, respectively, the material which was in the books for 1939, being Exhibit 72; for 1940, being Exhibit 73; and for 1941, being Exhibit 74, and for the Ned's Auto Supply Company locations competitive booklet, being Exhibit 75, and will ask you if you have examined all of this material and are familiar with it.

A. I am.

Trial Examiner Ballinger: Off the record.

(A discussion ensued off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Hanley:

Q. Is it true, Mr. Raupagh, that your office had prepared books, including photographs and other material, for the years 1939, 1940, and 1941, and a fourth book having to do with photographs and other material applying

3523 to service stations in the proximity of Ned's six service stations in Detroit?

A. Yes, sir.

Q. And you were familiar with all of those books?

A. Yes, sir.

Q. It is true, is it not, that there were extracted from these books this morning certain photographs, being now exhibits in evidence as follows: No. 68, covering photographs for the year 1939; No. 69, covering photographs for the year 1940; No. 70, covering photographs for the year 1941, and No. 71, covering photographs for the Ned's book of stations in proximity of Ned's Service stations. Do you recall that?

A. Yes, sir.

Q. Now, are you familiar with the fact that there was additional material in each of those books which was not included in the exhibits, or photographs just referred to, and introduced in evidence?

A. Yes, sir.

Q. I now refer you to Exhibit 72, which is the material that was in the 1939 book; Exhibit 73, which is material which was in the 1940 book; and Exhibit 74, which is material that was in the 1941 book, and Exhibit 75, which was in the so-called Ned's book. Are you familiar with all of this material?

3524 A. Yes, sir.

Q. Have you examined it?

A. Yes, sir.

Q. Have you examined it frequently, Mr. Raupagh?

A. Yes, sir.

Q. Now, with particular reference to Exhibit 72, which is the 1939 material, and Exhibit 73, the 1940 material, I will ask you if that material is the type and kind of material that you and your staff gathered in the regular routine of your business in connection with the retail competitive situation existing in Detroit from time to time?

A. It is.

Q. It is a record of your office?

A. Yes, sir.

Q. Have you personally gathered some of that?

A. Yes, sir.

Q. And has the balance of it come into your office as reported to you by your staff, in the regular course of their duties?

A. Yes, sir.

Q. Has that been gathered by them in the regular discharge of their duties under your supervision and at your direction?

A. It has.

3525 Q. And was it and is it a permanent record of your office?

A. It is.

Q. Was that all gathered prior to any knowledge on your part as to the instigation of this lawsuit?

A. Yes, sir.

Q. Have you gathered that for many years last past?

A. Yes, sir, we have.

Q. So far as you know, it will be the purpose and policy of your office to continue gathering that type of material for your own guidance and information, will it not?

A. It will be.

Q. Now, did you continue in that policy and routine in the year 1941, to date?

A. I did.

Q. And I will ask you if Exhibit 74 is not the material which you have gathered in that connection.

A. It is.

Q. For the year 1941, so far?

A. It is.

Q. I hand you Exhibit 75, and will ask you the same questions in reference to that exhibit, as to whether or not it is material of like character which was gathered by your office from now back at least through 1938; probably earlier, I don't know. It is the exhibit having to do with stations surrounding Ned's service stations.

3526 A. It is.

Q. And is it also a permanent record of your office?

A. Yes, sir.

Q. Is there any duplication in the materials appearing in these several books?

A. There is no duplication.

Mr. Hanley: At this time, your Honor, we offer Exhibits 72, 73, 74, and 75 in evidence, (the same being, in some instances, a photograph, as in the case of the exhibits offered this morning, but carrying some notation other than the Court specifically ruled on this morning; photostats of discount cards; photostats of purchase tickets of gasoline at various service stations, supported by the affidavit of the purchaser; signs or dodgers or handbills, advertising gasoline at various service stations and at various prices; tear sheets from premium catalogs indicating the offer of premiums of various kinds and under various plans by service stations; profit-sharing certificates; lists of premiums offered by various service stations and material of similar character, indicating offers of gasoline at commercial discounts and other discounts obtainable at various service stations in and about the City of Detroit.

I will ask you further, Mr. Raupagh, do these things come to you in the mail, as well as being gathered up
3527 at these stations?

A. They do.

Q. Do they come to your office in the regular order of business?

A. Yes, sir.

Q. Do you have the experience or have you had the experience of obtaining these when they were stuck in your car under the windshield wiper or thrown on the seat?

A. Yes, sir.

Q. Are they obtained by your drivers at the bulk plants and by salesmen who cover the city?

A. Yes, sir.

Q. Is there daily a grist of that kind of material in the normal course of your business that enters your office?

A. Yes, sir.

Q. And you preserve it as a record of business?

A. Yes, sir.

Q. And rely on it for your information, in part, at least, as to the competitive retail situation in Detroit?

A. Yes, sir.

Q. And have done that in the past and are doing it now?

A. Yes, sir.

Mr. Hanley: We offer the exhibits, your Honor.

Trial Examiner Ballinger: For the purposes of the record, please state the offers and the purpose of the
3528 offer.

Mr. Hanley: The purpose of the offer, your Honor, is identical with the purpose for which the photographic exhibits, Nos. 68, 69, 70 and 71 were offered, but this material is of a type which was not regarded as being within the purview of your Honor's ruling this morning, and, consequently, was withdrawn from those offers, and is now being offered as a separate exhibit. It merely supplements the photographic material which was offered this morning, and proves just the same sort of thing.

Trial Examiner Ballinger: Does counsel for the Commission wish to make a statement?

Mr. Austin: I object. In the first place, before looking at each one of these, I object to the whole group of them upon the ground that they have not been properly authenticated and I will object to all of them unless the origin and authenticity of each one was established by competent evidence. I think it is apparent from the questions and answers which you have just heard that this is just what the tide brings in to the Standard Oil Company office, and here it is: some of it may be what it purports to be, and some of it may not be. I don't know. But I object to any blanket offer, both upon the ground that it is not properly authenticated and upon the ground that it is irrelevant and immaterial.

3529 Trial Examiner Ballinger: Objection sustained. Do you desire to be heard more on it?

Mr. Hanley: I do not, your Honor. I do not care to press the matter. I might say that I could authenticate it, in part.

Trial Examiner Ballinger: Objection sustained, and Respondent's Exhibits 72, 73, 74, and 75, for identification, are rejected.

Mr. Hanley: May we have this map (indicating) marked, if your Honor please?

Trial Examiner Ballinger: The reporter will mark the document named by Respondent's counsel as Respondent's Exhibit No. 76, for identification.

(The document referred to was marked, for identification, "Respondent's Exhibit 76.")

By Mr. Hanley:

Q. Mr. Raupagh, I hand you a map of the City of Detroit marked Respondent's Exhibit 76, for identification, upon which appears certain stars and circles, and will ask you if you had that map prepared in your office, or whether it was prepared under your supervision.

A. It was.

Q. Was that prepared in connection and as related to the so-called 1941 book of photographs and other material showing competitive conditions in the retail market in
3530 the City of Detroit?

A. It was.

Q. What do the blue stars represent?

A. The blue stars represent the locations of the six Citrin-Kolb Oil stations, or stations they operate, which have been testified previously about in this hearing.

Q. That is, testified to as having given a reduced retail price?

A. Yes, sir.

Q. What do the gold stars represent?

A. The gold stars represent the six Ned's Auto Supply Company's service stations.

Q. What does the red circle represent?

A. It represents dealers selling at cut price as per the pictures in the 1941 picture book.

Q. And what do the blue circles represent?

A. Dealers with canopy costs, as per photographic evidence and as were represented in the 1941 book.

Q. What do the numbers and representative circles on the map represent?

A. They represent the numbers showing the location of each one of these stations of which a picture or evidence appeared in the 1941 book.

Q. Do I understand that they relate to a page number as the book was originally compiled?

3531 A. Yes, sir.

Q. Now, do those stars and circles correctly represent the location of the stations in the City of Detroit?

A. They do.

Mr. Hanley: At this time we offer Respondent's Exhibit

No. 76 in its entirety as a companion offer to Exhibit, in evidence, No. 70, and our Exhibit, for identification, No. 74.

By Mr. Hanley:

Q. I will ask you, Mr. Raupagh—and may this be understood to be ahead of the proffer, your Honor—if this exhibit, map exhibit, does exclude reference or any visual location symbol on the map of the Joy, Zip, and Speedway stations that are referred to in the 1941 book?

A. It does exclude them.

Q. There is another map that has been received that refers to those stations, is there not?

A. Yes, sir.

Mr. Austin: I am not quite clear, Judge, about these blue ink marks here that say: "Dealers with Under-Canopy Cuts." What is it, as distinguished from dealers selling at cuts?

Mr. Hanley: That is to distingush it from material referred to in the various type of material offered in Exhibit
74, for identification, which exhibit was not received,
3532 as you will recall, in evidence.

Mr. Austin: In that case, your Honor, I will object to the circles here in blue ink, and the reference to them down here, about "Dealers with Under-Canopy Cuts as to photostatic evidence," because there is no such evidence in the record. It has been excluded. So, therefore, I see no basis for such representation on this map.

Mr. Hanley: If your Honor please, I think, as your Honor has ruled, and the record stands, it is probably a good objection, but inasmuch as this map was compiled to be a visual companion to both of these exhibits, 74 and the other one for 1941, I would like to make the offer as I have, and have the ruling, and then, if need be, I will re-offer them on a revised basis.

Trial Examiner Ballinger: The objection is sustained.

Mr. Hanley: The Respondent now offers Exhibit 76 with the blue circles deleted and the legend being a blue circle followed by the words: "Dealer with Under-Canopy Cuts as photostatic evidence," also deleted.

Trial Examiner Ballinger: Any objection?

Mr. Austin: I don't think so.

Perhaps I don't quite see the point, Judge. I don't quite see the difference yet.

Mr. Hanley: Those are the same maps you are
3533 looking at. One is just a copy of the other.

Mr. Austin: I thought this was a new offer.

Mr. Hanley: I am offering it, but I haven't physically deleted it. It is the same map.

Mr. Austin: I have no objection to a map when offered like this one with those things eliminated that you just spoke of. Do you mean that you intend to offer it?

Mr. Hanley: I am offering it now. I haven't gone through the mechanics of rubbing out the circles, but I am offering the exhibit with those deleted.

Trial Examiner Ballinger: Respondent's Exhibit 76, for identification, as re-offered—

Mr. Austin: Pardon me, your Honor. If I may interrupt, I would like to make one other objection that I forgot momentarily, when I was asking about this, and that is an objection I made to another map.

There are six stations whose locations are shown on this map by blue stars, and they purport to be Citrin-Kolb Oil Company station locations, and, as I said before, I don't concede that these six stations have any more importance or relevance than several others that were mentioned, and I think that if a map prepared in this way would more fairly show the locations of not only these six stations, but also five Langer and Cohen stations, and I think there were two others which were mentioned, as receiving
3534 less than the wagon price on their purchases from
Citrin-Kolb. Of course, that doesn't make this inaccurate, as far as it goes, but I think it is incomplete if it purports to show all Citrin-Kolb stations to which reference has been made in connection with the issues of this case, so whether that is a valid objection to the exhibit or not, I again wish to point it out.

Trial Examiner Ballinger: The objection is overruled, and Respondent's Exhibit 76, for identification, as now reoffered, is admitted in evidence.

(The document referred to, heretofore marked, for identification, "RESPONDENT'S EXHIBIT 76," was received in evidence.)

Mr. Hanley: If your Honor please, I would like to have these four magazines marked as exhibits, please.

Trial Examiner Ballinger: The reporter will mark the ~~document~~ Respondent's Exhibits 77, 78, 79, and 80, for identification.

(The documents referred to were marked, for identification, "Respondent's Exhibits 77, 78, 79, 80.")

By Mr. Hanley:

Q. Mr. Raupagh, are you familiar with an organization in Detroit known as the Retail Gasoline Dealers Association?

A. Yes, sir.

3535 Q. Have you been familiar with that organization for some period of time last past?

A. Yes, sir.

Q. Can you tell us about how long?

A. Oh, at least eight or ten years.

Q. Do you know whether or not that organization has an official organ or publication that they get out periodically?

A. Yes, sir.

Q. And do you know the name of that?

A. It is "Retail Gasoline Dealers News."

Q. Do you receive that magazine?

A. Yes, sir.

Q. And have you received it currently, for some years past?

A. Yes, sir.

Q. I call your attention now to Respondent's Exhibit 77, which appears to be a magazine to which you have referred, the issue of September, 1940; Respondent's Exhibit 78, issued of the same magazine for January, 1941; Exhibit 79, issue for March, 1941, and Exhibit 80, issue for April, 1941, and ask you to look at them and state if those are four issues of the magazines to which you have referred and which you have stated is the official organ of the Retail Gasoline Dealers Association.

A. They are.

3536 Q. And were those particular magazines received by you in your office?

A. Yes, sir.

Q. Are you acquainted with a man named Rankin P. Peck?

A. Yes, sir.

Q. Do you know whether he has any official connection with the Gasoline Dealers Association?

A. Yes, sir.

Q. What is that connection?

A. He is Executive Secretary of the Association.

Q. Has he been for some time past?

A. Yes, sir.

Q. Is he at the present time?

A. Yes, sir.

Q. I see.

Mr. Hanley: At this time there is offered by the Respondent Exhibit No. 77, being the Retail Gas Dealers News for September, 1940, with particular reference to page 3 thereof; Exhibit 78, being an issue of the same magazine for January of 1941, with particular reference to page 3 thereof; Exhibit 79, being an issue of the same magazine for March of 1941, with particular reference to page 5, and the last column of page 29 thereof; Exhibit 80 is offered, being an issue of the same magazine for April of 1941, with particular reference to the facing page thereof,
carrying the reproduction of a letter directed to gaso-
3537 line dealers, and purportedly signed by R. P. Peck,
and to page 3 thereof.

Trial Examiner Ballinger: Are there any other portions of the documents just described to which you direct attention that you desire introduced in evidence other than those portions which you have designated?

Mr. Hanley: Well, I offer the entire magazine, your Honor. It is a bound volume, but I have no particular interest in directing attention or having in evidence the balance of the magazine. I can't mutilate it very well. I offer the whole thing as a magazine. Those are the parts.

Trial Examiner Ballinger: The Examiner understands that you want the front page, that is, the front of the outside folder of each magazine?

Mr. Hanley: Yes.

Trial Examiner Ballinger: And then the portion of the particular page you described?

Mr. Hanley: Yes, I want that.

Trial Examiner Ballinger: Other than that there is nothing—

Mr. Hanley: Well, no, only I think it should be considered in connection with each magazine or offer—I don't know what you would call it—the data that always appears
in any publication, the location, the officers and
3538 so on.

Trial Examiner Ballinger: Where is that?

Mr. Hanley: It appears in Exhibit 77 on page 10, the editorial page, I would regard it; on Exhibit 78, it appears on page 12; on Exhibit 79, it appears on page 20; and on Exhibit 80, it appears on page 6. I would like to ask permission that it may be regarded as prior to the offer, I would like to ask this question of Mr. Raupagh.

By Mr. Hanley:

Q. Is this a magazine of some extensive circulation among dealers in gasoline in Detroit?

A. Yes, sir.

Mr. Hanley: I suspect it may take a little time to read these and the portions offered.

Trial Examiner Ballinger: The Examiner will instruct the reporter to mark the first document 77-A, B, and C; the B and C being noted on the pages indicated by counsel. Is that satisfactory?

Mr. Hanley: Yes, sir. That is all we care to call attention to.

Trial Examiner Ballinger: And the reporter will follow the same course in marking Respondent's Exhibit 78, for identification, which will be 78-A, B, and C; 79 will be marked A, B, and C; and 80 will be marked A, B, and C, for identification.

3539 Mr. Austin: Has there been an offer made?

Mr. Hanley: I have offered all those exhibits.

(The documents referred to were marked for identification, "Respondent's Exhibits 77-A, B, C; 78-A, B, C; 79-A, B, C; 80-A, B, C.")

Trial Examiner Ballinger: Any objection?

Mr. Austin: Yes, your Honor. I did not know whether it would be even necessary to object. It seems quite patent that nothing in that publication, seems quite obvious, can be of any materiality or relevancy to this lawsuit. I don't know of any question or issue involved in this lawsuit as to which any of the matters in this newspaper could be relevant and the fact that something was said in there could be of importance, that might be of importance, then it might be necessary to find out what it says.

Trial Examiner Ballinger: The Examiner inquires of counsel for the Respondent the purpose of the offers.

Mr. Hanley: The purpose of the offer, if your Honor please, is one which Respondent regards as being of paramount importance to the Federal Trade Commission, as well as to the Respondent in this action. Counsel for the

Commission must have really clairvoyant power if he can
determine that there is nothing in the exhibit that might
be material, without having looked at the articles in
3540 question. I trust that your Honor will take the time
to examine them before attempting to pass on any
objection made by counsel. There are articles or let-
ters in each of the exhibits offered which clearly indicate
that much of the promotion of this complaint, as well as
similar complaints have been brought at the instance of
a minority pressure group. That, in itself, the Respondent
does not urge as any reason why the Complaint might not
be made or the reasons put on trial. However, an analysis
of all of the articles and the background picture exhibited
by these exhibits and others which will be offered do very
clearly demonstrate what the Respondent does regard as
highly material on its case and of paramount interest to
the Commission: namely, the question of the public inter-
est that is to be regarded in connection with any deter-
mination of this matter that the Commission may make.
It is quite apparent that there are articles in these maga-
zines which, in my considered judgment, at least, would
constitute a contempt of court if written during the pend-
ency of a trial in a court of law. It predicts the outcome
of this proceeding in substantial effect. It outlines a
program, a program promoted by Mr. Rankin Peck and
to which he refers frequently for the consummation of
certain things. I think it is a four-point program.

Mr. Austin: Do these articles appear to be written
by Mr. Peck?

3541 Mr. Hanley: I am not undertaking to say that.
I am offering the exhibits and the Court has asked
me to explain them, and I am attempting to. I am not
going to do any discussion on hearsay or of hearsay. As
I have stated, these articles suggest the outcome of this
action, if, indeed, they do not predict, and they state that
there has been success in certain other points of that pro-
gram which is a clear misrepresentation of the facts as we
will demonstrate by other offers of proof. We think that
it is proper that the Commission, in considering this case,
should consider the real purpose behind the Complaint and
the interest that is sought to be subserved, which is not
that of the public, as we assert, but is that of a small
pressure group which is not interested in competition, but
is, on the contrary, interested in raising the price of gaso-
line to the public, and to their own profit.

Mr. Austin: If your Honor please, I now move that under the rules of the Commission, as heretofore explained by the Examiner, regarding the propriety of placing on the record argument in interest of material which has been objected to, that the statement just made by counsel—that the Respondent has just made through counsel, that the reporter be directed to strike physically from the record the remarks of counsel.

Trial Examiner Ballinger: The motion is denied.
3542 The Examiner is prepared to rule on counsel for Respondent's statement.

Mr. Hanley: Very well.

Trial Examiner Ballinger: The Federal Trade Commission acts only in the public interest.

The Respondent's Exhibits 77-A, B, and C; 78-A, B, and C; 79-A, B, and C; 80-A, B, and C, for identification, are rejected.

Mr. Hanley: May I inquire if the Court has read these proffered exhibits?

Trial Examiner Ballinger: I haven't. The Examiner accepts the statement of counsel for the Respondent. He acted solely upon that statement.

By Mr. Hanley:

Q. Mr. Raupagh, I may have asked you as to some of these companies, but I am not sure. I will ask you about this in one question: Are the following companies, which I will name, competitors of the Standard Oil Company of Indiana at the present time: Red Indian Oil Company?
A. Yes, sir.
Q. Shell Petroleum Company?
A. Yes, sir.
Q. Texas Company?
A. Yes, sir.
Q. Gulf Refining Company?
3543 A. Yes, sir.
Q. Standard Oil Company of Ohio?
A. Yes, sir.
Q. Aurora Gasoline Company?
A. Yes, sir.
Q. National Refining Company?
A. Yes, sir.
Q. Hicock Oil Company?
A. Yes, sir.

Q. Cities Service Company?
A. Yes, sir.

Q. Argo Oil Company?
A. Yes, sir.

Q. And Sun Oil Company?
A. Yes, sir.

Q. Have those companies, and each of them, been competitors of Standard Oil Company of Indiana at all times from at least as far back as January 1, 1930?
A. Yes, sir.

Q. To date?
A. Yes, sir.

Q. And during all of the period from June 30, 1936, on?
A. Yes, sir.

Mr. Hanley: You may take the witness.

Mr. Austin: May we have a five minute recess?

3544 Trial Examiner Ballinger: We will take a five minute recess.

(A short recess was had.)

Trial Examiner Ballinger: Come to order.

Cross-Examination by Mr. Austin.

Q. Mr. Raupagh, did you testify that it is a general practice in Detroit for refiners and, perhaps, other large purveyors of gasoline, to sell by what has been called a dual operation; that is, selling both to jobbers at tank car prices and to retail service stations at tank wagon prices?
A. Yes.

Q. Were you referring only to refiners, when you made that statement? I made a note here "refiners." I am not sure whether I got that correctly, or is that true to some other companies which are not refiners?
A. That is true of other companies, too.

Trial Examiner Ballinger: True of what?

The Witness: Of other companies, too. That is true of other companies.

Trial Examiner Ballinger: It is true both of refiners and other companies?

The Witness: Yes.

Trial Examiner Ballinger: Who are not refiners?

3545 The Witness: Who are not refiners.

By Mr. Austin:

Q. What other companies do you refer to specifically?

A. I refer specifically to Hicock Oil Corporation.

Q. And that is the Highland Oil Corporation here, is it not?

A. Yes.

Q. Are they a subsidiary of Hicock?

A. Yes, sir.

Q. That is, when you refer to the Hicock Oil Corporation, do you mean, in Detroit, the Highland Oil Corporation?

A. Highland and Wilson.

Q. Do Highland and Wilson buy from Hicock?

A. Yes.

Q. Or are they agents of Hicock?

A. They buy from Hicock.

Q. Do you know whether they buy from Hicock at a price which is lower than the tank car price of most of the major companies?

A. I know they did, and I know they have since 1936.

Q. The reason I ask that: if they, as you say, sell to jobbers at tank car prices, it would seem that they would have to obtain their gasoline at lower than tank car price in order to have a margin.

A. They do.

3546 Q. And both Highland Oil Corporation and Wilson Oil Company sell to retail service stations at tank wagon prices by tank wagon delivery, and also sell to jobbers at tank car prices?

A. Yes, sir.

Q. Do you think of anyone else who is not a refiner who engages in both of those operations?

A. Yes. Red Indian Oil Company. There may be some others, too.

Q. Does the Red Indian Oil Company sell direct to retail service stations?

A. Yes, sir.

Q. Do you know how many service stations they have that they supply directly? It may be in the record.

Off the record.

Trial Examiner Ballinger: Off the record.

(A discussion ensued off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Now, I believe I asked you last about the retail outlets that were served by tank wagon by the Red Indian Oil Company.

A. I would like to have the reporter read the question.

(The question was read.)

A. Six.

Q. And how many jobbers do they supply?

3547. A. The Bulldog Oil Company.

Q. They only supply part of the gasoline purchased by the Bulldog Oil Company, do they not, Mr. Raupagh?

A. That is right, sir.

Q. Do you know how many others; do you know how much of it? I see on Exhibit 38 that there are five different suppliers listed for the Bulldog Oil Company, of which the Red Indian Oil Company is only one.

A. They also supply the Victor Oil Company. Just a minute, and I will answer your other question. They also supply Wing Petroleum Products Company.

Mr. Hanley: I think there may be a misunderstanding between counsel and the witness. If I am wrong, I am willing to be corrected. You asked Mr. Raupagh how many service stations the Red Indian Oil Company supplied.

Mr. Austin: He answered that, and I asked him about jobbers.

Mr. Hanley: He answered that as six. Did you understand that to mean how many service stations they supplied of all classes, Mr. Raupagh, or how many they supplied direct?

The Witness: I understood that to mean how many stations they supplied direct. Is that what you meant?

Mr. Austin: No. I think I asked how many service stations they supplied by tank wagon, that is, that

3548 they sell gasoline to, deliver by tank wagon price.

What we were discussing in the first instance are companies engaged in the dual operation of selling to retail service stations and selling to jobbers, so that I assumed that in so far as they may operate a retail service station, they are not a competitor of the Standard Oil Company, isn't that right, because the Standard Oil Company operates no retail service stations?

A. Well, they would still be a competitor to the Standard Oil Company dealers.

Q. Well, but I am talking now whether they would be a competitor of the Standard Oil Company to the extent that they operate retail stations.

A. Well, they are a competitor in any language. I just don't understand what you mean.

Q. I am asking you whether you consider the operation—whether you consider any operator of a retail station, a competitor of the Standard Oil Company. Now, I am considering only the business of the retail station: Whether that is a business which is competitive with the business of the Standard Oil Company in Detroit.

A. I feel that any service station that sells gasoline, other than Standard Oil Company gasoline, is a competitor; some way.

Q. Regardless of whom they sell it to?

3549 A. Regardless of whom he sells it to.

Q. So that your definition of a competitor would include all retail station operators except retail stations which sell Standard gasoline?

A. It would include all retail station operators, because—

Q. I didn't ask you why. I just asked whether that was your answer.

A. I can't answer that unless I can explain it, Mr. Austin. Am I permitted to do that?

Q. I would first like to have you answer whether you consider every operator of a retail service station to be a competitor of the Standard Oil Company.

Trial Examiner Ballinger: You may answer that yes or no and then offer any explanation.

A. Yes. And I consider them a competitor for the reason that they are competitive with our products which are handled by dealers who we supply.

Q. Well, now, getting back to these companies, I would like to have you answer my question—we were on the Red Indian, so I will ask you again how many retail service stations are supplied by the Red Indian Oil Company, and by that I mean how many service stations do they sell to and deliver the gasoline in tank wagon quantities? In other words, how many do they sell to at tank wagon prices and at tank wagon delivery?

3550 A. I can't give you those figures offhand. I have a record of that somewhere, but I can't just pull that out of the air.

Q. Well, is there any place in any of these exhibits which were put in through your testimony where that is shown?

A. No, not that I remember. There are a substantial number.

Q. Well, is it your testimony that the Red Indian Oil Company does sell to retail service stations in the same manner that the Standard Oil Company sells to its retail outlets?

A. Yes, by tank wagon delivery.

Q. Now, you were naming, also, certain jobbers to whom the Red Indian Oil Company sells, and you mentioned the Bulldog Oil Company.

A. Yes, sir.

Q. Victor Oil Company, Wings Petroleum Products Company?

A. That's right.

Q. And I assume from—

A. Sam Hartman, is another one.

Q. Who?

A. Sam Hartman.

Q. Do you have any information regarding that except what was supplied by Mr. Griswold from the Secretary of State's records?

3551 A. Yes.

Q. And do you believe the information stated on Exhibit 38, which is the exhibit prepared by Mr. Griswold, is correct?

A. Yes, I do.

Q. It appears on Exhibit 38 that all of the jobbers that you have named buy only in part from the Red Indian Oil Company. Do you have any knowledge about whether the Red Indian Oil Company supplies the major requirement of any one of those jobbers?

A. No, I haven't.

Q. Now, returning to the Highland Oil Company for a moment: what jobbers are supplied by the Highland Oil Company?

A. Central Service Petroleum or Central Service Oil Company.

Q. Any others?

A. There may be some others, but that is the only one I recall right now.

Q. Does the Central Service Company operate any retail stations?

A. Yes, they do.

Q. Exhibit 38-A has a "No" in that column under "Operating Retail Station."

A. They may not operate any at the present time,
3552 but in last four or five years I know there have been times that they have operated service stations.

Q. Now, are there any other companies who sell to retail resellers by tank wagon delivery and who also sell to jobbers by tank car or transport truck at tank car prices?

A. Wilson Oil Corporation.

Q. You named that. You named Wilson, Highland, and Red Indian; in addition to refiners.

A. Victor Oil Company.

Q. Well, now, if Victor Oil Company purchases from the Red Indian Oil Company, and then, in turn, sells to other jobbers at tank car prices, let me ask you whether you have any knowledge about—well, isn't that rather unusual, Mr. Raupach? What strikes me is that one jobber sells to a second jobber, and that one sells to the third jobber. Where does the profit come from?

A. The profit comes from the original sale by the original supplier or from the party whom the Victor Oil Company, in this case, purchases from, because he has enough differential so that he can afford to sell some of that gasoline at wholesale and make a profit, and still sell it below the prevailing dealer tank wagon price. I might say that that is nothing unusual in the Detroit area.

Q. Well, as to the named Victor Oil Company, as
3553 a company which both sells to jobbers and to retailers, do you know how many retail stations are served by the Victor Oil Company?

A. I have that information somewhere, but it is not here, and to just rattle off the exact number or about the exact number of stations served by each one of these jobbers, I wouldn't attempt to do that without some memorandum from my office where we have the records, Mr. Austin.

Q. The Victor Oil Company is not primarily a retailer, is it?

A. It started out as primarily a retailer, and I would say that even now it is primarily a retailer. However, it perates in such a varied manner. Its operations are so aried. They sell from their bulk plant to cut-price serv- ce stations that come and haul out of their bulk plant to upply their own cut-price service stations. As a matter f fact, they do and have done just about everything under he sun as far as the oil industry is concerned.

Q. Now, Exhibit 38-D states that the Victor Oil Com- any does not operate retail service stations.

A. No, that is correct.

Q. And didn't you just say that they did operate them?

A. Yes, I did.

Q. You said they were primarily a retailer?

554 A. Yes, sir, I said they were primarily a retailer, to start with. They started—

Q. Well, are they a retailer now?

A. No, I don't think they are now, because they have eased out their stations, but their primary business or heir main business is from the stations that they own or ontrol and have leased out.

Q. That is true of the Standard Oil Company, isn't it?

A. I wouldn't say that. I would say that is a fairly ubstantial part of our business.

Q. The majority of your gallonage, in fact, a very great ajority of your gallonage to retail resellers comes from he leased stations, does it not?

A. That is right. And I can further state that since 036, Victor Oil Company have operated their own sta- ons.

Q. Since then, but not necessarily in 1940?

A. Not now.

Q. Have you any other companies in mind that sell oth to jobbers and to retail service stations?

A. Did I mention Argo?

Q. I don't believe so.

A. Argo Oil Company, and the Plymouth Oil Company s another one.

Q. What brand of gasoline does Plymouth handle?

A. They handle the Dixie brand of gasoline, supplied by the Ohio Oil Company.

555 Q. Is Dixie a local brand of the Plymouth Oil Company?

A. No, it is not a local brand. It is just about a na- ional brand.

Q. Isn't the Argo Oil Company also supplied by the Ohio Oil Company?

A. Yes.

Q. Do they sell Dixie also?

A. They did at one time, but they sell principally Marathon gasoline now under that brand.

Q. What is the difference between Marathon gasoline and Dixie gasoline?

A. Well, as far as the difference in gasoline is concerned, I don't know, but they are two distinct and different brands. The Dixie brand of gasoline was started quite a number of years ago over in the western part of the State by some of the jobbers that got together that wanted a brand of their own, and that spread pretty well over the United States. It was quite extensive at one time. Just how extensive it is now, I am unable to answer, but it does cover a number of states.

Q. Well, that brand does belong to the Ohio Oil Company?

A. No, it does not.

Q. How about Marathon?

A. That belongs to the Ohio Oil Company.

Q. How many customers whose business is that of
3556 a retail reseller, whose business is chiefly that of a
retail reseller, does the Standard Oil Company sell
to in the Detroit area at tank car prices?

Mr. Hanley: Will you read that question, please?

(The question was read.)

Mr. Hanley: Do you understand it, Mr. Raupagh?

The Witness: Yes, I believe I do.

Mr. Hanley: Go ahead and answer it, then.

A. Ned's Auto Supply Company.

By Mr. Austin:

Q. There is just one, isn't there?

A. Just one.

Mr. Hanley: Who is that; just for my enlightenment?

The Witness: Ned's Auto Supply Company.

Mr. Austin: I wouldn't think that would be hard at all.

Mr. Hanley: Well, I just didn't get your question fitted into my head right, I guess.

By Mr. Austin:

Q. Now, if that question has been clarified; I would like to ask the same question as to Texas Company.

A. Will you read the former question, please?

Mr. Hanley: I think that is a very highly technical kind of question.

3557 Mr. Austin: It is a very simple question, what we commonly refer to as tank car customers.

Trial Examiner Ballinger: Will you re-ask the question, please?

By Mr. Austin:

Q. How many tank car customers, tank car customers whose business is chiefly that of a retail reseller, does the Texas Company have in the Detroit area?

A. Well, they have the Firestone Tire & Rubber Company; they have the B. F. Goodrich Company. I know there is one more some place here (referring to documents). Bulldog Oil Company.

Trial Examiner Ballinger: What company?

The Witness: Bulldog Oil Company.

By Mr. Austin:

Q. Is the Bulldog Oil Company entirely a retailer?

A. Predominantly so.

Q. According to Exhibit 38-A, they operate two retail service stations.

A. That's right.

Q. Is that their entire business, or largest part of it? I will leave off the last. Is that their entire business?

A. That isn't their entire business. That is the large part of it.

Q. Now I ask the same question as to Gulf Pe-
3558 troleum Corporation.

Mr. Hanley: Are you trying us or your other cases now, Mr. Austin?

Mr. Austin: No.

A. These same people that I have mentioned, namely, Firestone Tire & Rubber and B. F. Goodrich.

In addition thereto they supply Carnick Oil Company.

By Mr. Austin:

Q. Is Carnick Oil Company a jobber?

A. They are, in my language.

Q. I don't see them on the list of licensed distributors.

A. That's right. They are not on that list.

Trial Examiner Ballinger: What do you mean by your statement?

The Witness: I mean this, your Honor, that they perform all the functions that a jobber of petroleum products generally performs.

However, they are not a licensed distributor because they are handled by the Gulf Oil Corporation as an agent. They haul their gasoline out of the Gulf plant by their own trucks, and when I say "they" I mean the Carnick Oil Company.

They receive a jobber's price.

The Gulf Oil Company furnishes the equipment for the dealers that they supply, and, at times, since 1936, the 3559 Carnick Oil Company has operated service stations of its own, directly operated them, as well as supplied other dealers, and consumer accounts, commercial consumer accounts.

By Mr. Austin:

Q. Mr. Raupagh, this question was directed at jobbers whose business was chiefly that of a retail reseller. I gather from what you just said that the business of the Carnick Oil Company is not chiefly that of a retail reseller.

A. Not in the sense that they operate their own service stations, but their business is chiefly the supplying of dealer stations.

Q. I am not talking about that. I am only asking you about customers whose business is similar to that of Ned's, to be perfectly clear. In other words, whose business is wholly or chiefly that of a retail reseller, and by that I mean they operate their own stations and sell the gasoline.

A. Yes, sir.

Q. Now, with the question again clarified, does the Carnick Oil Company meet that description?

A. No, I wouldn't say it does.

Q. And how about Bulldog Oil Company?

A. Yes, I think they are predominantly a retailer.

Q. Now I ask you the same question again, relating to customers who buy by tank car, whose business is wholly or predominantly that of a retail reseller; the same 3560 question as to Mid-Continent Oil Corporation.

A. Yes, Mid-Continent, or Thiesen-Clemens, which is the same thing.

Q. What do you mean is the same thing?

A. Well, I mean that Thiesen-Clemens is the distributor in Michigan for Mid-Continent Petroleum Company's products.

Q. What is your answer?

A. National Garages.

Q. They are a retailer?

A. They are entirely a retailer; and they buy in tank cars or at tank car price.

Q. Now, any others?

A. No others, as far as Mid-Continent is concerned, that I can recall right now.

Q. I ask you the same question as to Sinclair.

A. Sinclair? They supply J. J. Bright, who is predominantly a retailer. They supply him at tank car prices, and he hauls out of the Sinclair bulk plant.

Q. Why is it, then, on Exhibit 38-A Sinclair Oil Company is not mentioned as a supplier of James J. Bright?

A. That is for the reason that J. J. Bright, as far as the Sinclair Oil Company is concerned, is again considered an agent, hauling out of the Sinclair bulk plant.

As a matter of fact, J. J. Bright has three or four types of service station operations that he all-operates himself.

3561 For instance, at one of the stations, he buys Sun Oil Company gasoline and, I assume, at the dealer tank wagon price.

At two of the stations he purchases gasoline from the Sinclair Refining Company by hauling it out of the bulk plant, and, prior to 1941, before he opened his cut-price stations, he did not require to have a distributor's license.

In late 1940 or '41, he opened up some cut-price stations; I mean, with posted cut prices, and used his own brand.

Q. Is that what he got from Argo?

A. That's what he got from Argo.

Q. Were you here when Mr. Dyer testified for the Respondent?

A. Yes.

Q. Mr. Dyer stated that the Sinclair Oil Company does not sell to retailers and jobbers in the same territory, and said that in Detroit they sold to retailers, but not to jobbers.

A. Well, he may not have considered J. J. Bright a jobber I can't explain his testimony, sir.

Mr. Hanley: I think, in fairness to the witness, counsel should call the witness' attention to the fact that Mr. Dyer testified that that was the policy of his company, and he did not know specifically what might be done and what might be going on in Detroit.

Mr. Austin: Well, he stated that it was against
3562 the policy of the company, and it was his belief
that they did not do it anywhere, and that is my recollection of what he said, and he also said that if they did it here, it was not his knowledge, and he is in charge, I believe, or directs the sales policy of the company. I think that was his testimony, and it also appears from Exhibit 38-A that J. J. Bright did not report the Sinclair Oil Company to the Secretary of State as a supplier.

By Mr. Austin:

Q. Well, let us assume that they do supply J. J. Bright, Mr. Raupagh. Let us assume that the Sinclair Oil Company does supply Bright. I really did not intend to get into an argument on that point. Is there anyone else whom they supply at jobber prices, tank car prices, whose business is that of a retail reseller other than Bright?

A. National Petroleum Products Company.

Q. Well, there again Sinclair is not shown as a supplier on Exhibit 38-C.

A. That is true. And the reason I say National Petroleum Products, is that I know in 1940 or the latter part of 1940 they did supply them. That, again, is a hauling proposition.

Q. Well, the supplier shown on Exhibit 38-C is the National Petroleum Products Company of Toledo, Ohio.

A. Well, the reason for that may be that the
3563 National Petroleum Products also is in the freight
trucking business and they operate service stations and sell to the public at the same time. So, they, no doubt, haul some gasoline from Toledo, and they may be doing that now, but prior to 1941 I know that they purchased from the Sinclair Oil Company.

Q. Is there anyone else, any other retailer whom Sinclair supplies?

A. Not that I know of.

Q. Now, I believe that that exhausts the list of majors that you mentioned in your previous testimony as engaging in this dual function.

A. I believe I mentioned some others. Argo and Plymouth.

Q. Well, you have mentioned several others here now.

That is why I asked you at the beginning whether in mentioning just four, you weren't mentioning refiners only, and you probably were, because you have already given me several others. How about Shell Oil? Do I understand that Shell does not supply both retailers at tank wagon and jobbers at tank car in Detroit?

A. Well, they supply Stark Hickey in Detroit.

Q. Is his business predominantly that of a retailer?

A. All of it.

Q. Do you know whether they supply anyone else at jobber prices in Detroit?

3564 A. No, I don't.

Q. Now, getting back to this list that you gave me awhile ago, without going into their—well, I will just ask you the number first, and may not go any farther. The Highland Oil Company, how many jobber customers do they have, whose business is wholly or predominantly that of a reseller?

A. Central Service Oil Company. That is one that I can think of right offhand.

Q. Any others? If you can give me the number.

A. R. W. Oil Company.

Q. Is that R. W.?

A. Yes; R. W. Oil Company.

Q. They don't appear here as a licensed distributor, or do they?

A. No, they do not.

Q. If a seller of gasoline buys at tank car or jobber price and resells wholly at retail, does he have to take out a distributor's license?

A. I didn't understand that question.

Mr. Austin: Will you repeat the question, please, Mr. Reporter.

(The question was read.)

A. No.

By Mr. Austin:

3565 Q. That, then, explains why this R. W. Company does not appear as a licensed distributor.

A. If he buys gasoline tax paid, he doesn't need to take out a license.

Q. Are there a number of instances where gasoline is purchased that way, that is, tax paid, but in tank car lots? Is that common or not?

A. Well, I think if you stated the tank car price, it would be more prevalent.

Q. In other words, are you referring to the practice which you have mentioned before, of some people getting a tank car price, but hauling their gasoline by tank truck?

A. That is right.

Q. How many retail customers does the Wilson Oil Company have; the same question as to the Wilson Oil Company as I asked about the others.

A. There are two that I know of. They have the Bulk Stations, Incorporated. They have Railroad Oil Company.

Q. Bulk Stations, Incorporated; according to Exhibit 38-A, does not operate retail stations.

A. That is true, but during the time from 1936 they have operated retail stations. They have only one. I think there has been a time when they had two, from 1936 to the present time.

3566 Q. Well, perhaps we had better restrict ourselves to the last six months, or we might get into so many changed conditions. Has the Bulk Stations, Incorporated, operated any retail stations during the past six months?

A. I would have to say yes.

Q. Then, you would not agree with the answer of—

A. Yes, I would.

Q. Because this answer, as I understand it, as I understood, Mr. Griswold, those answers on Exhibit 38-A would apply to probably December of 1940. In other words, the condition existing when these applications were filed.

A. Well, my answer as to the operation is this, as to their operating a service station at that time, it would be in October of 1940.

Q. And Central Service Company, that company mentioned a moment ago, it, again, appears on Exhibit 38-A that they do not operate retail service stations.

A. No, Mr. Austin, they do not operate retail service stations at the present time. They have 28 stations that they own or control. They have a bulk plant that they do not use. The bulk plant is used by the Highland Oil Corporation, whenever they feel like using it. Otherwise the gasoline is trucked directly from the Highland Oil Company to the service station of the Central Service Oil Company.

3567 Q. But you say the Central Service Oil Company does not operate its stations?

A. Not at the present time.

Q. Now, the same question as to Red Indian Oil Company; and, let us restrict it now to customers who were retailers wholly or predominantly within the last six months.

A. Wings Petroleum. That is all I have on that. Wings Petroleum are predominantly retail.

Q. The same question as to Argo Oil Company.

A. Argo—as previously mentioned, they supplied J. J. Bright, who is predominantly retail. They, in part, supply Bulldog Oil Company, which is predominantly retail. They supply Montgomery Ward, which is absolutely retail.

Q. Are they the sole supplier of Montgomery Ward?

A. ~~Yes, as far as I know.~~

Q. Do you know anything about that other than what appears on Exhibit 38-A?

A. Yes, I do. Would you like to know it?

Q. That Montgomery Ward's supply?

A. Yes.

Q. Yes.

A. We at one time supplied Montgomery Ward at one of their stores outside of the Detroit area. We sold them on a regular dealer tank wagon basis.

We were given the privilege of selling them, or, at
2568 least, they solicited us to sell them, on a tank car and
a tank car basis using their own brands when they received the gasoline.

They had no bulk plant or anything of that kind.

They wanted it delivered into their own storage tanks, and that proposition was taken on by the Argo Oil Corporation at a tank car price.

Q. Why didn't you accept it?

A. We didn't want that business.

Now, let us see. The question is as to who Argo is supplying? People that predominantly retail. Is that the question, now, Mr. Austin?

Q. Yes.

A. Within the past six months they have supplied I. Paul Taylor, who is a retailer.

They are supplying at the present time, Muerer Brothers, who is entirely retail, at tank car prices; and they are furnishing part of the supplies for the Bulldog Oil Company.

Q. One more. The same question as to Plymouth Oil Company.

A. Plymouth Oil Company are supplying Jefferson Company.

They are supplying Texas Coal and Oil Company, or did supply them.

They did supply the Apex Oil Corporation.

They did supply Star Products Coal and Oil Company.

3569 Q. Why do you say "They did supply"? Do they still supply them?

A. Well, I can't say definitely, whether they are supplying them today, but I know that in the latter part of 1940 they did supply those people.

Q. You evidently have some doubt as to whether they still are.

A. No, I haven't any doubt, only I just want to be sure about that, that's all, and, of course, those things are subject to change, too, Mr. Austin.

Q. Was Marathon one of the brands that you mentioned among the 12 that you considered major brands?

A. Yes, sir.

Q. And was the Dixie?

A. Yes, sir. That is the same; Ohio Oil Company.

Q. I asked you about the brand.

A. I don't believe we mentioned Dixie Brand. I think we should have mentioned it.

Q. On the identification advertising of Marathon gasoline, or any stations which advertise that brand, does the name Ohio Oil Company appear, or anything to identify the gasoline as originating from the Ohio Oil Company?

A. I don't believe it does.

Q. And the same question as to Dixie.

A. No. It would never happen on Dixie, for the
3570 simple reason that the very purpose of creating that
brand was to get away from any source of supply, but have it distinctly a brand for jobbers. That was the purpose of the Dixie brand.

Q. Referring to the companies which I have mentioned to which I have questioned you particularly—well, I will ask you, first, as to Standard Oil Company. Why does not the Standard Oil Company sell to other dealers than Ned's Auto Supply Company at tank car price?

A. I think we would. We don't always get a chance.

Q. Have you ever offered to sell at tank car prices to any other customer or to any other dealers whose business was primarily that of a retailer?

A. We haven't gone out and made any offers.

Q. You have never done what has been referred to here, that some of the companies have done to Ned's? By that I mean Mr. Gershenson and you also referred to certain offers made by other companies to Ned's?

A. No, we never have.

Q. Have you made similar offers to other dealers?

A. No, sir.

Q. Is it the policy of the Standard Oil Company not to sell to more than one retail reseller in a given area?

A. No.

Q. How do you explain the fact—or do you explain
3571 it—that there has been no effort to obtain other retail
reseller business at tank car prices?

A. I don't explain it.

Q. Going down this list, I think that you mentioned only two such customers for Sinclair and Gulf; three for Texas, one of which, the Bulldog Oil Company, operates only two stations—oh, let me ask you about Bulldog. Do they sell Texaco gasoline under the Texas Company's brand?

A. I think they do, in one pump.

Q. Are they what is known as divided stations?

A. Yes, very much divided.

Q. I think I started to ask you a question? Why is it that most, if not all of the major companies that engage in the dual function here sell to so few retail customers in tank car lots? It appears from your answers that two or three seems to be the limit for any one company, and yet—

A. I can't explain why the other companies don't Mr. Austin.

Q. Well, in your opinion, would it not be possible for Standard Oil Company or any other company, to get additional tank car business from retailers, if they so desired?

A. Yes, I think it would. Of course, there are some that we can't get, anyway.

Q. Isn't it true that any retailer who could take
3572 care of delivery in that quantity, would be glad to
get the tank car price?

A. Well, I don't know about that.

Q. What is your opinion?

A. Most of them are not equipped and most of them are not financially able to do anything.

Q. Of course, I realize that. I was assuming the ability:

Now, Mr. Raupagh, you mentioned certain requirements of the Standard Oil Company which you said had to be met as a policy of the company before you would give a tank car deal to a customer.

A. Yes, sir.

Q. One of them was sufficient storage to take care of tank car shipments?

A. Yes.

Q. Does that mean anything more than the ability to unload the car or the transport truck when it arrives, and dispose of the proceeds—I mean of the contents?

A. Oh, I think it does mean perhaps a little more, because you can't very well set up a wholesale proposition with a tank car capacity of 10,000 gallons, which is the average tank car, because he has got to carry enough merchandise to carry him over, and if he sells to other companies or other dealers, he has to have a bulk plant, Mr. Austin: a real bulk plant. He should have.

3573 Q. If someone comes to you and wants a tank car of gasoline and tells you where to deliver it, are you concerned with what he does with it?

A. No, providing he has storage facilities to unload it and take care of it. I would be concerned about that.

Q. You have some interest in the matter of brand in that connection, don't you? I would like to have you explain that a little bit. I assume that you don't just sell gasoline by the tank car load and let the person who buys it go ahead and sell it unbranded or any way he wants to, do you; or do you?

A. No, we don't; not in Detroit. We don't sell gasoline and let the other party sell it as unbranded. At least, we haven't up to this time.

Q. Do you have a tank car spot market here? Do you ever sell gasoline in that way? That is, without the right to retail it as Standard gasoline?

A. Do you mean as to resellers or consumers?

Q. I would have to ask you as to each one. Isn't there a separate market for unbranded gasoline, and does the Standard Oil Company ever participate in it?

A. We do not participate in it.

Q. That is, in this area, at least, you don't, to resellers sell unbranded gasoline?

A. That's right.

3574 Q. If you do to consumers, I am not interested in that. I don't think it has any relevancy here.

Well, regarding the storage, does the requirement of sufficient storage to take care of shipments mean any more than the ability to take care of a single carload? To put it another way: Does the Standard Oil Company offer to sell gas at tank car prices to anyone who orders a tank car of gasoline and who either pays cash or has satisfactory credit?

A. No, I think we have the right to select our customers; and do.

Q. You do, but I asked you if you offer to sell it to anyone who will buy it and pay for it, in tank car lots?

A. We do in some cases. Again you have the consumer and reseller proposition. Are you referring to reseller?

Q. I am just asking, or trying to ask, Mr. Raupagh, whether gasoline is sold by you like a lot of other commodities are sold. The manufacturer makes a commodity and publishes the commodity in his catalog and anybody who wants to comes in and orders a carload lot and can get it simply by ordering it and paying the price.

A. That's right; if his credit responsibility and everything is satisfactory; yes.

Q. Then, is it true that anyone who orders a tank car of gasoline may buy it without being a regular customer?

3575 A. Yes.

Q. In other words, without your expectation that they will buy another tank car tomorrow or next week?

A. Oh, yes.

Q. Wouldn't there be some restriction on what could be done with the gasoline, or would you inquire about that? I am not trying to lead you down any crooked lane here, but it would seem to me perfectly natural that there would have to be some restriction, because, otherwise, a man might take a carload of gasoline away and sell it under some other brand or something—

A. I don't think we would sell it to him if we knew he was going to put it in the lake out here where it would endanger life and limb.

Trial Examiner Ballinger: Did I understand you earlier to testify you only sold in tank car lots to those only who had tank car facilities?

The Witness: Yes, sir.

Trial Examiner Ballinger: Now, do I understand you to say you will sell to anybody who comes to your storage place and wants to buy a tank car?

The Witness: Again the proposition that he must have proper bulk storage facilities; and we would inquire into that.

Trial Examiner Ballinger: Then, anybody who
3576 came there and wanted to buy a tank car, you wouldn't sell it to him, is that correct, unless he had bulk storage facilities?

The Witness: That's right.

Trial Examiner Ballinger: If he merely wanted one tank car, what difference would it make to you whether he had bulk storage facilities?

The Witness: Well, that's our policy, your Honor.

By Mr. Austin:

Q. Suppose a group of retail dealers from your stations should approach you to buy in tank car quantity, a tank car of gasoline, and told you that they had arranged so that they could have that emptied into trucks right at the railroad sidings, and delivered to their stations—

Mr. Hanley: I object to this as repetitious. That was gone into thoroughly on the Government's case, Mr. Raupagh was called as an adverse witness. Most of this examination that has gone in for the last several minutes was thoroughly gone into in the Government's main case with this witness.

Trial Examiner Ballinger: The objection is overruled. You may proceed. It is, to a certain extent, repetitious.

The Witness: Will you please read the last question?

(The question was read.)

3577 By Mr. Austin:

Q. —would you entertain such an offer?

A. No, sir. And I would like to explain the reason why. In the first place, in the City of Detroit and in most other communities, it would be against the law to do that; this is, unloading from a tank car, gasoline, direct into tank trucks.

Secondly, our experience with group buying, my own experience with group buying, has not been good, and I have had that experience.

3578 Q. Well, I will ask you the same question then. Would you, with this same group of dealers in any given locality, if they asked for a delivery by transport truck, delivered into their service station tanks, we will say, five dealers and each one wanted two thousand gallons, would you entertain that sort of an offer?

A. At what?

Q. Tank car price.

A. No, sir.

Q. Then, when you say that one of your requirements for a tank car customer is that he has sufficient storage to take care of shipments, you mean bulk storage and not just any kind of storage?

A. That is right.

Trial Examiner Ballinger: I understand you have other requirements in addition to bulk storage?

The Witness: We have.

By Mr. Austin:

Q. Why do you make the requirement or why does the company make the requirement as a matter of policy that the tank car buyer must have the volume of one million to two million gallons per year?

A. Well, we think that that is a wholesale operation.

Q. What do you mean by a wholesale operation?

A. Well, I mean that it takes on the function and
3579 the quantity requirements. That is one of the rules of our company.

Q. You, I believe, told us several times that you weren't concerned whether he resold at wholesale or retail?

A. That is right.

Q. And is that not, in effect, the restriction, as directed to retailer customers? Is it not in effect a restriction on the tank car price, to large customers?

Mr. Hanley: I don't know whether that is—

Mr. Austin: Well, I will withdraw the question because I understand the witness has already stated that the tank car deal is restricted to customers whose volume is from one million to two million gallons a year or more.

Mr. Hanley: I don't care to object to the question, Mr. Austin, but the witness has repeatedly said that there are a number of elements that go into the selection of the wholesale jobber customer and his characterization as such by the Standard Oil Company and the volume, he has said, is another. But, when you pick out each one and say, is that the thing that differentiates, it is confusing and unfair to the witness. I have tried to tell many times on the former examination by you of him, as well as now, what those things are and why they are.

Mr. Austin: Well, on your direct examination, Mr. Raupagh named five requirements and it is my un- 3580 derstanding that the policy of the company is that the tank car buyer must meet all five of those requirements.

By Mr. Austin:

Q. Is that right, Mr. Raupagh?
A. Yes.
Q. And another was his credit and another was an established business and, I assume that the requirement of an established business answers in part the question that I asked a while ago, as to whether or not you would sell in tank car quantities to an occasional buyer?
A. That is right.
Q. In other words, you would not?
A. No.
Q. Now, another requirement was equipment to handle, and I suppose that that means equipment to handle the gasoline into the bulk plant and out of the bulk plant, is that correct?
A. In and out of the bulk plant and if he is to supply other dealers, truck equipment to make those deliveries.
Q. Suppose he is to supply himself at retail stations?
A. Then it isn't necessary.
Q. Does he still have to have the truck equipment?
A. He would have to still have the truck equipment to supply his own stations.

Trial Examiner Ballinger: It could not be supplied 3581 by leased equipment, could it?

The Witness: Oh, yes, I think it could, as long as they leased it.

By Mr. Austin:

Q. I was just coming to that. I think you stated in that connection that he had to have his own personnel?
A. That is right.
Q. Would there be any objection on the part of your company if, instead of having his own trucks or personnel, that he employed someone, some hauler to transport the gasoline from the bulk plant to the service station?
A. I don't think there would be any objection.

Mr. Hanley: Would you have any objection to the witness having a short recess, Mr. Austin?

Mr. Austin: Not if he desires it.

Trial Examiner Ballinger: A recess will be called.

(A short recess was taken.)

3582 Trial Examiner Ballinger: Come to order.

By Mr. Austin:

Q. We were talking about the requirements of the Standard Oil Company in supplying gasoline in tank car quantities at tank car prices.

Suppose a jobber came to you who was already handling another brand of gasoline and who could satisfy all of these five requirements that you named, and wanted to purchase Standard Oil Company gasoline on a tank car basis and resell it in conjunction with his other brand. Would you entertain such an offer?

A. No, I don't believe I would, Mr. Austin.

Q. Then, is that an additional requirement for a tank car buyer; that he must not also be dealing in any other brand of gasoline?

A. Well, we have found that if a man is a customer of ours—

Q. I would just like to have a yes or no answer to that, and then you can explain, if you wish.

Trial Examiner Ballinger: Read the question.

(The question was read.)

A. Yes. With the exception of Ford Benzol. Most of our jobbers also deal in Ford Benzol.

However, we do not like the operation of split accounts, and if a man is going to be a customer, why, he should be a customer without splitting his business so many

3583 different ways.

Q. You say the majority of your jobbers handle Ford Benzol?

A. Yes.

Q. Does Ned's sell Ford Benzol?

A. Yes, they do.

Q. Citrin-Kolb does not, do they?

A. I really don't know, for sure.

Q. That is my recollection.

A. You may be right on that. I am really not sure.

Q. I am not sure, but it seems to me Mr. Ledbetter said the Wayne Oil did and Citrin-Kolb did not.

A. You may be right. I don't know.

Q. Why do you make an exception with Ford Benzol?

A. Well, that has sort of grown up with the business here, and we have always accepted that.

Q. Is that partly because that is a gasoline which sells at an intermediate price and is not sold at the same price as any of your brands?

~~A. No, that has no connection at all.~~

Q. Ford Benzol is a locally produced and sold gasoline is it not?

A. Yes, sir.

Q. Suppose a man that wanted the tank car deal was
a retail operator such as Ned's, but operated divided
3584 stations where he sold other brands, would your
policy be the same toward that business as you have
just stated in connection with the reseller business?

A. We have never had an opportunity like that.

Q. Are many divided stations in Detroit?

A. No.

Q. Retail stations?

A. No, there are not so many.

Q. Does the Standard Oil Company sell to any retail stations who are divided stations; by tank wagon, now, I am talking about.

A. Divided with Ford Benzol, yes.

Q. Any other?

A. No.

Q. You are acquainted with Marvin Goldberg, are you not?

A. Yes, I am.

Q. Hasn't Marvin Goldberg, within the last year applied to you for a tank car deal?

A. Yes, he has.

Q. Have you granted it to him?

A. No.

Q. Why didn't you grant him that sort of a deal?

A. In the first place, he has no bulk storage. He doesn't come up to the five requirements that you know about.

Q. Is that the only requirement that he doesn't
3585 meet?

A. There are others, too, Mr. Austin, that he doesn't meet; of the five.

Q. What is that?

A. Others of the five.

Q. His volume is big enough, is it not?

A. No, it is not.

Q. Do you know what his volume is on stations which he operates—and I am including now, whether it is Marvin or Lester?

A. Well, it is less than 500,000 gallons a year; of the two stations together.

Q. You say their volume is around a half million a year?

A. Yes—or less than that.

Q. Well, how much less?

A. Well, their volume is not over 350,000 gallons a year; the two stations.

Q. Is their credit satisfactory?

The Witness: (Addressing Mr. Hanley) Am I obliged to answer that?

Mr. Hanley: I don't think so. I object to it, your Honor.

A. I would rather not answer that, Mr. Austin.

Mr. Hanley: This man is at present a customer of the Standard Oil Company on a tank-wagon basis.

Mr. Austin: I will withdraw that question.

3586 By Mr. Austin:

Q. You do supply those stations, do you not, by tank wagon?

A. Yes, sir.

Q. And they are an established business, are they not?

A. Yes, sir.

Q. Is it your opinion that they would have any difficulty getting bulk storage if you granted them the tank car deal?

A. I think they could secure bulk storage, either by building it, or, possibly, finding somebody they could lease it from; yes, sir.

Trial Examiner Ballinger: Is the sale of gas by tank car substantially a cash transaction, or do they have time?

The Witness: It is substantially a cash transaction.

Trial Examiner Ballinger: How often are settlements made?

Mr. Austin: What was that question?

Trial Examiner Ballinger: How often are settlements made?

The Witness: Most of the settlements are made within ten days after purchase.

By Mr. Austin:

Q. That is in order to take advantage of the cash 3587 discount, is it not, Mr. Raupagh?

A. That is one reason, yes, sir.

Q. And does not the fact that a cash discount for payment in ten days is offered, indicate that payment within ten days is not required?

A. That can be construed either way. Do I have to answer yes or no, and then explain?

Q. Well, if payment is required in ten days, I would like to have you say so, and if it isn't, I would like to have you say so.

A. No, it isn't required within ten days. However, our experience has been that gasoline, being a commodity that is turned over very quickly, it runs up the amount on the purchaser's account very rapidly, and it has to be watched very closely, from a credit angle.

Q. Now, you have quite a number of stations whose operators either own the property or lease it from others than Standard Oil Company. I am now referring to what you call the 461 form contract station.

A. Yes, sir.

Q. And I believe that those contracts require those stations to purchase their entire requirements of Standard Oil gasoline from the Standard Oil Company during the term of the contract?

A. Yes, sir.

3588 Q. Do those contracts ordinarily run for a year?

A. Yes, they do, or longer.

Trial Examiner Ballinger: You say "or longer"?

The Witness: Yes, sir.

By Mr. Austin:

Q. Does the original term of any of them run for more than a year? I am not speaking, now, of some isolated or single example.

A. No. The vast majority of them are on a yearly basis, Mr. Austin.

Q. Now, suppose that the Citrin-Kolb Oil Company and the Wayne Oil Company or either one of them should offer to sell Red Crown gasoline to any of those stations upon the expiration of the 461 contract at ½c below the Standard Oil Company posted tank wagon price. In your opinion, would those jobbers take that business away from the Standard Oil Company?

Mr. Hanley: Just a moment. That is objected to as an improper hypothetical question; purely conjectural. It involves the knowledge of the state of mind of somebody else on a state of facts that is not complete.

Mr. Austin: Well, we have had a good many questions here that the witness was asked on direct examination, as to what the effect would be of the Standard Oil Company business—

3589 Trial Examiner Ballinger: The objection is overruled.

Mr. Hanley: The Court says you may answer, if you can.

The Witness: Will you repeat that question, please?

(The question was read.)

A. They would take some of the accounts, and some of the accounts they would not. Just how much and how little, it would be impossible for me to say.

By Mr. Austin:

Q. And about the time that one of those stations, that the contract of one of those stations was about to expire with you, if they—let us say they offered a cent off, that would be, or would it be a big inducement to that station?

A. Surely, it would be a big inducement.

Q. Now, assuming that one of those jobbers had adopted the policy of making such offers to the 461 stations, would the Standard Oil Company continue to supply that jobber?

Mr. Hanley: That is objected to as a hypothetical, and is conjectural that involves the determination of the policy on the part of the Standard Oil Company on some state of facts supposed to exist at some time in the future, and there is no showing at all that this witness would have authority either to determine the policy or to apply it if it was determined.

3590 Trial Examiner Ballinger: If the witness cares to express his opinion, he may do so.

By Mr. Austin:

Q. If you don't know, you may say so; if you have an authoritative knowledge of the policy in question, I wish you would tell me that.

A. I haven't, and I don't know.

Q. Do you know of any instance where such an offer has been made by either one of those jobbers?

A. No.

Q. Or by the Stikeman Oil Company?

A. No.

Q. Now, you stated on direct examination, Mr. Raupagh, that the Standard Oil Company would immediately lose the business, that in your opinion the Standard Oil Company would immediately lose the business of any one of the four jobbers who are served by you in Detroit, in the Detroit area, if the Standard Oil Company were to charge them the tank wagon price.

A. Yes, sir.

Q. In your opinion, would the Standard Oil Company lose the business of any of its retail tank wagon service stations if it charged them the tank car price?

A. No.

Mr. Hanley: Will you state that question again,
3591 please? Oh, go ahead and answer the question.

A. No, they wouldn't lose the business.

Trial Examiner Ballinger: May I ask a question? Have any of the stations leased by the Standard Oil Company ever been serviced by any company other than the Standard Oil Company?

The Witness: No, sir.

Mr. Hanley: That is, as to gasoline, you mean?

The Witness: That is right, gasoline.

By Mr. Austin:

Q. And referring to your answer to my last question, would your answer be the same if the margin between the tank wagon price and the tank car price were reduced? Do you understand that?

A. No.

Q. Well, I asked you first whether you would lose any retail stations if you charged them the tank car price, and now I am asking you whether you would lose any retail station if the margin between the tank car and the tank wagon price were reduced?

A. I don't believe so.

~~Q. Now,~~ I am going to ask you to suppose, Mr. Raupagh, that your company should charge the Citrin-Kolb Oil Company and the Wayne Oil Company the tank wagon
price only on gasoline purchased by them and resold
3592 by them at their retail operated stations, but continued to charge and give them the tank car price on the gasoline which they resell to dealers and, suppose else that no other major oil company would offer any of them tank car prices on that gasoline which they resell at

retail. In your opinion, upon the set of facts, would you lose the business of those jobbers?

A. Yes, sir.

Mr. Hanley: I move that the answer be stricken out, for the purpose of making an objection.

Trial Examiner Ballinger: On what grounds?

Mr. Hanley: Sir?

Trial Examiner Ballinger: Upon what grounds?

Mr. Hanley: Well, I thought I had to clear the record. The question is objected to for the reason that it is a hypothetical, and it requests the witness to assume an impossibility in that it requests an assumption that the gasoline sold on a truck transport or a tank car delivery basis and delivered in bulk into bulk storage of the named customers shall be policed by the seller after such delivery, which is an impossible thing to do physically and factually and legally, and, further, that the question fails to take in a paramount consideration in that it gives no consideration at all to the fact that the said customers supply their 3593 own service stations where they do have any direct retail operation, through the medium of their own storage facilities, delivery trucks, and personnel, which is an item and a consideration that is reflected in the usual tank wagon price charged to tank wagon customers who receive deliveries on the tank wagon basis, and that, consequently, there are no elements of comparability between the hypothetical set-up in which counsel has asked the witness to assume the Wayne Oil Company and Citrin-Kolb and the usual tank wagon retail customer of the Respondent.

Trial Examiner Ballinger: Objection overruled.

Mr. Austin: The witness already answered the question.

Trial Examiner Ballinger: The motion to strike is denied.

By Mr. Austin:

Q. In regard to the possibility of such an arrangement, I might explain for the benefit of the witness what I have in mind is something which I think would be very possible, and that is that it would be entirely possible for either one of the jobbers named, Citrin-Kolb or Wayne Oil, to report to the Standard Oil Company the amount of gasoline that they have resold through their own stations, and the

Standard Oil Company could then bill them at the higher price for that gasoline than for the rest, or the entire amount could be billed at one price and credit be given 3594 for what has been shown to be sold at wholesale, but I assume there is no—in fact, he does know how much gasoline he sells at his own stations, and how much he sells to other dealers.

Mr. Hanley: Just a moment. That is objected to for all the reasons assigned to the next preceding question, and for the further reason that it is not a question at all; that it is either an argument, in which event it is objected to as argumentative, or it is testimony on the part of counsel, and objectionable for that reason. And, for the additional reason that it calls upon this witness to testify as to the knowledge of the records and books on a hypothetical basis of the Wayne Oil Company and the Citrin-Kolb Oil Company, which, obviously, cannot be within the knowledge of this witness and is not even within the knowledge of the Citrin-Kolb Oil Company or the Wayne Oil Company, on a purely hypothetical basis, predicated upon some future arrangement, which still fails to take into consideration all of the elements necessary to properly frame a hypothetical question.

Trial Examiner Ballinger: Objection sustained.

Mr. Austin: Well, the only part of what I said to the witness that was a question was the last part, and I will restate that, so if there is any further objection to it, it may be made.

By Mr. Austin:

3595 Q. Is it not true, Mr. Raupagh, that the Wayne Oil Company and the Citrin-Kolb Oil Company and every jobber doing a similar business has constant records of the amount of gasoline which it sells through its own operated retail stations?

Mr. Hanley: I object, unless you know.

A. I don't think so.

By Mr. Austin:

Q. How does it find out what to pay the State Sales Tax on, then?

A. I suppose they could figure that up from their station records. However, Mr. Austin, I testified that in the first place, we would lose those customers.

Q. Now, just for a moment I would like to clear this up, if there is any question about it, because there has been a number of dealers who have come in here and told us what their volume was, and do you mean to tell me that Wayne Oil Company and Citrin-Kolb Oil Company don't know how much gasoline they sell at their stations every day or every month?

Mr. Hanley: That is argumentative. The witness has stated he doesn't know whether they know or don't know.

A. I suppose they know.

By Mr. Austin:

Q. Don't they have to pay a sales tax on every 3596 gallon of gasoline that they sell at their retail station?

A. If they operate them directly, yes.

Trial Examiner Ballinger: And conform with the law.

The Witness: That's right.

By Mr. Austin:

Q. Don't you know that they keep records of the amount of gallons of gasoline that they deliver to every station, whether they operate it or whether they sell it?

A. I have no way of knowing, but I assume they do.

Q. Now, if you wish, you can go ahead. You were about to say something about your answer to my question awhile ago about losing the business.

A. The proposition, in the first place, would be entirely not practical.

Visualize the situation like the Citrin-Kolb Oil Company. They have a service station right at their bulk plant.

If the hypothetical proposition that you put up were applied and they had to pay a retail price or had to pay dealer tank wagon price for the gasoline that they sold at their directly operated station, the first proposition would be that while the law—I assume there would be a law that would require them to do it—would be one thing. To make the collection from those companies would be another 3597 thing. I think it would be very difficult of collection.

Q. You don't mean that they wouldn't pay their bill, do you?

A. Yes, I do. I mean that there would be a lot of haggling on that: what is wholesale and what is retail.

Q. Well, I think there is something to Judge Hanley's

comment that when the jobber operates his own station that part of his deal is that he operates his own bulk plant and makes his own delivery, so that in so far as the Standard Oil Company is relieved of that function to a tank car buyer, there is a certain saving to the Standard Oil Company. That is one of the issues in this suit, as a matter of fact, so that I think I would have made a better example, Mr. Raupagh, instead of saying that suppose that the jobber paid the tank wagon price for what he sells through his retail station, let us assume we take a purely arbitrary figure that he were charged for what he sold at retail, 1¢ above the tank car price. In other words, a half a cent lower than the tank wagon price that was charged direct. I think that is a better example, because that would arbitrarily, for the purpose of the example, assume that the Standard Oil Company might very properly sell to him gasoline which he sold at retail for half a cent under tank wagon. Let us assume, instead of tank wagon price, that you were to charge for the gasoline sold at retail by
3598 the jobber 1¢ above tank car price.

Mr. Hanley: I think that is in the direction of improvement of the question, Your Honor. I don't think it escapes the objection yet, and I renew it to the question as amended.

Mr. Austin: The witness answered the previous question, and the motion to strike was denied, and now I would like to have him answer the question as so modified.

Trial Examiner Ballinger: The witness may answer the question.

A. I still think it would not be practical at all.

By Mr. Austin:

Q. Well, is it still your opinion that you would lose the business—I am talking of these two particular jobbers now—that you would lose that business?

A. Yes, sir; it is, definitely so.

Q. You are acquainted with their testimony that the retail operation is to them only a sideline and only done to a small extent where they can't avoid it?

A. Yes, sir.

Q. Then, is it your opinion, Mr. Raupagh, in view of your answer, that they would abandon the purchase of Standard Oil gasoline and transfer their business to a non-major company?

A. Possibly so.

3599 Q. Because you will recall that in asking the question I assumed that they would not get a better deal from another major.

A. Yes, sir, I believe that would be very likely and possible, and my reason for that is, too, who is going to classify the major companies and who is going to classify whether that is a major brand or not, and what is off-brand today may be a major brand tomorrow.

Q. Well, of course, I was accepting present conditions for the question and accepting your own definition of the 12 you named as majors.

A. However, I believe in accepting the present conditions we should take into consideration the conditions that might be possible tomorrow.

Q. I believe you said, Mr. Raupagh, that it was customary for the supplier, or, at least, for the Standard Oil Company, to furnish certain equipment to retail stations?

A. Yes, sir.

Q. And I think you mentioned gas pumps and I think you mentioned underground tanks—or did you?

A. I don't know as I mentioned them, but there have been cases where we furnished underground tanks.

Q. And oil pumps, I think you mentioned?

A. Yes, sir.

Q. And identification advertising.

3600 A. That's right.

Q. Anything else that occurs to you at the moment?

A. Not at the moment.

Q. How?

A. There is nothing at the moment that occurs to me besides those items. There may be a few others.

Q. Is such equipment furnished both to the stations who are lessees of the Standard Oil Company and to those which are not?

A. Yes, sir.

Q. And to the lessee stations, that equipment is rented, is it not?

A. Yes, sir.

Q. And it is listed in the lease, is it not?

A. Well, I don't know whether the underground tanks are listed in the lease or not, because that is something that is stationary and really part of the property.

Q. Even if they are not listed in the lease, is their value included or considered in fixing the value of the rental?

A. Yes, all of that is included.

Q. Now, as to the 461 stations; is it not true that the operators of those stations, in many instances, own their own equipment?

A. In some instances they own their own equipment; yes, sir.

3601 Q. Is any such equipment—before I ask you that: as to the 461 stations which obtain such equipment from the Standard Oil Company, does the Standard Oil Company retain title to that equipment while it is at the station?

A. Yes.

Q. Have you with you one of those forms of equipment loan agreement?

Mr. Hanley: I handed you one this morning, Mr. Austin?

Mr. Austin: Did you? I didn't even see it. I guess it has been lying here all day.

Will you mark this for identification, please, Mr. Reporter?

Trial Examiner Ballinger: The reporter will mark the paper as Commission's Exhibit 80, for identification.

(The document referred to was marked, for identification, "Commission's Exhibit 80.")

By Mr. Austin:

Q. Will you identify that form marked Commission's Exhibit 80, for identification, Mr. Raupagh?

A. Commission's Exhibit 80 is our form 385, that is, Standard Oil Company form 385, Equipment Loan Agreement, Sales Department.

Q. With whom are such agreements executed?

A. With our dealers.

3602 Q. With lessees?

A. 461 dealers.

Q. Only with 461 dealers?

A. Yes.

Q. How many 461 dealers did you have, as of the first of this year?

A. You mean in the Detroit area?

Q. Yes.

A. There was some over a hundred. I don't recall the exact amount. I think I gave that to you in previous testimony.

Q. With how many of those 461 dealers, approximately; or if you know the exact figure, give it, have you entered into these equipment loan agreements?

A. I don't know the exact figure, but I would say that with most of them we have.

Mr. Hanley: If your Honor please, I don't know what the purpose of this line of question is as to the plan of lending equipment to tank wagon resellers, what the purpose of this line is all about; the number of questions that have been asked upon it, and I don't care to make any objection or motion to strike if it is pertinent, but at this time, and for enlightenment, at least of counsel for the Respondent, I would like to know what the purpose is.
3603 If it is what I think it is, I do have an objection and
a motion to make. I may be wrong, but I would like to be enlightened.

Mr. Austin: It is cross-examination, your Honor, and my recollection is on direct examination Mr. Raupagh was directly asked about the supplying of equipment to retail stations and stated it wasn't done to jobbers, so I think that opens the way to inquiring into it.

Mr. Hanley: If that is the purpose, your Honor, the Respondent moves to strike all of the questions asked of this witness which have to do with the manner of supplying service station equipment to lessee dealers of the Respondent as distinguished from 461 dealers of the Respondent on the ground and for the reason that it is outside of the issues in the pleadings in this case. There is no allegation of any discrimination in price or otherwise as between the class of tank wagon buyers comprised of both lessees and 461 customers.

Further, that this matter was gone into early in the Government's case in this lawsuit, wherein the Government requested that the Respondent furnish to it certain leases, namely, the Marvin Goldberg leases, I think they were, and that was done.

At that time there was a considerable discussion and a number of questions asked in relation to rental plans
3604 and methods of arriving at rentals of properties
loaned or leased and then subleased by the Standard Oil Company, and at that time counsel for the Commission stated that he did not care to go into that subject; that we would not have to meet that issue, and since that time it has been entirely out of the case and it now, or at any time,

under the state of the pleadings, would come into the case improperly.

In making this objection, I assert to the Court that we have no objection to counsel cross-examining on the question of whether equipment is given to jobbers or to service station dealers who are sold by the jobbers as their customers.

Mr. Austin: I think I have a perfect right to find out just exactly how and through what contracts equipment is loaned or supplied to retail service stations. The question has been brought up on direct examination as to the difference in the arrangement between them and the jobbers. It is wide open.

Mr. Hanley: If your Honor please, you will recall we explained and counsel then knew that to arrive at any conclusion at all about the propriety of the charge to any lessee would involve opening every and all the background of it that we have in the Detroit area for all the years in question which is just a superhuman task.
3605 Your Honor will recall that evidence. I still don't know what the purpose is unless counsel is just simply finishing in the hope that he can find some way of bringing another charge against us as between one group, namely, the tank wagon buyers and that, definitely, is not in this case, and counsel himself has said we don't have to meet that charge; it is outside the issues.

I repeat we have no objection to cross-examination on the question of whether the Standard Oil Company furnishes equipment to either jobbers or other service station operators serviced by the jobbers, or upon the question of whether we do furnish equipment to certain tank wagon customers who are direct customers of the Standard Oil Company, in contrast to that group serviced by the jobbers.

Trial Examiner Ballinger: Let the Examiner see the document.

Mr. Austin: If your Honor please, I can—perhaps if that's all that counsel is afraid of, I can relieve his mind. I am not trying to prove any discrimination between lessee customers and 461 customers, but I do consider this cross-examination material upon the question of the different method of dealing with retail customers, on the one hand, and jobbers, on the other. It is offered on that issue of the case, and, of course, upon which there is direct examination.

3606 Trial Examiner Ballinger: Off the record.

(A discussion ensued off the record.)

Trial Examiner Ballinger: On the record.

Mr. Austin: I am not offering this at all with an attempt to prove discrimination between the two types of retail dealers. I told Judge Hanley that before.

3607 Mr. Hanley: I would like to have the adjournment now, your Honor, in line with your Honor's suggestion. This is a new thing and I want to take a look at this.

Mr. Austin: I especially request, your Honor, that it is not fair to counsel for the Commission to require a break off in the middle of cross examination on a subject when he is examining an employee, an officer of the Respondent.

Trial Examiner Ballinger: How much longer will you be?

Mr. Austin: I won't be much longer on this subject, but I want to go on this subject of equipment, both as to retailers and jobbers, because that is what was discussed on direct examination.

Trial Examiner Ballinger: Are you ready for a ruling on your motion?

Mr. Hanley: I haven't any motion that I know of.

Trial Examiner Ballinger: The motion is to strike all of the witness' testimony with reference to—

Mr. Hanley: Yes, your Honor.

Trial Examiner Ballinger: (Continuing.) to Commission's Exhibit No. 80, for identification.

Mr. Hanley: Has it been offered?

Trial Examiner Ballinger: No, your motion is

3608 to strike.

Mr. Hanley: That is what I understood, the testimony alone.

Trial Examiner Ballinger: The testimony. The motion is overruled in view of counsel's, in view of the statement of counsel for the Commission relative to the purpose for which the examination is being conducted.

By Mr. Austin:

Q. Now, Mr. Raupagh, referring to Commission's Exhibit No. 80, for identification, there is a blank space here toward the upper half of the page and there are some column headings "Serial Number" and also "Description of Equipment" and "Capacity". When one of these forms is executed, what is filled in in that space?

A. A description of the equipment.

Q. You mentioned a moment ago or rather mentioned in your direct examination, gasoline pumps, tanks, gasoline tanks, oil pumps, and identification advertising. And, I believe you said a moment ago that the tanks—well, we were talking about the leasing a moment ago. In these equipment loan agreements, is a tank generally listed or, are tanks ever loaned?

A. There have been cases where we have taken over a station, a dealer's station and have taken over the tanks which have been there and have listed them. If we 3609 have ownership of the tanks, we list them.

Trial Examiner Ballinger: They are included in the lease?

The Witness: Yes, sir.

Mr. Austin: I am speaking not of the lease, but of the agreement.

Trial Examiner Ballinger: You are referring to Commission's Exhibit No. 80 for identification?

Mr. Austin: Yes, sir.

By Mr. Austin:

Q. And in the blank space here, just below the middle of the page, of the same exhibit, what is generally listed there?

A. A description of the equipment and the rental to be charged.

Q. When is rental charged for that equipment? Strike that. That, perhaps, is not proper at this time.

Mr. Austin: I will offer the Commission's Exhibit No. 80, for identification, in evidence, and I wish to say that I was doing so to complete the agreements by the Standard Oil Company, which the Standard Oil Company has with the stations here in Detroit, other stations here in Detroit, and the lease and the 461 agreement were introduced as Commission's Exhibits 1 and 2 and at that time I was not familiar with these equipment loan agreements and 3610 they were mentioned, I think, during the course of Mr. Boatwright's testimony and also, I think, referred to, at least, if not by name, in Mr. Raupagh's direct examination at least, they refer to the loan of or supplying of equipment to retail stations, which was taken up on direct examination.

Trial Examiner Ballinger: Re-state for the purpose of the record for what purpose the exhibit is offered in evidence.

Mr. Austin: It is offered, your Honor, for the purpose of showing on the record the complete method of dealing and arrangements and contracts between the Standard Oil Company and its retail stations on the one hand as distinguished from its dealings with its jobber customers on the other hand. And, I believe that it is necessary to have the record show fully the dealings with retail stations in order to distinguish between those dealings and the jobber dealings and I can see no reason why they should be objected to in any way.

Mr. Hanley: There is no objection, your Honor, to supplying the Commission or, having offered in evidence, if counsel desires to do so, the blank form 385 to complete, as he says, the agreements or forms of agreement which were referred to in Mr. Boatwright's testimony or schedule of costs. The examination which Mr. Austin has been
making of Mr. Raupagh in connection with that
3611 exhibit wherein it goes beyond the testimony of Mr.
Raupagh that it is a form executed with said tank wagon dealers, is objected to and motion is made to strike the same and motion is renewed to strike all of the testimony which was heretofore moved to be stricken out on the grounds then stated and on the further grounds that now, in view of the statement of counsel, it has no materiality at all. The only materiality that this question on the furnishing of equipment to any dealers has in this case is on the question of costs in that it has been shown that certain costs were incurred by the Respondent, based upon the fact that it did furnish certain equipment to the class of dealers in Detroit, known as tank wagon dealers, which costs were given consideration by Mr. Boatwright in his testimony as to what Respondent's costs were in servicing tank wagon dealers. It has been testified that there was no equipment furnished by Respondent to the jobber dealers involved in this action, nor to the retail dealers that those jobbers serviced and that the Respondent was relieved of that item of cost in its method of sale and delivery and doing business with the jobber customers. Now, that is all there is to the question and the only materiality is and the only right of cross-examination that exists of this witness is, first, the question of whether it is the truth that we do not furnish the jobbers of their customers any

3612 equipment and do furnish equipment to that group known as tank wagon buyers. That, I concede is material on this cross-examination.

Secondly, on the question of the cost of furnishing that equipment to the tank wagon dealer group and I concede that this is material because that is a fact that was taken into consideration in the proofs which we have given of our cost. For any other reason or procedure, your Honor, it has no materiality. It just places upon us the burden of refuting implications of different methods of treatment of different persons in this one big group, with which we are not charged and there ought not to be any implications and the cross examination ought to be confined to the things that are material or issue with which we are confined here and as to them, we have no objection and no objection to the exhibit itself as evidence of the form itself, which Mr. Boatwright referred to, being received in evidence and no objection, as has been frequently offered here to the Commission examining all of the figures of cost arising out of this practice of furnishing equipment to tank wagon dealers that Mr. Boatwright took into consideration in his figurations of our costs. They are entitled to that.

Trial Examiner Ballinger: The Examiner is prepared
to rule. The Examiner admits in evidence Commission's
Exhibit No. 80 for identification, for the sole purpose
3613 of showing the form used and the cross examination
with reference to it will be limited to the direct testimony heretofore given.

Mr. Austin: Well, I am not in anyway contesting that, your Honor. It is my contention that the direct testimony permits me to go into this question. Furthermore, as Judge Hanley said, as their contention is and was, on Mr. Raupagh's direct testimony, that they have certain costs in connection with their retail stations that they do not have in connection with their jobbers and that question, I assume, is wide open and therefore, I am entitled to find out what they are.

(The document referred to, heretofore marked for identification "Commission's Exhibit 80" was received in evidence.)

Trial Examiner Ballinger: As to that, you are entitled to cross examine.

Mr. Hanley: We concede that.

Mr. Austin: I assume I am not precluded from finding out how this form is used when it is filled out, since it is furnished to me in blank and I presume I may cross-examine the witness as to what goes in this form when it is filled out.

Trial Examiner Ballinger: You may do that.

Mr. Austin: That is what I was starting to do.

3614 By Mr. Austin:

Q. Now, Mr. Raupagh, if you will look at form 385, Commission's Exhibit No. 80, I started to ask you about this blank space just below the middle of the page. Do I understand the same equipment is filled in there that is filled in in the blank space higher up?

A. Yes, sir.

Q. And in the lower blank, there is a column heading "Monthly Rental Rate" and you stated a moment ago that the amount of rental was filled in there?

A. That is right.

Q. When and under what circumstances is rental paid by the 461 station on the equipment which is included in one of these agreements?

Mr. Hanley: That is objected to for the reason that the exhibit speaks for itself. The answer seeks to elicit.

Trial Examiner Ballinger: Is the time of payment stated in there?

Mr. Austin: Your Honor, as I read it—you can see there (indicating).

Mr. Hanley: There are a dozen conditions. The exhibit states what they are.

Mr. Austin: As I read it, the rent is paid when the equipment isn't used.

3615 Trial Examiner Ballinger: Where is the provision with reference to payment?

Mr. Austin: It is right here (indicating).

Trial Examiner Ballinger: The witness may answer. Objection overruled.

The Witness: What is the question, please?

(The question referred to was read by the Reporter.)

A. I would have to look that up because I hope you appreciate the fact that we have over one thousand different forms and the application of each one of these forms is just a difficult proposition to know the details of. I would be glad to testify on that sometime later, if you will give me a chance to look it up.

3616 By Mr. Austin:

Q. Well, I was just trying to find out whether it was or was not a frequent or usual occurrence that rental is paid on one of these agreements. In other words, the agreement says: "In event dealer shall at any time cease to use any of the items of equipment—" there will be rental. Under what circumstances would your 461 dealers cease to use the equipment that is included in this agreement unless they went out of business and, if they went out of business, I assume the company would take their equipment back.

A. If he changed suppliers.

Q. I assume that is not frequent.

A. Yes, sir, it is frequent.

Mr. Hanley: That is objected to as a misstatement as to what Exhibit 80 is and says. The question deceives the witness. The statement to which counsel alludes is as follows: "In event dealer shall at any time cease to use any of the items of equipment herein mentioned for the handling of petroleum products supplied by Company, it is understood that dealer shall from the date of such discontinuance pay as rental—" There isn't anything mysterious about that, your Honor.

Mr. Austin: Well, I would like to be told.

Trial Examiner Ballinger: He wanted to know.

3617 Mr. Hanley: I say that when counsel says that rent is due only when the dealer goes out of business or quits using the equipment, that that is a misstatement.

Trial Examiner Ballinger: The document is very clear except as to what rental he shall pay.

Mr. Hanley: If your Honor thinks that material, he may answer.

Mr. Austin: He did not make any statement. I asked the witness when such rental would be, and I said: "Would that be when he went out of business?" It seems to me that Mr. Raupagh might be able to tell me. That is all I want to know. I am just an outsider when it comes to the use of your agreement, and I don't intend to make any statement on the subject. I never saw it until five minutes ago, but I was only trying to find out whether this rental clause became effective frequently or whether that is something that is put in there simply to cover an unusual case, and beyond that, I did not intend to go.

Trial Examiner Ballinger: You may ask the witness if he can tell you.

The Witness: I can't tell you.

Trial Examiner Ballinger: If he doesn't know—

Mr. Hanley: If you really wanted to know, you had better come to me. I drew up the form. That is the thing to do in this kind of a situation.

3618 Trial Examiner Ballinger: Off the record.

(A discussion ensued off the record.)

Trial Examiner Ballinger: On the record.

You may proceed.

By Mr. Austin:

Q. Referring to the kinds of equipment which are in practice listed on the equipment loan agreement, I ask you again whether there are any other types beyond what we have mentioned here on a couple of occasions this afternoon.

A. Not that I recall right now.

Q. Is any other such equipment supplied or rented by the Standard Oil Company at any retail stations, which are supplied by the Stikeman Oil Company, the Wayne Oil Company, or the Citrin-Kolb Oil Company?

A. No.

Q. Does that include the stations which they operate as retail stations?

A. Yes, sir.

Q. Does that answer—is your answer the same if directed to the question of identification advertising?

A. Identification advertising, we furnish identification advertising to the stations which the jobbers supplied.

Q. And that is also true of Ned's Auto Supply Company?

A. Yes, just the identification advertising.

Can you state why the Standard Oil Company fur-
3619 nishes the identification advertising to its jobbers,
but does not furnish other types of equipment? I
assume that has something to do with policy.

A. That is the policy of the company, yes.

Q. Why does the company differentiate between those two types of equipment?

A. I don't know. Most likely it sells one on a tank car basis and one on a tank wagon basis.

Q. Well, the identification advertising is the same type of advertising, isn't it, whether it is supplied to a jobber or a retailer?

A. That is right, but it is always a good plan for us or any oil company to have it at a service station.

Q. Can such advertising with your brand names on it be obtained from any other source except from your company?

A. No.

Q. And is it the policy of the company to retain ownership of all such advertising?

A. Yes.

Mr. Austin: That is all I have on that subject, your Honor.

Trial Examiner Ballinger: It now being 6 o'clock, the hearing is adjourned to ~~be~~ reconvened at—

Off the record.

(A discussion ensued off the record.)

3620 Trial Examiner Ballinger: On the record.

To be reconvened at 9:30 A. M., May 9th, 1941, in Room 859 Federal Building, Detroit, Michigan.

(Thereupon at 6 o'clock P. M., an adjournment was taken, to reconvene at 9:30 o'clock A. M., May 9, 1941.)

3621 Room 859, Federal Building,
Detroit, Michigan,
May 9, 1941.

Before:

Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., Attorney for the Federal Trade Commission.

Harold R. Hanley, Esq., 910 South Michigan Avenue, Chicago, Illinois, and Arthur J. Abbott, of the firm of Abbott, MacMahon, and Roberts, 2230 Buhl Building, Detroit, Michigan, on behalf of the Respondent.

3622 PROCEEDINGS.

Trial Examiner Ballinger: We will come to order.

This is a reconvening at 9:30 A. M., Eastern Standard Time, May 9, 1941, in Room 859 Federal Building, Detroit, Michigan, in Docket No. 4389, in the case entitled Standard Oil Company.

The last hearing was held in Detroit May 8, 1941.

The Reporter will note counsel for the Commission and Respondent present.

You may proceed.

Mr. Hanley: There appearing to be some confusion in numbering of the Retail Gas Dealers News magazine exhibits, counsel for Respondent re-offers the same as follows:

The issue of September, 1940, being marked Respondent's Exhibit 77-A, the face sheet, 77-B, being page 3, 77-C being page 10 thereof. There is offered the issue of January 1st, 1941, as follows: Exhibit 78-A being the face sheet thereof; 78-B being page 3 thereof; 78-C being page 12 thereof; and the additional pages to be marked 78-D being page 7 thereof, and 78-E, being page 11 thereof. Further, there is offered the issue of March, 1941, being marked Exhibit 79-A, the face page thereof; 79-B, being page 5 thereof; 79-C, being page 29 thereof, and there is offered the additional page as 79-D, being page 20 thereof. The
3623 issue of April, 1941, marked Exhibit 80-A, being the face page thereof; 80-B, being page 3 thereof, 80-C

being page 6 thereof, and the additional exhibit 80-D, being page 9 thereof. The foregoing exhibits and the series 77-A, B, C, 78-A to E, inclusive, 79-A to D, inclusive, and 80-A to D, inclusive, are offered in evidence.

(The documents referred to were marked, for identification, "Respondent's Exhibits 78-D and E, 79-D, and 80-D.")

Trial Examiner Ballinger: The Commission acts only in the interest of the public. The source of its information and the reasons for its acts are matters that are not open to inquiry in this proceeding. The tendered documents are rejected.

P. A. RAUPAGH was thereupon recalled to the stand, and having been heretofore duly sworn, testified further as follows:

Cross-Examination (Continued) by Mr. Austin.

Q. Mr. Raupagh, in your direct examination, you enumerated 12 brands of gasoline that you classified as major brands in the Detroit area, but you stated that that classification had no reference to the volume of gasoline sold of those brands in the Detroit area, and you also named 3624 some other non-major brands, and I believe stated that there was more gallonage of some of those brands sold in Detroit than some of the brands that you classified as majors. Is that correct?

A. That is correct.

Q. With that classification in mind does the volume of gasoline sold in the Detroit area, as between those different brands, both major and non-major, have any reference to the retail price levels at which the different brands are sold?

A. No.

Q. Then, is it your opinion that as between the different brands, the volume sold in the Detroit area is not affected by the retail price at which they are sold?

A. Oh, yes.

Q. That's what I intended to ask you before.

A. If so, it wasn't clear to me.

Q. I phrased the question a little differently the second time, but I will ask you again, then, whether the volume of gasoline sold in the Detroit area at retail, as between different brands that you named, including all of them, major and non-major, is not affected by the price at which the various brands are sold.

A. Yes, I believe that has an effect.

Mr. Hanley: Will you ask him what majors you 3625 are referring to; or he is referring to, in his answer?

Mr. Austin: Yes. The first question I asked him —I think the record is clear on that, unless you want it read back.

Mr. Hanley: I just want to know, Mr. Raupagh, if you are talking about your classification of major marketers in Detroit that you have heretofore given, in your answer to that question.

Mr. Austin: The record so states. I think it is entirely clear.

Mr. Hanley: You used the designation "12 majors." There were more classified by Mr. Raupagh. I want to know whether he is referring to the 12 or to the entire list.

Mr. Austin: My understanding is he referred to 12, which he classified as majors in Detroit.

Mr. Hanley: He classified more than that.

Mr. Austin: As major brands?

Mr. Hanley: Yes, sir, as major marketers.

Mr. Austin: I don't believe that ought to be in the record. I am perfectly willing to stand on the record.

Mr. Hanley: I am trying to avoid any redirect examination. I would like to have it clear as we go along.

Mr. Austin: I am satisfied with the record as it stands. Therefore, I object to any further questions on cross-3626 examination.

Trial Examiner Ballinger: Proceed.

Mr. Austin: My opinion is that the record is clear. If it isn't, it can be brought out later.

By Mr. Austin:

Q. What is the normal price differential, Mr. Raupagh, between major brand and non-major brand gasoline?

A. There is no normal price differential.

Q. Referring to the volume of different brands, I am correct in stating that you classified the Joy and the Zip gasoline as non-brand, am I not?

A. No.

Q. Didn't you say that they were not major brands?

A. No.

Q. Do you say that they are major brands?

A. Yes.

Q. Well, I think that may be contrary to your previous testimony, but, if so, I am sure that—then, I would like to have you make a complete statement at this time of all brands of gasoline which you claim are major brands in Detroit. I think in view of that previous answer, the record may need clarifying.

Mr. Hanley: There isn't anything contrary about it. May I say to your Honor and counsel that I think the confusion arises here out of the fact that Mr. Raupagh
3627 testified to the names of 12 companies which were
denoted majors in the exhibits which undertook to differentiate certain classes of gasoline as between jobbers and other companies. Now; Mr. Raupagh testified to those 12 because they were the ones that were used and the gasoline fell into certain groupings in Exhibit 58, for instance, and other marketers' gasoline fell into other groupings in that exhibit, but when Mr. Raupagh was asked what he considered as the major brands marketed in Detroit, he added many other names to that list of 12. I was confused myself for a little while, you may recall, but that is the only place that list of the 12 has in this record or in the testimony of Mr. Raupagh.

Mr. Austin: You mean, just in the exhibits?

Mr. Hanley: To identify the gasoline that was referred to as the major group in those exhibits.

Mr. Austin: Well, I don't pretend to know why it was referred to in the exhibits one way and in the testimony in another way.

Mr. Hanley: Well, the reason for that is, if your Honor please, that some of these marketers, like Zip and Joy, market exclusively in Detroit. The other marketers, like Sinclair and the Standard Oil Company, market all over the State, and the effort was to classify the groups so that the true picture in Detroit could be portrayed.
3628 Now, have I correctly stated your testimony, Mr. Raupagh?

The Witness: Yes, sir, you have.

Mr. Austin: Well, we will try to avoid further inquiry into major and non-major, which is beside the point.

Mr. Hanley: We have no objection to asking the witness to recapitulate what he regards as majors.

Mr. Austin: No, but for the purpose of these classifications, we will refer to the classifications on the exhibits which I believe refer to certain brands as major brands and certain brands as non-major or off-major or off-brand gas. Well, it really doesn't make any difference for the present question, anyway, because I am going to ask you specifically about Joy and Zip, and whether that is a major or a non-major brand is immaterial for the purpose of this question.

By Mr. Austin:

Q. And your testimony is that they sell, or did sell in 1940, a volume of about 40,000,000 gallons of gasoline in the Detroit area?

A. Charles E. Austin, selling Joy gasoline, sold in Detroit in 1940; 17,900,000 gallons of gasoline.

Q. Is that just the Joy?

A. That is just the Joy brand.

3629 Q. And how much was sold by the Zip?

A. Sunny Service, Puritan Oil Company, selling the Zip brand of gasoline, sold, in 1940, 12,490,000 gallons.

Q. That is around 30,000,000, for the two of them?

A. That's right, sir.

Q. Is that volume due largely to the price at which that gasoline was sold at?

A. Price and acceptance of the product.

Q. Doesn't—

A. It has been—pardon me, sir.

Q. Isn't the acceptance caused very largely by the price?

A. Partially. However, advertising is also a great feature.

Q. In your opinion, if the Joy and Zip gasoline were never sold for more than 2¢ per gallon below the prevailing major retail price, would they be able to maintain their present volume?

A. I don't know. With their methods of extensive advertising, at times giving premiums, they would maintain a very substantial volume, I am sure of that. Just how much, I can't say.

Q. Your opinion is, then, Mr. Raupagh, if all the brands of gasoline which you named, regardless—well, we will again have to refer to the ones which are classified as majors and non-majors, and I suppose we had again

3630 better refer to those exhibits as a means of framing the question.

In your opinion, if all of those brands, both major and non-major, were sold at the same price, would there not soon be a shift in volume to the major brands and away from the non-major brands?

A. That would depend upon the quality that would be maintained, either by the non-majors, as referred to in the exhibits, or the majors.

Q. Well, I am assuming that it would be the same gasoline that is sold now.

A. Oh, I think that the non-major would always have a place in the picture.

Q. You would be very glad if all the gasolines were sold at the same price, wouldn't you?

A. Oh, I would be delighted, yes, sir.

Q. I believe you testified, Mr. Raupagh, to the fact that times in 1938 were not as good as in 1937 or 1939.

A. That's right.

Q. And I think you said people driving autos didn't have as much money to spend.

A. That's right.

Q. Referring again to the matter of price: In your opinion, was price, or was it not, a bigger factor in influencing retail sales in 1938 than it would be in a more prosperous year? I mean, retail price.

3631 A. I would say that it was quite a large factor, yes.

Q. And would you say that price is a larger factor in influencing retail sales in a year such as 1938 than it would be in a more prosperous year?

A. I believe so.

Q. And isn't it true that the off-brand marketers increased their gallonage in 1938?

A. Very materially.

Q. Now, you recall that there was something of a price war in November of 1939 when both retail prices and wholesale prices were changed quite frequently, and very unstable; is that right?

A. That's right, sir.

Q. And you stated that after November, 1939, or in the latter part of November, 1939, the price-cutting situation corrected itself. I believe those were the words that you used; that is, the words: "Corrected itself" to a large extent. Was that your testimony?

A. Something along that line. I don't recall it exactly.

Q. I will ask you now whether the price-cutting situation in Detroit did correct itself in the latter part of November, 1939, to a large extent?

A. Yes.

Q. Have retail prices been more steady since that time than they were in the year or two years previous?

3632 A. To a degree, yes.

Q. What is the reason for that, in your opinion?

A. Well, one of the main reasons for that is that a smaller dealer margin—I think that is always a big factor.

Q. I don't understand you. I am asking why, in your opinion, the price-cutting situation corrected itself at that time or why prices have been more stable since that time; with reference particularly to why there was a change at that time.

A. You mean—

Q. At the end of November, 1939.

A. One of the main reasons why there was a change at that time, I believe it was in—I believe it was some time in September or October, 1939, when the Sun Company went into a sort of a rampage here and got some of their dealers to sign agreements to the effect that if they would sell at a margin of 2¢ to the dealer, the dealer tank wagon price would be a certain amount, and reduced the tank wagon price. That was followed by the Socony Vacuum Oil Company and the Shell Oil Company, and some of the other oil companies.

Q. That was Sun that you mentioned first?

A. Yes, sir; that was Sun Company.

Also, at that time, the Sun Company introduced a

3633 new gasoline. They started with a new line of advertising; namely, that their regular grade of gasoline was equal to premium or Ethyl brand gasoline. That all broke about the same time.

We never reduced our price, our dealer tank wagon price, to the lowest price to which the Sun Company reduced their price.

The Sun Company also started out and gave that price to certain dealers who would sign this agreement or letter. When we reduced our price, we made it effective to all the dealers in the area.

That went on for a period of three or four weeks or something like that, until finally the price leveled down, and those companies that had those letter agreements with their dealers, withdrew them. We had none. We had no arrangements or agreements with our dealers.

I think that was one of the main factors that caused a very wide demoralization, to start with.

Q. Well, why was the price situation better after the Sun Oil Company and the others raised their tank wagon price back to where it was before?

A. Well, I think they were all sick of it. In plain words, I think that is the case. I think it was a very unfair thing, as it was.

Q. Is it your opinion, then, that that situation had 3634 some effect upon the retail price situation?

A. Oh, absolutely, it had an effect upon the retail price situation.

Q. Well, I think it did affect the retail price situation after the tank wagon price was moved back to 8.1¢.

A. Well, for the reason that the major companies, as well as the dealers, were all sick of it, and they were more willing and ready to go on a more stable basis.

Q. Don't the Sun Oil Company state that it was lowering its tank wagon price in order to enable its dealers to meet the prices charged by the dealers, such as Ned's, who bought in tank car lots from the other companies?

A. They made no such statement publicly. The only thing they did was to write up a letter in their own office and go around to their dealers and try to get their dealers to sign these letters and go on a different retail basis, and, I will repeat, they did introduce their new gasoline, the breaking of new advertising about the same time seemed to all, looked like a pre-arranged proposition.

Q. When was the new gasoline advertising? Was that before or after that cut in the tank wagon price?

A. Just about the same time. It wasn't before, but it may have been a few days later, but it all came about the same time.

Q. Well, that new gasoline and the new adver-3635 tising was, of course, advertised all over the country, was it not?

A. I don't know as to that. I can't say to that, because I don't know whether they had it available all over the country.

Q. Well, do you know whether they cut their tank wagon price at that time anywhere else except in Detroit?

A. Oh, they did at various times later than that.

Q. I say at that time did they make the same move on their tank wagon price in any territory that they made here or do you know?

A. What do you mean by territory?

Q. I mean to say just now, referring to some cut in the tank wagon price made by the Sun Oil Company in November of 1939.

A. Yes.

Q. And I assume you were speaking of the Detroit area?

A. Yes, sir.

Q. Do you know whether they made any similar cut in any other area which they made at the same time?

A. Oh, yes, they went clear up to Pontiac and a week or two weeks later in Lansing they did the same thing.

Q. That is in this division?

A. Yes, sir.

Q. And that was all about the same period?

A. Yes, sir.

3636 Q. Do you know whether they did it anywhere else outside of Michigan?

A. I read in the trade journals that they did.

Q. At that time?

A. Yes, sir.

Q. Do you have any personal knowledge of that at all; that is, from any reports to your own company?

A. No.

Q. And is it true, then, that after the Sun Oil Company raised its price back to 8.1¢ a gallon that I believe Standard Oil and Socony did the same, and that after that time the retail prices were more stable?

A. That is right. I don't subscribe exactly to those raises. I don't know who raised first or last.

Q. I wasn't attempting to state who raised first or last, either, but I am sure that the price of 8.1¢ on house brand gasoline is correct.

Do you remember a Mr. McDonald of the Federal Trade Commission?

A. Very well, sir.

Q. Wasn't he in Detroit and didn't he call on you about that same period; that is, during November of 1939?

A. It was the latter part of 1939. I don't remember the exact date.

Q. Do you think the fact that Mr. McDonald was
363 here and was known to be investigating the price
situation had anything to do with the stabilization
of retail prices after November, 1939?

A. I don't think it had a thing to do with it. You wouldn't want me to say, would you, that he was the instigator, would you?

Q. The instigator of what?

A. Of the Sun Oil Company making that move?

Q. Well, do you think that, or do you care to express yourself? I am not pressing you for an answer.

A. Well, I am frank to tell you I don't think he had a thing to do with it.

Q. Do you keep in touch with the posted tank wagon price of other oil companies in Detroit, major oil companies?

A. Oh, yes. That is a matter of necessity and it is a matter of public knowledge.

Q. Are you familiar with the tank wagon price of the Argo Oil Company?

A. Well, when you say familiar—

Q. Can you tell me now whether it is as high or higher than the Standard Oil Company posted price on Red Crown?

A. I don't believe I can tell you for the past ten years whether it was as high or as low, because I think they are all over the map.

Q. Do they have a posted tank wagon price for
368 Marathon gasoline.

A. I believe they have a posted price, but I question whether they follow it.

Q. You mean you question whether they follow it in their sales to retail service stations?

A. Yes, I do.

Q. Well, how about the Red Indiana Oil Company? How does the posted tank wagon price on Fleet-Wing compare with the posted tank wagon price on Red Crown?

A. The same.

Q. Has it been the same during the last three or four years, to your knowledge, for most of the time?

A. Well, yes, I think it has been the same for most of the time. Well, of course, there are dates and so on that don't jibe.

Q. Well, if there is a change up or down of your own tank wagon price, perhaps some other tank wagon company major might not change theirs on the same date. I presume that is what you refer to?

A. Yes.

Q. But your answer is that, first, there is a tank wagon posted price on Fleet-Wing?

A. Yes.

Q. And, secondly, that it is generally, except for per-
haps brief intervals, the same as Standard Oil Com-
3639 pany tank wagon price on Red Crown?

A. Yes, I believe it is.

Q. Does the identification advertising that the Fleet-Wing service stations show that that gasoline is refined or produced by the Standard Oil Company of Ohio?

A. I don't believe it does.

Q. Is the brand Sohio used in Michigan at all?

A. No.

Q. Did the Standard Oil Company—that is, your company ever take any action to prevent the use of that trade mark in Michigan?

A. Oh, I think there has been times when they have used it on some of their dealers' stations, and they have used it, and I have made a report of it to our legal department.

Q. And has your legal department taken such steps—taken any steps to have that use discontinued?

A. Well, it did discontinue.

Q. You mean they discontinued the use of Sohio?

A. Yes. I think the discontinuance was as to the name of Standard Oil.

Q. Do you consider that your company has the exclusive right to the right—to the use of the name Standard Oil in Michigan, in connection with gasoline?

Mr. Hanley: I don't know what the materiality is. I
haven't any objection. If you know, go ahead and
3640 answer, Mr. Raupagh.

A. I can't answer from a definite angle, but that has been the understanding.

Mr. Austin: The only purpose, Judge, is I want to bring out if it is material that while Fleet Wing has been referred to as a major brand, because it comes from the Standard Oil Company of Ohio, that it isn't advertised in Michigan as a Standard Oil gasoline which, in my mind, might have some effect upon public acceptance.

Mr. Hanley: There is no objection to counsel pursuing that theory, of course, if he regards it as material, but it may be helpful if I state that the Standard Oil Company of Indiana does claim the right to the name Standard Oil, and any specific use of it applied to petroleum products within the State of Michigan.

Mr. Austin: I so understood, and that was about all I was trying to bring out.

Mr. Hanley: And we resist vigorously the attempted adoption of that name by any competitor; that is, as to petroleum products, of course. There are companies handling other things where they use the name.

Trial Examiner Ballinger: Off the record.

(A discussion ensued off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

3641 Q. I would like to show you Respondent's Exhibits 58 and 59, Mr. Raupagh, the second column on Exhibit 58 is headed "Total Sales—Detroit Area."

A. Yes, sir.

Q. And the second horizontal column on Exhibit 59 is headed "Consumption—Detroit Area."

Now, is the meaning of "Consumption—Detroit Area," as used in one exhibit, and, "Total Sales—Detroit Area," the same?

A. Yes.

Q. And is it not true that the figures under those titles in the respective exhibits are the same?

A. Yes, sir.

Q. Now, I wanted to ask you, Mr. Raupagh, whether those figures for sales or consumption, as they are called in their respective cases in the Detroit area, include consumption by commercial consumers?

A. Yes, because they operate motor vehicles.

Mr. Austin: I wanted to clarify that, your Honor, simply because I think, on the face of these exhibits, it might naturally be inferred that the 100% totals under the columns I named were 100% of the totals of the other columns. Unless you took the trouble to add up the other columns and see it didn't come out, which I presume it wouldn't.

3642 In other words, I assume the totals of the other columns would not add up to the totals for the Detroit area.

Mr. Hanley: Off the record?

Trial Examiner Ballinger: Off the record.

(A discussion ensued off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Take Exhibit 58 again, Mr. Raupagh, and it appears that the total of columns 8, 9, and 4, equals column No. 2.

A. That's right.

Q. Now, that being true, where does the consumer use or the sales to consumers appear; which one of those columns?

A. Well, it appears in the totals, because we took all motor vehicle registrations in the area.

Q. Oh, I see. Then, in your total for Standard Oil Company sales, column 4: "Standard Oil Company sales excluding jobbers," that includes your sales to commercial consumers?

A. Yes.

Mr. Austin: Off the record?

Trial Examiner Ballinger: Off the record.

(A discussion ensued off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

3643 Q. I suppose, Mr. Raupagh, that the jobbers also do some consumer business?

A. Yes; a little.

Q. Other than through the retail service stations?

A. Yes, they do; a little.

Q. I should have said commercial consumer business.

A. They do a little, yes.

Q. Did you testify, Mr. Raupagh, that the business of the four Standard Oil Company jobbers per outlet did not increase in 1937 over 1936?

A. I don't remember whether I testified to that or not.

Q. Do you recall being asked about the increase of the volume of the jobbers in 1937 over 1936 and then you were asked whether the Citrin-Kolb Oil Company didn't increase its number of outlets, and then you were asked whether, figuring the amount of gallonage per outlet for the four jobbers, there was an increase in their business in 1937 over 1936, and I think you stated that there was no increase per outlet, although there was an increase in total gallonage.

A. I believe that's right.

Q. Have you got any computation there or figures that you prepared on that?

A. We did have. We checked that with the jobbers.

Q. Well, those figures, of course, for their volume, 3644 appear in the State Gasoline Division reports, do they not?

A. Yes, they do.

Q. And have you those figures with you; that is, have you any computation with you which you made, as to the number of outlets and the gallonage per outlet?

A. I haven't any of that computation with me.

Q. Well, in making that computation as to the total gallonage of the respective jobbers during the four years or, rather, the total gallonage for the four jobbers, I believe is what we referred to, and also the gallonage per outlet, when you testified that the gallonage per outlet did not increase in 1937 over 1936, were you including the four outlets then operated by Ned's Auto Supply Company?

A. As I remember the testimony, I think that was only asked me of the Citrin-Kolb Oil Company.

Mr. Austin: Well, if your Honor please, I have the testimony here and I think perhaps the best thing to do would be to find it and if you give me a moment, I think I can locate it.

The Witness: May we go off the record for just a moment and take a short recess?

Trial Examiner Ballinger: We will take a recess for five minutes.

(A short recess was taken.)

Trial Examiner Ballinger: Come to order.

3645 By Mr. Austin:

Q. Mr. Raupagh, do you recall certain testimony that you gave regarding Charles Gershenson, you stated, I believe, that he at one time, on behalf of the Ned's Auto Supply Company, applied to you or to your company to lease to Ned's certain service stations, the property of which was owned or leased by the Standard Oil Company?

A. Yes, I remember?

Q. And you said that you declined to lease those stations to Ned's Auto Supply Company?

A. Yes?

Q. And Ned's—did Ned's want to operate that station as Standard Oil Company retail stations?

A. Well, they wanted to operate them as Ned's retail stations, I assume.

Q. But they wanted to operate them as Standard Oil Company stations, did they not?

A. Yes, that is what they had in mind.

Q. Did they have in mind, in making that request to you, that the gasoline, that is, if your acceded to that request, to lease them the station, that they would supply the gasoline from their bulk plant, or was it to be supplied by you by tank wagon?

A. Oh, no, that was to be supplied by them from their bulk plant.

3646 Trial Examiner Ballinger: I did not understand that.

The Witness: Oh, no, that was to be supplied by them from their bulk plant.

Mr. Hanley: That is what they told you.

The Witness: Yes.

Mr. Hanley: You are stating what Ned's had in mind.

Trial Examiner Ballinger: That was their understanding?

The Witness: That is what they told me.

By Mr. Austin:

Q. Why did the Standard Oil Company refuse that request?

A. Well, we just did not think that was good business, at least, I did not.

Q. Have you ever leased any of your service station properties, and by your service station properties, I mean those properties which you either own or lease from the owner?

A. Yes.

Q. Did you ever lease any of those properties to anyone except a service station operator under one of your lease, regular lease agreements?

A. Just a service station operator.

Q. And did you ever lease one of those properties to anyone who proposed to obtain his gasoline from any other source than tank wagon delivery from the Standard Oil Company? 3647

A. I never had anyone propose that, even.

Q. Well, Ned's proposed it this time?

A. Oh, no.

Q. You just said that Ned's proposal was that they would not receive gasoline from those stations by tank wagon, they wanted to supply it from their own bulk plant.

A. That's right.

Q. I am asking you whether you have ever leased service station property to anyone except an operator who was to receive his gasoline by tank wagon purchase from the Standard Oil Company.

A. I don't recall we ever did.

Q. And that is a policy of the company; at least, in the Detroit field?

A. That is my policy.

Trial Examiner Ballinger: Well, your policy is subject to approval or disapproval by the company?

The Witness: That's right.

Trial Examiner Ballinger: Did you act independent of the company?

The Witness: I will answer that by saying that that is a policy of the company, your Honor.

By Mr. Austin:

3648 Q. Isn't the reason for that policy that the company considers it more profitable to sell its gasoline to the service station by tank wagon delivery rather than to supply it to the jobber and let him supply the station from gasoline that he purchases at tank car?

A. I don't know what the reason for the policy is, Mr. Austin.

Q. Well, in your opinion, would your operation in the Detroit area be more profitable if you could lease a large number of your service stations to jobbers so that the service station would be supplied by the jobber, and the gasoline would be sold by you to the jobber at tank car prices rather than direct to the service station by tank wagon?

A. I have no opinion on it. I have never gone into those figures.

Q. Have you a copy of Respondent's Exhibits 60 A to 60-D, Mr. Raupagh?

A. Yes, sir.

Q. Will you turn to the year 1938 on Exhibit 60-B. If you will notice opposite the date February 15, 1938, that Exhibit shows a figure of 913 for the number of service stations selling below the prevailing retail market price on house brand gasoline on that date.

A. Yes, sir.

3649 Q. And then on March 4th shows only 79 stations selling below the prevailing market price?

A. Yes, sir.

Q. What was the reason, in your opinion, for that very great decrease in the number of service stations selling below the prevailing price in such a short time?

A. The reason for that decrease was that I believe about that time there was quite a controversy between the gasoline dealer association and the A. F. of L. Union.

Q. What union would that be?

A. American Federation of Labor.

Q. I mean what class of employees were in that union?

A. Well, they were trying to organize the service station operators and also the helpers, and in that organization activity, they got quite a number of dealers to join their organization and one of their programs was that there should be no price signs posted at service stations, and they would go around, sometimes as many as ten or twenty dealers would go from one dealer to the other, and just about compel him to take his price signs down. I, myself, was threatened on that proposition.

Q. Well, did that happen just at this particular time?

A. I think that is the time it happened and, later on there was some bombing of service stations.

Q. In your opinion, is that the reason for the de-

3650 crease from 913 down to 79 in about two weeks?

A. Yes.

Q. Or about two and one-half weeks?

A. Yes, I think that was the reason.

Q. Now, turning over to Exhibit 60-C, you will find another figure there in the number of service stations selling below prevailing retail market, between November 15, 1938, and December 13, 1938, the figure drops from 869 down to 79 in exactly four weeks. What is the reason for that?

A. You will note that the dealer tank wagon price on November 15, 1938, was 8.8 and on December 13, 1938, it was 7.6. I don't just recall the exact date that there was a price change in the dealer tank wagon price, but whenever there is a price change of that kind—

Q. By "change of that kind" you mean a reduction, do you not?

A. Well, either way, whether it is up or down. Whether it is a reduction or an increase. Whenever that takes place, sometimes it takes a week or two weeks before the dealers will start posting their signs, price signs.

Q. Well, how does that effect a reduction in the number of stations?

A. Well, because they did not have any prices posted.

3651 Q. Well, in that case, how would the prevailing price be determined for such a period?

A. We determine it the best way we could.

Q. Well, was that reduction in the number of stations cutting due to the fact that a large number of them did not post prices?

A. That is the main reason for it.

Q. And, in your opinion, is there any—was there a prevailing retail price at that time, as you have described it, meaning a price posted by more than 65% of the service stations?

A. Oh, yes.

Q. Well, you just stated that a great many of them did not have a posted price.

A. That is right.

Q. How do you reconcile that by saying that the prevailing price here is the price posted by a great majority of stations or by over 65% of them?

A. Well, we found that there were only 79 stations in this case—that is the date you mentioned?

Q. Yes, December 13, 1938.

A. We found that there were only 79 stations that were selling below, or that were posting a price below the price of house brand, below the prevailing retail price of house brand gasoline.

Q. Well, was that because the prevailing price was reduced?

3652 A. I think that had something to do with it.

Q. I still don't understand why that would result in—it might result in a change in the prevailing price, but I still don't understand why that would result in a decrease of nearly 800 stations out of 869 stations in the number that were selling below the prevailing price.

A. Well, they generally try to make a new start, and they start in, perhaps, most of them at the same price, and from there on, it gets worse and worse as it goes on.

Q. From there on, certain stations start to cut; is that right?

A. Yes.

Q. And then that spreads?

A. Then that spreads.

Q. Now, there is another substantial decrease in the stations selling below prevailing market price between February 24, 1939, and March 17, 1939. Is there any particular reason that you can describe for that? It is on Exhibit 60-D. The first two figures at the top. That is not such a large decrease as the other two.

A. No, I don't know any reason for that particular decrease, except that it was there. Sometimes the activities of the Gasoline Dealers Association has something to do with that.

Q. Would you say that it has been the policy of your office to have a survey such as this conducted periodi-
3653 cally to determine the number of stations selling be-
low the prevailing retail market price and the amounts of the price cuts?

A. Yes.

Q. Well, it appears that statistics were made on that very frequently during 1938?

A. That's right.

Q. And then when we get over to 1939, we find that the statistics, at least as shown on this survey, are much less frequent?

A. That's right.

Q. Did you make these surveys as frequently in 1939 as you did in 1938?

A. I don't believe we did. In the first place, to make these surveys is a tremendous task, and it takes a lot of time to do it properly.

You will note, also, that in 1936 and 1937 we didn't show on the survey in regard to the premium grade gasoline, because that involves a lot of work and we didn't think that was necessary.

Q. You did do it in 1938 on all three; very frequently.

A. That's right. We did it in 1938 and we did it for October, November, and December, 1937, and we discontinued that again in June, 1938; as far as showing on pre-
mium or third grade gasoline, because that is only a
3654 small percentage of the business, and we like to cut
down our work and not make it too burdensome.

Q. Let us just stick to the house brand and the third grade. That appears to have been made all the way through these computations.

A. Yes.

Q. Now, why did these surveys stop in 1939 and the next one in June, 1940, and there are only two for 1940?

A. Sometime in that period; I don't recall just when, we had complained to our principals, the Chicago office, that it took too much time to make these surveys, and instructions were changed on them; that it wasn't necessary to make them as often as we had been making them.

Q. Didn't you make any such survey during November or December, 1939?

A. November or December, 1939? No, I don't believe we did.

Q. Does this exhibit, Respondent's Exhibit 60-A to 60-D, show a record of all such surveys that were made by the company from 1937 to date?

A. Yes.

Q. Do you have any records, Mr. Raupagh, or any estimates which you have made for your own benefit and your company's benefit, of the volume of gasoline sold in the Detroit area by the various oil companies, either
3655 majors or non-majors, who do business here?

A. We have some such records, yes. We have some records where we can figure the information off the records of the gasoline tax department reports, but on some of the major companies, that's impossible to do.

Q. Why is that?

A. Because they do not segregate that on the report.

Q. You mean the report shows the business for the entire State?

A. That's right.

Q. Do you have any estimates of the percentage in the Detroit area of the business done by the different major companies?

A. No, I haven't.

Q. Perhaps you can tell me which companies do the greatest volume of business in gallonage of gasoline in the Detroit area.

A. I can give you a pretty close guess, if that is what you would like.

Q. Who is the largest?

A. Who is the largest?

Q. Yes; in gallonage.

A. I think the Standard Oil does the biggest volume, although we may be pretty close—or Sun Oil Company may be pretty close to us, now.

3656 Q. In case you are first, would you name Sun second?

A. I would name either Sun or Socony Vacuum second.

Q. Are those three the largest in volume in Detroit?

A. Yes.

Q. Is Socony Vacuum near Sun, in volume?

A. Yes; they are near Standard Oil.

Q. Do those three stand out? In other words, is there a fourth or a fifth, whose volume approximates the volume of the three you have named?

A. Of course, that is very indefinite. You understand I am guessing, myself.

Q. Well, you would know, wouldn't you, Mr. Raupagh? You certainly have a very good idea, based upon the information that you have available, as to whether or not—the number of companies that do the largest volume. You have stated three, and I am trying to get it, if I can phrase it properly—you have named those three, and then there is a considerable drop before you come to the next one, or is there any other that is almost as large as the three you have named?

A. I think the Hi-Speed brand of gasoline would come next. I think Sinclair would come after that. I am just trying to find that list; to be a little more specific (referring to documents).

Q. How does the volume of the Hi Speed company 3657 in the Detroit area, if you can give me an estimate, compare with that of Sun or Socony Vacuum?

A. It may be about ¼ to ⅓ of the volume of Socony Vacuum or Sun. Shell Corporation comes in there.

Q. I understand you feel you can give me any percentages which would be approximately correct, upon the percentage of the total volume in Detroit that is handled by your company or by Sun or by Socony Vacuum Company. Could you give me that percentage or estimate on the three?

A. I couldn't give it on the three. I can give it to you on ours.

Q. I think that has already been done. It is in one of the exhibits.

A. It is in the exhibit.

Q. I think it is 16.2% for 1946

A. That is right, but I would rather not guess on the others, because that is uncertain.

Q. You mentioned the Socony Vacuum Oil. Does the Socony Vacuum Oil Company sell gasoline at tank car prices to any jobbers in the Detroit area?

A. None that I know of.

Q. I would like to ask you another question, Mr. Raupagh, which I asked you on the Commission's case on direct examination, but I want to check it, and that is as to the number of stations, service stations supplied
3658 by the Standard Oil Company in the Detroit area, including Dearborn, Hamtramck, and Highland Park, as of January 1, 1941.

Trial Examiner Ballinger: Can you answer that question?

The Witness: What is the question, please?

Trial Examiner Ballinger: Read the question.

(The last question was read.)

By Mr. Austin:

Q. Now, to make that perfectly clear, in view of the terminology we have been using, I will say instead of service station; I will ask you as to retail resellers.

A. Just a minute.

Mr. Hanley: Was there any definite answer given to you, Mr. Austin, on direct?

Mr. Austin: Well, perhaps the question wasn't phrased exactly the same, but I think there was a definite answer in the record.

The Witness: 438. That includes jobber stations and Standard Oil Company stations. Is that the way you want it?

By Mr. Austin:

Q. No. As to the supplier? You don't supply these jobber stations.

A. Oh. In that case there were 332.

Q. I think that the figure you gave me on direct
3659 examination was 336, but that is near enough, but I was under the impression that there were 400. This figure of 438 includes such stations as supplied by the Citrin-Kolb Oil Company and the Wayne Oil Company?

A. I think you might have been mixed on the phraseology, because 438 stations flying the Standard brand flag.

Q. That is what puzzled me, because the information

I had was that there were over 400 of them. However, that would be a difference of about 110 stations and it has not been my understanding from the testimony in this case that those four jobbers supply 110 retail stations between them.

A. They supply 106.

Q. Do they?

A. Yes.

Q. Well, then, perhaps Stikeman Oil Company has more than I know about.

A. It is in the exhibits.

Q. What exhibit would that be in?

Mr. Hanley: I don't have the number, but here it is, Mr. Austin. It is No. 53. Wait a minute. Is that the one?

Mr. Abbott: Yes.

Mr. Hanley: Here. That (indicating) has the figures.

Mr. Austin: Was this in evidence?

3660 Mr. Hanley: Yes, both of these (indicating) were in evidence.

Mr. Austin: What number is this?

Mr. Hanley: I don't know.

Mr. Austin: This hasn't got the number of the stations.

Mr. Hanley: Well, they are both in evidence.

Mr. Austin: The number of retail outlets supplied, yes, this has it. Thank you, Mr. Raupagh. I never did understand the figure of 336, and now I think it has been explained to me. Perhaps everyone else understood it. I don't know.

By Mr. Austin:

Q. One reason I did not understand that was that in our records which Mr. McDonald compiled, I think his information was about 450 stations that—he may have been mixed up in the same way that I am here, but I think he reported that there were about 450 stations supplied by the Standard Oil Company in 1939, and that about 200 of those were the 461 stations, and the others were lessees. Now, is that figure much too high?

A. He must have gotten his figures from some other source than the Standard Oil Company.

Q. Well, I was under the impression that he got them from you, but I won't state that as a fact.

3661 A. He, no doubt, got them from some other source.

Q. Anyway, it is no secret. The stations are there and anybody can count them, so I am not in any way questioning your answer.

A. As a matter of fact, there are very few secrets in the oil business.

Q. I believe you have six bulk plants in the Detroit area.

A. Yes.

Q. And the deliveries by tank wagon to the retail stations are made from those bulk plants, with the exception of a few near the marine terminal?

A. That's right.

Q. I am just recalling the testimony on that.

How many bulk plants do you have in the Detroit field? Do you have any outside the City of Detroit?

A. Yes, surely.

Q. Do you operate them in Lansing or Ann Arbor?

A. Yes.

Q. Are deliveries to service stations in Lansing and Ann Arbor made from bulk plants located there?

A. Yes.

Mr. Austin: I might say, Judge Hanley, this is slightly off your direct, but if you don't object, I would like to ask a couple of questions along this line. I will concede 3662 it wasn't on your direct.

Mr. Hanley: Go ahead.

By Mr. Austin:

Q. Can you tell me where bulk plants are located outside the City of Detroit?

A. We have main plants located at Pontiac, Lansing, Jackson, Monroe.

Q. Is that all in your field?

A. That's all in our field.

Q. Is Pontiac in the Detroit field?

A. Yes. And then we have a large number of small bulk plants that we use to serve the rural communities, and also the resellers and other demand in that territory.

Q. How are those bulk plants supplied?

A. They are supplied either by tank car or tank truck.

Q. And where you use the transport truck or truck-train, you employ haulers for that, do you not?

A. Yes, sir, we employ contract haulers.

Q. And that operation is the same whether it be transportation to a bulk plant outside of the Detroit or whether it be to one in Detroit?

A. Yes.

Q. And in all cases do you use your own trucks to transport gasoline from the bulk plant to the service stations?

A. Yes, sir.

3663 Q. Can you tell me the total number of bulk plants that you have in your field, including the six in Detroit?

A. I would like to get that figure accurately, if you like it.

Mr. Hanley: We can give it to you accurately, if you want it. 99.

By Mr. Austin:

Q. 99 bulk plants?

A. 99.

Q. You have described some of those. How would you describe them; small or big; in size?

A. They are what I term small bulk plants. I mean by that they are bulk plants which have three, possibly four storage tanks, and by storage tanks I mean bulk plants that are located upon foundations above the ground.

Each storage tank holds all the way from ten or 12,000 gallons to seventeen or 18,000 gallons of gasoline.

Q. Are all those bulk plants, regardless of size, supplied the same way, that is, by transport truck or tank car and directly from the marine terminal at River Rouge?

A. Yes, sir.

Mr. Austin: I think that's all I have.

Trial Examiner Ballinger: Judge, before you commence your redirect, if it is agreeable, I would like to ask the witness one or two questions.

3664 Mr. Hanley: Surely.

Examination by the Trial Examiner.

By Examiner Ballinger:

Q. The Examiner is a little hazy with reference to the requirements to obtain gas from the Respondent company in tank car lots. Is there any form of application used by the company?

A. No.

Q. Are the applications submitted in written form or by word of mouth?

A. You mean by the buyer?

Q. Yes.

A. By word of mouth, generally.

Q. Before you act upon them, do you act upon the application yourself, or do you submit the application to the Chicago office?

A. This is tank car purchases?

Q. Yes, sir.

A. Resellers?

Q. Yes.

A. I submit them to the Chicago office with my recommendation.

Mr. Hanley: Pardon me, Judge. May it be understood, which I think is the fact, that you are referring to a new prospective buyer? You are not referring to the purchases made by the jobbers, in this case?

3665 Trial Examiner Ballinger: I am referring to a prospective purchaser.

Mr. Hanley: Yes.

By Trial Examiner Ballinger:

Q. There have been such applications submitted and rejected, have there not?

A. Yes, there have been; in the past.

Q. Do you transmit the application to the Chicago office in writing?

A. Sometimes. Sometimes verbally.

Q. Without disclosing the name of any applicant, would you produce the correspondence; that is, the letter of transmittal, in any case, deleting the name of the applicant?

A. That is up to counsel.

Mr. Hanley: On one of these tank car applications?

Trial Examiner Ballinger: Yes.

Mr. Hanley: For what period of time would you want that?

Trial Examiner Ballinger: Any time during the period they have been furnishing gas in tank car lots.

Mr. Hanley: And do you want all of them; all the correspondence we have?

The Witness: His Honor asked for one.

Mr. Hanley: Oh, you just want one?

Trial Examiner Ballinger: Merely one.

3666 Mr. Hanley: Oh, yes; surely. We will try to do that.

Mr. Austin: I wasn't clear whether your Honor was referring to a letter written by Mr. Raupagh from the

Chicago office or a letter written by the applicant to Mr. Raupagh.

Trial Examiner Ballinger: Well, I understand that none of these applications have been made in writing, but all have been made by word of mouth.

The Witness: As far as the buyer is concerned. That is, within recent years, within two or three years.

Trial Examiner Ballinger: But in some instances, you made a report and submitted the application to the Chicago office in writing?

The Witness: Yes, sir.

By Trial Examiner Ballinger:

Q. In order to clear up the situation, the Examiner would like to have a copy of the letter of transmittal, deleting the name of the applicant.

Mr. Hanley: You will get it if we can find such. As far as the name is concerned, we are not very particular about that. If we can find those Miller letters and correspondence, if there is any, we will give that to your Honor. It has been brought into this case very briefly.

Mr. Austin: That, however, according to your
3667 interpretation of the matter, was not the usual testi-
mony in applications. As I understand it,—well, I guess it was, too, because I was thinking it was at the station, but he did not say that he had a siding, so I guess it was.

Mr. Hanley: I don't know that there was. We will find one.

Mr. Austin: Well, Mr. Raupagh said here, I believe, that Marvin Goldberg very recently made such an application. I don't know whether there was any correspondence on it.

Mr. Hanley: Do you know?

The Witness: Yes, but I did not even submit that to Chicago.

Mr. Hanley: Did not submit that?

The Witness: No.

Mr. Hanley: So there isn't any correspondence?

The Witness: No.

Trial Examiner Ballinger: That is all right. Have you anything further, Mr. Hanley?

Mr. Hanley: I don't think I have any questions, your Honor.

Trial Examiner Ballinger: Mr. Raupagh, you are excused.

(Witness excused.)

Mr. Raupagh: Well, I want to thank you, gentlemen.

3668 Mr. Austin: Thank you, Mr. Raupagh.

Trial Examiner Ballinger: Anything further?

Mr. Hanley: Your Honor, you aren't concerned particularly when we get that for you, are you? We can submit it some time.

Trial Examiner Ballinger: Any time.

Mr. Abbott: I will ask to have these documents, which consists of certified copies of the State records, marked Exhibits 82, 83, and 84, for identification.

Trial Examiner Ballinger: One moment. The last number I have here is 80. What is your last number, Mr. Reporter?

The Reporter: No. 80.

Trial Examiner Ballinger: Then it would be 81.

Mr. Abbott: That is right.

Trial Examiner Ballinger: How many are there?

Mr. Abbott: Three.

Trial Examiner Ballinger: There are several pages. Off the record.

(A discussion ensued off the record.)

Trial Examiner Ballinger: On the record.

The reporter will mark the documents handed him by counsel for Respondent as Respondent's Exhibit 81, containing nine pages; 82, containing nine pages; and 83,
3669 containing 23 pages, for identification.

(The documents referred to were marked, for identification, "Respondent's Exhibits 81, 82, 83.")

Mr. Abbott: Now, these three exhibits marked 81, 82, and 83, for identification, may be considered together inasmuch as they all relate to the same subject. They are all certified copies of State records.

Exhibit 81, for identification, is an opinion, certified by the County Clerk of Ingham County, in the case entitled *Frens v. Prosecuting Attorney of Ingham County*, being Case No. 20171, entered December 22, 1939, by the Circuit Judge of that county, holding Act No. 282, Public Acts of 1937, unconstitutional, particularly with reference to the provisions thereof authorizing the taking of a cost survey, which the Court holds, by this opinion, to be banned by the hearsay rule, and that the so-called cost survey violates the requirements of due process of law as guaranteed by both the State and the Federal Constitutions.

Exhibit 82 is a certified copy of the opinion of Hon.

Donald Van Zile of the Recorders Court of the City of Detroit, certified by the Clerk of said court, in the case entitled *People v. Stark Hickey,* No. A-15715, construing the validity of the so-called cost survey provision, which is Section 5 of the Act No. 282, Public Acts of 1937, of the State of Michigan.

3670 Exhibit 83, for identification, is a certified copy of the opinion of Hon. Guy A. Miller, Circuit Judge of Wayne County, Michigan, in the cause entitled *Argo Oil Corporation v. Duncan C. McCrea, Prosecutor of Wayne County, and the Retail Gasoline Dealers Association of Michigan, Incorporated, et al.,* being cause No. 274-429 (Chancery) in said court, which opinion holds that the cost survey, so-called, under the provisions of Act 282, Public Acts of 1937, is invalid.

I offer these three exhibits, identified as Exhibits 81, 82, and 83, for identification, in evidence. They are all duly certified by the Clerks of those respective courts.

Mr. Austin: They are objected to, your Honor, as irrelevant and immaterial and not relating to any issue in the case, and they apparently refer to a law known as 282 of the laws of Michigan of 1937 which is not in evidence in this case and it therefore appears that any decisions which interpret or pass upon the constitutionality of that law cannot be relevant. The law itself not being in evidence in the case, and there being no evidence introduced into the case in reliance of that law.

Mr. Abbott: Act No. 282 of Public Acts of 1937 is what has been referred to in this case many times, both by the number of the Act and also as the Fair Trade
Standards Act of the State of Michigan, and it has
3671 been referred to by Mr. Austin many times in the
record and also in Dr. Taggart's cost survey, which I think the record shows to be based upon this particular Act, has been testified to in the case, and it seems to me relevant, and there has also been this statement made, as I recall.

The other day Mr. Austin was getting a statement in this hearing, at this particular hearing in the Respondent's case, that there had been at least one case in the courts in this county in which there had been a conviction of some individual under this law, and I think it is relevant upon the question of the reliability of the cost survey, as testified to by the witness Professor Taggart, to show that at least three courts,—and these were all the decisions that I know that have been reduced to opinion form, these three courts have held that the survey is not only unreliable, but is invalid.

Trial Examiner Ballinger: The three Courts referred to are all nisi prius Courts are they not?

Mr. Abbott: They are all Circuit Courts of Wayne County. One is the Circuit Court of Wayne County, one is the Circuit Court at Ingham County at Lansing, and the other is the Records Court of the City of Detroit which I may say is the Court of Original Jurisdiction in the City of Detroit.

Trial Examiner Ballinger: They are Courts of 3672 original jurisdiction?

Mr. Abbott: These are, except the Circuit Court is the Court of Appellate jurisdiction for the Common Pleas Court for the City of Detroit, and of the lower courts of Ingham County.

Trial Examiner Ballinger: None of these decisions are decisions of Appellate Courts, are they?

Mr. Abbott: There is no decision of the Appellate Court with the exception, as I say, the various Circuit Courts of Wayne County have certain Appellate jurisdiction, but these are not Appellate jurisdiction cases which I ask to have admitted in evidence.

Trial Examiner Ballinger: The recollection of the Examiner is that Mr. Austin had the statute marked for identification, but that it was never admitted in evidence.

Mr. Austin: I think it was offered, and the ruling was withheld, and the offer was later withdrawn.

Mr. Abbott: What Exhibit Number is that, for identification, do you know?

Mr. Austin: I don't know.

Mr. Abbott: It must have been referred to.

Trial Examiner Ballinger: The statute has never been admitted in evidence.

Mr. Abbott: If it has been offered for identifica-3673 tion and not formerly offered in evidence, I, at this time, proffer it in evidence on behalf of the Respondent, according to the original offer for identification.

Trial Examiner Ballinger: The recollection of the Examiner is that the Examiner indicated very clearly that he would reject the offer if made, there being nothing in evidence with reference to the statute, there being nothing in evidence that anything offered in evidence was done or made pursuant to the provisions of the statute. The

Examiner can't perceive the applicability of these exhibits.

Mr. Abbott: Of course, the cost survey originally compiled by Professor Taggart was made in pursuance of the statute.

Trial Examiner Ballinger: Irrespective of what it was made under, the cause of the making of the survey, the survey was admitted on its own merits.

The tendered exhibits of Respondent, Respondent's Exhibits 81, 82, and 83, for identification, are rejected.

Mr. Abbott: I now ask to have these documents marked, for identification, as Respondent's Exhibits 84, 85, and 86.

Trial Examiner Ballinger: The reporter will mark the exhibits Respondent's Exhibits 84, 85, and 86, for identification.

3674 (The documents referred to were marked, for identification, "Respondent's Exhibits 84, 85, 86.")

Mr. Abbott: Exhibit 84 consists of seven pages; Exhibit 85 consists of two pages; and Exhibit 85 consists of 38 pages.

These likewise, your Honor, are certified copies of records of certain courts of the State of Michigan, including the Supreme Court of the State of Michigan, and they all relate to the same subject, and I therefore offer them in evidence together, and will state the purpose of the offer.

Exhibit 84, for identification, is a certified copy of the opinion of the Circuit Court of Kent County at Grand Rapids in the case entitled *Sperry and Hutchinson Company, et al., v. the Prosecuting Attorney of Kent County*, being Cause No. 40,728, holding Section 6 of Act 282, Public Acts of 1937 prohibiting the giving of premiums with sales of gasoline and other petroleum products at retail, to be unconstitutional. Also holding with reference to the so-called Fair Trade Act in its entirety that "The Michigan Legislature of 1937, after refusing to pass a General Fair Trade Practices Act to cover all retail business, did succumb to the log-rolling inference of two pressure groups, consisting of certain oil station operators and dealers in baked goods," and that "Through

3675 the influence of this unholy and unnatural alliance, Act 288 was enacted."

The Court further expressly holding that—

Trial Examiner Ballinger: It is unnecessary to state what the Court held.

Mr. Abbott: I will state generally what the Court held.

Trial Examiner Ballinger: It is unnecessary to state what the Court held. Merely state what the exhibit is.

Mr. Abbott: The exhibit is offered for the purpose of showing that the Circuit Court of Kent County, Michigan, held that the premium section of Act 282 and also the Act in its entirety was unconstitutional and void.

Exhibit 85, for identification, is a certified copy of the opinion of the Supreme Court of Michigan in Cause No. 40,103, affirming the decision of the Circuit Court of Kent County, in the case of *Sperry and Hutchinson* v. *the Prosecuting Attorney*, which is also referred to in the previous exhibit, whereby the Court held Section 6 of Act 282—

Trial Examiner Ballinger: It is unnecessary to state what the Court held.

Mr. Abbott: Very well.

Exhibit 86, for identification, is a certified copy of the opinion of the Supreme Court of the State of

Michigan filed February 2, 1939, likewise holding that the premium section of Act 282, Public Acts of 1937, forbidding the giving away of premiums with retail sales of gasoline, is unconstitutional.

These all relate to the matter of premium giving with sales of gasoline and other petroleum products and express the last opinion of the Supreme Court of the State; in fact, the only opinions upon that subject.

I think this is something that should be before the Commission, because there has been considerable evidence in this case upon the subject of giving away of premiums, and it appears from these decisions that in the State of Michigan, and there is a contrariety of opinion on this subject in the various states; in Michigan the Supreme Court has held that any statute forbidding the giving away of premiums with the sale of gasoline at retail is invalid, and that such statutes cannot be enforced, being unconstitutional.

Trial Examiner Ballinger: The Examiner is of the opinion, and so holds, the Statutes of the State of Michigan referred to, or the Statute of the State of Michigan referred to, has no application to this proceeding. The tendered exhibits are rejected.

Mr. Abbott: I now ask to have marked Documents 87 and 88, for identification. 87 has seven pages, and 7 88 has 12 pages.

Trial Examiner Ballinger: The reporter will rk the documents Respondent's Exhibits 87 and 88, for ntification, respectively.

(The documents referred to were marked, for identifiion, "Respondent's Exhibits 87 and 88.")

Mr. Abbott: These relate to the same subject, your nor, and are, therefore, offered together, referring to hibit 87 for identification and 88 for identification. ey are likewise certified copies of State records.

Trial Examiner Ballinger: Pertaining to the same tter?

Mr. Abbott: These two pertain to the same matter.

Trial Examiner Ballinger: To the same statute?

Mr. Abbott: You mean these two exhibits?

Trial Examiner Ballinger: Yes.

Mr. Abbott: These two exhibits do pertain to the same atter.

Trial Examiner Ballinger: The same statute?

Mr. Abbott: Well, they refer to another statute; not one I have been mentioning.

Exhibit 87, for identification, is a certified copy of a ll of Complaint filed in the Circuit Court of Wayne unty, Michigan, in Cause No. 271,279; 143 Chancery, entitled: *Retail Gasoline Dealers Association of* 78 *Michigan* v. *Standard Oil Company, P. A. Raupagh, Samuel N. Gershenson, Charles H. Gershenson, illiam Gershenson, Aaron H. Gershenson, and Rose rshenson*, co-partners doing business as Ned's Auto upply Company, seeking to enjoin Standard Oil Company om selling to Ned's Auto Supply Company gasoline at nolesale or tank car prices by the tank car method of livery.

Exhibit 88, for identification, is a certified copy of the inion of the Circuit Court.

Trial Examiner Ballinger: In that case?

Mr. Abbott: Of Wayne County, dismissing the Bill of mplaint; denying injunctive relief.

Trial Examiner Ballinger: The Examiner is of the pinion, and so rules, that the Exhibits have no applicaon to this proceeding, nor any matter in issue in this roceeding, and are rejected.

Mr. Abbott: I wish now to have these documents marked Respondent's Exhibits 89, 90, and 91, for identification.

Trial Examiner Ballinger: The Reporter will mark the documents Respondent's Exhibits 89, 90 and 91, for identification.

(The documents referred to were marked, for identification, "Respondent's Exhibits 89, 90, 91.")

Mr. Abbott: Exhibit 89, for identification, consists 3679 of three pages; 90 consists of nine pages, and 91 consists of five pages.

Exhibits 89, 90, and 91, marked for identification, are likewise certified copies of State records.

Exhibit 89, for identification, is a certified copy of Criminal Complaint filed July 29, 1938, in the Recorders Court of the City of Detroit against Standard Oil Company charging violation of Section 555 of the Michigan Penal Code in selling gasoline at tank car prices to Merchants Supply Company, and permitting said Merchants Supply Company to resell said gasoline at tank car prices to Samuel Gershenson, Charles Gershenson, William Gershenson, Aaron Gershenson, and Rose Gershenson, doing business as Ned's Auto Supply Company, as a retailer of Standard brand gasoline.

Exhibit 90, for identification, is a certified copy of the opinion of the Hon. Arthur E. Gordon, Judge of the Recorders Court of the City of Detroit, dismissing said criminal complaint.

Exhibit 91, for identification, is a certified copy of Criminal Complaint filed February 19, 1938, in Recorders Court of the City of Detroit against Standard Oil Company of Indiana and also against Citrin-Kolb Oil Company, charged as co-Defendant, alleging violation of Section 555 of the Michigan Penal Code in that they had, between February 18, 1936, and February 18, 1938, conspired to destroy the business of competitors and to prevent 3680 competition by selling gasoline to Citrin-Kolb Oil Company at tank car prices and by the tank car method of delivery.

The exhibit also contains a certified copy of the Petition of Paul W. Voorhees, Prosecuting Attorney of Wayne County, praying for an entry of an order of nolle prosequi in said cause; also a certified copy of the order of nolle prosequi entered September 27, 1940, by Hon. John J. Maher, in causes as follows: No. A-16,250 against Standard Oil Company and Citrin-Kolb Oil Company, and other causes.

These exhibits, if your Honor please, are cases in which I personally represented the Standard Oil Company in State Courts involving criminal prosecutions against Standard Oil Company.

Trial Examiner Ballinger: Is that assigned as an additional reason why they should be admitted?

Mr. Abbott: No, I don't assign that as an additional reason why they should be admitted, but I do say that they do involve an identical situation which is involved under State laws, the exhibits showing in one case involving Ned's Auto Supply Company, the Court, after a preliminary examination, dismissed the cause, showing the causes for the dismissal, and I further cite, in that connection, and referring now to Exhibits 89 and 90, 3681 90 being the opinion of the Magistrate, Hon. Arthur E. Gordon of the Recorders Court of the City of Detroit, it, in my opinion, contains certain holds that are res adjudicata in the present case, particularly with reference to the Court's allusion to the contract between Merchants Supply Company and Ned's Auto Supply Company and Benzol Stations, Incorporated, whereby the latter corporation contracted to haul gasoline from the bulk plant of Ned's Auto Supply Company, which has been testified to, concerning, in this proceeding, a cost of ½¢ per gallon, the Court making a ruling concerning the nature of that contract, and what it concluded in the way of costs and I submit that on that ground, in view of the fact that the opinion is res adjudicata upon some matters which are involved in this present case, that the opinion is not only relevant, but is binding in this proceeding, and should be admitted.

Upon the further ground that these are matters presented by Exhibits 89, 90, and 91, for identification, which the Commission should be apprised of and these being all certified copies of the records of the Court, I think they should be received in evidence.

Trial Examiner Ballinger: The Examiner is of the opinion and so rules that the documents tendered are not relevant to this proceeding or any matter in issue 3682 therein, and, accordingly, Respondent's Exhibits 89, 90, and 91, for identification, are rejected.

Mr. Abbott: At this time, your Honor, I move that we take a recess until whatever time the Court determines.

Trial Examiner Ballinger: Off the record.

(A discussion ensued off the record.)

Trial Examiner Ballinger: On the record.

The motion of counsel for Respondent is granted and now, at 12:15 P. M., the hearing stands in recess until 1:45.

(Thereupon at 12:15 P. M., a recess was taken until 1:45 o'clock P. M.)

3683

Afternoon Session.

Trial Examiner Ballinger: Come to order.

Mr. Hanley: At this time the Respondent withdraws its objection to the offer of Commission's Exhibit 65, for identification, and offers in evidence Commission's Exhibit No. 65.

Mr. Austin: I think that offer was made by Mr. Abbott this morning, your Honor.

Trial Examiner Ballinger: Off the record.

(A discussion ensued off the record.)

Trial Examiner Ballinger: On the record.

There is no use to argue about that. You did not offer Commission's Exhibit 65?

Mr. Abbott: Well, I did not recollect that I did.

Trial Examiner Ballinger: You made allusion to it. No tender.

Mr. Austin: The record will show that it is offered.

Mr. Hanley: Well, I am now specifically withdrawing the Respondent's objection to the offer of Commission's Exhibit 65, for identification, and I am now specifically offering it in evidence, consisting of a copy of the Public Act No. 282 of the Acts of 1937 of the State of Michigan.

3684 Trial Examiner Ballinger: The offer is rejected, it having no relation to any matter in this proceeding.

Mr. Hanley: The Respondent now re-offers Exhibits 81 through 91, both inclusive, marked, for identification, as Respondent's Exhibits.

Trial Examiner Ballinger: The tendered offer is rejected for the reason as previously stated.

Mr. Hanley: Now, I think that is the end of our picture at this hearing, Judge.

Trial Examiner Ballinger: Anything further from the Commission?

Mr. Austin: No, your Honor; not at this time. I was only cross-examining at these hearings, anyway, and I have nothing on direct examination, if that is what is referred to at this time—I mean no further cross-examination.

Trial Examiner Ballinger: If counsel has any suggestions to offer with reference to future hearings, he may so state now.

Mr. Hanley: Well, do you want this discussion on the record?

Trial Examiner Ballinger: Just as well.

Mr. Hanley: Well, I understand from Mr. Austin, in informal discussion, that he desired to cross-examine Mr. Boatwright some time the week after next. I don't 3685 know just what the date of that week would be.

Mr. Austin: I don't know, either. I said that I hoped we would be able to take care of it some time during that week.

Trial Examiner Ballinger: Counsel are not prepared at this time to agree on a date for a future hearing?

Mr. Austin: I am not, your Honor.

Trial Examiner Ballinger: Then, at 2 P. M., the hearing stands adjourned, subject to a five day notice.

(Whereupon, at 2 o'clock P. M., May 9, 1941, the hearing in the above-entitled matter was adjourned.)

3686

Room 332, Federal Trade
Commission Building,
Washington, D. C.,
Tuesday, June 3, 1941.

Met, pursuant to notice, at 10 a. m.

Before Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., appearing on behalf of the Federal Trade Commission.

Harold R. Hanley, Esq. (910 South Michigan Avenue, Chicago, Ill.), and Arthur J. Abbott, Esq. (Abbott, MacMahon & Roberts, 2230 Buhl Building, Detroit, Mich.), appearing on behalf of the Respondent.

3687

PROCEEDINGS.

Trial Examiner Ballinger: Come to order.

The hearing in Docket 4389, in the matter of Standard Oil Company, is reconvened pursuant to notice at 10 o'clock a. m., June 3, 1941, in Room 332, Federal Trade Commission Building, Washington, D. C.

The last hearing was held in Detroit, Mich., May 9, 1941.

The Reporter will note Counsel for the Commission and Respondent present.

You may proceed.

Mr. Hanley: Before the cross-examination opens, Your Honor, there is a matter I would like to take up, if I may.

Trial Examiner Ballinger: You may do so.

Mr. Hanley: On my return to Chicago yesterday, I found a letter awaiting me from the Official Reporter which enclosed Respondent's Exhibit No. 47, which is a letter dated April 30, 1941, written by the Red Indian Oil Company, signed I. B. Dworman, and directed to Ned's Auto Supply at Detroit, Mich., and the Official Reporter states in that letter, "Inasmuch as this exhibit was never received in evidence, we are returning same to you for proper disposition."

I was advised in Detroit by my associate, Mr. Abbott, that this letter had been received in evidence. That 3688 occurred when I was in Detroit, and yesterday after looking at this letter I telephoned Mr. Abbott to check on the thing, and he reassured me that it had been introduced in evidence and received.

Trial Examiner Ballinger: If the Examiner may interrupt: The Examiner's record discloses that Respondent's Exhibit 47 was admitted in evidence during the hearing at Detroit.

Mr. Hanley: Well, that was my understanding, and I wrote yesterday to the Official Reporter requesting a recheck of their records, but suggesting that I bring the exhibit with me on this occasion and re-offer it in order to

Trial Examiner Ballinger: That is unnecessary.

The Examiner instructs the Reporter to incorporate the exhibit into the record.

Mr. Hanley: Well, thank you, Your Honor. Should I just now hand the exhibit back to the Reporter?

Mr. Austin: I should think the testimony generally showed. Did you check on the testimony, Judge?

Trial Examiner Ballinger: This is off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

We will take a recess.

(There was a short recess taken.)

3689 Trial Examiner Ballinger: Come to order. Call your witness.

Mr. Austin: All right, Mr. Boatwright.

Trial Examiner Ballinger: Mr. Boatwright, you have been previously sworn?

Mr. Boatwright: That is correct.

JOHN W. BOATWRIGHT, was recalled to the stand and testified further, as follows:

Direct Examination (Resumed).

Mr. Hanley: If your Honor please, before the cross-examination opens, there is one correction question I would like to ask Mr. Boatwright, referring to page 2471, Mr. Austin.

Trial Examiner Ballinger: You may do so.

Mr. Hanley: This is a figure that goes into cost and apparently it was inadvertently transcribed.

Trial Examiner Ballinger: Does it appear in the exhibit?

Mr. Hanley: No. It is in the testimony of Mr. Boatwright.

Trial Examiner Ballinger: Please refer to the date and the page number of the record.

Mr. Hanley: The date and page?

Trial Examiner Ballinger: Yes.

Mr. Hanley: The page is 2471.

Trial Examiner Ballinger: Off the record.

3690 (Discussion off the record.)

Mr. Hanley: The date is April 29, 1941.

By Mr. Hanley:

Q. Mr. Boatwright, I call your attention to the 12th line of the transcript, at page 2471 of the evidence of April 29, 1941, and particularly to the figure appearing in that line ".38 cents" and I will ask you whether or not that is a correct figure and, if not, what the correct figure should be?

A. The correct figure should be .638 cents. That figure appears on Respondent's Exhibit 31-A and Respondent's Exhibit 31-C.

Trial Examiner Ballinger: You may sit down, Mr. Boatwright.

Mr. Hanley: That is all. Thank you, your Honor. You may cross-examine.

Cross-Examination by Mr. Austin.

Q. Mr. Boatwright, you stated on your direct examination that the type of operation engaged in by Ned's Auto Supply Company is one which occurs frequently throughout the United States in the oil industry. By "type of operation" what did you mean?

A. I mean a wholesaler buying and distributing direct.

Q. That is, you mean a retail reseller who purchases in tank car quantities or at tank car prices and resells at retail?

3691 A. Who operates a chain of outlets and does distribute through his own owned and controlled outlets.

Q. You mean retail outlets?

A. Yes, sir.

Q. Can you name examples of that same type of operation elsewhere in the United States, other than Ned's?

A. Yes.

Q. Would you please do so?

A. Cosden Oil Company at Des Moines; Roco Petroleum Company at St. Louis; Waggonner Service Stations at Chicago; Gale-Slone of Chicago; Bailey Oil Company in Kansas City. I am sorry, I don't think of any others at this very moment. However, there are many of them throughout the midwest which—

Q. How many of those which you have named are supplied by the Standard Oil Company?

A. Three of them.

Q. Will you name those?

A. Yes. The Bailey Oil Company was supplied, is no longer supplied by the Standard Oil Company. Roco Petroleum Company was and is supplied by the Standard Oil Company. The Cosden Oil Company of Des Moines was and is supplied by the Standard Oil Company.

Q. Are those three that you have just named all concerns which resell only at retail and which buy at tank car prices?

A. Not only at retail; they operate direct and they 3692 operate through dealers other than direct sale.

Q. Are any of them engaged principally in retail reselling, that is, is that the major part of their business?

A. All of them are.

Q. In other words, I understand you to state that those three all sell the major part of the gasoline which they purchase from the Standard Oil Company at retail?

A. That is correct. They also do some business with the consumers on a wholesale basis and they also, in some cases, supply dealers on a wholesale basis. Principally, however, they are retail operators.

Q. I don't believe that you have named any more than one such account in any one city; is that correct?

A. That is—no. Two in Chicago.

Q. Two in Chicago. But only one of those two was supplied by the Standard Oil Company?

A. Neither of the two in Chicago were supplied by the Standard Oil Company.

Q. Oh, I had perhaps forgot. I thought Roco was Chicago.

A. That is correct. Roco is St. Louis.

Q. Do you know whether the Standard Oil Company supplies any account having a type of operation similar to Ned's? That is, whether the Standard Oil Company supplies more than one such account in any one city?

Now, to clarify—

3695 A. Yes, I—

Q. —that question, of course, in Detroit it has been brought out that Citrin-Kolb and Wayne operate some retail stations incidental to the operation of their wholesale business, or, whether it is incidental or not, at least that their retail operation is small compared with their wholesale operation, so that for the purposes of this question I am referring to Ned's as the only tank car account in Detroit reselling principally at retail.

Now, I am asking you whether the Standard Oil Company has more than one account similar to Ned's in any other one city.

A. I don't know.

Q. Do you know of any city where they have more than one?

A. I don't know.

Q. Well, I say do you know of any place where they have more than one such account?

A. My answer is I do not know whether that condition prevails or whether it does not prevail.

Q. You gave some testimony, Mr. Boatwright, regarding the Zip & Joy Gasoline Stations in Detroit?

A. That is right.

Q. Do you recall that?

A. Yes, sir.

Q. I believe you stated that when the price differ-
3694 ential between their retail prices and the prevailing major gasoline or Standard Oil retail prices narrows, that the Standard Oil Company sells more gasoline and Zip & Joy sell less, and that when the differential between the retail price of Zip & Joy, on the one hand, and Standard Oil, on the other hand, widens, that Zip & Joy sell more gasoline in proportion to—I suppose in proportion to the total volume of the city and Standard Oil sells less; is that correct?

A. That is correct.

Q. Does that price differential change frequently?

A. Does the differential in price between the products merchandised by Zip & Joy and the products merchandised by Standard Oil Company—are the differentials changed frequently?

Q. The Standard Oil Company stations I am talking about, retail stations, of course.

A. I am afraid I am not clear on your question. Does the Standard Oil Company price change or does the differential between Standard Oil prices and these other products?

Q. The differential does change?

A. The differential is what you are interested in?

Q. Yes; that is right.

A. Yes, it does vary from time to time. By "frequently" I don't know what your mean. If it is once a month, that isn't likely, but it does vary from time to time.

Q. What are the causes of such changes in the differential?

3695 A. All of the influences in a market which affect your marketing prices are the causes. It could be the purchasing price in the community; it could be the availability of distress stocks; it could be any of the economic factors having a bearing on price. When you ask the question as to what causes a price change,—

Q. Well, I am asking what causes—

A. —you are asking a very broad question.

3696 Q. Well, I am asking what causes a change in differential, that means that one price changes more than the other.

A. The cause of a change of a differential is that one of the prices moves and the other one does not. Now, the reason for that movement of price on the part of one of the products may be infinite.

Q. Do you know whether over a period of, say, the last 3 years there has been more or less variation or fluctuation in Joy prices than there has been in the prevailing major gasoline price?

A. I do not know.

Q. Do you know the source of supply of the sellers of Zip and Joy gasoline?

A. I do not know from my personal knowledge; no, sir.

Q. Do you know whether they do not buy part of their gasoline from the major gasoline companies or from some of the major oil companies?

A. I do not know.

Trial Examiner Ballinger: Do you know whether they buy from the Standard Oil?

The Witness: I could only answer that by saying I do not recall of a single case where any quantity of gasoline has cleared for either of those distributors; and one of my functions is to control the budget which does give clearance on quantities.

3697 By Mr. Austin:

Q. Standard Oil Company does sell some gasoline unbranded, does it not?

A. We sell some gasoline according to specification of purchaser. Is that your question?

Q. Well, I guess perhaps it is.

A. Yes.

Mr. Hanley: Well, may I inquire if you are referring to Detroit, Mr. Austin?

Mr. Austin: Not in that question, no, Judge, not necessarily.

By Mr. Austin:

Q. Do you know whether Charles E. Austin, or the other concern that sells either Zip or Joy,—I forget now which was sold by Austin and which by someone else, but I think the record shows,—do you know whether either of those concerns is a refiner?

A. I understand that neither of them are. I do not know that neither of them have an interest in some refinery, however.

Q. Well, is it your understanding that they both purchase their gasoline?

A. That is my understanding.

Q. Then, that being the case, any change in price which they have to pay for their gasoline would affect their retail selling price, would it not?

3698 A. It may or may not affect their retail selling price.

Q. Normally, it would, would it not? I am just asking that as a general economic question.

A. I would, depending upon the severity of competition with which they are confronted.

If they secure a lower price for their product, and are content with the gallonage that they are selling, it might not change their price. If, however, they were not content with the gallonage they were doing, and they received a lower price, the probabilities are that it would affect their business.

Q. Or if they have to pay a higher price, that would necessarily, or might—cross that.

I suppose that if the price which they had to pay for their gasoline raised, it might force them to raise their retail price; is that right, in order to maintain a certain margin of profit?

A. That is entirely possible.

Q. I believe you made reference on your direct testimony, Mr. Boatwright, to a publication called the National Petroleum News.

A. That is correct.

Q. Can you state who publishes that magazine, the publication, whatever it is?

6399 A. Warren Platt is the editor.

Q. Well, will you describe it? What is the purpose of the publication?

A. Well, it is a weekly publication. It is merely a trade magazine in the oil industry. It comes out weekly. It presents not only editorials relative to policies of the industry, it presents articles having to do with various phases of marketing, production, or refining. It presents statistics on prices, stocks and other economic factors affecting the petroleum industry.

Q. Do you know who supports it or who owns the publication?

A. No, I do not.

Q. Is it known as an organ of the major oil companies?

A. I do not know.

Q. You stated, Mr. Boatwright, that excise taxes are considered to be a part of the money which passes through the hands of the gasoline retailer for State and governmental purposes. I think that is the substance, at least, of the statement which you made. It may not be word for word a quotation, but that is correct, is it?

A. That is the substance of my statement.

Q. Is money collected by a retail service station for gasoline used for the payment of any tax on the gasoline sold?

A. The price that the retail service station charges for its merchandise must cover the various taxes imposed by different governmental agencies.

3700 Q. Well, I would just like to have you answer that question, whether any of the money which the retail service station collects upon the sale of gasoline is used for the payment of any tax upon that gasoline.

A. The retail service station collects in various States a tax that is used to pay the 3 per cent sales tax. Included in the price of the product that he sells there is a portion which goes to the payment of the federal and State sales and excise taxes.

Q. Well, hasn't the State and federal excise taxes been paid on that gasoline before it is sold by the retailer?

Mr. Hanley: That is objected to, Your Honor, for the reason that it now appears from the last two answers of the witness that there is necessarily in the price at which gasoline is sold at a retail service station a necessary amount to cover and pay the excise and sales taxes irrespective of who pays that tax. The fact is that there is a different law in every State on the sales tax. There is no uniformity.

Mr. Austin: I am talking about federal and State taxes. We are talking about all of them.

Mr. Hanley: Well, so am I. I say there is a different law in every State as to State taxes.

Trial Examiner Ballinger: The objection is over-
3701 ruled.

The witness may answer.

The Witness: Would you repeat your question, please.

Mr. Austin: Would you read the question, please.

(Question read.)

A. It is paid in most cases by the dealer when the gasoline is delivered.

Mr. Hanley: You mean by the retail dealer?

The Witness: The retail dealer.

Trial Examiner Ballinger: Do you mean by that that it is included in the cost price to the retail dealer?

The Witness: It is a part of the cost price to the retail dealer?

Mr. Hanley: May I interrupt for one question?

It is usually billed separately on the invoice as a tax, is it not, Mr. Boatwright?

The Witness: That is correct.

By Mr. Austin:

Q. But when the retail dealer receives the gasoline he never pays any federal or State excise taxes on that gasoline, does he?

A. He is billed separately for the gasoline and the tax; therefore, when he buys he pays a price which includes the cost of the merchandise plus the excise tax. Now, when

he sells he must include as a part of his price, to the
3702 consumer these two portions of the taxes, State and
federal.

Q. What do you mean by "must"? He can sell the gasoline for any price he wants to, can't he, Mr. Boatwright?

A. Oh, certainly he could; certainly he could.

Q. Now, I would like to ask you again, and if you can answer the previous question "yes" or "no" I would like to have you do it.

Is any of the money collected by retail service stations for gasoline used for the payment of any tax other than a sales tax upon that gasoline?

Mr. Hanley: That is objected to as repetitious.

Mr. Austin: I do not think the witness has answered the question. That is the question I would like to have a "yes" or "no" answer to, if you can give it, as applied to Detroit or to Michigan.

Mr. Hanley: He has answered it a number of times, Your Honor, and I insist upon the objection. It is repetitious.

Trial Examiner Ballinger: The objection is overruled.

A. I stated that his price includes the tax paid as such. Any money which he collects for the sale of gasoline is in part a collection for the payment of the State and federal taxes.

3703 By Mr. Austin:

Q. Does he pay any of those taxes out of that money? Does he pay any of the taxes on that gasoline from the money which he receives from the sale of it?

A. He certainly does. He certainly has. He has paid in advance.

Q. I ask you, Mr. Boatwright, if he paid any of the excise taxes on the gasoline he sells from the money which he receives upon the sale of it?

A. And my answer was that he had paid the tax upon the receipt of the gasoline. In other words, he has paid prior to the sale of the gasoline.

Q. Can you answer this question—

Your Honor, I do not want to keep repeating this, but the witness, I think, can answer the question "yes" or "no," and I would like to have a "yes" or "no" answer to the question.

Mr. Hanley: If Your Honor please, that is objected to as a quibble, and as trivial, and as frivolous, for this reason: This witness does not know, and no other witness could know whether if when a service station operator sells Your Honor a gallon of gasoline for 17 cents he takes 3 cents of that particular specific money and pays the tax with it. He may have previously borrowed the money from his aunt to pay the tax, but he has paid the tax.

3704 Trial Examiner Ballinger: The Examiner inquires into the materiality of this line of questioning.

Mr. Austin: I think it is very material because this is in connection with questions that were asked about the Taggart survey, and about the question as to whether or not the price which the retailer gets for gasoline includes taxes, or whether it does not, and Mr. Taggart was cross-examined on that, Mr. Boatwright was questioned on it.

Trial Examiner Ballinger: Does your question contemplate the earmarking by the gasoline station of the money received?

Mr. Austin: No, Your Honor.

Trial Examiner Ballinger: For the payment of any tax out of the money.

Mr. Austin: The question is very simple. I simply asked the witness whether or not any of the money which the retailer receives when he sells a gallon of gasoline is used for the payment of any tax on that gasoline.

Mr. Hanley: And if that is the question it is objected to as repetitious, having been answered six times, at least.

Trial Examiner Ballinger: How could this witness have any knowledge as to that?

Mr. Austin: Well, he obviously can, because he knows.
If I understand him correctly, what the practice is
3705 in the State of Michigan as to who pays the tax on
gasoline.

Trial Examiner Ballinger: The Examiner understands that the witness has testified that when the retail service station operator receives the gas, he pays in addition to the purchase price the excise taxes, both federal and State.

Mr. Austin: I do not understand that, Your Honor.

Trial Examiner Ballinger: Is that correct?

The Witness: I so stated in the testimony.

Trial Examiner Ballinger: I so understood it.

Mr. Austin: Well, may I question him on that?

Trial Examiner Ballinger: You may.

By Mr. Austin:

Q. Does he pay—Who does he pay that tax to?

A. He pays that to the delivering company.

Q. He does not pay it to the taxing authorities, does he?

A. No. He pays that to the supplying company.

Q. Then, doesn't he pay the supplying company simply the amount that is stated on the bill which he receives for gasoline?

A. He pays the supplying company the amount stated on the bill, which is segregated between value of product and retail collections.

Q. But the retailer does not pay the tax?

A. The retailer does pay the tax. The supplying company merely serves as a collector for the State taxing
3706 authorities and transmits those funds to the taxing authority.

Q. Who is responsible for the payment of the tax, the supplying company or the retailer?

A. The supplying company.

Q. Now, after we pass that step, the retailer then has the gasoline. Then, according to your testimony, he has already paid an amount which if not the tax is at least an amount equal to the tax and covers the tax.

A. He has paid the tax.

Q. All right.

Now, when he collects, therefore, when he sells the gallon of gasoline to the consumer, the tax already having been paid, how can any of the money which he collects again be used for the same tax?

Mr. Hanley: Oh, if Your Honor please, this is objected to as utterly frivolous.

Trial Examiner Ballinger: The objection is sustained.

Mr. Austin: Well, Your Honor, in order to get the thing clearly on the record, I am going to ask this original question again and ask Your Honor either to instruct the witness to give me a "yes" or "no" answer or to overrule my request, and I will pass on, whichever ruling Your Honor makes.

Trial Examiner Ballinger: Proceed.

3707 By Mr. Austin:

Q. Is any of the money collected by a retail service station for gasoline sold by it used for the payment of any tax on the gasoline sold?

A. I must answer that "yes" or "no"?

Mr. Hanley: Not unless you can.

Trial Examiner Ballinger: If you can, you may answer it "yes" or "no," and then offer any explanation.

Mr. Hanley: I am going to object to the question, first, Your Honor, for the reason that the question does not stipulate as to whom the tax is paid. If counsel means does the service station operator pay the tax to the taxing authority, that is one thing. If he means does he pay an amount of money which finds its way into the hands of the taxing authority through some collector, that is another thing.

This difficulty which we are in here now arises out of the fact that the Government agencies have imposed a burden of a tax collecting agency upon the oil companies, which they do at their own expense, but they collect it for the Government authorities. That is all there is to this thing.

Mr. Austin: I think the difficulty is perhaps that I am directing this question to the particular gasoline sold. Of course, that money that is collected may be used to pass
along to the oil company for the payment of tax
3708 upon the next gasoline he buys, but all I am trying
to get at is that none of the money which is collected by the service station upon selling a gallon of gasoline is used for the payment of tax upon that gasoline because the tax has already been paid.

Trial Examiner Ballinger: The Examiner is in doubt as to the payment of taxes. The Examiner understands that when the wholesaler sells to the retailer there is a tax upon that sale, both State and federal; is that correct?

The Witness: That is correct.

Trial Examiner Ballinger: And that when the gasoline is billed by the wholesaler to the retailer the bill separates the cost of the gasoline and the tax, and that the retailer pays the bill, both the charge for the gasoline and the tax, and pays that to the wholesaler.

Now, it seems to the Examiner it is wholly immaterial whether the retailer transmitted direct to the taxing authorities or whether he paid to the wholesaler and the wholesaler discharged the tax indebtedness.

3709 Mr. Austin: Yes, your Honor, at that point, but
I was going to the question of the sale by the retailer to the automobile owner.

Trial Examiner Ballinger: Now, is there a further tax, either state or federal, upon the sale of gasoline by the retailer?

The Witness: Within the state of Michigan?

Trial Examiner Ballinger: Within the state of Michigan.

The Witness: There are three tax levies.

Trial Examiner Ballinger: Is there any further tax upon that gasoline after it reaches the hands of the retailer?

The Witness: There is.

Trial Examiner Ballinger: Will you state what tax that is?

The Witness: That is a 3 per cent tax.

Trial Examiner Ballinger: And that is paid by whom?

The Witness: By the retailer.

Mr. Austin: Thank you. That is ~~really the~~ point I was trying to bring out, in the first place.

By Mr. Austin:

Q. That is the only tax which is paid by the retailer, is it not, Mr. Boatwright?

Trial Examiner Ballinger: Direct?

3710 Mr. Austin: Yes.

A. Direct to state authorities?

By Mr. Austin:

Q. State or federal authorities.

A. Direct to state or federal authorities, that is correct. The other is paid through a second party.

Q. And in referring to the methods used by Dr. Taggart in conducting his survey, Mr. Boatwright, you stated that the inclusion of a disproportionate number of "super service stations" would have increased the resulting cost of distribution per gallon?

A. That is correct.

Q. Will you please explain that statement? That is, I assume that you mean that the cost of—do you mean that the cost of a particular kind of service station is higher or the cost of a larger service station, or what do you mean by the statement that if a larger number of super service stations were included in such a survey that the resulting cost per gallons would be higher?

A. According to my recollection, your reference to the original testimony is not complete. My statement is that frequently you would find different cost levels applicable

to different classifications of outlets. If Professor Taggart had included a disproportionate side—disproportionate number of the super stations and then applied the
3711 constant ratio of gasoline realization to total realization, the resultant per gallon cost would have been high. The reason for that statement is merely this: A super service station usually has employees working in the washrooms, the grease racks, and performing other functions about the stations. The gasoline realization at a super service station normally does not bear the same ratio to total realization as it does to—as it would at a transient station.

In other words, whereas Dr. Taggart has used a cost figure of approximately 80—I am sorry; a realization figure of approximately 80 per cent, that 80 per cent will tend to vary, according to the type of outlets studied.

Q. Do you know what proportion of so-called super service stations were included in the survey?

A. No, I do not.

Q. You used the phrase "a disproportionate number." What would you consider a proportionate number?

A. One that would be representative of the number of super stations in the community studied.

Q. Then that would first require a study of the various types of stations so that you would get—use in your survey a proportionate number of stations of each type?

A. That is correct.

Q. Do you know that that was not done by Dr. Taggart?

A. I do not know. I stated his study is not clear
3712 in that respect.

Q. Now, Mr. Boatwright, the Standard Oil Company operated retail service stations in Detroit and other territories for a number of years; did it not?

A. We operated service stations prior to leasing them out, I think, which program was completed in 1936.

Q. Did the company operate its own service stations for a number of years prior to 1936?

A. It did.

Q. I suppose that during that period the company kept records of the cost of retail distribution of gasoline through its own service stations?

A. That is correct.

Q. How was that done? Did you have—for instance, as an accounting matter, did you have an additional column on form 189, then, referring to Commission's Exhibit 32?

Mr. Hanley: May I—

By Mr. Austin:

Q. Pardon me. That is Respondent's Exhibit 32.

Mr. Hanley: May I inquire as to the materiality of this? I recall at the hearings in Detroit when it appeared that some question was asked as to the experience of Mr. Raupagh on costs of company operated stations, there was a vigorous objection on the part of the government as to its materiality. It has no bearing on this case 3713 as to what it cost the Standard Oil Company or how they ascertained their costs prior to 1936. I object to this question for the same reasons that the government objected to a similar question on the last hearing, its materiality and relevancy.

Trial Examiner Ballinger: The objection is overruled.

The Witness: Would you read the last question, please?

(Question read.)

By Mr. Austin:

Q. That is the blank form 189.

A. Prior to 1936 we did have a separate column on the 189.

Q. And on that column were the retail distribution costs inserted or the retail distribution expenses inserted in a similar manner as the other channels were taken care of on 189, now?

Mr. Hanley: That is objected to as immaterial, not the best evidence, wholly irrelevant to any of the issues in this case, already having been excluded by the Trial Examiner when attempted to be developed by the respondent as a qualification of Mr. Raupagh in the matter of the cost of selling gasoline in Detroit.

Mr. Austin: Well, if the—

Mr. Hanley: And prior in point of time to the adoption of the Robinson-Patman Act and wholly outside of the 3714 issues in this law suit.

Trial Examiner Ballinger: Objection is overruled.

Mr. Austin: If your Honor please, I don't—

Mr. Hanley: May I understand, your Honor, what this is about, please? I just can't get the picture here at all.

Mr. Austin: If your Honor please, I don't intend to pursue this line of questioning if counsel for respondent objects to it upon those grounds, except, however, I think that the objections which might have been made to Mr. Raupagh testifying on accounting matters obviously would not be good to questions of Mr. Boatwright, but so that—

Trial Examiner Ballinger: The Examiner understands this witness previously testified that a certain survey made in Oklahoma presented the only then available records of the Standard Oil Company, or the best records of the Standard Oil Company, with reference to the cost of marketing. This line of examination now—

Mr. Hanley: Well, if your Honor please, I would like for the record—

Trial Examiner Ballinger: —is directed, I take it, to ascertain whether or not the Standard Oil had some other.

Mr. Hanley: That is a misapprehension, your Honor. The survey in Oklahoma was a survey directed specifically to the ascertainment of the cost of selling gasoline to jobbers.

3715 Trial Examiner Ballinger: That is correct.

Mr. Hanley: Not at all through service stations. Indeed, we didn't operate service stations or the tank wagon business in Oklahoma but did operate through jobbers, and that survey was entirely directed to that one proposition.

Trial Examiner Ballinger: You are correct.

Mr. Austin: Well, I don't intend to and didn't intend to proceed further on that point, anyway, beyond simply bringing out the fact—rather, inquiring into the fact of the operation of the stations at that time. I am inclined to agree with Judge Hanley that perhaps the cost of operation by the company prior to 1936 might not have a great deal of materiality, but—

Trial Examiner Ballinger: The Examiner doesn't perceive,—

Mr. Austin: —in any event—

Trial Examiner Ballinger: —unless identical stations were shown or to what extent cost conditions had changed, the materiality of the evidence.

Mr. Austin: In any event, I don't recall that the company has offered to prove the company cost of operation of retail service stations in Detroit at that time, although I will confess that I haven't read recently Mr. Raupagh's testimony, and I don't recall, Judge Hanley, just to what exten, the objections went to which you referred.

3716 Mr. Hanley: I don't recall it either. I know we attempted to prove, in a general way, something about it and we were precluded from proving as much as we would like to prove, and I don't know how far it went. I haven't read it either lately.

By Mr. Austin:

Q. Mr. Boatwright, you referred to the fact that Dr. Taggart's survey indicated a cost of 4.8 cents per gallon for retail distribution of gasoline in Detroit, whereas the retail dealer's margin on major brand gasolines during 1940 and early 1941 was—3.63 cents is the figure I have here. I am not sure whether that was more recent or whether that was in 1940. There has been some—I believe some recent increase.

Mr. Hanley: That is objected to as a misstatement of this witness' testimony. I think the fact is that Dr. Taggart's testimony and survey showed a cost of 4.8 cents.

Mr. Austin: Yes.

Mr. Hanley: And that he testified that from his figurations he found the actual margin to be 3.63 cents.

Mr. Austin: I believe that is right.

Mr. Hanley: Is that your Honor's recollection?

Trial Examiner Ballinger: My recollection—

Mr. Austin: I accept the correction, Judge. I am sure that is right. It was a misreading of my own notes. In other words, that was what Dr. Taggart found to be
3717 the dealer's margin when the made the survey of
3.63 rather than the margin of 1941.

The Witness: I see.

By Mr. Austin:

Q. Now, you said that these figures, if they were correct, demonstrated a loss to the service station operator?

A. That would be correct.

Q. You would there be referring to gasoline only, would you not, Mr. Boatwright?

A. Yes, sir.

Q. And might it not be that even though the retail cost of operation of selling gasoline was 4.8 cents per gallon and that the dealer only received 3.63 cents per gallon for it above the price he paid, that he still might conceivably be making money on his entire business, including things other than gasoline?

A. That isn't very likely. The margin of profit which accrues to a retail dealer on other merchandise will normally run less than the difference between 3.6 and 4.8.

Q. You understand, do you not, that the cost of 4.8 cents per gallon included an allowance for salary or labor to the station operator?

A. That is correct.

Q. And also the interest on his investment if he owns his service station?

3718 A. That is correct.

Q. And, of course, there were other things included which I won't attempt to repeat now because I think they appear in the survey.

You also referred to the inclusion in Dr. Taggart's survey of data for certain service stations which you described as sport cases. Did you determine how many of such service stations which were included which you would call sport cases?

A. That was impossible to determine from the study. The only source that that could be obtained from would be the detail work sheets upon which the study was based.

Q. Well, from what data did you reach your conclusion that sport cases were included?

A. I reached by conclusion upon the strength of the fact that he had included some service stations with a cost per gallon of 22 cents as contrasted with a reported realization of 18.2 cents, and I know from my practical experience that if you encounter a station which incurs a cost of 22.8 cents per gallon you are not talking about a typical or representative outlet in a given community.

Q. Well, are those the only stations that you referred to as sport cases, that is, those that were extreme at one end or the other in their cost?

A. Your sport cases will normally be at your extremes. It is entirely possible, however, that a sport case may
3719 exist other than at the extremes if there are some unusual conditions surrounding that.

Q. Did you attempt to make any computation by eliminating the sport cases which you found to be apparent upon the face of the survey?

A. I couldn't make such a calculation, not having the work sheets of the individual statements.

Mr. Austin: Your Honor, may we have about a five-minute recess?

Trial Examiner Ballinger: Take a recess for five minutes.

(A short recess was taken.)

3720 Trial Examiner Ballinger: Come to order, gentlemen.

Proceed.

By Mr. Austin:

Q. Mr. Boatwright, I will now direct my questions to Respondent's Exhibit 31-A to Q.

Trial Examiner Ballinger: Have you those exhibits?

The Witness: I do.

Mr. Austin: Has the Trial Examiner a copy of this exhibit?

Trial Examiner Ballinger: No.

The Witness: I do not have an extra copy, Judge.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Turning to Respondent's Exhibit 31-B, which is headed "Explanation and Procedure Used in Determining Differences in Marketing Cost Incurred by the Standard Oil Company of Indiana in Serving Ned's Auto Supply Units with Our Equipment—September, 1936, Through February, 1938." The first heading is entitled, "Delivery Cost Differences," and the subheading under that is, "Labor Cost Differences," and then subtitle "A. 1."

On that exhibit is reference to Form 018 showing
3721 the size of dump and time for delivery by truck Nos. 34270 and 29525, year 1940.

Subheading A.-2 on Exhibit 31-C refers to tank truck efficiency report maintained in the Detroit division for the months of December, 1939, and March, June, and September, 1940, and there is a statement that those tank truck efficiency reports were compiled on a quarterly basis.

Does that mean that the report for each of those months covered a period of 3 months,—that is a full quarter,—or do the tank truck efficiency report cover only one month?

A. It covers the one month.

Q. Then, by a quarterly basis, you meant there simply that the report is compiled for one month every three months?

A. That is correct.

Q. Tank truck efficiency reports are not the same as Form 018, are they, Mr. Boatwright?

A. They are based upon the Form 018.

Q. Are they prepared from Forms 018?

A. That is correct.

Q. Who prepares the tank truck efficiency report?

A. Members of the accounting department.

Q. They are not prepared by the truck drivers, then?

A. They are not.

Q. Who prepares the Form 018?

3722 A. 018 is prepared by the tank gauger, a clerk working in the warehouse who times the truck in and out and gauges the tanks before they pull out of the yard with a load.

Trial Examiner Ballinger: When you say prepares the form, do you mean fills out the form?

Mr. Austin: Yes.

Mr. Hanley: That is what you mean, too, isn't it?

The Witness: That is correct; yes, sir.

By Mr. Austin:

Q. Will you describe what you mean, or explain what you mean by time in and out; that is, what time is included?

A. Yes. The truck comes into the yard empty, and the time of the arrival of that empty truck into the yard is entered on the Form 018. It goes to the loading rack and is loaded for the next deliveries. The loading time is entered on Form 018 as well as the merchandise with which the truck is loaded.

Upon return to the yard again the time back in the yard is again entered so that we know the exact amount of time that is taken to load and deliver each of the different loads the truck handles.

Q. Well, that is really, then, time in to time in, is it not?

A. That is right.

Q. And is the driver paid for all of that time?
3723 That is, is he paid for the period during which the truck is in and being loaded as well as the time—

A. The drivers work on a regular union contract, and they are paid for all of the time that they are on the job. Now, where possible, we load the trucks prior to the arrival of the drivers so that we may have the load all ready and waiting by the time the driver gets it, but the driver is paid for every hour that he is on the job.

Trial Examiner Ballinger: Now, when you say "on the job," do you mean while he is on the truck?

The Witness: It may be that he is standing by the truck while it is being loaded. He may be helping to load the truck. He is paid for that time.

By Mr. Austin:

Q. Will you explain the difference between Form 018 and the tank truck efficiency report?

A. Form 018 gives truck number, compartment, product loaded by compartment, deliveries made, ticket numbers, quantities on each ticket number, and the time in, the loading time, and the time back to the yard; that is signed by the driver and by the gauger. The truck efficiency report—

Mr. Hanley: Just a moment, Mr. Boatwright.

This may be off the record.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

3724 Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Now, will you go on about the tank truck efficiency.

A. The tank truck efficiency report is not concerned with individual deliveries, but it is a recapitulation of the hours of truck operation and the gallonage through put on that truck which is then associated with cost to determine a cost per gallon of delivery of labor, and at the end of the year we study, then, the cost of the through put on the equipment. That is not done on a quarterly basis. Labor is done on a quarterly basis.

Q. I do not quite understand the tank truck efficiency report—are on a quarterly basis, you say?

A. That is correct, and the salary cost of the driver is reduced to a per-gallon cost each quarter. At the end of a year when we know the operation, the maintenance, and all of the other cost of the operation of the truck, we can recapitulate these and get both a driver's cost and equipment cost so that we can study our costs of operation of each individual unit.

Q. And that is only on the basis of those four months, is it not?

A. That is correct.

Q. Do you use those as representative of the year?

A. That is correct.

3725 Q. Does the tank truck efficiency report show the delivery time for each truck; that is, the total for the month concerned as shown, or as arrived at from the total of the 018 for the truck?

A. It shows the complete hours of operation of each individual unit.

Q. Does it show the time for each trip or per day, or just for the entire month?

A. No, it is a recapitulation of the individual trips and shows it for the entire month.

Q. And it is also a recapitulation as to the gallons delivered by the truck?

A. That is correct.

Q. Are all truck drivers operating out of the Scotten Avenue, Lycaste, and North Detroit plants paid on a regular per-hour basis?

A. All truck drivers operating out of these respective plants are union drivers operating on a union contract, so many hours per week, and their hourly rate is as given in this report.

Q. That was 95.2 cents?

A. That is correct.

Q. Per hour?

A. That is correct.

Q. Are any of those drivers paid on a commission basis?

3726 A. We have a separate classification of drivers.

Mr. Hanley: Well, just a moment, Mr. Boatwright. You are referring to the same drivers at the Lycaste, Scotten Avenue—

Mr. Austin: The three plants, yes.

Mr. Hanley: —Scotten Avenue and North Detroit?

Mr. Austin: Scotten Avenue and North Detroit, yes.

Mr. Hanley: The question is, are any of those paid.

The Witness: In making deliveries to the re-seller trade. We have a class of drivers which we call commission drivers operating out of each of these plants who deliver fuel oil, range oil, and refined oil on a commission basis, peddler routes.

By Mr. Austin:

Q. Do you mean to consumers?

A. That is correct.

Q. You stated on your direct examination that some drivers were paid on a commission basis, and I believe you referred to Dearborn, perhaps, and some other localities. Can you state where in the Detroit area drivers are paid on a commission basis, or what drivers are paid on a commission basis, referring now to re-seller gasoline business?

A. The Detroit area is composed of ninety-some station points, as we classify them. At each of these station points we have a bulk plant and do make deliveries
3727 from these respective stations.

I do not recall all of the names of the stations at which there are sellers and at which there are commission drivers.

Dearborn is an illustration of the commission type of delivery.

I would say that in Detroit there were approximately 78 of these stations which were operated by commission employees.

Mr. Hanley: Do you mean by "Detroit" the Detroit division?

The Witness: The Detroit division; that is correct.

By Mr. Austin:

Q. Do you know how many of those stations are located in the Metropolitan Detroit area?

A. It would depend upon your classification of the Metropolitan Detroit area.

Q. Well, we have referred to it here as including the City of Detroit, Highland Park, Dearborn, and Hamtramck.

A. I would have to consult the record to know just how the different plants were operated.

Mr. Hanley: I believe it to be a fact, Mr. Austin, that there is only one, and that is the Dearborn plant. If it is important, we will develop that information for
3728 you, but I am quite sure that is the fact.

Mr. Austin: Well, these computations on Exhibits 31-B and C are made on the basis of the drivers' salary of 95.2 cents per hour, and I want to find out to what extent that may be affected by the fact that some drivers are on commission basis, not on salary basis.

Mr. Hanley: Would you like to have us determine—I am quite sure of my information on that, but of course I would want to check it before I would be certain about it.

Mr. Austin: I thought perhaps that should be brought out. I do not know whether it is material or not. It may be.

Mr. Hanley: Well, I can obtain that for you. I think I am right about it, but we will be glad to ascertain it.

By Mr. Austin:

Q. I call attention particularly to the fact that one of the Ned's Auto Supply stores is in Dearborn, and would it necessarily follow, Mr. Boatwright, that this estimate of labor cost of delivery to Ned's stations would be correct based entirely upon a 95.2 cents per hour basis if some of those drivers were operating upon another basis?

A. Was that one outlet of Ned's located at Dearborn in operation in 1937?

Q. Well, that is a question we ought to know by this time.

3729 Mr. Hanley: We ought to.

Mr. Austin: I am sorry to say I cannot answer that offhand.

The Witness: I can answer this question, Your Honor. The four outlets existing operated by Ned's Auto Supply in 1937 were served entirely out of our Scotten Avenue, our North Detroit, and our Lycaste plants; during the year 1937 there was no Ned's Auto Supply outlet served by a commission driver in the City of Detroit.

Mr. Hanley: Doesn't that settle the whole thing, Mr. Austin?

Mr. Austin: I think so.

3730 By Mr. Austin:

Q. I might ask, however, whether any of those three plants that you named serve Dearborn.

A. They do not.

Q. I wasn't familiar with that.

A. Yes. They do not. That is right.

Mr. Hanley: I assume I am relieved of the obligation of getting this information when this develops.

Mr. Austin: Yes, subject to the check as to whether the Dearborn station was in operation, and that is in the record. The record shows whether the Dearborn station was in operation in 1937. I am assuming from Mr. Boatwright's testimony now that it was not but, as I say, that can be very easily checked with the facts in the record.

Mr. Hanley: Oh, all right.

By Mr. Austin:

Q. That was probably one of the two that has been put into operation since that time?

A. That may be.

Q. Then, I understand your testimony to be, Mr. Boatwright, that you are positive that all gasoline delivered by tank truck to tank wagon resellers—well, delivered by tank truck to Ned's Auto Supply Company outlets in 1937 was delivered by drivers who were working on a salary basis?

A. That is correct.

3731 Q. Now, that would not be true, however, would it, as to the total deliveries in the Detroit metropolitan area in 1937?

A. No, it would not, if Dearborn be included as a part of the Detroit metropolitan area.

Mr. Austin: I think, Judge Hanley, we might—it might still be well to develop to what extent drivers working on a commission basis were used in the Detroit metropolitan area in 1937.

Mr. Hanley: That is including Detroit, Dearborn, Wayne County and Highland Park?

Mr. Austin: For this particular computation I don't think it is necessary to go through the entire Detroit field because for Exhibit 31 other computations were used.

By Mr. Austin:

Q. As I understand it, 31-A and B—rather, 31-B, C, D and E are intended to apply only to a comparison of costs in the metropolitan area; is that right, Mr. Boatwright?

A. That is right. That is correct.

The Witness: May I ask a question off the record, your Honor?

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Is delivery to tank wagon consumers made by 3732 drivers operating on a commission basis in metropolitan Detroit?

A. Deliveries to tank wagon consumers would be made by a commissioned driver at Dearborn.

Q. I am not going to pursue that. I just wondered whether the tank wagon consumer business was handled differently than the tank wagon reseller business or by different drivers.

A. It is not. It is not.

Q. While we are on this subject, can you state, Mr. Boatwright; what is the amount of the commission that is paid truck drivers by operating—or working on a commission basis in delivering gasoline, or how that commission is computed?

A. That varies in different communities. Your commission rates are not uniform for all of the different communities served by commissioned drivers.

Q. That would be true as to the Detroit field?

A. That is correct.

Q. Do you know what the rate is for Dearborn?

A. It would be a guess. I have a faint recollection, but I do not recall the exact figure.

Q. Where the driver operates on a—or is paid on a salary basis, is that his entire compensation?

A. The driver may participate in some of the plans that the company offers to its various employees. In the past that may have been a stock purchase plan. At the present it may be a joint participation in insurance plan.

3733 Q. Well, I am really talking about direct compensation. In other words, does the same driver operate, or may he operate, partially on a salary basis and partially on a commission basis?

A. Oh, no. Oh, no. If a man is on a commission, he is on a commission basis. If he is on a salary, he is on a salary basis.

Mr. Hanley: You are referring now generally to the operation, not particularly to Detroit?

Mr. Austin: I am referring to Detroit.

Mr. Hanley: Well, to clarify it, may I ask a question? What you have just stated is true throughout the territory in which the Standard Oil Company operates, is it, Mr. Boatwright?

The Witness: Yes.

Mr. Hanley: It will be true of Detroit or Indiana or any other community?

The Witness: That is correct.

Mr. Hanley: Assuming there are commissioned drivers in Detroit.

By Mr. Austin:

Q. Have you with you a copy of the Detroit form 189 for 1940?

A. I have.

Q. Would you mind referring to it?

3734 A. I have it now.

Q. That, by the way, is the same form that was introduced in evidence in blank as Respondent's Exhibit 32; is it not?

A. That is correct.

Q. Now, will you look under the column headed "tank wagon reseller," first, on the line "account 006, salaries, drivers," and, secondly, on the line for "account 021, commissions," and will you state which figure under the tank wagon reseller column is the larger?

Mr. Hanley: Off the record.

(Discussion off the record.)

A. You want only which figure is the larger?

Q. That is all.

A. The payment of commissions was $110,000 and the payment of salaries to drivers was $55,481.

Q. Then the commissions paid on tank wagon reseller gasoline business were approximately twice the amount of drivers' salaries on tank wagon reseller business?

A. That is correct.

Q. How do you account for the preponderance of commissions as related to salaries?

A. Why, there was just additional marketing expense incurred there.

Q. Well, what I mean is, Mr. Boatwright, you stated in metropolitan Detroit that, so far as you know, Dear-
3735 born is the only place where the tank wagon reseller drivers operate on a commission basis, so at least that would seem to indicate that there would be a great deal more paid to drivers by way of salary than by way of commissions on that type of business. Now, your form shows that the reverse is true.

A. This is a Detroit field—

Q. Yes.

A. —including, as I stated, approximately 90 stations of which 9 are located in Detroit proper, one at Dearborn, or 10 of the 90 would be included in the salary—or 9 of the stations in Detroit are operated by salaried drivers. Dearborn is operated by a commission. In addition, I think I.

stated there were 70 plus stations operated by commissioned drivers in the area outlined, Detroit proper.

Q. Well, I didn't understand that.

Is it the practice of the comapny to pay their drivers on a commission basis throughout the territory outside of Detroit, in the Detroit field, and I am talking now strictly about trucks delivering gasoline to tank wagon resellers.

A. That is correct in a smaller community. Where we have a bulk plant the commissioned driver will deliver to reseller business and he will also deliver in the rural consuming business. He is a representative of the Standard Oil Company in that community and does effect deliveries both to reseller and consumer channels.

3736 Q. Then is it your testimony that the payment of salaries to the tank truck drivers serving tank wagon resellers is something that is restricted chiefly to the city of Detroit in the Detroit field?

A. Again I would have to state that I do not recall the individual stations in Detroit that are on a salary; not only the city of Detroit. In addition, I know Lansing is served by salaried drivers; Ann Arbor is served by salaried drivers, but I would have to consult either a Van Dyke of the territory which, I think, was placed in evidence at the Detroit hearing, which indicates that the stations served by salaried drivers differ from those served by commissioned drivers, or I would have to see the list of the stations in Detroit to segregate the salaried from the commissioned drivers.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Is it your opinion, based upon the figures which you have read from the Detroit form 189, 1940, that approximately twice the amount of gasoline sold tank wagon resellers in the Detroit field, is delivered by drivers who are paid by commission—twice the amount is delivered by drivers paid on a commission basis as compared with the amount delivered by drivers paid on a salary basis?

3737 A. No, that need not follow. Naturally, any company is going to adopt a more economical means of distribution. If we can operate in one given area at a lower unit cost by having a driver on a salary, the station will be operated on a salary basis. If, on the other hand, we can operate in a given community more economically on a commission basis, we will place that station on a commission basis, and the overall efficiency can not be judged by an individual channel. It must be judged from your sales activity, not only in your reseller but in your consumer channel as well. So, as to the ratio of these expenses depicting exactly the ratio of gallonage, that should not be anticipated.

Q. Well, it would not be very far off, would it, Mr. Boatwright?

A. I don't know. In the Detroit field I wouldn't—I wouldn't know exactly.

Q. Well, what is your opinion as to the relative economy of delivering gasoline by drivers who are paid salaries?

A. Each year we analyzed these stations and their costs to determine whether it is advantageous for us to continue to operate a given outlet on a salary basis or upon a commission basis. An opinion formulated today on any given outlet may be changed a year from now. They switch back and forth from salary to commission. Now, the trend in recent years has been away from salary operation to commission.

3738 Mr. Austin: Off the record.

(Discussion off the record.)

3739 Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. What do you mean by "commission agent," Mr. Boatwright?

A. Our territory is divided into many subdivisions surrounding the establishment of bulk plants. An agent is in charge of that territory and works on a commission which is determined by his sales and he has the exclusive representation of the company in that area for the tank wagon sales of our products.

Q. Who operates the bulk plant in that territory?

A. The agent does.

Q. Is the bulk plant owned by the company?

A. The bulk plant is owned by the company.

Q. Who pays for the labor at the bulk plant?

A. The agent performs that.

Trial Examiner Ballinger: Performs, or hires and pays?

The Witness: That is right. Except for maybe a painting job, or something of that kind. The company maintains the property; but the agent performs the warehousing, the unloading, and the labor of that type, or hires and pays for that labor.

Mr. Hanley: May I ask a question to further develop this.

Mr. Boatwright, in addition to handling gasoline, is
3740 it or is it not a fact that that bulk plant agent also
handles or may handle kerosene and fuel oils, and tractor fuels and distillates, and tires, and automobile accessories, and greases, and insect spray, and separator oils, and specialties of many, many different kinds.

The Witness: The agent handles all products which you enumerated with the exception of automobile supplies. Those are shipped directly out of our salaried stations.

Mr. Hanley: And he receives his commission,—his commission compensation, in other words, is predicated on the handling of all of these products, is it not?

The Witness: That is right, with the exception of the automobile supplies.

Mr. Hanley: Yes, sir.

By Mr. Austin:

Q. Well, of course, the commissions paid covering all those products are prorated between your various channels on Form 189, are they not, Mr. Boatwright?

A. Commissions are chargeable direct.

Q. Then, the commissions which would be entered in the tank wagon re-seller column would be for what products?

A. For the delivery of gasolines, for refined oils to our re-seller outlets.

Q. Would you look at the Detroit Form 189 for 1937 and state the figures entered in the tank wagon re-seller column
on that form for commissions and for driver salaries.
3741 A. Salaries to drivers in re-seller channels, 1937,
$67,366.70; commissions to commission employees, tank wagon re-seller channel, $117,676.44.

Q. You said there commissions to company employees.

A. To commission employees.

Q. To commission employees?

A. Yes.

Q. The form in evidence here just says commissions. Is there any change in it?

A. Only in the terminology.

Q. No change in what goes into that account?

A. No.

Q. You referred a moment ago to, I believe you said, about twenty stations in Detroit in the metropolitan area, or did you say that?

A. No, I did not. I said we had nine stations in the City of Detroit proper, which includes Ferndale, purely a commission station for the delivery of fuel oil; eight salaried stations for the delivery of our regular merchandise.

Q. Were there that many bulk plants in the Detroit Metropolitan area in 1937?

A. Yes, there were.

Q. My recollection of the testimony is that it was six, but I may be in error; I mean at the present time.

37 Mr. Hanley: No, I think it has always been eight or nine.

Mr. Austin: Perhaps my recollection is in error.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Do I understand you to say that the Dearborn bulk plant is operated by a commission agent?

A. That is correct.

Q. Have you made any study to determine the cost of distribution of tank wagon re-seller gasoline per gallon in the Dearborn area?

A. Not in connection with this lawsuit.

Q. Have you made such a computation for any area served by a commission agent since 1936 in Detroit?

Mr. Hanley: Well, may I inquire as to the materiality of that?

You see, Your Honor, one reason I am raising these questions, the half-cent discount accorded to Ned's Auto Supply Company came to an end in the spring—I think it was about the end of February, 1938. It has never been in effect since, either Ned's or any place else. It is a closed book so far as its operation is concerned.

On the matter of costs in justifying it, if there 3743 was no Ned's station served by a commission driver in 1937, then all of this examination relative to cost by commission drivers is immaterial.

As to the question of cost of delivery to Ned's since, that is, delivery to Ned's on this half-cent basis, subsequent to, I think, February, last, 1938,—is equally immaterial no matter where the stations are located because that was completely abandoned at that time, and Ned's went on to a cent and a half discount, or differential basis, so I believe, Your Honor, that we are just wasting time on this question until we determine whether Ned's had this Dearborn station or was served out of the Dearborn station in 1937. It might be possibly material if that were true, but certainly not otherwise, and I think—I have not the record with me, I am sorry. You have that.

Mr. Austin: That can be determined very easily.

Mr. Hanley: But I would like to request that it be determined whether or not that Dearborn station served any of Ned's stations in 1937.

Mr. Austin: Whether it did or not—

Trial Examiner Ballinger: If it should be determined that that Dearborn station did not serve Ned's stations in 1937 and up to February, 1938, then is this line of testimony material?

Mr. Austin: I think it is, Your Honor. I would not
3744 want to concede that no service station located at
Dearborn was in competition in the sale of gasoline
with anyone of Ned's other stations in view of the fact
that people drive in and out of the city upon highways.

Trial Examiner Ballinger: How does the question of competition enter into it? Isn't it solely a question of what the costs are?

Mr. Austin: Yes, but costs are only material as between stations which are in competition with each other. In other words, the question here, first, is what did it cost the Standard Oil Company to deliver gasoline to Ned's; second what did it cost them to deliver gasoline to other stations who were in competition with Ned's. Now, that is a comparison, and that is being made here. It is an attempt to show the difference in labor cost, cost of delivery of gasoline to Ned's station, on the one hand, and to all of the other re-seller stations generally in the Detroit area, and in some other statistics; the whole Detroit field is used.

Trial Examiner Ballinger: The question of cost of delivery to Ned's relates only to a period of about one year, does it not?

Mr. Austin: The delivery to the other stations relate to the same period; and what is attempted to be shown here is the cost of delivery, the average to other stations as compared with the cost of delivery to Ned's.

3745 Trial Examiner Ballinger: If it should develop
that Ned's was supplied during that year on a wage
basis and not upon a commission basis,—that is, salaries
paid to the deliverer,—how does it become material?

Mr. Austin: Why, because, Your Honor, it now appears that at least Dearborn was handled by a commission agent, and the company's cost of delivering gasoline to retail service stations in Dearborn may have been, and probably was, quite different than its cost of—than its labor cost of delivering gasoline to stations elsewhere in the City of Detroit.

Now, the comparison that is attempted to be made here is the cost of delivery between Ned's and the others. Now, you can't make that comparison unless you find out how much it costs, to deliver gasoline to other retail gasoline stations competing with Ned's.

Trial Examiner Ballinger: Suppose delivery was made to all on the same basis.

Mr. Austin: Well, if it was, then there would not be any question of commissions, but we now know at least Dearborn was delivered, on another basis.

Mr. Hanley: Well, may I suggest this, Your Honor:
I apprehend that there was no legal obligation upon the
Respondent to undertake a justification of this one-half
cent discount at all in this lawsuit for the reason that
that operation was abandoned in the spring of 1938,
3746 and having been stopped there is no obligation upon
the Respondent to do anything about attempting a
justification of it.

The Commission would be performing or trying a moot question, and performing a fruitless act even if it were to enter an order to cease and desist something that had ceased and from which we had desisted in the spring of 1938.

The only reason, Your Honor, that we are justifying that operation as of that time is to endeavor to keep the utmost good faith with the Commission and to demonstrate that there were justifiable reasons for having done that operation in order to give, as I have so frequently said to Your Honor in trying to introduce evidence of one sort or another, a full background picture of the whole situation.

Now, Your Honor, we have shown that it does cost a certain amount to deliver gasoline out of the stations, and by the means with which Ned's stations were served as contrasted with delivering to other service stations out of those same bulk plants, and with the same facilities, and in the same competitive neighborhood.

Now, it just seems that we are going far afield and getting thoroughly metaphysical when they try to extend this thing clear out into the far reaches of all possible conception of competition with Ned's, which hasn't anything to do with it. It is a question of our costs of delivering this stuff to Ned's Service Stations as contrasted
3747 with driving the same trucks out of the same plants
to the contiguous service stations around the ones at which we were dumping gasoline in Ned's stations. It is just too burdensome, Judge. I do not see why they should pursue that course at all.

Suppose we did not justify that half cent, what could be done about that in this proceeding?

3748 Trial Examiner Ballinger: The Examiner is of the opinion that that is a matter that is before the Commission. In the absence of a stipulation that you would not engage in that practice in the future, notwithstanding the fact that you had discontinued it, the Commission might issue an order. My recollection is that the Circuit Courts of Appeals are divided upon that point.

Mr. Hanley: Well, I make no issue of that, Judge. I just simply say that I don't know that we are under any legal obligation to do it, but we have assumed the obligation, in any event, but why should we be required to assume a much greater obligation of cost justification than is clearly apparent on the face of this thing?

Trial Examiner Ballinger: I don't know that it is necessary to have this on the record. I would like to hear from counsel for the Commission further as to the precise reasons why he thinks such testimony is material.

Do you want this on the record or off the record?

Mr. Austin: It can be off, as far as I am concerned.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

(Discussion off the record.)

Trial Examiner Ballinger: Let us proceed.

By Mr. Austin:

3749 Q. Does the company employ any salesmen on a commission basis?

A. Only with—

Q. Gasoline salesmen?

A. No.

Q. So then the commissions paid salesmen would not be found in the tank wagon reseller allocation on form 189?

A. That is correct; there are no commissions paid salesmen on gasoline in the Detroit area.

Q. How about refined oil?

A. None on refined oils.

Q. Then are all of the commissions which are assigned by the company to the tank wagon reseller channel under its code of accounts, are all of those commissions, agents' commissions? That is, I would like to carry that a little farther. Are those commissions all commissions of the type that you have described as being paid to a selling agent to operate a bulk plant?

A. They are all agents' commissions.

Q. Are there any other kinds of agents than the kind that you have described—

A. I have described—

Q. —who receive commissions?

A. —in my testimony the existence of a commissioned driver, he operating out of a station or a point, operating the peddler routes. In outlying areas it is entirely possible that a commissioned driver may make a delivery to a—

3750

Trial Examiner Ballinger: Confine your statement to the Detroit area.

The Witness: In Detroit city?

Trial Examiner Ballinger: Yes.

By Mr. Austin:

Q. Including Dearborn and the others?

A. There would be no commissions paid to drivers in Detroit city for deliveries of resellers—reseller gasoline. In Dearborn it would be all commissioned agent payment.

Q. Then if Judge Hanley were to furnish me with a list of the bulk plants operated by commissioned agents, would the agents represented by those bulk plants include all—that is, would they be the persons to whom all of the —would they account for all of the commissions entered in the tank wagon reseller column opposite account 021 on form 189?

A. They would.

Mr. Austin: That is the only request I wish to make, then, Judge Hanley, would be simply a—now that I understand this method of operation, which I didn't before, I would like to have a list of all commissioned agents or bulk plants operated by commissioned agents in the Detroit metropolitan area. I understand Mr. Boatwright's testimony to be that a commissioned agent is a man 3751 who acts as the company's agent in operating a bulk plant and delivering to tank wagon resellers served from that bulk plant and that the commissions paid him for that agency operation are what is included and all that is included in the commissions opposite account 621, commissions, tank wagon reseller, excepting, possibly, some small amount paid to these drivers who operate out of—

By Mr. Austin:

Q. Well, will you complete that exception, Mr. Boatwright?

A. The exception applies primarily out of a city like Monroe, Michigan, where you will have some salaried driver taking care of the inner circuit of business. Your commissioned driver will serve out of Monroe salaried stations, delivering to consumers and what we refer to as circuit point resellers where the distance from the plant is such that a smaller truck and taking smaller dumps will serve that as part of his regular route.

Mr. Austin: I am speaking now of Detroit.

Mr. Hanley: Including these four places, Detroit, Highland Park, Hamtramck and Dearborn?

Mr. Austin: That is right.

Mr. Hanley: And what you want me to give you is what stations or plants in those four municipalities are commissioned plants?

Mr. Austin: Commissioned plants and the territory served from each one of those plants.

3752 Mr. Hanley: That is all you want?

Mr. Austin: That is all I want.

Mr. Hanley: We will get that for you.

Trial Examiner Bailinger: Off the record.

(Discussion off the record.)

Mr. Austin: Would it be possible, conveniently, also to supply in that connection—of course, there may be only one—

Mr. Hanley: That is my understanding.

Mr. Austin: —to state in that connection also the amount of commissions paid that agent and the amount of tank wagon reseller gallonage moving from that bulk plant?

Mr. Hanley: If you get into that, we got to know when, where and the amount.

Mr. Austin: For 19—

Mr. Hanley: I don't know.

Mr. Austin: Well, I would like to have it for 1937 and 1940, not more than that, or either one or both. That is, I would like both if you have it. It will be just total figure for commissions and total figure for gallonage. I don't know. Let us don't go into that. If we decide we need that we can—I don't think it will—it probably will not be important. Just leave it the way we have it, Judge.

Mr. Hanley: All right. We will get you this. We will answer your first request. We can do that very readily.

3753 Mr. Austin: Yes.

Mr. Hanley: We can telephone and get that for you.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Let us proceed.

Mr. Austin: Let us go to lunch, if your Honor please.

(Discussion off the record.)

Trial Examiner Ballinger: Now, at 12:50 p. m., the hearing stands in recess until 2 p. m.

(Whereupon, at 12:50 p. m. a recess was taken until 2 p. m.)

3754 Afternoon Session, 2 P. M.

Trial Examiner Ballinger: Come to order, gentlemen, please.

We will be in recess while Mr. Hanley answers the long distance telephone.

(There was a short recess taken.)

Trial Examiner Ballinger: We will resume, gentlemen. By reason of the serious illness in Judge Hanley's family, the hearing is now adjourned subject to being reset upon five days' notice.

(Whereupon, at 2:35 o'clock p. m., June 3, 1941, the hearing in the above-entitled matter was adjourned.)

3755 Room 332, Federal Trade
Commission Building,
Washington, D. C.,
Monday, June 16, 1941.

Met, pursuant to notice, at 10 a. m.

Before:

Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., appearing on behalf of the Federal Trade Commission.

Harold R. Hanley, Esq. (910 South Michigan Avenue, Chicago, Ill.), appearing on behalf of the Respondent.

3756 PROCEEDINGS.

Trial Examiner Ballinger: Come to order.

The hearing in Docket No. 4389, the matter of Standard Oil Company, is reconvened pursuant to agreement of counsel at 10 a. m., June 16, 1941, in Room 332, Federal Trade Commission Building, Washington, D. C. The last hearing was held in Washington, D. C., June 10, 1941.

The Reporter will note Counsel for the Commission and Respondent present.

You may proceed.

Mr. Austin: At this time, I would like to offer in evidence Commission's Exhibit 78-A to E, inclusive, for identification. This is a statement of miscellaneous expenses of the Citron-Kolb Oil Company. It was identified by Mr. Byber and was not offered in evidence at that time because Your Honor's ruling upon the Respondent's Exhibits 7 to 16 was still pending. Now, those exhibits were later received in evidence and it was my intention to offer this exhibit in evidence if Respondent's Exhibits 7 to 16 were received, but after they were received I overlooked this exhibit until I found it in my file recently, so I believe it has been fully identified, and I would like to offer it at this time.

(Mr. Austin hands document to Mr. Hanley.)

Trial Examiner Ballinger: Is there any objection?

Mr. Hanley: May we go off the record a minute, if 3757 the Examiner please.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Austin: For the record, if Your Honor please, I may state further that Commission's Exhibit 78-A to E, for identification, which is now offered, is a breakdown which was produced by Mr. Byber from the files of the Citron-Kolb Oil Company or copied from those files, a breakdown of the item entitled "Miscellaneous" on Respondent's Exhibit 8, for the year 1940.

Mr. Hanley: Well, perhaps in answer to Your Honor's query as to whether there is any objection, Counsel for the Respondent should state upon the statement of counsel that the exhibit was identified by Mr. Byber, and is merely a breakdown of an item in an exhibit already received in evidence, there is no objection on the part of the Respondent.

Trial Examiner Ballinger: The document will be admitted in evidence as Commission's Exhibit 78-A to E.

(The document heretofore marked for identification "COMMISSION'S EXHIBIT 78-A TO 78-E," was received in evidence.)

Mr. Austin: Will you take the stand, please, Mr. Boatwright.

3758 JOHN W. BOATWRIGHT was thereupon recalled as a witness for the Respondent, and, having been previously sworn, testified further as follows:

Trial Examiner Ballinger: Mr. Boatwright, you have been previously sworn?

The Witness: Yes, sir.

Cross-Examination by Mr. Austin (Continued).

Q. Mr. Boatwright, on your direct examination you referred to "The accepted tank car spot market" in a given community. What is the tank car spot market?

A. It is the prevailing price at which tank car sales of gasoline are made by various supplying companies.

Q. Then there is a prevailing price or a spot market price which applies to more than one company?

A. Yes, there is an accepted price.

Q. Well, what is that price? That is, I am not familiar with the operation of such a market. I wish you would explain just how gasoline is sold on a tank car market. Does that refer to unbranded gas or branded gas? Is it a market where or in the sense that there is a market price and different companies sell their gasoline through the same agents or brokers, or anything of that sort, or is it something that each company handles separately? I wish you would just explain that a little bit.

3759 A. Each company handles it separately. It may be sales on specifications, unbranded, or it may be sales of branded gasoline.

Q. Does the tank car spot market refer to branded gasoline in the case of the Standard Oil Company, for instance? Would branded gasoline be sold on what you would call a spot market?

A. It may or it may not.

Q. What is the meaning of the term "tank car spot market"? Does that just refer to a price?

A. It refers to the price level at which the merchandise is sold by tank car quantities.

Q. Does that have anything to do with the price at which gasoline is sold to jobbers?

A. No. It may be unrelated and they may be related, depending upon the type of contractual agreement that is drawn.

Q. Would purchases made by the four jobbers in Detroit that we have been referring to in this case—would those be purchases on spot markets or would they be so considered?

A. I don't think that any of the four jobbers were sold on the open spot market quotation.

Q. Then what determines whether a purchaser buys at spot market or whether he buys on some other basis?

A. The purchaser's policies.

3760 Q. The purchaser's or the seller's?

A. The purchaser's policies.

Q. Well, how can the purchaser determine that?

A. Well, if the purchaser is buying on the spot market, he determines whether he is going to be a distributor of gasoline so secured or whether he is going to be the distributor of gasoline of a branded type. A spot market buyer may buy from one source today and another source tomorrow. He exercises the decision as to whether he will buy open market or whether he will become associated with and distribute regularly a given brand of gasoline.

Q. What difference does it make whether he becomes associated with and sells regularly branded gasoline? Why couldn't he continue to buy that same brand if he wanted to on the spot market?

A. He could. He could buy regularly on the spot market.

Q. You see, I am bearing in mind, Mr. Boatwright, that it has been brought out in this case that there is no contractual relationship between Standard Oil and Citrin-Kolb or Ned's or the other two in that each one orders a tank carload at a time and either party can stop at any time they please. I want to know what the difference is between that relationship and the relationship of buyer and seller on tank car markets.

A. Generally speaking, we think of the man who buys and participates, secures his supplies regularly on
3761 the open market as being non-affiliated with a particular type or brand of gasoline. He is what we refer to as an open market buyer, and he secures such gasoline as he can at any given time at whatsoever the prevailing tank car price may be.

Trial Examiner Ballinger: Without regard to branded?

The Witness: That is correct, generally speaking. Now, frequently, open market buyers do buy on specifications, Judge, but it is their own specifications that they buy under.

By Mr. Austin:

Q. If such a buyer obtained a tank car of Red Crown gasoline, whether or not it had the brand on the car or the truck when it was delivered to him, he wouldn't be able to resell that as Red Crown gasoline, would he, through Red Crown pumps, for instance, if he was operating at retail?

A. If he buys on open market, and according to specifications, it would not be sold under the brand name "Standard Red Crown."

Q. Well, that is one important distinction, is it not, between such a relationship as we have here with these regular buyers, on the one hand, and the tank car buyer, on the other hand?

A. That is a distinction.

Q. On direct examination, Mr. Boatwright, you made the following statement, at page 2413 of the record:

3762 "He would have taken his expense items and classified them according to functions performed." (There you were referring to Dr. Taggart.) "And then expressed each of his various expense items as a proportion of realization for comparison with such reports as are published by Dun and Bradstreet, or other similar reporting commercial organizations."

What are the reports published by Dun and Bradstreet to which you referred in making that statement?

Mr. Hanley: Perhaps Mr. Boatwright should have the whole answer before him, Mr. Austin.

Mr. Austin: All right, I will be glad to let him have it.

Mr. Hanley: The question and the entire answer, so we will know what you are both talking about.

Trial Examiner Ballinger: The question and answer appear on what page of the transcript?

Mr. Austin: This was a part of a long answer that Dr. Boatwright gave to a question which appears at page 2413 of the record, and my question now is: What reports published by Dun and Bradstreet were referred to there?

A. Dun and Bradstreet publish annually statements, operating expense and profits, by classifications of retail outlets. It is such a report that I referred to.

By Mr. Austin:

3763 Q. Well, does that refer to retail gasoline stations, or what is it a study of?

A. It is a study of filling station operations.

Q. Filling station operations?

A. Yes.

Q. Do they make those studies just for the oil industry or for various industries?

A. They make them for various industries.

Q. And have they made studies of the distribution expense of gasoline retail filling stations?

A. They have made studies of the distribution and operation of service stations, and have taken the various expense items and classified them and expressed those expense items as a percentage of the gross realization of the outlet. Their study is not so much a study of the costs of a particular product as it is the cost of the operation of this class of retail outlet.

Q. Well, haven't they, as far as you know, reached any conclusion in any reports as to the average cost per gallon of distribution of gasoline by a retail service station?

A. I do not recall whether Dun and Bradstreet translate it to a cents-per-gallon basis or not, but annually they put out these reports; and whether or not they reduce it to a gallon of one particular product, I could not tell you.

Q. Well, when you talked about a portion of 3764 realization in reference to expense items, was it your suggestion that Dr. Taggart might have taken the total or average of any particular expense of the service station and compared it with the total realization; in other words, was it your opinion that the Dun and Bradstreet report would have been any basis of comparison of a check against Dr. Taggart's figures?

A. Oh, yes.

Q. You think it would?

A. Yes.

Q. Has Dun and Bradstreet ever made a check covering the Detroit area?

A. Well, they classify the country into regions. They have a north central region in which Detroit is included. The study is based on a scale that is national in its scope, and then they classify the outlets according to regions, although they do not classify it as to individual city, but they do have a region which does encompass and include Detroit.

Q. Well, do you know whether Dr. Taggart did or did not make such a check?

A. No, I do not know. I merely enumerated that as one of the checks that could have been made.

Q. And you do not know, do you, whether or not the check was favorable or unfavorable to his report if it had been made?

A. I do not.

Q. Now, we will turn back to Respondent's Ex-3765 hibit 31-A to Q, Mr. Boatwright.

Now, on June 3, we were having some discussion about the commission agent type of distribution of gasoline, and you stated "The four outlets existing operated by Ned's Auto Supply Company in 1937 were served entirely out of our Scotten Avenue, our North Detroit, and our Lycast plants; during the year 1937 there was no Ned's Auto Supply outlet served by a commission driver in the City of Detroit," and you stated further that none of those three named plants served Dearborn, and that you were positive that all gasoline delivered by tank truck to Ned's Auto Supply Company outlets in 1937 was delivered by drivers who were working on a salary basis. It appears from Mr. Gershenson's testimony in the record that the Ned's Michigan Avenue store in Dearborn was the second store established by Ned's Auto Supply Company, and that this store was selling the Standard Oil gasoline in 1936. You probably checked that since you were here.

In view of that fact, do you wish to change any of the statements which I have just quoted from the record?

A. Each of the statements quoted from the record were accurate. The difficulty lies in the fact that our station, geographical territories, do not coincide exactly with the municipal territories. Thus in spite of the fact that one station was located at Dearborn and in the municipal area of Dearborn, that part of Dearborn is and was 3766 served out of the Scotten Avenue plant. The statement remains exactly as given.

Mr. Hanley: If Your Honor please, if I might be permitted to examine a moment on voir dire, I think that I can clarify this whole thing and do so by a map.

Mr. Austin: I will be glad to have the map.

Trial Examiner Ballinger: Since there is no objection, you may do so.

Mr. Hanley: I would like to have this map marked as Respondent's Exhibit No. 92, for identification.

(The map was marked for identification "Respondent's Exhibit No. 92.")

Examination on Voir Dire by Mr. Hanley.

Q. Dr. Boatwright, I show you what purports to be a map of Detroit with certain red lines superimposed thereon with certain names given the territories enclosed by such lines, and I will ask you if you prepared the portion of the map having to do with the superimposition of the red lines and names?

A. I did not prepare it personally. It was prepared at my request.

Q. Did you supervise the preparation of it?

A. I did.

Q. First, what do the names represent that appear in red letters?

3767 A. Each of these names indicate one of the station territories served out of our various bulk plants.

Q. And what is the fact as to whether or not the bulk plants in Detroit are referred to by the various names that appear in the red letters?

A. That is correct.

Q. Now, which of those several bulk plants serve Ned's stations and all of Ned's stations during 1937?

A. Scotten Avenue bulk plant.

Q. Just a moment.

A. Excuse me.

Q. Let me reframe that question.

Which of those stations, by name, served all of Ned's service stations from September of 1936 until late February, 1938?

A. Scotten Avenue served two; North Detroit served one, Lycast served one.

Q. Now, Mr. Boatwright, it appears that there are on the map certain red dots encircled by a green line. What do those markings represent?

A. Those markings represent the street intersections, or the locations of the four outlets of Ned's Auto Supply Company.

Q. At what period?

A. During the year 1937, the period that you refer to.

Q. Now, is that the period during which this half-cent reduction off tank wagon price was allowed to Ned's Auto Supply?

3768 A. It is.

Q. I call your attention particularly to a red outline area marked "Dearborn." Does that or does it not coincide with the geographical limits of the municipality of Dearborn?

A. It does not.

Q. I call your attention to one of the points in red encircled by a green line, which you have said refers to the location of Ned's Auto Supply stations which appears just to the right of the area marked "Dearborn," and I will ask you if that station is in fact within the geographical limits of the city of Dearborn?

A. That is my understanding.

Q. As a matter of fact, is that station also within the area as indicated on the map served by the Scotten Avenue bulk plant?

A. It is.

Q. And was it in fact served by the Scotten Avenue bulk plant?

A. It was.

Q. I direct your attention to an area just south of the Ned's Auto Station in Dearborn which we have been discussing marked "Ford Motor Company," and to an area to the left or the west thereof which is comparatively blank on the map, and will ask you if you know what is the situation with reference to whether that area is built
3769 up and what occupies it in the City of Dearborn?

A. Well, it is largely the area in which the various Ford interests are located. It includes the Ford golf course, and Greenfield Village, Ford proving grounds, the Ford Motor Company's plant, the Dearborn plant, and so forth.

Q. What is the fact as to whether or not there are a great many open fields and open country in that vicinity in which there are no business places, residences, or service stations of any kind?

A. There are many open places in that area.

Q. Have you verified your testimony to the effect that throughout the period from the fall of 1936 until the end of February, 1938, all of the existing Ned's Auto Supply service stations to which deliveries were made by the Respondent were made by salaried drivers only out of the Scotten, Lycaste, and North Dearborn bulk plants of the Respondent?

A. There was an error in your statement. It was the North Detroit plant instead of North Dearborn.

Q. I am sorry. North Detroit.

A. I have checked and have verified; all of the plants were served entirely form these three bulk plants, all of which are salary operations.

Mr. Austin: Judge, I don't want to interrupt you, but I think you are getting pretty far afield. If you want to put this map in for that purpose, I will be glad to
3770 have it, and I don't mind identifying anything on the map and explaining about the territory of the map, but—

Mr. Hanley: All right. I will just ask one further question.

By Mr. Hanley:

Q. Are any of the plants indicated by the red-lettered names on the map commission plants except that designated as Dearborn?

A. No, sir.

Q. And Dearborn, as I understand your testimony, did not at any time during this period, fall of 1936 to the spring of 1938, serve any of Ned's stations?

A. It did not.

Mr. Hanley: We offer the exhibit, Your Honor, No. 92.

Trial Examiner Ballinger: Any objection?

Mr. Austin: No objection.

Trial Examiner Ballinger: Without objection, Respondent's Exhibit for identification, No. 92, is admitted in evidence.

(The map heretofore marked for identification "RESPONDENT'S EXHIBIT No. 92." was received in evidence.)

Cross-Examination by Mr. Austin (Continued).

3771 Q. On this map, Exhibit 92, there are seven areas marked out in red. What are those areas? What do the areas represent? Is each one an area served from a particular bulk plant; is that right?

A. That is correct.

Q. And of the seven, how many of them are in the City of Detroit?

A. Well, they don't exactly correspond with the lines of municipal areas. Dearborn is outside of the City of Detroit (indicating). Lycaste, Clay, Bellview, Scotten, Strathmoor, and North Detroit are almost entirely in the City of Detroit.

Q. On June 3d, you referred to nine or ten stations, and I believe you used the word "station" as meaning a bulk plant station.

A. That is right.

Q. Nine or ten stations in the Detroit area. Where are the others that are not shown on the map? Seven are shown here.

A. Well, there is seven. I referred to Ferndale, which makes eight. Ferndale is a commission station delivering only fuel oil.

Q. Where does Ferndale get its gasoline?

A. It doesn't distribute gasoline.

Q. Aren't there any customers in Ferndale who buy gasoline?

A. Oh, yes.

Q. Standard Oil?

3772 A. Yes.

Q. Where do they get it?

A. It would come from one of the adjacent stations. It might come out of Royal Oak.

Q. Is Royal Oak a commission station, or a—

A. Royal Oak is a salaried station.

Q. A salaried station?

A. Yes.

Q. Is Hamtramck and Highland Park shown on here?

A. Yes, here is Hamtramck and here is Highland Park right here (indicating).

Q. Oh, those are both in the area served by the Clay bulk plant?

A. Not entirely.

Q. But largely?

A. I would say in part. You see, the names as indicated on here—actually the areas represented by these respective names may encompass a wider zone, part of which may be in North Detroit and part in Hamtramck, even, maybe in Bellview or Lycaste. I can't tell you the exact geographical boundaries of those two areas.

Q. I stated on June 3d that it was my recollection that Mr. Raupagh had stated there were six bulk plants in the City of Detroit, and I find that that was correct. I believe that this map bears out that statement rather 3773 than your statement of nine or ten. That is, I assume, Mr. Raupagh was referring to the six stations shown here exclusive of Dearborn.

A. That is correct.

Mr. Austin: I believe that is a fair statement.

Mr. Hanley: That may be true.

The Witness: Yes, that is correct.

Mr. Hanley: I wouldn't take issue with it at all.

By Mr. Austin:

Q. If there were any other bulk plants serving the Detroit area, I wanted to find out where they were. You state there is Ferndale and this Dearborn station, that makes eight. Ferndale, however, as I understand you, does not sell or supply gasoline.

A. It does not.

Q. Are there any others?

A. No, sir.

Q. You referred to a certain area here which is not very heavily settled; is that what you stated, to the west of the Ford plant?

A. That is correct.

Q. On Respondent's Exhibit 92.

Ned's Auto Supply station in Dearborn is located on Michigan Avenue; is it not?

A. Yes, sir.

Q. And Michigan Avenue, I believe, runs all the 3774 way through Dearborn, does it not, and over into the territory to the west of Dearborn, as shown on the map?

A. I think that is correct.

Q. Is the territory within the Dearborn commission agent territory, as shown on this map—I might refer in general to the western part of the Dearborn territory which it is shown as divided up into streets—that is all settled residential territory, is it not?

A. That is residential territory. The western part of the area.

Q. And is it not true that a great many people drive back and forth from that territory into Detroit every day, on Michigan Avenue?

A. Oh, yes.

Mr. Austin: If Your Honor please, I would like to ask a number of further questions on the operation of the commission agent territory and the method in which commission agents operate, not solely in connection with Exhibit 31, but also in connection with the testimony and exhibits in relation to the 1939 and 1940 cost differences as between jobbers and retail operators.

I would like to point out that it is shown here that while the Ned's Dearborn station was served by salaried drivers, that the major territory in Dearborn, including considerable residential portions, were served by a 3775 commission agent, and I think it is quite clear that retail gasoline stations located in Dearborn and served by a commission agent must be considered as in competition with Ned's Dearborn store. So that perhaps it is unnecessary for me to make this preliminary statement, but I am just doing so in case there is any claim that testimony on this point is in any way immaterial. And the commission agent method of operation is one with which I am not familiar, and about which very little, if anything, has been said in this case. I wasn't aware of such a method of operation until the testimony here on June 3d. Consequently, I would like to go into it a little further.

By Mr. Austin:

Q. Have you made any separate computation of the Standard Oil Company's costs of sale and delivery of gasoline to tank wagon resellers supplied by commission agents?

Mr. Hanley: Now, just a moment. Counsel having asked the question in line with his statement, Your Honor, I wish to make this objection and statement:

First, the Respondent has no objection to counsel's examination on the question of how commission drivers or agents are paid, or the commission system of distributing petroleum products in so far as the same relates to differences in cost as set up by the Respondent between deliveries to the reseller channel, on the one hand, by tank wagon and the jobbers or tank car buyer distributor, on the
3776 other hand, because there definitely is in the computation of cost supplied, Your Honor, in this case, by the Respondent, a recognition of both costs arising out of commission compensation paid agents and distributors for the company, as well as salaried drivers. That is a matter we were able to take directly from the books without making any calculations pointed to this lawsuit at all. It was just a matter of taking what the books showed irrespective of any questions involved in this litigation.

However, as respects the computation relative to the one-half cent deduction of tank wagon accorded Ned's Auto Supply Company in 1937, there is an entirely different situation. Let me say again that under our system of keeping books, which is by channel cost, there was a set-up, and has been for many years, a cost set up on the books referring to the reseller channel, and another referring to the tank car channel of sales. So we had no difficulties there. We could go right to the books and establish the costs as between those two channels of distribution. However, in connection with the one-half cent off-tank wagon on deliveries to Ned's, we were there confronted with the necessity of establishing the difference in cost of delivery to a group of stations in the reseller channel as distinguished from other stations in the reseller channel. We don't keep the books that way. There is no effort made by the company—indeed, it would be an impossibility from an accounting standpoint—to undertake to keep costs 3777 on every individual station in the reseller channel, but it became necessary to break down the costs as between this group of Ned's stations, on the one hand, in the reseller channel, and served by the same trucks and out of the same plants as certain other reseller accounts were served in the same general area. Now, we have done that. It appears from the testimony now that all of those stations were served out of three plants in Detroit by salaried drivers, as were all of the other reseller accounts in that general area.

Now, this is a question of cost, Your Honor, cost to the Respondent to serve these various accounts. We have demonstrated a cost out of these three plants to serve Ned's, on the one hand, and all other stations in that territory, on the other hand. As to that feature of cost, we do object to any consideration of commission method of compensation, for the specific reason that it has nothing to do with it; it would merely complicate the situation as having absolutely nothing to do with the cost to the Respondent. The only cost we had so far as delivery was concerned was predicated on a salary basis.

Just to recapitulate and make it clear: We do not have any objection to counsel examining and to the court considering this question of salaried cost and commission cost of delivery on the broad question of the reseller channel as distinguished from the tank car channel, be-3778 cause there is included in the reseller channel two different kinds of delivery cost.

We do, however, object to any inquiry on the part of counsel on the question of commission selling or any consideration by the court of that question as it relates to the question of cost concerning the one-half cent difference allowed to Ned's Service Stations, for the reason that it is utterly immaterial and irrelevant to that issue, and is of no aid and would simply be an immaterial complication.

3779 Trial Examiner Ballinger: The Examiner would like to hear from counsel for the Commission with reference to the relevancy of the examination as to whether the sales made to Ned's during the period the one-half cent differential was effective, was it on a straight salary basis or upon a Commission basis?

Mr. Austin: Yes. If your Honor please, of course I might say in the first place that since it is conceded that this testimony may be relevant in one phase of the case, that I assume that questions might be asked regardless of what they might be intended to refer to, but I would certainly not want to concede that such testimony has no relevancy to the 1937 situation of the one-half cent differential.

On the question of labor costs and delivery costs differences, Respondent's Exhibit 31-B purports to use a method of selling in 1940 on full dump deliveries to determine the estimate, I suppose you would have to call it, of labor cost delivery to Ned's stations in 1937.

Respondent's Exhibit 31-B refers to a procedure to obtain the drivers' salary cost per gallon for delivering gasoline to the average reseller in Detroit. Now, that is in paragraph B on Exhibit 31-C, first the average reseller in Detroit. Now, that means the Detroit area and I am simply, I think it is certainly relevant to determine whether or not a computation based entirely on drivers' salaries
is a proper means of showing the cost of delivering
3780 to the average reseller when certain resellers may
have, I mean certain commission agents may have a different cost of delivery.

In other words, the same thing is carried out on equipment cost differences.

If your Honor will turn to Exhibit 31-F, it refers to equipment costs per gallon for delivery to the rank and file of retail outlets. Well, now, this may not be terribly important here, but I think it is unquestionably relevant, and the theory is that it costs the Standard Oil Company a certain amount to deliver gasoline to Ned's and it costs them a different amount to deliver their gasoline to other retail stations, but in estimating the cost to other retail stations they do not include any of these commission stations, and the commission stations were, the commission stations in Dearborn were I think undoubtedly in competition in the sale of gasoline with Ned's Dearborn station, possibly with some of the other stations.

So that I do not know whether there is any great—I suppose if the testimony goes in the record with the 1939 and 1940 situation it would be there anyhow, but I would certainly hope for the reasons I have just stated that your Honor would not rule that it is not material in connection with 1937.

Trial Examiner Ballinger: Is there any question but what Ned's company has been served throughout, commencing in the fall of 1936 and on down to the present 3781 time by tank cars operated by salaried employees?

Mr. Austin: Tank trucks.

Trial Examiner Ballinger: Tank trucks operated by salaried employees.

Mr. Austin: No, there is no question about the method of delivery to them.

Trial Examiner Ballinger: Well, that goes back and includes the period when the one-half cent differential was in effect.

Mr. Austin: Yes.

Trial Examiner Ballinger: Then, how does it become material to inquire with reference to what might have been the cost if it had been operated on a commission basis?

Mr. Austin: Well, if your Honor please, Ned's is only half the picture. It is a comparison between Ned's on the one hand and retail stations on the other. Now, these retail stations were served by a commission agent, but the computation here is a computation for retail stations based on salaried drivers.

Mr. Hanley: If your Honor please, I think it will be more clear if your Honor just glances at this map. Now, all of Detroit, your Honor, according to the testimony disclosed here on the map is served by salaried drivers including all of Ned's stations except this portion here marked Dearborn.

3782 Now, in point of fact Dearborn actually, the actual boundary line is over here some place. I know the Ford Motor Company is in Dearborn, which appears on the map, and this station is in the geographical limits of Dearborn but that portion of Dearborn bounded by the red line was served by the Scotten station, which is a salaried station, and consequently all of the territory on this map and all of the service stations in it with the exception of this portion over here, there was no service station in this proving ground and golf course, and Mr. Ford's farming country, which appears as a blank space on the map. The only stations served by the commission agent would be over here.

Trial Examiner Ballinger: Would that be outside of the Detroit area?

Mr. Hanley: Well, I think it would be generally in the Detroit area. Dearborn is a separate municipality, but we have considered it for the purpose of this lawsuit as within the environs of Detroit, as we have Hamtramck, which you see here is right in the heart of the great metropolitan area of Detroit, but all of these stations, all over the city, with the possible exception of what few might be in here were served by salaried drivers, all of the existing stations of Ned's included. Now, the only way in the world we could make a comparison was to compare what it cost us to serve Ned's in the salary area with what
3783 it cost us to serve all the rest of these stations in the salary area.

Mr. Austin: Well, you see, there are service stations out here on Michigan Avenue, running through all these service stations, in competition with Ned's, without question. Now, the question is, what is the difference of serving Ned's and these stations here; these stations are just as material to the case, in other words, as these stations over here.

Trial Examiner Ballinger: The Examiner will permit the evidence to be received subject to motion to strike.

Mr. Austin: Well, if your Honor please, it has been conceded that this testimony would be relevant in connection with 1939 and 1940 part of the case anyhow, and I am offering it in connection with both dates.

Trial Examiner Ballinger: Well, I understand.

Mr. Austin: So if its relevancy is conceded for one purpose, I assume it would not be subject to motion to strike.

Trial Examiner Ballinger: Well, motion to strike as to its relevancy to another period.

Mr. Austin: Well, if such motion is in order, but I just wanted to be sure I understood your ruling.

I might state that I might postpone this until cross-examination upon Exhibit 33, but I would prefer to go ahead with it at this time, and since we have taken
3784 the subject up and we are already in it, I think perhaps it might make the record a little more orderly to go ahead now. That is the only reason I want to do it at this time.

Trial Examiner Ballinger: Proceed.

Mr. Austin: Is there a question pending?

Will you please read the question?
(Question read, as follows:
"Q. Have you made a separate computation of the
andard Oil Company's costs of sale and delivery of gaso-
ne to tank wagon resellers supplied by Commissic
gents?")
The Witness: Is your question limited to the Detroit
ea and to this lawsuit?

y Mr. Austin:

Q. It is limited to the Detroit area but not to this law-
it.

A. I have made no separate computation.

Q. Have you made any such computation for any other
mmission agent area in the Detroit field?

Mr. Hanley: Well, now, that is objected to as repeti-
ous. Dr. Boatwright testified on June 3rd that the ques-
on of whether a station would be continued or placed on
ther a commission or a salary basis was a matter of almost
early consideration, and that the economies of the situa-
tion governed at any given time, and they might switch
785 back and forth in any given area, which testimony has
already been given by this witness.

Mr. Austin: Well, my question was whether he made
ny study of the cost of sale and delivery, or cost of deliv-
ry by commission agents in the Detroit area. Now, I think
r. Boatwright has been using the word "area" as synon-
mous with "field" a number of time, and I would like to
sk you, Mr. Boatwright, to try to refer to the Detroit
rea only when you are referring to the city of Detroit,
nd Dearborn, Hamtramck and Highland Park, and use the
hrase "Detroit field," when you are referring to the larger
rritory. I rather suspect that your answer which you
ave me a minute ago was directed to the Detroit field, but
ou said Detroit area. That is why I asked you the same
uestion again as to the field. I do not quite understand
udge Hanley's objection, because I was only being sure
f the territorial limits of the answer that Mr. Boatwright
ave.

Mr. Hanley: Well, it might aid us if the question and
e objection were read.

Trial Examiner Ballinger: The question may be repeti-
ous but some time has intervened since he previously tes-
fied, and the objection is now overruled.

Mr. Hanley: Will you please read Mr. Boatwright the question?

(Question read.)

3786 A. Your question is so broad that it is difficult—

By Mr. Austin:

Q. Then, please, Mr. Boatwright, I asked you first whether your had made any computation of cost of sale or delivery of gasoline to tank wagon resellers supplied by commission agents, and limiting your answer to the Detroit area, you said no. Will you tell me, by your answer were you limiting your answer to the city of Detroit or the whole Detroit field?

A. At that time I was referring to the four areas considered as Detroit metropolitan market, Detroit, Dearborn, Hamtramck and Highland Park.

Q. Well, now, can you enlarge that answer to say, so that I will be asking you whether you made any study of commission agent costs in the Detroit field since 1936?

A. Yes. Analyses are made of commission agent's cost and are reviewed annually; that would apply to the Detroit field as well as any other of our sales fields.

Q. And those reports, I suppose, are available?

A. Those studies.

Q. Analyses, I believe you called them.

A. Those studies are part of general records of the company, and the analyses are conducted annually to insure that we can maintain our distribution on as efficient a basis as possible.

Q. Would such analyses include Dearborn, or would 3787 there be one covering Dearborn?

A. Every year we receive from each of our stations complete statements on through put and costs. Each of those are analyzed to ascertain whether costs incurred at that station are comparable with costs that would be incurred under another mode of competition. Dearborn, of course, is included.

Q. Of course, there are some costs of operation of stations in—I should not say "cost of operation"—cost of distribution to service stations located in commission agent territory which would be the same whether the station was served by salary or by commission agents, isn't that correct? I mean by that, many costs, perhaps you call them overhead costs or—

A. Yes, there are many costs.

Q. There are certain costs appearing on 189, I suppose, which would not be affected?

A. There are many costs which you can not segregate or differentiate between whether that cost be incurred on volume sold through a commission agent or whether they be incurred on volume sold by a salaried delivery function.

Q. And then on the other hand I assume that there are other costs that would differ as between the commission agent method of distribution and the salary agent method?

A. Yes, sir.

Q. What are the duties of a commission agent?

Mr. Hanley: Well, that is—I do not have any
3788 particular objection, but it is repetitious.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Hanley: Well, I will withdraw the objection, if there is any question.

Mr. Austin: Let me proceed with specific questions, and perhaps the general one—I will withdraw that question.

By Mr. Austin:

Q. Does the Standard Oil Company furnish the trucks used by the commission agent for delivery of gasoline to tank wagon resellers?

A. It does not.

Q. Those trucks are furnished by the commission agents themselves?

A. Yes, sir. The company furnishes only the tank mounted on the truck.

Q. Oh, the company furnishes the tank mounted on the truck?

A. That is correct. The chassis is owned by the agent. The company furnishes the tank.

Q. Does the title to the tank remain in the company or does the company simply sell that to the commission agent?

A. The title to the tank remains in the company.

Q. Are the expenses of maintenance and operation of these vehicles paid by the commission agent?

3789 A. They are.

Trial Examiner Ballinger: How about the expense of the maintenance of the tank?

The Witness: They are assumed and maintained by the company:

By Mr. Austin:

Q. Well; there [illegible] maintenance of tanks, that would be almost nil, would it, Mr. Boatwright?
A. It would be very light, yes.
Q. And when you said paid by commission agents you did not mean that that is reimbursed to them by the Standard Oil Company, did you, except insofar as he receives his commission?
A. I am sorry. Your question is not clear.
Q. I asked you, for instance, whether maintenance of operation of vehicles was paid by the commission agent, and you said yes. Are those expenses reimbursed to the commission agent by the company?
A. They are not.
Q. As such?
A. They are not.

By Mr. Hanley:

Q. They pay a rental in many instances, is that not so, Mr. Boatwright?
A. A rental is paid on the chassis but the repairs and maintenance of the chassis itself is an obligation of the agent.

3790 By Mr. Austin:

Q. What do you mean by a payment of rental on the chassis?
A. The company pays a rental to the agent for the utilization of the truck in the distribution of its products on a monthly basis.
Q. Is that in addition to the agent's commission?
A. Yes. He receives a base commission rate plus a truck rental.
Q. Does he receive any other remuneration or payment from the company?
A. No, he does not, except as he participates in the various plans that I enumerated in the testimony.
Q. Well, that is—
A. That is available to any employee, that is understood.
Q. Yes.
You stated on June 3 that the commission agent is the

exclusive sales-representative of the company in his territory for tank wagon sales, that is correct?

A. That is correct.

Q. Does the commission agent perform selling services in his territory?

A. Oh, yes.

Q. Does he employ salesmen?

A. Not as a rule.

Q. Does he attend to the sales promotion in his
3791 territory, in driveway training stations, that sort of
thing, if any?

A. Naturally, inasmuch as the commission agent receives a commission on the delivery of products to the reseller outlet located in his territory, he has a direct personal interest in the maintenance of proper Standard service at the respective outlets.

The actual training of the employees depends largely upon the sales personnel. Actually, we find in many cases that the station agent is a nimportant force in seeing that the resellers in that area come up to those standards.

3792 Q. By the "station agent" you mean the commission agent?

A. The commission agent. You can't say that it is a regular part of his duty except that it is a regular part of his duty in maintaining his earnings through delivery to the outlet.

Q. Well, does the company do any sales promotion work in the commission agent territory?

A. Yes, sir.

Q. Are there salesmen employed by the division office assigned to territory supplied to commission agents?

A. Yes, sir.

Q. Are the duties of those salesmen the same as they are in the territory served by the salaried drivers?

A. Yes, sir.

Q. Does the company spend less sales effort—by sales effort I mean in number of salesmen employed and time spent—does the company spend less sales effort per—that is, in comparison with volume of gasoline sold and territory served by commission agents than in territory served through salaried stations? And let me state further, in connection with that question, that since you have stated that the commission agent does perform some selling services, and do some work of his own in his own territory, that leads me to ask you whether it is necessary for the company to do as much work through its own salaried salesmen?

Trial Examiner Ballinger: Now, answer the first 3793 question, will you, please?

A. In answer to the first question, I cannot differentiate between the selling effort exerted at stations served by salaried drivers from the effort exerted at stations served by commission agents.

Does that take care of both of your questions, or was there a—

By Mr. Austin:

Q. I think so.

Is it your opinion, then, that if you had to apportion salesmen's salaries on a per-gallon basis in those two types of territories, that, in other words, taking one territory and taking the other, you wouldn't arrive at any great difference in the amount of selling expense per gallon? Now, that is a very general question, Mr. Boatwright. I am not referring to any particular two territories but just as a general question.

A. Well, it is because you are assuming a unit of distribution for your costs. As you are aware, we use the time allocation on salesmen, but if I were using the per-gallon unit of distribution, I couldn't differentiate.

Q. May I interrupt, please? I am not trying to get away from that part of it, but after you use your time at the distribution, you arrive at a certain selling expense.

Now, after you have arrived at the expense you still 3794 divide the gallons into it, don't you, to get the cost?

A. Yes, sir; and I could not differentiate between them.

Q. Well, that is the answer:

A. Yes, sir.

Q. To whom does the commission agent report; that is, who is his immediate superior?

A. His immediate superior is the consumer salesman.

Q. The consumer salesman?

A. Yes.

Q. Who is he?

A. We have a class of salesmen which we designate as consumer salesmen, who have under their jurisdiction varying numbers of commission agents ranging from eight to perhaps as high as twelve stations in the Detroit field that have as their principal duties the supervision and training and direction of the efforts of the commissioned agent.

Q. You say there would be about how many of those in a field like Detroit, about how many consumer agents?

A. How many consumer salesmen?

Q. Consumer salesmen.

A. I don't recall, but in a field of that size it would normally carry nine or ten.

Q. Are they well paid employees?

A. Just about the same as the reseller salesmen. They rank on a basis of equality.

3795 Q. Where are their salaries included? In the expense accounts listed on the Form 189?

A. Under the item of salaries to salesmen.

Q. And they are treated, then, for the purpose of your accounting, as salesmen?

A. They are salesmen.

Q. I believe you testified two weeks ago, Mr. Boatwright, that the commission agent employs and pays the drivers of the trucks who deliver gasoline in his territory.

A. Yes, if he is operating more than one truck, he owns the second truck and employs the driver thereof.

Q. You say if he is operating more than one. You mean that the first one he would probably operate himself?

A. That frequently is the case.

Q. On the other hand, if he operates a number of them, I suppose he might employ the drivers for all.

A. That is correct.

Q. Did the Standard Oil Company operate any retail service stations prior to 1936; that is, prior to the Iowa plan, in territory now served through commission agents, and you may limit your answer to the Detroit field, if you wish, or—

Mr. Hanley: May I have that question, please? I am sorry.

(Question read.)

A. The answer is "Yes."

3796 By Mr. Austin:

Q. Then, do any tank wagon reseller customers in territory now served by commission agents lease their service stations from the Standard Oil Company?

A. Yes, sir.

Q. In other words, you have lessee stations in commission agent territory as well as in salaried driver territory.

A. Yes, sir.

Q. And is the percentage of leased stations in commission agent territory, in general, as great as in territory served directly by the company?

Mr. Hanley: Just a moment, Mr. Boatwright.

I have no particular objection to this line of testimony, Your Honor, except that it is wholly immaterial. Just for the record, I want to preserve that objection. It has nothing to do with the lawsuit in any phase so far as I am able to ascertain, costs or otherwise. I just want to preserve that objection on the record.

Mr. Austin: Well, I think it has relevancy, but that is the last question on this question of leased stations.

By Mr. Austin:

Q. I would like to know whether there is any different proportion of leased stations in commission agent territory, as a rule, than in territory served by salaried stations.

Trial Examiner Ballinger: The objection is overruled.

3797 A. Is the answer to be limited to the Detroit field again?

By Mr. Austin:

Q. Well, it is more or less a general question, Mr. Boatwright. If you think that there is any difference there or you can answer the question at all, then you may limit your answer, if you wish.

A. May I give you a general answer, then? Stations are built according to potential. Where there is a good potential the company has erected in the past years its retail outlets. If that potential happens to be served by a commission agent, that station is now operated by a lessee. If it happens to be served by a salaried driver out of salary-operated stations, it would now be served by salary. But the distribution of stations is determined on the basis of potential and not on the basis of whether the station is served by a salaried or a commission driver.

Q. I see. What I had in mind was that I thought that perhaps commission driver territory might have grown up differently and perhaps that that might have always been commission driver territory and perhaps the Standard Oil

Company never operated stations in such territories, as a general rule. Further than that, I believe it is true, and I would like to have you tell me if I am wrong in this, that the great majority of the lessee stations are now stations which were formerly operated by the company.

3798 A. The great majority of lessee stations are those which were formerly operated by the company.

Q. Now, that being true, I thought it was entirely possible that the percentage of lessee stations in commission agent territory might be very small compared with other territory.

A. No, that would not be true.

Mr. Hanley: May I ask one question, if Your Honor please?

Examination on Voir Dire by Mr. Hanley.

Q. Is there any relation at all, Mr. Boatwright, between the fact of whether a retail outlet is operated by a lessee or otherwise than the fact that it may be served by a commission or bulk plant agent or a salaried bulk plant driver?

A. There is no relationship.

Q. Anywhere in the territory?

A. No.

Cross-Examination by Mr. Austin (Resumed).

Q. Is a commission agent paid on a gallonage basis for the gasoline sold and delivered by him?

A. Yes, sir.

Q. What is the amount per gallon of the commission paid the commission agents in the Detroit field?

A. It varies.

3799 Q. Does the company enter into written contracts with its commission agents?

A. It does.

Q. Are those contracts made by the Detroit field manager or are they made through the Chicago office?

A. Made by the Detroit field manager.

Q. Would they be on file in Detroit?

A. I am quite sure they are. I am not—I don't know whether they are then forwarded to the general office.

but I am sure there would be at least a copy on file at Detroit.

Trial Examiner Ballinger: Is the final approval in Detroit or in Chicago?

The Witness: Final approval is in Detroit.

By Mr. Austin:

Q. In Detroit?

A. The Detroit manager makes the contract.

Mr. Austin: Off the record.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. When you were last here, Mr. Boatwright, we were discussing to some extent the Form 018.

A. Yes, sir.

Q. And tank truck efficiency reports.

3800 A. Yes, sir.

Q. The Form 018 you stated shows the time of the truck on the rack for loading, I believe, until it comes back empty again after having delivered the load, and also, I believe, shows the amount of the delivery. And does it also show the names of the customers to whom—

A. No, it does not show that. It shows the sales ticket numbers which identifies the delivery with the customer.

Q. I think you said that the tank truck efficiency reports were made out one month each quarter by the accounting clerks. They were prepared by the accounting department, I believe you said, from the Forms 018?

A. That is correct.

Q. Is that correct?

Are they prepared, for instance, for the Detroit field—would they be prepared in Detroit or Chicago?

A. They are prepared on each truck at the bulk plant out of which that truck operates.

Q. I see. You have, in other words, accounting clerks assigned to the bulk plants, either permanently or they go there for that purpose.

A. No. Each bulk plant out of which salaried drivers operate has a small accounting personnel.

Q. Is the total delivery time shown on a tank truck

efficiency report the total of the put-in time reported
3801 on Forms 018 for that truck for the period covered by the efficiency report?

A. I am satisfied the answer is "Yes," although your question is not entirely clear.

Is the time of each truck a recapitulation of the time of the operating of that truck as shown by 018?

Q. Yes, the time shown on the tank truck efficiency report, which I understand covers a month.

A. That is correct.

Q. Is that the total of the time shown on 018 for that truck for that month?

A. Yes, plus if it be necessary for that truck to go to the garage for any repairs or maintenance or anything of that, that time would be included on the total time of the truck.

Q. Then is the driver paid for the total time which is entered on the tank truck efficiency report?

A. He may not be paid for the total time for a particular truck, as shown on the truck efficiency report, but if it becomes necessary for a truck to go to the garage and the driver is available, he will then operate another truck until the return of the one from the garage.

Q. Well, he won't be paid for the time truck is in the garage?

A. He wouldn't be paid for operating that truck while it is in the garage, but he will be paid for operating a truck.

Q. No, but the time that he is paid for operating
3802 a truck will be shown on the tank truck efficiency report, for the other truck, will it not? In other words, you are going to have a report for both of those trucks in which only one of those trucks is being operated by a driver for the time the other one is in the garage?

A. That is correct.

Q. On what basis are drivers' salaries computed? If that is a little too broad, I am interested in time basis; that is, do they have a certain number of hours a day and how is that time computed?

Mr. Hanley: It is repetitious. It has already been gone into thoroughly by Mr. Boatwright in his examination on June 3d. It is contracts with the union. We haven't anything to do with it except sign on the dotted line.

By Mr. Austin:

Q. Well, accepting that suggestion, I believe that the statement was this: A union contract provides that they get a certain amount per hour, and I suppose they work a certain number of hours per day; is that right, or a maximum per day?

A. I do not know whether this particular contract specifies an hourly rate or a monthly rate, but it is a union—we have a contract with the union and the rate per hour is determined upon the pay scale that we are paying them, the drivers, which figures out to 95.2 cents per hour.

3803 Q. I think it is rather important to know whether the drivers are paid on an hourly basis or some other basis, because the company has got to figure up the number of hours he worked if he is paid on an hourly basis.

A. Well, I am sorry. I do not know the terms of that contract, whether he be on a monthly basis or an hourly basis. I cannot testify.

Q. For the purpose of this exhibit, Exhibit 31-B and C, and D, E, and F, also, the driver's salary is referred to as 95.2 cents per hour?

A. Yes.

Q. But what I am interested in is how you determine how many hours the driver has worked or what hours he is paid for.

A. We don't determine it; the union tells us how many hours he works.

Q. You certainly keep time records, don't you?

A. Absolutely.

Q. And you don't pay a driver for time that he isn't there, do you?

A. No.

Q. Then the company must have some means, either from the 018's or otherwise to find out how much to pay the driver?

A. We do. We have a pay roll record.

Q. The pay roll record has to be made up from something?

A. That is right. We have a time record on every salary driver out of each of the plants.

3804 Q. Well, my next question is going to be: Are the drivers' salaries figured upon the time shown on the Forms 018?

A. They are not.

Q. Then how is the time computed upon which the driver is paid?

A. Well, time in and time out. He comes to work at a certain hour during the day and he works a certain number of hours, and then he is checked out in the evening.

Q. Well, suppose he is standing around while a truck is being loaded. Is he paid for that time?

A. He is if we permit him to stand around while the truck is being loaded; yes, sir. It is our obligation, however, to see that our employees have something to do.

Trial Examiner Ballinger: The Examiner understands the object of the examination by Counsel for the Commission to ascertain the basis upon which you arrived at 95.2 cents per hour.

Mr. Austin: Not the basis upon which he arrived at it, but I want to know—

Trial Examiner Ballinger: The facts from which

Mr. Austin: For what time the driver is paid. I assume he is paid 95.2 cents per hour, but I want to know what work he is paid for.

Now, if Your Honor doesn't just at the moment see the relevancy of that, I think if you will study these 3805 exhibits as much as I have, why, perhaps it would be obvious that there is a comparison here of labor costs and that is the comparison of drivers' salaries, and I think that the—I won't go into that further now unless you have some question.

Mr. Hanley: I might call Your Honor's attention to this fact: That whether the cost per hour of the salaried driver is 95 cents an hour or $95 an hour, and irrespective of the basis on which it is reached, the important thing here is not how much it is as the comparison of time used in actually making deliveries as between two classes of receivers of gasoline.

Trial Examiner Ballinger: Proceed.

By Mr. Austin:

Q. You stated, I think, Mr. Boatwright, just now, that the out-in time on the 018 has nothing to do with the computation of time for which the driver is paid?

A. No.

Q. Suppose the driver goes out, as he sometimes does, with the truck and comes back, and the time reported on the 018 is a period which might include a lunch period. Is the driver paid a salary for the total time on which he was out, or how is the lunch period ended?

A. The driver reports the time that he took out for his lunch.

Q. But that is not shown on the 018?

3806 A. No, no, it is not.

Q. Do I understand you to say that the driver reports the time taken out for lunch but that that time is not taken out on the 018?

A. It is not.

Q. Then does it follow that the driver does not report that lunch time to the clerk who makes out the 018 but reports it to someone else?

A. I don't know to whom he reports. It may be a small station at which the only clerk on the job is the one that he reports his time in and his time out. On the other hand, he may be operating out of a larger station where there may be several clerks. I don't know the individual and it wouldn't be the same in each of the stations.

Q. On Respondent's Exhibit 31-B, it is stated that only 018 tickets were used for deliveries on which time consumed for delivery could be determined accurately, and that any questionable time periods such as those which might include a lunch period were omitted.

A. That is correct.

Q. So I was wondering why those tickets were omitted or whether the lunch period would or would not be included in the 018.

A. The ticket might show a total time of three hours
and, let us assume that he drove out of the plant
3807 at 11 o'clock and returned at 2. Now, part of that
time was utilized by the driver in getting his lunch.
Therefore, the actual time as shown on the 018 includes
both the delivery time and a period of inactivity while the
driver was eating his lunch. It would not have been a fair
comparison to have included that ticket in the analysis.

Q. Well, not if the lunch period might be in there, but it would seem reasonable that if the driver was not paid for the lunch period, that it shouldn't have been in the 018, and that is the purpose for this line of questioning.

A. Unfortunately, the lunch period was in there.

Q. But I will say that the driver was not paid for the lunch period.

A. No, the driver isn't paid for the lunch period.

3808 Q. Now, are lunch periods and other time reported on Form 018 but not actually spent by the driver in making deliveries included in truck delivery time shown on the tank truck efficiency reports? In other words, I have been talking about the 018. Now, you say the lunch period is in there, it does not get out, stays in. Now, when tank truck delivery report is made, tank truck efficiency report is made on Form 018, does the lunch time still stay in?

A. No, sir.

Q. How is such time eliminated?

A. It must be reported to one of the accounting clerks at the bulk plant.

Q. Then, is your answer that the tank truck efficiency report, any time which they say, which you have referred to here as total delivery time for that truck, is it your testimony that the total delivery time shown by the tank truck efficiency report does not include any lunch periods?

A. It does not.

Q. Were the 018's all included where there is a lunch period?

A. I think the 018's are included, but the reduction is made for the reported time taken by the driver for his lunch period. I think that is the process followed.

Q. You mean that the reduction is made when the tank truck efficiency report is made out?

3809 A. Yes, sir.

Q. Do you know how that is accomplished?

A. I do not know the minute details, no, sir.

Q. Well, your testimony was that the tank truck efficiency report was made out on the forms 018. Now, you say some 018's include the lunch period, you say, where the lunch time gets in the tank truck efficiency report.

A. I also stated the tank truck efficiency report is made out in part from 018, but not solely 018, but that they used other records as well. Thus, it would be entirely possible that they would take the gallonage from 018 only. They could take the time from the 018 and deduct the lunch hour.

Q. Do I understand that you are not sure at the moment as to how the time, delivery time shown on the tank truck efficiency report is arrived at?

A. Well, the delivery time is the actual time that the driver, or the truck was in operation. I do not have the specific instructions for the compilation of the truck efficiency report.

Q. You stated a moment ago that it includes time in which the truck goes to the garage for repairs. That is not actual delivery time, is it?

A. No, no, it is not.

Q. Is there any other time included on the tank truck efficiency report, which is not actual delivery time?

3840 A. No, I think not.

Q. Referring to Respondent's Exhibit 31-B, a sample of 018 tickets for full load deliveries in 1940 by truck numbers 34270 and 29525 are used for the calculation. Those were 1,500 gallon truck, were they not, Mr. Boatwright?

A. That is true.

Q. Out of what bulk plant did those trucks operate?

A. Scotten Avenue.

Q. Both of them.

A. Yes, sir.

Q. Were these two trucks used for the delivery of gasoline only?

A. Yes, sir.

Q. Were these two trucks used in 1940 for the delivery of gasoline to tank wagon resellers?

A. They were.

Q. Were they used exclusively for delivery to tank wagon resellers or did they make some delivery to tank wagon consumers?

A. They made some to tank wagon consumers.

Q. Do you know what portion of the deliveries were to tank wagon consumers?

A. A very small portion.

Q. Were the 018 tickets used for the computation on Respondent's Exhibit 31-B tickets for delivery to tank wagon resellers? 3841

A. They were.

Q. Is it your opinion that the proportion of full load deliveries to total deliveries made to tank wagon resellers in 1937 in the Detroit area was about the same as in 1940?

A. I do not know.

Q. Well, you have here made a computation based upon the performance of two trucks in 1940, and you have used that as an indication of labor and equipment costs in 1937, is that right?

A. That is correct.

Q. And you have made a differentiation here as to the cost of full dump deliveries and partial dump deliveries?

A. Yes, sir.

Q. But you do not know whether the proportion of the full load deliveries to partial load deliveries from salary stations in the Detroit area was approximately the same in 1937 as in 1940?

A. Well, I know of no reason for a change, but you are asking me a question that I can not answer, for the simple reason that the form 018 tickets are not maintained except for the past 12 months. We do not have that record.

Q. Well, I asked you in your opinion, I did not ask you the fact because I realize you could not state whether they were the same. I asked you in your opinion the pro-
3812 portion of full load deliveries and total deliveries to tank wagon resellers in the Detroit area, if it would be approximately the same in 1937 as it was in 1940.

A. Yes.

Mr. Hanley: That is objected to as immaterial for any purpose, whether they were or whether they were not.

Trial Examiner Ballinger: The Examiner has understood the witness to answer that he does not know.

Mr. Austin: No, I do not think he has, your Honor. He just stated that, as I understand, that in his opinion there was the—he just stated there was no reason why they should differ, and I believe that he has stated that he does not know as to the actual fact in comparison by number because he could not make it.

Trial Examiner Ballinger: Well, the question may be one that may have some materiality.

The objection is overruled.

You may answer.

Mr. Austin: Will you read the question, please, Mr. Reporter?

(Question read.)

A. As I stated, I know of no reason why it should not be the same. There has been an increase in volume in the Detroit area since 1937, which may have some reflection on that, but in my judgment they would be approximately
3813 the same proportion.

By Mr. Austin:

Q. What is the meaning of the figures on Respondent's Exhibit 31-C appearing right after the word "hours" in the first column of the computation there, the figures being 1006-2006?

A. Those are the account numbers from which the record was taken.

Q. Well, now, those account numbers are expense account numbers, are they not?

A. Marketing expense account.

3814 Q. And this is a statement of hours?

A. Certainly.

Q. How is the number of hours arrived at from the expense account?

A. Well, hours are a marketing cost to the company, so many hours at so much per hour.

Q. The hours shown here are hours for trucks delivering gasoline only from three plants; is that right?

A. That is correct.

Q. Will you explain at how you arrived at those numbers of hours through the use of the expense account?

A. Accounts 1006-2006 are not, in my interpretation, an expense account similar to what an individual would submit following a trip.

Q. Oh, no.

A. But they are the record of the hours devoted to specific purposes on the part of the drivers.

Now, in this particular case the record of the utilization of the driver's time for delivery of gasoline as charged to 1006 and 2006 for the three plants is shown as being 7,993 hours total.

Q. Well; is that the total hours for deliveries from the three plants?

A. No, that is the total hours for delivery of gasoline at the three plants.

3815 Q. Well, are those hours—one method, it seems to me, of arriving at that would be to take the total of the delivery time from the tank truck efficiency report up at the top, where it is "information tank truck efficiency report maintained, Detroit Division, for months December, 1939, March, June, and September, 1940." Now, I would therefore have assumed in the absence of those two numbers that the numbers of hours stated, from the top line of the computation, were totals taken from the total time shown on the tank truck efficiency report for those trucks, and that would not involve the use of any information from those accounts at all, would it, Mr. Boatwright?

A. Oh, yes, the hours on your tank efficiency report have to tie up with your account number to which you are going to assign your cost.

Q. Well, how did you arrive at these hours? Are these totals taken from the tank truck efficiency reports or were they arrived at in some other way through the expense account figures?

A. Well, our official record upon which our marketing expense statement is predicated and including the allocation of the hours of the driver are designated to account Nos. 1006 and 2006, the actual hours were taken from those respective reports, those respective accounts.

Q. Well, then, is it—am I to understand that these 3816 figures for hours appearing on Respondent's Exhibit 31-C, are those figures which reflect only the hours shown on the tank truck efficiency reports for these particular trucks used in this computation and they are not merely a division of total expense by driver's salary to determine hours in that way? You might have—for instance, you could have figured a certain amount you paid a driver, and you might divide that by 95.2 to find out the number of hours, that would be one way to tell; another way would be to go direct to your tank truck efficiency report and take the hours from that.

I want to know which way it was done.

A. I could not answer you positively whether we took this form from the tank truck efficiency report or direct from the account numbers. The number of hours would be the same in either case.

Q. Were consumer deliveries included in computing "driver's salary cost per gallon for delivering gasoline to the average reseller" on Respondent's Exhibit 31-C?

A. I am afraid that I do not have the reference that you are referring to. Will you give it to me again?

Mr. Austin: Exhibit 31-C.

May we go off the record?

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

3817 A. Yes, sir.

Mr. Hanley: May I ask, while Mr. Austin is examining these papers, Mr. Boatwright, whether it would make any difference in cost whether a given amount of gasoline were delivered out of a given truck to a consumer or to a reseller?

The Witness: No, it would not.

Mr. Austin: Now, may I go off the record a moment, please?

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Mr. Boatwright, do you know of your own knowledge obtained from company records how many separate deliveries of gasoline were made to Ned's Auto Supply Company stores in 1937?

A. I do not.

Q. Do you know what percentage of the gasoline deliveries made to Ned's in 1937 were full load deliveries?

A. I do not.

Q. Do you know how many partial load deliveries of gasoline including deliveries of Solite with Ethyl were made to Ed's Auto Supply Company in 1937?

A. There are no actual records of the individual time tickets on the deliveries to Ned's Auto Supply in the 3818 year 1937 in existence.

Q. Then, you do not know, do you, that there were no partial load deliveries made to Ned's in 1937?

A. I know that the most of them were on the full load basis except as when it became necessary for our truck to operate out of our plants to make deliveries to stations in the nearby neighborhood they were privileged at any time upon the report to the plant to dump one or two compartments in the Ned's tanks. That responsibility of keeping the tanks filled enabled us to operate our trucks on a full load basis to a greater extent than they could have been operated in serving other retailer accounts had it not been for the Ned's outlets.

Q. Do I understand, then, that sometimes partial dumps were made at Ned's on their way to or from serving other stations?

A. Yes, sir. If we had an order, let us say, for three compartments of our truck to some station in the vicinity of Ned's, rather than pulling out of the yard with only three compartments filled we would fill the five of them, dump the three on per order and then dump the other two at Ned's, putting back to the yard empty.

Q. That would be a partial dump delivery in the case of Ned's?

A. That is correct.

Q. As well as in the case of the other stations?

A. That is correct.

3819 Q. Have you made any computation of the distance from the bulk plant to the customers, to whom the deliveries were made which were used in the computation on Respondent's Exhibit 31-B?

A. No, sir.

Q. Did you make any comparison of the distances traveled by 34270 and 29525 in making full load deliveries used in Exhibit 31-B, and average distances traveled by truck making deliveries from Scotten, Lycaste, and North Detroit plants?

A. I did not.

Q. In making your computations on Exhibits 31-B and C, you have used the factors of gallons delivered, time consumed for delivery, and driver's salary cost; that is correct, is it not?

A. Yes, sir.

Q. Is it not true that for any single delivery of gasoline by tank truck from a bulk plant the time consumed and the labor costs are directly affected by and will depend in part upon the distance which the truck has traveled in making the delivery?

A. Certainly.

Q. The figure .114 cents appearing on Respondent's Exhibit 31-C purports to be the average driver's salary cost per gallon of the Standard Oil Company for delivery of gasoline to tank wagon resellers from the Scotten, 3820 Lycaste, and North Detroit plants; is that correct?

A. Yes, sir.

Q. Does this figure purport to be the labor cost of delivery to any one customer?

A. No, sir.

Q. Is it not true that the per gallon labor cost of delivery of gasoline to different tank wagon reseller customers will vary according to the number of deliveries, the gallons delivered per trip and the time consumed in making deliveries?

A. Those factors do influence the cost of delivery to individual customers; yes, sir.

Q. Do you know how many tank wagon reseller customers of the Standard Oil Company in Detroit other than Ned's received some full load deliveries of gasoline in 1937?

A. I do not.

Mr. Hanley: That is objected to as immaterial.

I move that the answer be stricken.

Trial Examiner Ballinger: What materiality do you attach to that?

Mr. Austin: I think it is a very material question, although perhaps it is only carrying on a little further some of the questions I asked before.

The materiality is, this is a comparison of cost of 1937, Your Honor, between full load deliveries and partial dump deliveries.

3821 Mr. Hanley: No, it is nothing of the kind, Your Honor; and that is objected to as a misstatement on the part of counsel.

Mr. Austin: Well, it is a comparison for deliveries between full dump and partial dump in 1940, but that is presented here as indicating the same figures for 1937 and 1940 as used here, merely as a means of arriving at the cost in 1937, because those tickets are no longer in existence for 1937.

Mr. Hanley: That is objected to as a misstatement, Your Honor, 1937. The statement here is a statement contrasting the cost of delivery of gasoline to Ned's Service Stations, on the one hand, as against other reseller stations, on the other hand, and all this complication and mystery and legerdemain that is sought to be injected in here to complicate this thing is not helpful to court or Commission.

Now, there may be other full load deliveries in this other group other than Ned's. We do not say that they are not, but we have broken out of the reseller channel what it costs us to sell to Ned's. Now, it may have cost us less to sell to X, Y, Z, than it did to sell Ned's, but we are not on trial for selling to X, Y, Z. We are demonstrating the difference in cost between Ned's, on the one hand, and the rest of the classification, on the other hand.

Mr. Austin: That, Your Honor, I would like to
3822 point out, is the fallacy of the Respondent's position.

Under the Robinson-Patman Act there is absolutely no sanction for using an average of all customers as against one customer, if the Commission can prove that.

If the Commission could prove that for any substantial number of customers or, technically, even for one customer the cost was no greater than the cost of delivering to Ned's, it would be sufficient upon which to base the issuance of an order, and the Respondent's position that they may try to show the cost of delivering to Ned's, which, by the way, there are no deliveries to Ned's included here at all, but this exhibit is on the assumption that Ned's took full dump deliveries in 1937—now, if what has been done here is to compare the delivery cost of certain full dump deliveries with the average cost of all deliveries, and including full dump deliveries was incorrect in referring to partial dumps, because it is an average of all and contrasted with the full dump deliveries.

There are certain cases where the average cost is the only method on which you can use for comparison. It is my contention that that is clearly not true here, and that it is just as easy to determine the cost to anyone or to several large customers as it is to take the entire average, and it could be done from these same tickets and on the same information. Consequently, I think that the position of
3823 using an average here is no justification under the
Robinson-Patman Act.

Trial Examiner Ballinger: If that is your contention, the objection is overruled and the motion to strike is overruled.

Mr. Hanley: What was the question, please?

Mr. Austin: The question and answer.

(Question and answer read as follows:

"Q. Do you know how many tank wagon reseller customers of the Standard Oil Company in Detroit other than Ned's received some full load deliveries of gasoline in 1937?

"A. I do not.")

Mr. Austin: I would like to point out, Your Honor, that it appears here that Ned's received some partial load deliveries in 1938 but what is much more important, it appears definitely that there were other stations who received full load deliveries and probably a great many of them. I don't care whether the same station got a full load delivery every time it bought gasoline or whether it did not, but whenever there was a full load delivery made, the cost of that full load delivery by the very showing on this exhibit was the same as the cost of delivery to Ned's.

Mr. Hanley: If Your Honor please, inasmuch as counsel has pursued the argument and distorted the effect of the witness' testimony, I wish to make this statement:
3824 First, I do not understand it to be the law, and if it is the contention of the Commission I would like to so learn, that, in the first place, no vendor is required as a manner of law to pass on savings that that vendor may make by the method of sale or delivery; but I do understand it to be the law and a law which cannot be legislated out of existence by a theory of trial counsel, that a vendor has a right to pass on to a customer savings in method of sale or delivery.

Hence, if there was a general cost to Respondent in the matter of selling in the reseller channel by tank wagon, a general over-all cost, and, of course, there was—we have established what it was—and there was a saving as against that cost in delivery to Ned's, then counsel is not permitted to say and the Commission is not entitled to legislate our defense away from us by saying that it may be, just that it may be on some speculative theory, that examination, some other customer of ours receiving by tank wagon may have received deliveries at a cost to us as low or even less than Ned's received deliveries. Our obligation, if we have any on this one-half cent thing at all, is to establish that we made a certain saving as between Ned's and our over-all reseller channel.

I said a moment ago that counsel distorted the statement of the witness. I mean by that this: He says it now appears that there were other full load deliveries, for
3825 one thing. It does not so appear. It simply appears that the witness doesn't know whether there were any full load deliveries or not.

Secondly, he says it appears that there were partial deliveries to Ned's, thereby drawing the inference that the cost incident to partial deliveries, which is greater, attached to Ned's. What the witness did say was that the fact that Ned's gave the privilege to the Respondent of keeping Ned's tanks full gave to the Respondent the opportunity, not to make just partial deliveries in the sense that counsel uses the term, but if we had to make a partial delivery to John Jones of three compartments, we had the right instead of sending a truck out with three compartments full to send it out with five compartments full and leave two of them on the way home, at Ned's, which instead of being a burden was a benefit. And to say that we were making partial deliveries to Ned's, and infer that we were burdened with the cost of partial deliveries is a pure distortion of what the witness said.

Trial Examiner Ballinger: As this is a leading case, the Examiner prefers that the leading question presented should be determined by the Commission and, accordingly, the Examiner overrules the objection and the motion to strike.

The answer stands.

You may proceed.

3826 By Mr. Austin:

Q. Have you preserved on the 018 tickets for trucks 34270 and 29525 for 1940?

A. Yes, sir.

3827 Q. Have you segregated the tickets used for the computation on Respondent's Exhibit 31-B?

A. Segregation was made at the time of the computation. They do not remain segregated?

Q. They do not remain segregated?

A. No, sir.

Q. Didn't you anticipate that some check might be desired to be made upon Respondent's Exhibit 31-B?

A. The tickets 018 are bound in books, 100 copies, 100 tickets per volume. Therefore, they were not removed from their binding but remained in the binding, so that an actual segregation of one class versus another could not be made without destroying the record.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Have you made a computation of the average driver salary cost per gallon of gasoline for all deliveries made by these two trucks in 1940?

Mr. Hanley: Will you read that question, please?

(Question read.)

A. No, sir.

By Mr. Austin:

Q. That could be done, could it not?

3828 A. It could.

Q. Have you computed the average driver's salary cost per gallon of deliveries made to any one customer served by either of these two trucks?

A. No, sir.

Q. That could also be done from the 018 tickets, could it not?

A. It would be difficult. You would have to take your 018 tickets, determine the serial number of your sales ticket, then pull your sales tickets, observe your location of your individual customer, and trace a sufficient number of these individual tickets through your records to establish a representative cost on a given account.

Q. The difficulty, as I understand it, Mr. Boatwright, is due to the fact that the 018 tickets do not show the customers?

A. It does not show the customer's name.

Q. Only the—

A. It shows the serial number of sales tickets. It would be a very difficult operation.

Q. It is true, is it not, that the same customers are generally served by the same truck?

A. No.

Q. Or isn't it?

A. That need not follow at all.

3829 Q. We have had some testimony about the trucks having routes.

A. That is correct, but a given truck may take a route, a certain route this morning and a different truck may take that route tomorrow morning.

Q. I see. Well, just so as not to leave that too open, although that is a question which I think I asked Raupaugh more fully, I believe that I will put it this way:

My understanding from his testimony is that, in general, the truck has a route and gets to know the needs of the drivers and from that I assume generally follows the same route, so I will just ask you whether this change of trucks on a route is usual or is that more infrequent?

A. Well, I think that what you meant in your statement was not the needs of the drivers but the needs of the customers.

Q. That is what I meant to say, the needs of the customers are known by the driver.

A. It is just a practical operating desire to serve given customers with given drivers and we do try to but—

Q. Oh, it may be a different truck but the same driver?

A. It may be a different truck, or it may be in many cases even different drivers, but, as a general tendency we try to serve given customers with the same personnel because of a friendship, because of an understanding,
3830 common understanding of needs, requirements, and so forth.

Mr. Austin: I move, your Honor, that we adjourn until 2 o'clock.

Trial Examiner Ballinger: The motion is granted, and now, at 12:30 p. m., the hearing stands in recess until 2 o'clock.

(Whereupon, at 12:30 p. m. a recess was taken until 2 p. m.)

3831 Afternoon Session.

Trial Examiner Ballinger: Come to order. 2 P. M. You may proceed.

By Mr. Austin:

Q. I asked you this morning, Mr. Boatwright, certain questions about the time included in the tank truck efficiency reports and about the method of computation of time upon which the drivers are paid.

Do you wish to make any further statement on that point at this time?

A. I could only add that on Respondent's Exhibit 31-B, wherein the calculations of the cost involved for delivery on a full dump basis was explained, each hour the truck was in actual operation we calculated at a labor cost of 95.2 cents per hour for the identical period that the truck was in operation.

On Respondent's Exhibit 31-C, where the second reference was made, hours as shown are the total hours out of these respective bulk plant areas devoted to the delivery of gasoline and the cost of 95.2 cents per hour was again applied to the total hours of operation for gasoline delivery out of each of these three plants. In each calculation, it is the identical hours of operation in delivery of gasoline only.

Q. You just stated that on 31-C, the total gasoline
3832 delivery time from these three bulk plants was used. Do you mean that or don't you mean the total gaso-

line delivery time of trucks which were used only for the delivery of gasoline?

A. The hours as shown on 31-C are the identical hours during which time period drivers were delivering gasoline.

Q. All trucks or just trucks which were used only for gasoline?

A. It is all trucks. During the time they were used for gasoline. Now, a truck might be used both for fuel oil and gasoline. This is the segregation of the time devoted to the delivery of gasoline only.

Q. Then when it is stated—

Mr. Hanley: Excuse me, Mr. Austin.

Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. On Respondent's Exhibit 31-C there is a reference to the total delivery time of trucks used for gasoline only out of three named bulk plants. That does not mean then that only the time of trucks which were used for gasoline only is included; in other words, as I read that statement, it meant to me that you had taken certain trucks, all of the trucks operating out of those three plants which were 3833 used only for gasoline and that you had eliminated all time of all trucks which had been used partly for some other product?

A. No. The difficulty in our understanding is due to the fact that one truck may be delivering gasoline during the summer months. As your demand for gasoline declines and as your demand for fuel oil appreciates a truck may be diverted from a gasoline truck to a fuel oil truck using the same equipment, you see.

Now, the hours as indicated on Respondent's Exhibit 31-C are the same total number of the hours spent in delivering gasoline only irrespective of the truck that may have been used. It is a segregation of the time of the drivers used on a particular product.

By Mr. Hanley:

Q. Namely, gasoline?

A. Namely, gasoline, yes, sir.

By Mr. Austin:

Q. It covers all trucks operating out of that station?

A. It covers all trucks operating out of those three stations.

Q. Now, you will understand perhaps my questions regarding the hours because I was under the impression you were not including all gasoline hours.

A. Well, I am sorry that I misunderstood your question. This is all gasoline hours at each of these three plants.

3834 Q. But you did say this morning that the tank truck efficiency reports contained certain hours in their showing of total delivery time which were not hours actually employed by the trucks in delivering gasoline.

A. No, that is not quite the statement. I did not state that they showed hours for delivery time that was not delivery time. I did state that the tank truck efficiency reports which are an operating statement to judge the efficiency of operation of the various units of our fleet, recognized hours other than operating hours, but that is not delivery time.

Is that distinction clear?

Q. Well, it was my understanding and is still from the statement on the exhibit that the total hours shown here are the total hours shown on the tank truck efficiency report for those trucks. The statement is that the source of information is the tank truck efficiency reports, Detroit division, for certain months. If those efficiency reports contain hours other than hours spent on delivery of gasoline, how were those hours eliminated, or were they eliminated?

A. They were eliminated from any calculations. This is the actual hours expended by these respective plants in delivery of gasoline as reported on Respondent's Exhibit 31-C.

Mr. Hanley: Mr. Austin, I do not want to ask a 3835 question in view of your request, and I think the answer makes it clear, but will you ask a question as to whether or not these hours on Respondent's Exhibit 31-C apply to delivery hours only so that that clearly appears in the record if it is a fact?

Mr. Austin: Well, I prefer to state that, try to get at that this morning as to how these hours were computed, and I will ask the witness the question directly whether any of the hours shown on the first line of the computation here include any hours during which the trucks were at a garage repair shop.

Trial Examiner Ballinger: What computation do you refer to?

By Mr. Austin:

Q. On the first line of the computation on Respondent's Exhibit 31-C, opposite the word "hours."

A. There are no hours included in that computation on Respondent's Exhibit 31-C while a truck was in a garage or other than in operation.

Q. Well, then, isn't it true, Mr. Boatwright, isn't it indicated by the use of those account number figures there, 1006 and 2006, that those hour figures were arrived at not by taking the total from tank truck efficiency reports or any from tank truck efficiency reports, but weren't they arrived at by taking tank wagon driver salaries for 3836 these three plants and dividing it by 95.2 cents?

A. These figures were arrived at by taking from the plant operating records the actual hours spent in delivery of gasoline and then extending those hours by the prevailing rate of 95.2 cents per hour.

Q. Well, there is no extension on this first line. It is simply the number of hours.

A. Well, your extension is in the third line where you come to your costs.

Q. I am just referring to the first line, just referring to where you got these figures with hours.

A. We got them from the plant record in the actual hours spent on delivery of gasoline by all trucks operating out of those plants.

Q. And on what forms, or where is that shown?

A. I think it is shown in two forms, I think it is shown on—we took them from the account numbers 1006 and 2006 which ties up with our marketing cost statement. Those are the actual hours assigned to the delivery of gasoline.

Q. Does each bulk plant keep a separate account of the expenses by your code of account numbers?

A. Each bulk plant assigns the number of hours to 1006 or 2006 according to the number of hours actually spent.

Q. Now, do you know where the bulk plants, in getting that assignment, where they get the data from?

3837 A. I am not certain as to just what supporting form that comes from.

Q. Doesn't this exhibit indicate that they get it from the tank truck efficiency reports?

A. Yes, sir, I think that it does except for that one item. You will notice that at the top, source of information, gives tank truck efficiency reports maintained in the Detroit division. Now, hours 1006-2006, were taken directly from the account records. Now, the tank truck efficiency report as I have stated previously is merely a means of checking the efficiency of the operation of our fleet of trucks. It is an operating statement. As such it is not tied up with and balanced with the account record, although the account record may coincide exactly, I could not state that they took the 1006 or 2006 accounts from the efficiency reports.

Q. And if they did take them from the tank truck efficiency reports, then they would include hours at which the trucks were at the garage, is not that true?

A. There are no hours included in this when the truck was at the garage.

Q. Well, you have said that, Mr. Boatwright, but you have stated you are not positive of what source the bulk plants obtained the number of hours assigned to those accounts.

Now, if they take the hours from the tank truck efficiency report, first let me ask you whether they may not do
3838 that. Do you know that they do not do it?

A. I have stated I do not know the underlying form number from which they take the exact number of hours for different channels, no, sir.

Q. Then, how can you state positively that the hours included here which you have taken from those accounts, which are the hours assigned to those accounts of the three stations do not include any time not spent on actual delivery?

A. I can state that positively because in taking this information from the records I made sure that there was nothing in there except the time actually spent on delivery.

Q. And what did you do to make sure of that?

A. I checked with the agent in charge of the supervisions of the drivers.

Q. And is that a separate agent for each station, or do you have one agent?

A. No, we have a separate agent for each station.

Q. Did you check with all three of them?

A. No, sir. I checked with the tank wagon superintendent for the Detroit division, and I checked with the agent at Lycaste and the agent at Scotten Avenue. I did not check with the agent at North Detroit.

Q. What did you do, just ask him that question?

A. No. They have instructions they have to follow, and in following those instructions they would not include 3839 hours which were not assigned to the delivery of this particular product, gasoline.

Q. I do not want to pursue this much further, but I will just ask you one more question:

Do you know that in preparing these figures or assigning the hours to the different accounts that the men you have just referred to do not consider the time of the trucks at the garage to be part of the time assignable to the delivery of gasoline?

A. Yes, I do know that.

3840 Q. Then it is your belief that some way or other any such time has been eliminated in preparing this statement; is that correct?

A. It isn't my belief; it is my knowledge that it was.

Mr. Austin: Unless Your Honor has some further question, I will proceed.

Trial Examiner Ballinger: Have you finished, now, your examination?

Mr. Austin: Yes.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Mr. Boatwright, your statement is that the hour figures on Respondent's Exhibit 32-C do not include any time other than actual time of delivery operation. Just pursuing that a little further, you stated that you knew that only actual delivery time was included there. That is based, is it not, upon the statement made to you by these employees whom you have just mentioned of the different bulk plants?

A. It is based upon the instructions and the statements of the employees to the effect that they were following those instructions. Naturally, I couldn't audit the individual time allocations of individual drivers.

Q. I am still not quite clear whether you are in any 3841 way correcting the statement made here that the tank truck efficiency reports maintained in the Detroit division for these four months was the source of this information, and if I understand you correctly—well, tell me again, were those tank truck efficiency reports the source of the information given you by these accountants at the bulk plant, or was it some other source, or do you know?

A. The actual hours were taken from the hours shown on our pay roll records, accounts 1006 and 2006.

Q. Yes; now—

A. Now, they may have been based on the truck efficiency reports, but I cannot testify that they were.

Q. You thought they were when you wrote this page of the exhibit, did you not?

A. Frankly, I don't think the thought entered my mind until you raised it because we regard our account number—our final account number as the final authority. The underlying form, the supporting forms making up those individual accounts I didn't think of as to which one it was coming from.

Q. What did you mean, then, by stating that your source of information was the tank truck efficiency reports?

A. We stated at the beginning of each of these exhibits the general source of information. Then if there is any particular item which comes from a form with a different form number, we so indicate, and accounts 1006 and
3842 2006 are the only accounts on our marketing expense statement. The allocation of effort has been made to those accounts, and we took it from the final source, which goes to make up our marketing expense statement.

Q. I see. That is clear.

Now, will you tell me among these other lines here below "Hours" what information, if any, there came from the tank truck efficiency reports?

Trial Examiner Ballinger: To what do you refer?

Mr. Austin: We are still referring to Exhibit 31-C.

A. Well, the only other item that had to be secured from and form was your gallons delivered. That is taken from the tank truck efficiency reports, while the line preceding that, "Cost of Total Time" is merely an extension; the line following that, "Cost Per Gallon" is merely a division.

By Mr. Austin:

Q. Let us turn to Respondent's Exhibits 31-D, E, and F, referring to equipment cost difference. The source here is stated to be maintenance cost obtained from machine shop records. If you will turn to Exhibit 31-E, please, on that page you have made perhaps not a complicated but at least an extended computation on the sample method to arrive at a conclusion of the total hours employed by truck Nos. 34270 and 29525, in 1940, in the delivery of gasoline.

3843 That is the computation, is it not? That is, I have correctly stated what the result of the computation is?

A. I think that is correct; yes, sir.

Q. Why was it necessary to use this sampling method to obtain the total number of hours' operation for these two trucks for 1940? Why was not the actual total time of operation used?

Mr. Hanley: Just a moment, Mr. Boatwright. I don't know whether I have any objection to that or not. I don't know what the latter part of the question refers to.

Mr. Austin: It explains the first part.

Mr. Hanley: The year 1937?

Mr. Austin: No, 1940.

As I understand it, on Exhibit 31 certain sample tickets have been taken to the extent of 294 single dump tickets and 340 multiple dump tickets; that is, the total for the two trucks, and on the basis of that and the time consumed, why, a time per delivery has been arrived at, and that has been multiplied by the total number of deliveries for the year, to get the total time of operation for those trucks.

Mr. Hanley: I see.

Mr. Austin: My question is—

Mr. Hanley: With your explanation, may I have the question again?

(Question read.)

3844 Mr. Hanley: May I inquire, Mr. Austin, if you mean by total time of actual operation the time used in the actual deliveries to Ned's and to others?

Mr. Austin: No. I mean total time of these two trucks in 1940, which is the thing that has been arrived at at the bottom of this page.

Mr. Hanley: I see. Instead of the sampling method?

Mr. Austin: Yes. In other words, instead of taking some 294—well, take for truck 34270, instead of taking 94 tickets out of 190 for single dump and some 130 out of 1172, and then taking an average, and then multiplying by the total, it wouldn't have been much more difficult to take just add up all the tickets.

Mr. Hanley: I think that is a proper question, Your Honor. No objection.

Trial Examiner Ballinger: Proceed.

A. The difficulty was that some of the tickets overlapped the noon hour, as I explained before. Therefore, it was necessary that we exclude those tickets to get a fair measurement of the time of operation of the truck. It was necessary to do it on a sampling basis to exclude non-representative tickets which were in the total group of tickets.

By Mr. Austin:

Q. How do you know which tickets include a lunch hour and which tickets do not?

3845 A. It is very easy to detect from the tickets. Depending upon the time of the departure from the yard and upon the return to the yard, an unusual, unreasonable, let me say, amount of time over the noon hour indicates that the driver has taken a luncheon period during that stand when the truck was out of the yard.

Now, as I explained earlier in the testimony, we completely excluded those tickets that overlapped the noon hour period so that we could get a fair measurement on the time of actual operation for delivery purposes.

Q. That is more or less of a guess, isn't it, as to which tickets include lunch hours and which ones do not?

A. No, it is a very obvious thing. If he goes out of the yard at 11:30 and comes back at 3, there is a lunch hour in there.

Q. How long is the driver's lunch hour?

A. It may be an hour.

Q. You said a while ago that the driver reports that to somebody.

A. That is correct.

Q. But—.

A. It isn't jotted down on the individual tickets, Mr. Austin.

Q. Then, as I understand your procedure, whenever you found a ticket that happened to have a particularly long time on it, you just eliminated that ticket?

3846 A. That is not a correct statement. Whenever we found a ticket that overlapped the noon hour, that ticket was excluded.

Q. I should have made that qualification as to the noon hour.

A. Yes, sir.

Q. Would it not have been more accurate to take the total time of all the tickets, and as for those noon hours simply to have deducted an hour from each one?

A. No, I don't think so. If in each case each driver took exactly an hour then that procedure would have been quite acceptable. We had no assurance, however, that on each of those tickets the time was exactly an hour as applied to that particular ticket. That procedure was discussed and we felt that the fair thing to do was to take all those cases where there was no other activity intervening in the delivery, but that it was a straight delivery, and to use those as a sample. Now, this sample was predicated upon segments. We would take 12 tickets, full-dump delivery, and we would take a second twelve, and a third, and so on, and so on, so that our sampling reached the stability level which it had in both cases. The sample is truly representative, and I believe it is fairer representation of the actual
operations than it would have been had we tried to
3847 associate individual noon hour periods of individual
drivers with tickets when the ticket does not associate
those noon periods with them.

Q. Is there much variation to the time of the various 018 tickets of the same truck?

A. Yes, they do vary.

Q. Then what precaution did you take in using this sample to determine that the average time of the sample used was representative of the average time of all tickets?

A. The process that I just outlined, wherein we would take these tickets and we started them in groups of twelve. Then we calculated an average time for 12 tickets. We charted that. Then we would take a second twelve and we would chart that. Then we would chart the accumulative for the 24, and then we would take a third 12, giving us a time on each individual segment, and in total as we moved across our chart.

Q. Were those 12's just taken at random?

A. Purely at random, and in that process the statistician says we reached a stability level, and having reached the stability level we doubled our sample to see whether our stability level would be influenced in the slightest, and it remained at the same level. The sample is truly representative.

Q. Well, in that case, Mr. Boatwright, in figuring average time consumed on multiple dump trips, why were 24
percent of the tickets used for truck 29525 and only
3848 11 percent for truck 34270?

Mr. Hanley: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Have you the question?

The Witness: I have, sir.

A. In each case it was not so much the calculation of the percentage of the total tickets that was used in the sampling. In each case by working your problem in segments and having determined a stability level for each truck, for each type of operation, and then having extended that sample beyond what we knew to be necessary to provide us with reasonable measurement, it was just an unnecessary continuation; having established an adequate sample, then we used that adequate sample.

3849 By Mr. Austin:

Q. Then, is it your testimony in the one case you had to use more tickets to establish what you considered an adequate sample than in the other case?

A. No. Frankly I do not think it was my testimony to that effect because in working these, the actual time measurement was allocated among a group of different comptometer operators and I was checking on one truck, and by the time I had succeeded in checking my sample on the other truck they merely had more tickets, and so we just used more tickets. I could have established a perfect defendible sample on a much smaller sample, on the second truck that was actually used.

Q. Will you turn to Respondent's Exhibit 31-F, please, Mr. Boatwright?

Beginning 7 lines from the bottom of the page, this statement appears: "To secure the equipment costs per gallon for delivery to the rank and file of retail outlets the annual cost for the two trucks was divided by the total annual output."

Do you consider that the per gallon equipment costs for these two trucks in 1940 is closely representative of the per gallon equipment cost of delivery "to the rank and file of retail outlets" in 1940?

A. I do.

Q. Do you consider that it is equally representa-
3850 tive of the per gallon equipment cost of delivery to the rank and file of retail outlets in 1937?

A. Yes, I think it is.

Q. Then, if that is true, why was not the same method used on Respondent's Exhibit 31-C to determine the average driver's salary cost per gallon for delivering gasoline to the retail outlets?

Mr. Hanley: Well, that is objected to as argumentative inasmuch as the question does not disclose what counsel means by the "same method."

Mr. Austin: Well, if the witness understands, why I would like to have him answer it. If he does not understand, I will very gladly explain.

Mr. Hanley: Well, I am sure I do not understand, and if the witness does, I wish he would make the explanation in his answer.

Trial Examiner Ballinger: Well, the record should portray whether both counsel and witness understand the same thing.

By Mr. Austin:

Q. Let me ask the question then more specifically:

In other words, Mr. Boatwright, you have on Exhibit 31-C gone through the process of going to your hours and going through your bulk plants to obtain something which you have obtained on Exhibit 31-E merely by taking
3851 the average cost of two trucks, and those are the same two trucks which you used on Respondent's Exhibit 31-C.

Now, would it not have been much easier to divide the total salaries paid the drivers of these two trucks in 1940 by the total gallons delivered by those trucks than to make the computation of all gasoline trucks operating out of Scotten, Lycaste and North Detroit plants for four months?

Mr. Hanley: I do not suppose it is a very sound objection, your Honor, to state that I object to that on the ground that counsel does not understand. If the witness does, I have no objection to his answering it. I will confess I do not know what the question means. If the witness does, he is at liberty to answer.

Trial Examiner Ballinger: That objection is overruled.

By Mr. Austin:

Q. You do, don't you, Mr. Boatwright?

Trial Examiner Ballinger: If the witness understands, he may answer.

A. Well, I think the difficulty is one of a lack of common understanding.

Trial Examiner Ballinger: Lack of what?

The Witness: Lack of common understanding.

In the first case I had available a complete record of every hour devoted to the delivery of gasoline out of
3852 these plants serving not only Ned's outlets but all other reseller outlets in plant area. To get the full time of truck operation on an individual unit, an individual truck, it was necessary for me to take the total tickets that that truck had issued during the year.

By Mr. Austin:

Q. You mean what sort of tickets?

A. These 018 tickets, and having the total number of tickets that the truck issued I computed the actual truck operating time excluding any time that it may have been in shop. Now, I could not do that on all trucks unless I brought into our picture and our calculations deliveries of fuel oil and other products that the truck might be used for during the winter months. Therefore, the reason I could not follow their same procedure was merely the necessity of including from our individual delivery record the sum total of the operating hour of a truck unit. Now, a truck need not follow a driver. Is that clear? For instance, these trucks you will notice work more than 40 hours a week. If the driver works 40 hours, then there will be two or three drivers. Now, we allocate driver time that is recorded under summaries in 1006 and 2006.

However, we do not allocate the time of the individual truck where it is used for multiple purposes, these two trucks were used solely for the delivery of gasoline. Other trucks were used for the delivery of gasoline, delivery
3853 of fuel oil and other items. Therefore I had to calculate the actual number of hours of operation of that truck, and did so calculate, but I had no comparable record on the actual number of hours of operation of all trucks out of each of these three plants for the purpose of delivering gasoline.

Q. Mr. Boatwright, you have rather answered my question in reverse, I may say. I understand your answer clearly. You have explained to me why you did not use the 31-F, on Respondent's Exhibit 31-F the same method you used on Respondent's Exhibit 31-C.

A. I thought that was your question.

Q. My question was really the reverse of that, rather, why did you not use on Respondent's Exhibit 31-C the same method you used on Respondent's Exhibit 31-F?

A. The same answer applies.

Q. And it would have been perfectly easy for you to have obtained the average labor cost of these two trucks, would it not, by simply dividing the total drivers' salaries by the total gallons delivered, in other words, you have done that for equipment costs on Respondent's Exhibit 31-F. You have divided the total equipment cost of two trucks by the total time of the two trucks, or rather by the total gallons of the two trucks?

A. You are quite correct. It could have been done. I felt that it would be more representative to give you
3854 the average of the prevailing conditions in the area. I would have preferred the process used in Respondent's Exhibit 31-C had it been possible in Exhibit 31-F. It was impossible; therefore, I had to do the only alternate open to me.

Q. That explains your reason, although I am frank to say that I differ with you as to the relative accuracy for the purposes of this case, my opinion is that your method used on Exhibit 31-C, but that is purely a matter of argument. I am only explaining why I ask you the question the way I did.

Mr. Hanley: Well, just a moment.

Will you read that statement of counsel, please?

(Statement read.)

Mr. Hanley: I take it that is just counsel's opinion. I haven't anything to say about that.

By Mr. Austin:

Q. Turning to Respondent's Exhibit 31-E, does not the figure 4254, which is the last figure on the page, represent the total hours spent by these two trucks on the delivery of gasoline in 1940?

A. It does.

Q. The average driver's salary paid was 95.2 cents per gallon, is that correct?

A. That is correct.

Q. I mean per hour.

3855 A. Per hour.

Q. Turning to Exhibit 31-F, we find near the bottom of the page a figure for total annual output of these two trucks of 4,228,839 gallons; correct?

A. That is correct.

Q. Suppose we multiply the total hours figure which is

4254 by 95.2 cents, and divide the product by 4,228,839, would the resulting figure be the average driver's salary cost per gallon for these two trucks for 1940?

A. Yes, on an over-all basis it would be.

Q. Wouldn't that method of computation of average driver's salary cost per gallon for delivery of gasoline to Detroit tank wagon resellers be just as accurate as the method of computation used for equipment cost at the bottom of Exhibit 31-F?

A. Yes, it would.

Q. Let us turn to Respondent's Exhibit 31-G, please.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Austin: I suggest that we take a five-minute recess, your Honor.

Trial Examiner Ballinger: All right. We will take a short recess.

(A short recess was taken.)

3856 Trial Examiner Ballinger: Come to order.

Mr. Austin: During the recess, Your Honor, I have made the computation which has been referred to in the previous questions and answers, for the purpose of determining the driver's salary cost per gallon for gasoline deliveries by truck 34270 and 29525 for 1940, and computed in the method which has been stated the average driver's salary cost per gallon for those two trucks as .096 cents. Referring to Respondent's Exhibit 31-C, the driver's salary cost per gallon, which is used there for the average for the Detroit area, is given as .114 cents. There is a difference, therefore, of .018 cents, the resulting difference as between the two methods of computation.

The Witness: Did you include a tax of 3 percent in your calculations?

Mr. Austin: No, I did not. Thank you, Mr. Boatwright.

Mr. Hanley: May I inquire of counsel as to how to figure the tax?

Mr. Austin: Yes. It is the same as on Respondent's Exhibit 31. The tax there is given as .003 cents, and I will use the same figure in the computation I have just made. In other words, that is the nearest thousandth of a cent in both cases, so that the total will be instead of .096, Your Honor, .099, and the resulting difference would be

3857 .015 cents between the two different methods of computation.

Mr. Hanley: Now, if Your Honor please—

Mr. Austin: Thanks, Mr. Boatwright. I forgot about that.

Mr. Hanley: Now, the computation just referred to and injected into the record by counsel is objected to and its consideration by the court is objected to, for the reason that it constitutes the unconfirmed and unsworn testimony of counsel, who is totally unfamiliar with the cost records and figures of the Respondent, which are the only cost records and figures which are material in the present action, and is an attempt on the part of counsel to substitute cost figures for the business of the Respondent, which are not the cost figures as developed by the accountants for Respondent, and as reflected by the records and accounts of the Respondent, and are speculative, hypothetical, and theoretical, and have no relation to the actual costs that are under consideration. The only cost involved here is the costs of the Respondent in respect of the varying methods of sale and delivery as between the respective customers involved in this action. Further, no cost, no matter how figured or by whom figured, nor how competently figured are material in this action except the costs of the Respondent, whether those costs be predicated on efficient or inefficient operation.

Trial Examiner Ballinger: The objection is over-
3858 ruled. The statement made by Counsel for the Commission will stand subject to check, to verification.

By Mr. Austin:

Q. Now, turn, please, Mr. Boatwright, to Respondent's Exhibit 31-G.

Account 1002 appearing on that page refers or includes the salaries of the sales manager and assistant sales manager of the Detroit division, or, rather, includes a portion of their salaries allocated to the tank wagon reseller channel for 1937; is that correct?

A. That and others.

Q. My recollection of your direct testimony is, without looking it up at the moment, that only those salaries were included in the accounts 002.

A. No, I think my testimony indicated it was the sales managers, promoters, and assistants.

Q. Aren't the assistants included in 003?

A. No, sales promotion and others, being clerks, stenographers, office boys, and so forth, working in the department. By "assistants," I mean assistants to help in the supervision of the activity of the sales force, not the clerical assistance.

Trial Examiner Ballinger: Now, so that it may be definite and certain, will you please state what the first item on Respondent's Exhibit 32-G represents?

3859 The Witness: The first item on Respondent's Exhibit 31-G represents the salaries of the sales managers, promoters, and assistants in the sales promotion department.

By Mr. Austin:

Q. You used "managers" in the plural; if I understood you correctly. Is there more than one sales manager?

A. Yes. We have the sales manager, consumer, and a sales manager, reseller, in the Detroit division.

Q. Well, this account here includes only the salary of the sales manager, reseller, does it not?

A. It may include a small percentage of the time of the sales manager, wholesale, provided he devotes some time to reseller activity.

Q. Do you know whether he does or not?

A. I don't recall whether in Detroit there is any specific allocation, but it is possible. You see, the sales manager, wholesale, is in charge of the "B" station salesmen, the consumer salesmen I discussed this morning. The consumer salesman supervises and directs the efforts of the Commission agents. The commission agents serve both reseller and consumer business. The reseller accounts located at commission points are responsible to reseller salesmen, but there are times when an emergency or something of that nature arises where the consumer department may have to pay a part. If so, that portion of his time

3860 directly directed to the reseller channel only is included in this item.

Q. Does the sales manager, wholesale, also have charge of the regular consumer business from all stations?

A. Yes.

Q. He isn't just merely in charge of the commission agents?

A. He is the wholesale—he is sales manager, wholesale, as the title portrays.

Q. I suppose what you have said about the sales manager, wholesale, also refers to the sales manager, reseller, if any of his time happens to be put on consumer business? That is all allocated to that channel?

A. That is correct.

Q. How many assistants does the sales manager, reseller, have whose salaries are included in this account?

A. Each of them have assistants, in Detroit.

3861 Mr. Hanley: You were referring to Detroit, Mr. Austin?

Mr. Austin: Yes.

By Mr. Austin:

Q. So we have a sales manager reseller and an assistant sales manager reseller?

A. Yes.

Q. Now, leaving out of consideration for the moment any of the overlapping from the wholesale managers, that makes two men whose salaries are included here, is there any other?

A. I think not.

Q. So that this is all a division office again, is it not?

A. That is correct.

Q. Does the sales manager reseller, or do the sales manager reseller and his assistant—strike that.

Will you tell me what their duties are?

A. Well, their duties are to manage the sales in the reseller channel of distribution.

Q. Does that include supervision of salesmen?

A. Definitely.

Q. That includes what you have called sales promotion work?

A. Yes, sir.

Q. Which for the benefit of the record, I believe is largely what you call driveway training.

A. That is an important part of it, yes, sir.

3862 Q. But wouldn't the larger part of their work be supervision of salesmen?

A. I—

Q. I can see where that question may be a little confusing. Who does the sales promotion work, driveway training, for instance?

A. The salesman.

Q. And he is also the fellow who devotes time to the selling of gasoline.

A. That is correct.

Q. And is there any division made on the time basis between the salesman's activities in promotional work and in actually selling work?

A. It is not possible to make such a segregation.

Q. Well, I did not know whether it was or not.

A. Because when you are training someone in proper merchandising methods you are selling.

Q. So that the salesman's time and the salary for that time, rather, are included under salesmen's salary in your account, regardless of whether the time was spent on driveway training or on something else; is that right?

A. Yes, sir.

Q. Do the sales manager reseller and his assistant spend part of their time on supervision and training of salesmen, or is that their principal duty?

3863 A. Yes. They work with salesmen.

Q. Do you have certain training courses for salesmen?

A. Yes, sir.

Q. And are those courses in the charge of these sales managers?

A. Yes, sir.

Q. Is Mr. Blau's salary included in this account 002?

A. No.

Q. What account number does Mr. Blau's salary come under?

A. Salary supervision, 1,000 account.

Q. Mr. Blau was in charge of reseller sales in 1937, was he not; wasn't his title manager in charge of reseller sales?

A. I think that is correct.

Q. Was he over the sales manager reseller?

A. Yes, sir.

Q. Why is not any of Mr. Blau's salary charged to sales promotion?

A. I think that—

Mr. Hanley: I do not know whether I have an objection to that. It seems to me it assumes a fact not in evidence, your Honor. I object on that ground. I have no objection to counsel asking if any of his salary is so charged.

Mr. Austin: Well, I think he has already stated that it is not.

The Witness: I have stated it was not.

3864 Mr. Hanley: I will withdraw the objection.

Mr. Austin: I will withdraw the question aside from the objection. I want to go into it more generally, not just as to Mr. Blau, and for that reason I see no point in asking the question as to him.

Mr. Hanley: I have no objection to your developing the fact.

By Mr. Austin:

Q. I do understand, Mr. Boatwright, that all of Mr. Blau's salary is included in account 000. Would it be all in account 1000, or would there be an allocation?

Trial Examiner Ballinger: What exhibit now are you referring to?

The Witness: 31-Q.

By Mr. Austin:

Q. I am referring really to Respondent's Exhibit 32, as to the account, which is the blank form 189.

Would Mr. Blau's salary, for instance, and this other apply also to Mr. Raupaugh's salary, those salaries are allocated between the different channels, are they not?

A. Yes, sir.

Q. Now, all the other salaries, do you know whether they are included under account 000, is that not right, on Respondent's Exhibit 32?

A. That is right. It is the 1000 account.

3865 Q. Well, it is 1000, 2000, and—

A. That is right.

Q. Whatever the other number is.

A. All right.

Q. And is it true that all of these salaries of the sales manager reseller and the assistant sales manager reseller are included on form 189 in account 002?

A. Yes, sir.

Q. Referring now to those salaries in account 002, that sales manager reseller and assistant sales manager reseller are in charge of and supervise salesmen who call upon Ned's Auto Supply Company, is that right?

A. Yes, sir.

Q. And as you have stated here that none of that expense is allocable or chargeable to Ned's Auto Supply Company.

A. That is right.

Q. Will you explain that?

A. Yes, sir. Because that salesman that called on Ned's Auto Supply had absolutely no responsibility for driveway training. He had no responsibility for the supervision of the operations of the plant; he had no responsibility such as he normally incurs at regular reseller outlets. He did the leg work in conjunction with a contract.

Q. It is indicated, is it not, by this exhibit, that there was certain selling expense in connection with Ned's 3866 Auto Supply Company?

A. Yes, sir. And I said he did certain leg work.

Mr. Hanley: If your Honor please, at this time I object to the question of counsel insofar as it implies any activity for allocation of time or effort on the part of either the manager of the Detroit field, Mr. Raupaugh, or the assistant manager, Mr. Blau, concerning whom the witness has just been questioned, inasmuch as it appears from Exhibit 31-Q that the amounts allocated to the reseller channel including the salaries of those individuals, were not included in allocation of expense against the reseller's channel in computing the saving accruing to the respondent in respect of selling to Ned's Auto Supply Company as distinguished from the balance of the reseller channel.

The objection goes only to any implication that there may be in counsel's questions relative to the efforts and supervision of the managerial staff, namely Messrs. Raupaugh, the manager, and the assistant manager, Mr. Blau.

I have no objection to any questions of counsel respecting any efforts that were directed to the servicing of Ned's account by any of the sales staff other than those two individuals.

Mr. Austin: I think my last question was directed specifically to the sales manager reseller and assistant sales manager reseller, and this does not include Mr. 3867 Raupaugh and Mr. Blau.

Mr. Hanley: I may be tardy, your Honor, but I just want it clear on the record.

Trial Examiner Ballinger: Now, as I understand your objection does not apply to the pending question.

Mr. Hanley: I have no objection to counsel questioning as to the efforts that were directed toward that station in connection with any of this staff who do have anything to do with Ned's station.

By Mr. Austin:

Q. Now, Mr. Boatwright, when you talk about driveway training and sales promotional work, what sales are promoted, Standard Oil Company sales or retail sales?

A. Retail sales.

Q. And on the other hand, in the training of salesmen and general supervision of salesmen, that is that work of these two managers or the manager and his assistant, is directed to the promotion of Standard Oil Company sales, is it not?

A. You are attempting to segregate there what I regard as an impossible segregation. This is to promote—

Q. Well, will you—I am not trying to segregate any figures. I just would like to have you answer that question.

A. Well, your question as you asked it differentiates between trying to promote sales of Standard Oil Company and trying to promote sales, reseller sales. When you
3868 do one you do both. You can not segregate them.

Q. All right. Your testimony is that you cannot segregate, if you wanted to segregate the amount of time spent on one and the amount of time spent on the other, but assuming that, is it still not true that these men devote their time to the promotion of both classes of sales, in other words, they are promoting sales of gasoline by Standard Oil Company and are promoting the sale of gasoline by the retailer, isn't that so?

A. Yes.

Q. And I believe you also said, did you not, that in promoting the sale of gasoline by the retailer you are incidentally promoting the sale of gasoline by the Standard Oil Company?

A. That is correct.

3869 Q. That being true, why is no portion of the salaries of the sales manager, reseller, and assistant sales manager, reseller, allocated to selling expense? In other words, you have here on 31-L referred to sales promotion; further, over on Exhibit 31-J you get into selling costs. Now, why is not a part of the time included in the account 002 a proper selling cost rather than a sales promotion cost? Or I will strike the last part of it. Why is part of it not a selling cost which should be used in computing selling cost rather than place it over here separately under sales promotion?

Mr. Hanley: If Your Honor please, that is objected to as a misstatement of the purport of the exhibit. All of the items and accounts in Exhibit 31-A through 31-Q are offered and represented by the Respondent as being sales costs. If the purport of the question goes to the matter of why certain of these items, and, specifically, the one on 31-G, account No. 1002, is not allocated to Ned's station, there is no objection to a question which asks for an explanation of why it is not so allocated. There is an objection to any statement or question on the part of counsel which assumes that which is not the fact; namely, that every item in the entire Exhibit No. 31 is marketing cost of the Respondent.

Trial Examiner Ballinger: Does counsel desire to be heard?

Mr. Austin: I don't think so. I think that is an 3870 answer which could have been made equally well by the witness, but if Your Honor please, I would like to rephrase that, because I think I have asked a question which was based upon the assumption—

Trial Examiner Ballinger: The question is withdrawn?

Mr. Austin: Yes.

By Mr. Austin:

Q. The question was based on an assumption about which I had some doubt prior to testimony, that there was more of an actual distinction than there appears to be between sales promotion and what I would call selling; in other words, what you have included under selling costs. I think that is clear now from your testimony, that the two go hand and hand, and are handled by the same men both in the field and as to supervision; is that correct?

A. That is right. You can't segregate them.

Q. That being true, is it not true that the salaries of the sales manager, reseller, and assistant sales manager, reseller are the same type of expense as what are called salesmen' salaries, which is included in acount 004?

Trial Examiner Ballinger: What exhibit do you refer to?

Mr. Austin: All acount numbers, your Honor, referred to in Respondent's Exhibit 32, and also wherever 3871 they are mentioned, to the subheads of Repondent's Exhibit 31. In this case, 004 is referred to the reseller channel part of it, which is 1004, as referred to on Respondent's Exhibit 31-M.

The Witness: By the same type of an expense, I am not just certain what you mean by that phraseology. It is a part of our general marketing cost. Does that answer your question?

By Mr. Martin:

Q. I am not going to ask you why you have one account number for sales promotion salaries and another account for salesmen's salaries. That is an arbitrary matter, and there is no reason for asking why it is done. But it is a fact that salaries, sales promotion, are included under one account and salesmen's salaries under a different account; isn't it?

A. That is correct.

Q. And that is your common practice?

A. Yes, sir.

Q. But on Exhibit 31-G, we find salaries, sales promotion, included as an item which is not influenced by Ned's Auto Supply Company.

A. That is correct.

Q. Under 31-J, K, L, and M, we find selling expense which is conceded to be an item which is influenced to some extent by Ned's Auto Supply Company. Now, my
3872 question, which I have been trying very hard to
phrase here so that it will be understandable is: Why is it that the salaries included in account 1002 are considered by you to be in no part allocable to Ned's business, whereas the salaries included in account 1004 are considered to be a part allocable to Ned's business? If you have made a complete answer to that already you may so state.

A. I think the question was asked and answered when I stated that the transaction which Standard Oil Company had with Ned's Auto Supply was such that we had no responsibility for driveway training, for displays on the driveway, for merchandizing practices followed by the respective efforts of Ned's Auto Supply, or on any of the other usual promotional activities incident to the operation of a reseller salesman.

Q. Well, this figure of $6,597.25 appearing on Respondent's Exhibit 31-G, that is taken bodily from the account Detroit Form 189 for 1937?

A. Yes, sir.

Q. How is the total of those sales ~~for account 002~~ allocated as between different channels on Form 189?

A. That is allocated on a distribution of time report prepared by the individuals working in that department.

Q. Are all of the figures in the righthand column of the computation 31-G, which are opposite, that is, all the

figures down as far as the total,—are all of those figures
taken directly from the Detroit Form 189 for 1937?

3873 A: Well, there is one that is not. That is the 3 percent.

Q. Oh, yes.

A. But I can check the others to ascertain whether that is correct.

(Pause.)

With the exception of that one case, they are all taken directly from Form 189 for the Detroit field for the year 1937.

Q. That is, all of those figures except the one for the insurance and unemployment?

A. That is correct.

Q. Will you turn to Exhibit 31-H, please, Mr. Boatwright? This exhibit is entitled "Certain Other Marketing Expense Items of an Overhead Nature Not Influenced by Ned's Auto Supply Business."

Will you state whether all of the figures in the right hand column on Exhibit 31-H other than the total are these figures entered on the Detroit Form 189 opposite the respective accounts listed; that is, for 1937?

A. Account 1001 is taken directly from the Form 189;
the same applies to account 1215; the same would not
apply to the federal insurance unemployment tax. Account
1054, taken direct; account 1066, miscellaneous operating
expense, taken direct; account 1084, taken direct; account
1025, taken direct; account 1216, taken direct; the
3874 same applies to 1217; likewise applies to 1220; and
applies to 1107.

Therefore, each of the items on Respondent's Exhibit 31-H was taken direct from the Form 189 for the Detroit field, the year 1937, tank wagon reseller channel only, with the exception of the federal insurance and unemployment insurance taxes, which is a direct application of the 3 percent of the salary items listed, and is the item of $403.87.

3875 By Mr. Austin:

Q. I noticed in answering that question, Mr. Boatwright, you made certain comparison of figures. Were you determining whether the amounts here are the same as the amounts on Detroit form 189, or were you finding out whether or not in making up this exhibit, Detroit form 189 was used?

A. Well, I was comparing it with the form 189 for the Detroit field to be sure that there was an exact repetition of the dollar value represented for these respective items on that form. It has been checked and rechecked, but you asked me a direct question and as a precaution I was checking the last time to ascertain that the amounts were identical.

Q. Then, when this exhibit was made up, was 189 the direct source of this information and the only source, I mean by this information, I should say all these figures?

A. The 189 was the direct source of these figures used in this calculation. However, it was not the only source in the fact that we discussed each individual account with the men and whose expenses were itemized in those accounts as to their contacts and relationship with Ned's Auto Supply business.

Q. Well, I was not referring to that, but what I meant was whether any check was made or whether these figures were arrived at from original records, or whether this merely was lifted from 189 on the assumption that the
3876 form 189 and the figures contained thereon are correct.

A. They are correct, and they were taken direct from the form 189.

Q. Without going back to the original records?

A. To go back to the original records would have had us pulling the vouchers and going back to the warehouse and reconstructing the vouchers for 1937 and would have meant much labor.

Q. I can realize that.

A. They were taken from our final form of marketing expense.

Q. Referring to the account 001, entitled salaries—supervision. Is the major portion of this expense item pro rated on a straight gallonage basis among channels on company form 189?

A. The major portion of that expense item is allocated among channels on an all gallonage basis.

Q. Was the tank wagon gallonage delivered to Ned's Auto Supply Company included in the tank wagon reseller gallonage used in making that proration for 1937?

A. It was.

Q. Turning to account 215 entitled "Expense—Salaries—Others."

Mr. Hanley: 1215.

Mr. Austin: No, just 215.

The Witness: It is 1215.

Mr. Austin: Well, I leave off the first one because 3877 the figure used on Respondent's Exhibit 32, the blank form 189, does not have the figure "1" in front, and when I am talking about allocation between channels, I believe Mr. Boatwright will agree that it is proper to leave off the first number because the first number refers to the channel.

Mr. Hanley: All right. You fellows make up your own minds about that.

A. That is correct.

By Mr. Austin:

Q. Referring to account No. 215, "expense—salaries—others. Is the major portion of that expense item prorated on a straight gallonage basis among channels on form 189?

A. The major portion is allocated on an all-gallonage basis among the channels.

Q. You seem to prefer the word "all" rather than "straight," and in using the word "straight gallonage basis" I am quoting your language on Respondent's Exhibit 31-I, if you will look at the top.

A. I did not know that it makes a bit of difference.

Q. As long as we both mean the same thing.

A. All right.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

3878 Q. Referring to account 084, entitled "Station Safety Expense—Salaries and all other expenses," is the major portion of that expense item prorated on an all-gallonage basis among channels on company form 189?

A. Yes, sir.

Q. In prorating that expense was the Ned's Auto Supply Gallonage included in the tank wagon reseller gallonage used in making that allocation?

A. Yes, sir.

Q. And is the same true as to acount 215, I believe I neglected to ask you that for 215.

A. I think you did ask me and I think the record will indicate that I answered that it was, it was an all-gallonage basis.

Q. Now, I think you answered it as to 001, but not as to 215.

A. It is true as of 215.

Q. Turning to account 220, expenses—employment department—salaries and all other expenses. Is the major portion of that expense item prorated on a straight gallonage basis among channels on form 189?

A. Yes, sir.

Q. And was the tank wagon gallonage delivered to Ned's Auto Supply Company included in the tank wagon reseller gallonage used in making that proration for 1937?

3879 A. Yes, sir.

Q. If none of the expense of these accounts is chargeable or was chargeable to Ned's business, why was Ned's gallonage included in the tank wagon reseller gallonage for the purpose of making the allocation of channels on form 189?

A. Because the sales of gasoline to Ned's Auto Supply was a part of the tank wagon channel of distribution. Being a part of the tank wagon channel of distribution we did not change our entire accounting instruction merely because of that incident, but allocated our costs on the same rules and the same instructions that we had throughout our experience prior to, during and subsequent to the period of time during which Ned's were supplied gasoline one-half cent per gallon less.

Q. Well, in your opinion were any of these expenses chargeable to Ned's business in the first half of 1936 before Ned's got the half-cent differential?

A. In my opinion, none of these items of expense were influenced by the Ned's Auto Supply business.

Q. Any more so after he got the one-half cent differential than before?

A. I can not testify that prior to the time when we had the agreement to supply him at one-half cent a gallon less, that we were operating on the identical contractual or verbal agreement relative to promotion and other
3880 activities. I can state that during this period of
time at which the half-cent was involved that these items of cost were not influenced up or down by the prevalence of Ned's Auto Supply business.

Q. What do you mean by influenced?

A. That our marketing expense remains the same for these respective items with or without the Ned's Auto Supply business.

Q. Well, was Exhibit 31 prepared on the theory that the only expense allocable or chargeable to Ned's business are those which would be eliminated if that business were lost?

A. No, the exhibit was prepared upon the basis of costs in one method of marketing direct by tank wagon to resellers as constrasted with another method of marketing through Ned's Auto Supply. Now, our arrangement and our business transaction with Ned's was different from our business transactions with our other reseller accounts. It was a large volume distributor, having four outlets. The other tank wagon resellers were only individual outlets, and so our entire transaction with this organization was not comparable with the other outlets, but we could not establish separate accounting procedures and costs on individual accounts.

Q. Perhaps you could not, Mr. Boatwright, but you used the same method of delivering to Ned's as to the others, isn't that right, tank wagon delivery?

A. Yes, sir.

3881 Q. And Ned's was a larger account, bought more gasoline from you, of course.

You stated that by inference you meant that these expenses would all have continued even in the absence of Ned's business.

A. That is correct.

Q. In your opinion is that any reason why some part of these expenses should not be charged to Ned's business, as long as the company has that business?

A. I certainly think that no part of any of these expenses should be charged to the Ned's account.

Q. You were asked a somewhat similar question by me during the course of your direct examination, or perhaps I should say interpolating the direct examination.

Mr. Hanley: Give the page, please.

By Mr. Austin:

Q. At page 2484 of the record; and you stated: "Certainly the draftsmen in our construction department who work on designs and layout of proposed remodeling of company owned stations or of remodeling of other plant facilities, having done nothing of that nature in connection with Ned's Auto Supply, could not be logically charged as any cost incurred because of the Ned's business, nor would the clerk and the stenographer in the construction department be regarded as cost against doing business to Ned's Auto Supply."

3882 A. Aren't you referring now to a specific account, rather than this entire exhibit?

3883 Q. Yes, I am, Mr. Boatwright. I am now referring to account 001 or 1001.

A. Yes.

Q. As it is here, which I believe you—yes, this particular item, I am quoting your testimony, "Is made up of a secretary to the manager, clerk draftsman in the construction department, and the stenographer in the construction department."

A. Yes, sir.

Q. Now, turning again to the quotation which I made from pages 2484 and 2485—do you have that in mind, or perhaps Judge Hanley has an extra copy there.

Mr. Hanley: Yes.

(A transcript was handed to the witness by Mr. Hanley.)

A. Yes, I have in mind the section referred to.

Q. Just referring to that one paragraph, Mr. Boatwright, would not what you there said as to Ned's Auto Supply Company be equally true as to any other tank wagon reseller customer in the Detroit area who does not lease his service station from the Standard Oil Company?

A. No.

Q. Will you explain why?

A. Absolutely not.

Q. Direct your answer, please, to that statement which appears at the bottom of page 2484 and the top of 2485.

3884 A. Why, certainly. An individual may own an outlet; he may own a corner; he is going to build a service station on that corner. He avails himself for discussion purposes of our drafting department. He comes in and reviews the plans that we have for service stations. He talks with our draftsmen. Our construction superintendent may counsel with him and help him to escape some of the mistakes of the inexperienced. And in every respect we incur costs on that type of operation through consultation, assistance, and so forth.

Q. Perhaps you are aware of the fact that Ned's Auto Supply Company built two new stations in 1938. I have no doubt that those stations were started during the time or certainly planned during the time that Ned's was getting the one-half cent differential. Is it your opinion that Ned's obtained no assistance of that kind from the Standard Oil Company?

A. It certainly is.

Q. Then why do you think that no such help would be given to Ned's who was one of your best customers, when such similar help would be given to the little fellow?

A. Probably he didn't ask for it. When Ned's build they just don't build a service station, they build a store with a driveway in front of it and their units are not at all comparable with the type of units that we construct.

Q. In other words, your construction department wouldn't be competent to help design a station such as Ned's?

3885 A. That is not what I stated.

Q. I am asking you.

A. I think that they would be competent; yes, sir.

Q. Isn't it true that there are—strike that.

Do you have any idea how many of the 461 contract service stations now doing business with the company in Detroit obtained assistance from your construction department in the construction of their service stations?

A. I do not, because that is something that there is a flow of that type of requests and that type of information. For me to attempt to guess at the number that they have discussed different problems, asked for different plans or lay-outs, would be a ridiculous guess.

Q. Don't you know that there are a number of those 461 contract stations who owned and operated their stations before they became customers of the Standard Oil Company?

A. Yes, sir.

Q. And as to any of those stations, is it not definite that they never obtained any assistance from your construction department?

A. No, that would not follow, because frequently they had a stall or they remodeled or they changed their driveways or they relocated the pump islands, or they relocated the tanks. There are many problems of construction incident to the operation of a service station which 3886 arise after the station is completed during the course of years. Then even though they may have operated before many years, they still may avail themselves of this assistance after they become our dealer.

Q. Then isn't your statement as given here on page 2484 and 2485, your explanation of that statement now based upon the theory that the services of your construction department are available to all of these service stations?

A. The answer as given in the testimony, both this afternoon and as of the date of the previous testimony being taken, was to the effect that the construction department is called upon for these services with one class of outlet while it was not called upon for these services with the other class of outlets.

Q. Now, what do you mean by "classes of outlets"?

A. With the one class of outlets calling for this service being the 461's, the P. O. S. S. L.'s and lease service stations, while Ned's Auto Supply did not call for this assistance.

Q. Do you know how many of these service stations other than Ned's ever called for that assistance at any time during 1936, '37, or '38?

A. No. I do not know how many actually did. I know that it is a continuous type of service.

Q. Did you make any effort to find out as to how many of them did or which ones did?

A. No sir; I did not, because if that construction 3887 department isn't busy and isn't in operation, why, we have an opportunity to cut our marketing costs.

Q. Well, the construction department is available to Ned's if they want to use it, or if they wanted to use it; wasn't it?

A. It is available, but it is considerably out of the line of their usual activities and their usual work, and we would not have taken the trouble to lay out a store unit for Ned's Auto Supply as just a part of regular service. We couldn't have done that.

Q. Why not?

A. Didn't have time.

Q. Ned's is a rather unusual sort of a customer, isn't it?

A. Yes.

Q. As far as the amount of gasoline bought.

A. Yes, sir.

Q. And yet it is your opinion that the Standard Oil Company would not have rendered him any service of that kind if he wanted it for the purpose of erecting another one of his superservice stations?

A. That is very definitely my opinion.

Q. It is true, is it not, that the Standard Oil Company was ready to give and would have given the same service to Ned's, that is, the services of its construction department, that it would have given to any other service station operator who was its customer?

3888 A. Well, I don't know how far they would have gone in that respect because there wasn't a call for it, so I just can't answer you.

Q. And there were probably many other service stations who made no call upon that department during 1937; isn't that right?

A. Many individual stations probably did not.

Q. Now, turning to page 2485 of the record, I again quote another paragraph of the same answer previously referred to:

"The manager's stenographer, representing the salary of the stenographer of one individual working for Mr. Raupaugh, is not a marketing expense item that could be influenced by the acquisition or the loss of any such account as Ned's Auto Supply. That has remained constant except as they have been influenced by increases because of service over a period of years."

Would that statement be equally true if instead of referring to Ned's Auto Supply you had used the name of any other single tank wagon reseller customer of the Standard Oil Company in the Detroit area?

A. It might have been.

Q. Wouldn't it be? The statement here was that was not a marketing expense item that could be influenced by the acquisition or the loss of any such account as Ned's Auto Supply. Now, isn't it true that if it is an item
3889 of expense that wouldn't be influenced by the acquisition or loss of an account as large as Ned's, it certainly would not be influenced by the acquisition or loss of any single smaller account?

A. Yes.

Q. Is a portion of the expense going into account 1001 allocated to the consumer channel on the Form 189?

A. Yes, sir.

Q. And a part of it is allocated to the other methods channel; is that right?

A. Yes, sir.

Q. Turning now to account 1215, the account is entitled "Expenses—Salaries—Others."

I believe you stated on direct examination that the figure for this account comprises the salaries of employees in the real estate and tax departments.

A. That is correct.

Q. And I should, I suppose, qualify that by stating that it is a portion of those salaries which is allocated on Form 189 to the tank wagon reseller channel.

A. Yes, sir.

Q. What taxes are involved in so far as the activities of the tax department are concerned?

A. Real estate, personal property, are the primary considerations.

3890 Q. How about the automobile licenses?

A. That comes as a part of maintenance, operation and maintenance.

Q. Is a part of the time of the tax department given to attending to those registrations and the obtaining of those licenses when the time of the year comes around?

A. I don't know whether the tax man has anything to do with that or not.

Q. Is there any question of license to operate in the City of Detroit?

A. Yes, there may be.

Q. Or in the State of Michigan?

A. There may be that.

Q. Requiring licensing of outlets or size of tanks. Those requirements vary from one municipality to another.

A. Yes.

Q. That would apply to the tanks at your bulk plant, would it not?

A. Yes, sir.

Q. Would it also apply to the marine terminal?

A. No, sir. No. No cost of the marine terminal is included in any way, shape, or form in the marketing expense statement.

Q. I see. It is not included in the costs of the Detroit field anywhere?

A. No, sir.

3891 Q. I was going to ask you that later on, but

A. That is all right.

Q. Well, what are the duties of the employees in the real estate and tax departments? Can you give me a further description of that?

A. Taking care of all the company's interest as its affects any problem of taxation, or any problem of real estate ownership, title to locations, and so forth. A large part of the real estate man's activity is devoted to real estate problems incident to company-owned service stations leased. He likewise spends a considerable amount of time on privately owned service stations leased, and he spends some of his time on any property acquisition by the company for our marketing operations, seeing that the title is clear, description of the lot, and all factors influencing the company's investment in that real estate.

Q. That would include the bulk plants?

A. It would.

Q. Would it include other company-owned property such as the main office?

A. It probably would if there was any problem involved there of an expansion or acquisition of property incident thereto.

Q. Does the company own its building in Detroit where the main office is located?

3892 Mr. Hanley: I did not hear that question. I am sorry.

By Mr. Austin:

Q. Does the company own the building in Detroit where the main office is located?

A. Yes, sir.

Q. Does the real estate and tax department have anything to do with the operation or maintenance of that building?

A. Only as it affects any problem of real estate or taxing on the building.

Q. They would have that—

A. That is correct.

Q. —in charge.

A. Yes.

Q. How much of that building is occupied by the company?

A. All of it with the exception of a small portion of the fore part, which is used as service station headquarters for the service station that is right in front of the building. You have seen the building, have you not?

Q. At a distance.

A. Well, the building is a combination office building and service station. Now, the service station is leased; that is a driveway and one room with such enclosed stalls as may be necessary on the first floor. Aside from that the company occupies the entire building.

3893 Q. You refer to privately owned service stations leased, and to company owned stations leased. Do the employees in this department spend any time in connection with the business of the contract stations, the non-lessees?

A. Oh, they might spend some time with—the 461 accounts you are talking about?

Q. Yes.

A. They might spend some time with 461 accounts, if he encounters any difficulty with his tax problems or title to his property, or anything of that kind.

Q. Do you know of any instance where one of those operators has come to you for advice of that kind?

Mr. Hanley: Just a moment, Mr. Boatwright.

If your Honor please, I want to make a record objection here which I think is of some importance.

Your Honor called us to the bench this noon to pose a question of procedure or law, and it seems to me that the trend of the examination as epitomized by this last question, and by many of the questions that have been asked this afternoon bears directly upon the question which Your Honor posed to counsel in the informal conference this noon. It must be quite apparent that the whole direction, the whole tenor, the whole purpose of the cross-examination during the entire day has been directed to the proposition that certain of these cost items that have been set up 3894 by the Respondent as a group may not be more applicable in some particular instance to some particular service station in that group than they are to Ned's Station. That surely is apparent from the trend of these questions, Your Honor.

Now, I have not objected to the individual questions because it seemed more appropriate to wait until there was a clear definition of the issue here, if there is that issue in Your Honor's mind, but now it seems after a day's taking of the testimony that it has been sufficiently demonstrated what the purpose of Counsel for the Commission is.

Counsel for the Commission is not, and has not, during the course of the cross-examination, questioned the propriety or the accuracy of the account, or the costs of the Respondent in selling at a certain cost which Respondent says is its cost to the reseller channel. That has not been developed any place. There has been no question raised about it. The only question that counsel has sought to raise, and the only attack that is being made is whether or not all of these costs in these various accounts as set up in the Form 189 as applying to the reseller channel apply to each and every of the service stations in the group other than Ned's.

Now, if Your Honor please, I certainly think that the Government has the right to test the accuracy of our cost accounting, and it seems to me that just is fundamental here, that they have the right, that if there is anything
3895 wrong with our cost accounting they have the right
to test it and determine whether we are accurate, whether we are fair, whether we are sound in our methods. They just have not done that. They have assumed that we are sound enough apparently, but they have attacked our method of distinguishing between Ned's, on the one hand, and the reseller channel, as such, on the other hand, and they are attacking not the difference in cost as between Ned's and the reseller channel as a whole, but they are attacking the proposition that it may be true. It has not been established as true, but they are raising the question that it may be true, that certain of these other reseller channel costs do not apply to some of these three hundred odd service stations other than Ned's in the City of Detroit.

Now, if Your Honor please, it seems to me that that very definitely raises the identical question that was in Your Honor's mind when you spoke informally to counsel this noon as to whether or not we have met that kind of an issue, or whether we have to meet the issue of a justification as between our cost, the Respondent's cost in selling and marketing through the reseller channel as a whole, on the one hand, and the cost of marketing to Ned's as distinguished from that general reseller channel.

Now, there can be no question, it seems to me, viewing the trend of these accounts, but that is the whole case of

the Government, so far as can be determined from the
3896 cross-examination to date, and every question that
has been asked almost would be objectionable if the law is determined that all we have to do is to justify on the basis of the reseller channel on the one hand, and Ned's, on the other hand.

Now, if the law is different than that, Your Honor, then I do not know what the law is, and I think Your Honor was entirely right in the suggestion that we ought to get a determination of it. This last question is objectionable on the ground that it is absolutely immaterial, Your Honor, whether any 461 account sought the aid of the real estate or tax department, if we are entitled to justify on the basis of the reseller channel, on the one hand, as distinguished from Ned's Auto Supply Company, on the other hand. If, however, that is not the law, if we are required to justify as between the highest cost station in this three hundred group or the lowest cost station in this three hundred group, and Ned's, then this might be a material question. I do not know. But if that is the law, Your Honor, it is just simply an absurdity. It would mean that we would have to try to make an individual account of costs,—I do not know how it could be done,—with three or four hundred individual services, and I just earnestly object to this question on that broad basis, Your Honor, that we are not held to a justification on the basis of Ned's against some other
3897 single service station, but that we are entitled to
justify as between the reseller channel generally, of which Ned's was a part, but segregate Ned's out and show where he gave us certain breaks and advantages that permitted us to make a saving in serving him that we did not have in this general course of business through the reseller channel.

Trial Examiner Ballinger: The Examiner is of the opinion that this line of examination is a little nearer to proper line of examination than that which the Examiner expressed some doubt about this morning.

There is a peculiar situation existing. We have retail stores that are owned and leased by the Respondent Company. We have another class of stations that are owned by the operators but are supplied by the Respondent. Now, the cost of delivering, supplying both the company-owned outlets and the outlets that are owned by the operator are in one classification, and a question arises as to whether or not certain costs are allocated to that entire group or some portion of the expenses should not be allocated to Ned's.

The Examiner overrules the objection.

Mr. Hanley: Well, if Your Honor please, I do not hold
to the ruling; understand that I except to it; but I would be
glad—I would be awfully glad to learn if I could what we
can do, what the Respondent can do that is at all feasible
or practical to aid in this determination of cost. Now,
3898 we have a cost, there isn't any doubt about that, we
have a cost, and anyway that we can allocate it or can
demonstrate it that will be of aid to the Commission we are
very anxious to do. If I have not made that abundantly
clear, I have certainly failed miserably in my intention.

Trial Examiner Ballinger: There are certain elements of cost that apply equally to both the stations that are owned by the Respondent Company and which are supplied by it, and those which are owned by the operators which the Respondent Company services.

Mr. Hanley: That is true, and certain costs that we recognize as applying to Ned's as well.

Trial Examiner Ballinger: Now, as to certain of those costs: There is no question in the mind of the Examiner but what they equally apply. Now, when you get to other questions of cost, such as your real estate department and architectural department there arises a question that I think Counsel for the Commission is entitled to inquire into.

Mr. Austin: I just would like to say to Your Honor, if
I may, that I think I am entitled to very broad latitude on
cross-examination of this witness as to his methods of pro-
cedure and as to why he did certain things even though the
particular item is inconsequential. I understand Your
Honor's remarks this noon to be directed more possibly to
the introduction of affirmative evidence on the part of
3899 the Commission than I did as any limitation upon
cross-examination, and so that I have no reason to
apprehend that I will be so restricted, but in view of the
objection made I just want to urge that I think I should
have very wide latitude on cross-examination of all points,
important and unimportant, as to the methods of account-
ing procedure used as to whether an item applies to certain
stations, or all stations. I think that if it got to the point
of redirect examination and the introduction of a lot of
costs of our own, why, that, I can see, would be something
different, and it might be something which would have to

be passed upon and decided and undoubtedly should be before we ever attempted to obtain such evidence, if we should. I am not saying that we will or we won't.

3900 Trial Examiner Ballinger: In order that the rights of both the Commission and the Respondent may be fully preserved and protected, the Examiner will reserve to counsel for Respondent the right to strike evidence such as he has objected to in his last objection; and at the conclusion of the cross-examination or at the conclusion of the case, he may renew the motion, the Examiner will then pass upon it; that will afford the Commission, counsel for the Commission, an opportunity in the event the Examiner sustained the motion to strike an opportunity to appeal to the Commission, and in the event the Examiner overrules the motion to strike, will afford counsel for the respondent an opportunity to appeal to the Commission, and before the Examiner's report is prepared, you may take it to the Commission and settle the question so far as the Commission is concerned, if you so desire.

It is understood that this entire line of cross-examination is admitted, subject to objection and a motion to strike.

Mr. Hanley: Your Honor, I am sure that that is appreciated on the part of the respondent, so far as it goes, and it may be under the Commission's procedure, it goes sufficiently far. The only thing that troubles me is the same thing that troubled me at the conclusion of offering our testimony on costs, at which time I made the offer on behalf of the respondent that any of our books or any records
3901 or any information that was desired on the part of the Commission, counsel for the Commission, we would gladly furnish. I did that because, of course, the respondent doesn't want to be foreclosed on the merits because of some procedural situation. We assume that we have proceeded rightly in trying to demonstrate our costs. Now, if we are in error as a matter of procedure, we don't want to be mulish and insist we are right when the Commission says we are wrong as a matter of procedure. We are willing to demonstrate costs on the theory that the Commission says is the law that we should demonstrate the costs, and the only fear I have, if your Honor please, is that of maybe being foreclosed of an opportunity and a right to demonstrate our costs insofar as the merits permit us to comply with the law as the Commission finds it.

Trial Examiner Ballinger: Judge, if the question is raised on a motion to strike, the Examiner rules on it, you will be afforded before this record is closed an opportunity—either side will be afforded an opportunity to take the matter to the Commission and let the Commission pass on it, and you may then be governed accordingly.

Mr. Hanley: Well, I think, of course, that is as far as your Honor can go.

Trial Examiner Ballinger: That is as far as I can go.

3902 Mr. Austin: Yes, I quite agree and concur, again urging, however, that the question of propriety and relevancy on cross-examination is, naturally, as your Honor knows better than I, much broader than on direct, and I am confident that—

Trial Examiner Ballinger: Well, it is a question of whether it is cross-examination on material or immaterial matters, and the Examiner would prefer to wait until the examination is concluded before he expresses his opinion.

Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Read the question.

The Reporter (reading): "Do you know of any instance where one of those operators has come around to you for advice at that time?"

Mr. Hanley: Do you mean to the witness or to the company?

Mr. Austin: To the company.

A. I do know of cases where real estate men have told me or tax men have told me that they were working on a problem related with 461 accounts. Such accounts always approach the man in charge of those particular operations in the field and in no way did I personally play any part in it except as I have—except in discussion with the men, they have informed me that they were working on something in that connection.

By Mr. Austin:

3903 Q. That would be distinctly a very small part of the business of the real estate and tax department, would it not, Mr. Boatwright?

A. I don't know that it would.

Q. Referring now to the 481 stations.

A. That is my point. I don't know that it would be a small part.

Q. You don't know that it would not be?

A. I do not.

Mr. Austin: I was going to state a moment ago that it is not my intention, Judge Hanley, certainly not my present intention and I don't believe it will ever be, to attempt to make a cost study on any one single station or two or three single stations for the purpose of comparing it with Ned's, but neither do I agree at all that the average is the only basis, and I think that this examination may bring out from time to time that certain of these costs don't apply to all stations and may apply to some and not to others, and that is quite a different thing, as your Honor pointed out, than talking about single stations.

Trial Examiner Ballinger: What is in the mind of the Examiner is this: I don't know to what extent this cross-examination may develop differences: That is why the Examiner has reserved an opinion or a ruling.

Mr. Austin: Yes. I don't know either, your Honor, I am trying to get something here which will be a basis for
3904 your Honor and the Commission to draw conclusions
upon, and also which may be a basis for affirmative testimony on rebuttal in behalf of the Commission.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Mr. Austin: I move we adjourn for the day, your Honor.

Trial Examiner Ballinger: Motion of counsel for the Commission is granted and now, at 5 o'clock p. m., the hearing stands adjourned, to reconvene at 10 a. m., eastern standard time, July 17, 1941, in Room 332, Federal Trade Commission Building, Washington, D. C.

(Whereupon, at 5 o'clock p. m. the hearing was adjourned to Tuesday, June 17, 1941, at 10 a. m.)

3905

Room 332, Federal Trade
Commission Building,
Washington, D. C.,
Tuesday, June 17, 1941.

Met, pursuant to adjournment, at 10 a. m.

Before:

Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., appearing on behalf of the Federal Trade Commission.

Harold R. Hanley, Esq. (910 South Michigan Avenue, Chicago, Ill.), appearing on behalf of the Respondent.

3906 PROCEEDINGS.

Trial Examiner Ballinger: Come to order, gentlemen. You may proceed.

JOHN W. BOATWRIGHT resumed the stand and testified further as follows:

Cross-Examination (Continued) by Mr. Austin.

Q. We were yesterday discussing some of the items on Respondent's Exhibit 31-H, and particularly the item opposite account No. 1215, which includes expenses of the real estate and tax departments of the Detroit division which were allocated to the tank wagon reseller channel on the company's accounting form 189; is that correct, Mr. Boatwright?

A. Yes, sir.

Q. I believe you testified that part of the services of the employees in the real estate and tax departments are devoted to real estate and tax problems in connection with company-owned property other than service station property, that is bulk plant properties, the company's office building, and so forth.

A. That is correct.

Mr. Hanley: Judge, may my objection to this general line of testimony stand without repetition?

Trial Examiner Ballinger: Your objection stands
3907 without objection.

Mr. Hanley: Thank you.

Trial Examiner Ballinger: And your right to move to strike at the conclusion.

Mr. Hanley: Thank you.

By Mr. Austin:

Q. Why is it that expenses of this nature, that is, expenses of the real estate and tax departments other than expenses in connection with service station properties are not an expense of doing business with Ned's Auto Supply Company to as great an extent as they are an expense of doing business with any other tank wagon reseller customer?

A. The activities of the real estate and tax departments incident of the operation of bulk plants is an insignificant portion of the total, total responsibilities of this department. These bulk plants have all been in operation; their titles are all cleared. Their descriptions of the properties, their complete lay-out has been completed; there has been no responsibility in the Detroit division incident to the operation of these plants for a period of years, many years.

Q. Well, they have some duties in connection with the company office building, do they not,—the employees in this department?

A. Yes, but is a very, very small part because again this office building has been completed, the taxes on
3908 it are pretty well established, and have been studied
and reviewed, and the responsibilities in connection with their bulk plants and main office building is an insignificant and negligible portion of their total duties.

Q. What is the principal part of their total duties?

A. The principal part of their total duties is incident to the retail operation.

Q. Well, will you explain what those duties are.

A. In connection with all problems of taxation of real estate of the three classes of retail outlets previously described as encompassing company-owned service stations, leased, privately owned service stations, leased, and the 461 contracts.

Q. And as to those three classifications, where are most of the services of the real estate and tax departments required?

A. I am sorry, your question is not clear.

Q. Is the time of the employees of the real estate and tax departments devoted principally to real estate and tax problems in connection with company-owned stations or P. O. S. S. L. stations, or the third classification, or can you answer that question?

A. Well, their time is devoted to the three, principally to the three classes of retail outlets; which one may take a greater portion of their time this year may not be the same class which will take the greater portion of 3909 of their time next year. I could not say that any one customer takes a greater portion than another.

Q. Well, isn't it true that a large part of the time of the real estate and tax departments is taken up in connection with the leasing of company-owned service stations and the subleasing of the privately owned service stations leased?

A. No, that is not true. They are all involved in that operation, but the finding of a lessee, the interviewing of lessees, the induction of lessees into the operation of different stations is primarily a responsibility of the salesmen in charge of that territory, who is assisted in interviewing by the personnel man, likewise, in interviewing by the manager, assistant manager, and other people responsibility for the welfare of the company in that area, but the real estate or the tax men have very little obligation in connection with leasing of the service station.

Q. Where—I am trying to find out or get some better picture than I have now as to just what their principal activities are. If you could give me some specific examples rather than the general description, perhaps we could bring that out. You say very little part of it is in connection with bulk plants, or office building, and they have very little to do with the lease. Well, what are their activities that account for this expense?

Trial Examiner Ballinger: Mr. Austin, what item?

3910 Mr. Austin: Account 1215 on the Exhibit 31-H, Your Honor, which is approximately some $9,000.

Mr. Hanley: Office expense.

Trial Examiner Ballinger: Expense-salaries-and others, salaries.

Mr. Austin: Yes, that is expenses of the real estate and tax departments, so we have been told.

The Witness: That is correct, and it includes supervision, clerical, and stenographic work charged to those departments.

A. Well, their principal duties, I find it difficult to make clear my testimony of yesterday. The real estate man is charged with the responsibility of negotiating for the exchange of properties, for seeing that the title to properties is clear, that the description of the properties for tax purposes is accurate and complete.

By Mr. Austin:

Q. Now, what property would that be?

A. Those would be owned properties except as he works in conjunction with other reseller outlets to assist them in a similar manner, which de does. Now, that is the real estate man's functions. I think his title primarily tell his obligations.

Now, the tax man, in his turn, is responsible for reviewing tax paid on different pieces of property, seeing
3911 the taxes in a given area are in line with taxes in
other areas, if it is in his power to do so. He is to assist in any problem of taxation that the 461 operator or the P. O. S. S. L. operator may encounter. And he works on questions of real estate, personal property tax, and contacting, and so forth, in conjunction with the tax problem of the organization.

Q. And are there any tax problems on property other than company-owned property?

A. Oh, yes.

Q. Will you explain that.

A. The testimony yesterday, I think, brought that ought to the effect that if an owner of a privately-owned service station, that is leased to the company, incurs any tax problem in conjunction with the operation of his outlet, it is a most natural thing in the world that he should turn to his friend, the supplier, and to seek any assistance that he could from an expert working for that organization in a taxing capacity.

Q. Well, yes, you stated something of that sort in connection with real estate problems. I did not recall it, but the tax problem.

A. Well, it is the same thing exactly. This is a service which is rendered.

Q. Now, such advice or help or service may be given in that way to the contract or privately owned service station

at their request. Do you consider the expenses rep-
3912 resented by such service to be a cost of sale and delivery of gasoline?

A. Oh, I certainly do. Definitely it is. The sale of gasoline cannot be covered by the salary item of salesmen. I am in the general office and yet my salary and the expenses of my department, research, is purely a selling cost.

Selling does not start or stop when a salesman is hired. Selling is an over-all function. We regard in our company every individual on the pay roll as a salesman, and it is our duty to sell the merchandise that our company is producing.

Now, a tax man can be an excellent salesman; a tank wagon superintendent is an excellent salesman; an equipment man is an excellent salesman. True, their salaries do not show up on marketing expense under the classification of salesmen's salary, but they are excellent salesmen because they secure business and secure accounts and keep those accounts merchandising our product.

Selling is a broad function.

Q. Well, would you go so far as to say that your real estate or tax employees were employed because of their value in performing selling functions?

3913 A. I certainly would say that their selling function is an important consideration in their selection, quite certainly, because a real estate man or a tax man has many opportunities to befriend a retail outlet, the operator of a retail outlet. Having these opportunities to befriend and to help him in his problems, he can cement the relationship of the supplier of the distributor in that manner and is an important adjunct to the direct efforts of a salesman covering that territory. Therefore, their personalities, their way of handling and meeting people, their way of meeting their problems, is an important factor in their selection.

Q. I see.

There is one question that I intend to ask you in regard to the expenses of the construction department, Mr. Boatwright, which I believe is account 0001 on Respondent's Exhibit 31-H, or at least that construction department is included in that account.

A. Well, the draftsman, or the stenographer in the construction department, the clerical help in the construction department, is included, that is correct.

Q. Well, what else is there in the construction department besides those employees?

A. Well, the superintendent of those employees is included in account 1000.

Q. Is that so?

3914 A. Yes.

Mr. Hanley: Judge—just a minute, Mr. Boatwright. I do not want to object to individual questions, your Honor. May it be understood the objection which I made to this line of questioning may stand to all this line of questioning, so I may not have to repeat the objection?

Trial Examiner Ballinger: It is so understood.

By Mr. Austin:

Q. Should not the costs of those construction department employees, or rather, expenses is a better word, be capitalized in the costs of the property and depreciated over the life of the properties; in other words, where they are involved in working out construction plans on a thing in the nature of company-owned property, isn't that an expense of construction?

A. May I restate your quest to be sure that I understand?

Q. Yes.

A. Should the cost of the construction department be capitalized as a part of the capital outlay of the company?

Q. Yes, where the services are performed in connection with company-owned property.

A. They are not so capitalized.

Q. Why should they not be?

A. It is a reoccurring expense, maintaining of full time individuals. Now, this is not the payment to an architect, or anything of that type. This is a construction 3915 man on our payroll, as a regular part and he is maintained on our payroll constantly. Therefore, we do not capitalize his salary more than we would capitalize the real estate man's or the tax man's. It has not seemed advisable to us to do so, and I think in that respect that our judgment is sounder inasmuch as this is a continuing expense, and the responsibilities of the construction superintendent are not allocated between individual jobs, but it is retained as a continuing expense on the books of the company and is not capitalized. I do not feel that it would be in this particular case advantageous to capitalize that expense.

Q. You regard that as a selling expense then and not as a capital investment?

A. I do, I do quite definitely because I have known accounts personally where the activity and the help and the assistance of the construction superintendent and the construction department in suggesting revised layouts, in addition to properties, in changing pump islands, in making your driveways more attractive, and incidents of that type, where he has worked with a distributor perhaps of a competitive product and as a result of the friendly help and advice of the construction man, has become a representative and a distributor of our products. He is a salesman.

Mr. Hanley: If your Honor please, I just want to make a record objection.

3916 I have really no objection to the questions of counsel or to the answers of the witness, but I do object to any question which goes to the matter of the efficiency or inefficiency, or the rightness or wrongness of the methods of accounting adopted by the respondent. Whatever they are, there they are, whether they are efficient or inefficient is not a matter of inquiry in this proceeding. The matter of inquiry here is whether or not those costs are greater or less as between the customers involved in this proceeding.

I just make that, your Honor, as a matter of record objection. I do not care about the inquiry. I am perfectly willing that counsel go on and make the inquiry, but I do want to assert that it does not make any difference what his views of what our accounting ought to be are.

Trial Examiner Ballinger: The Examiner would like to hear from counsel for the Commission with reference to the question just raised by counsel for the respondent.

Mr. Austin: Well, I do not think any question has been raised, your Honor, because I have not questioned the accounting method used by the respondent. My questions have been directed to finding out what the accounting method are, rather than to questioning their correctness, and at least I so intended, and perhaps that is the explanation that is desired.

3917 I think it certainly is relevant that we find out what was done, and as to any criticism as to how it was done, or any opinions on that, of course I can not express an opinion. I do not know that I would be competent to have one. At least the purpose of the question is to bring out what was done, and it may be a matter for argument later on as to whether what was done was correct, but I do not think that is involved now.

Mr. Hanley: Well, your Honor, we certainly can't have any reasonable objection to counsel developing what was done, how we developed our account, certainly there is no objection to that. I want to be clear on that position.

Mr. Austin: I assume also that there is no objection to finding out what Mr. Boatwright's opinion is as to certain principles, or as to why he did certain things.

Mr. Hanley: That is right. I have no objection to developing Mr. Boatwright's opinion.

Trial Examiner Ballinger: Proceed.

Mr. Austin: There is a long distance call awaiting me. Perhaps we might have a few minutes recess, your Honor, to find out what it is.

Trial Examiner Ballinger: The hearing will stand in recess for 5 minutes.

(A short recess was taken.)

Trial Examiner Ballinger: Come to order.
3918 You may proceed.
Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record. Proceed.

By Mr. Austin:

Q. Mr. Boatwright, you do have certain real estate and tax activities in connection with company owned or leased service station properties?

A. Yes, sir.

Q. Isn't that an expense which is directly allocable or can be directly allocated to those service station properties as distinguished from service stations which are not leased from the company?

Perhaps I can clarify that by recalling that you stated that expenses of this kind are directly allocated where possible. Why is not expense in connection with company owned properties directly allocable to those properties as a class if not to the particular service station involved?

A. Well, I presume that it would involve the inauguration of separate system of breakdown costs, probably establishing a complete record of the distribution of time

of these individuals, and it is an item of expense which has not appeared to justify them in establishing our expense
controls. It is primarily made up, as you can see,
3919 it is relatively a small item of expense, it is primarily
salaries and expenses of the department, which is
small. It is spread over the outlets of the three classes described, and it would involve an additional accounting cost and function which does not appear to merit that additional work.

Mr. Hanley: Just a moment, please:

Just as a matter of record, Judge, I move to strike the answer of the witness and I object to the question on all of the grounds alleged at the close of the hearing last evening, and may I have that objection to all this line of questioning, and I won't bother anybody with objections, if I may have that on the record.

Trial Examiner Ballinger: You may. The objection, although rather late, is overruled, not on that ground, and the motion to strike is overruled subject to renewal.

By Mr. Austin:

Q. What sort of services do the real estate and tax department perform in connection with the business of consumer customers, tank wagon consumers?

A. Their functions in connection with the individual consumer are very limited. Their functions in connection with the bulk plant operation, the other company property, such as the main office and so forth, are the causative factor in determining our metho of allocation on an all-
gallonage basis. The consumer channel does carry
3920 a portion of the expense of these departments be-
cause of our method of allocation.

Q. That is the same reason that Ned's carries a part of the expense of those departments, isn't it?

Mr. Hanley: That is objected to as argumentative, your Honor; assuming a fact not in evidence.

Trial Examiner Ballinger: The objection is overruled.

Mr. Hanley: Answer, if you know.

A. Well, I know only that Ned's gallonage was used as a part of the gallonage for the allocation of these particular expense items during 1937. It was so used because we do not keep a record of the costs by customer but by channel.

To exclude that gallonage would have involved the establishment of a set of records on an individual customer basis which in terms of cost of maintaining records would have been a prohibitive expense to the company, and we could not exclude individual customers.

By Mr. Austin:

Q. Well, will you explain why this real estate tax expense is more properly chargeable to tank wagon consumer business than it is to Ned's Auto Supply business?

A. I think that throughout the discussion of this item that I have emphasized that fact throughout, that the real estate and tax departments' principal responsibilities
3921 have been in connection with the retail outlets operated by our company. The operation of the outlets of the Ned's Auto Supply at this time, four principal outlets, our real estate men have nothing to do with the layout, had nothing to do with the supervision, seeing that the titles were clear, that the description of the property was accurate. He had nothing to do with the tax problems of the customer, or to any of their functions which follow regularly as a part of the responsibilities of these departments, whereas he did and continuously was called upon to perform in these like functions with respect to other outlets, therefore properly speaking—

Q. What do you mean by "other outlets"?

A. The other retail outlets.

Q. You did not mean consumers, do you, by "outlets"?

A. I mean the company owned service stations leased, the P. O. S. S. L. and the 461 accounts; we are discussing the tank wagon reseller channel and as—

Q. My question was, why this expense was chargeable, more properly chargeable to tank wagon consumer accounts than it is chargeable to Ned's Auto Supply Company.

Mr. Hanley: Would you read that question, please?

(Question read.)

Mr. Hanley: Well, your Honor, I do not care to object to individual questions if it may be understood that my general objection to this line of questioning may
3922 stand? That is the objection I made last evening.

Trial Examiner Ballinger: It is so understood.

A. Your question now stands, is why is this expense more properly chargeable to tank wagon consumer's channel than it is to Ned's Auto Supply.

3923 By Mr. Austin:

Q. Yes, since it appears that this expense was allocated between channels on a gallonage basis. You now say that Ned's gallonage was included only because it was general accounting practice to do so, and not because it was properly a part of the gallonage to which the expense was chargeable, but nevertheless a proportionate part of the expense is charged to the entire channel of tank wagon consumer business.

Now, if the charge to Ned's business only happened to get in there because you did not want to segregate one customer, that certainly is not true of the tank wagon consumer channel which could have been segregated very easily, and I want to know why any of this expense was charged to tank wagon consumer channel if none of it is chargeable to Ned's?

Trial Examiner Ballinger: Now, before you answer that question, will you state whether or not it could have been easily and conveniently segregated?

The Witness: It could not. It would have required a rewriting of our accounting instructions and establishing a separate set of instructions for the Detroit division as distinct from the code of accounts and the accounting practices maintained in the other sales divisions of the company.

The problem of isolating an individual customer and handling your accounting costs separately for that particular customer usually involves an expense and a 3924 time factor which does not merit for any purposes of cost control or setting up a system of accounting on which a sound operating statement can be predicated the additional costs involved.

Mr. Austin: Your Honor, the question was not whether Ned's could be eliminated. It was whether the consumer channel could have been eliminated, and it is true, isn't it, Mr. Boatwright, that if no expense is chargeable to the consumer channel, why, it is very easy to eliminate that channel from the allocation. I do not think that—well, yes, I will ask that question, not suggesting that it should have been done, but in view of the Examiner's question I am saying that if that expense was chargeable only to the tank wagon reseller channel, that it could be so charged directly, could it, without any difficulty, in eliminating either of the other channels?

Mr. Hanley: Well, if Your Honor please, I have no objection to the witness answering the question along tha line, but I do think that counsel ought to ask a specifi question so that the witness will know what he is talkin about.

Mr. Austin: I think the witness knows what he is talking about very well, but I think we are getting a littl far afield, and I will withdraw that question, Your Honor unless there is something that you desire to have cleane up.

By Mr. Austin:

3925 Q. Would you wish to make any further explanation, Mr. Boatwright, as to why this expense of rea estate and tax departments is allocated in part to the tan wagon consumer channel—I mean, part to other methods but, nevertheless, is not properly chargeable to Ned's Aut Supply Company?

Mr. Hanley: You are referring now to what, Mr. Austin? What is it?

Mr. Austin: The expenses under account 1215, real estate and tax departments.

Mr. Hanley: You so understood, Mr. Boatwright?

The Witness: Yes, I so understand, and my answer i that as a process, or as a means of spreading our costs o these departments, the all-gallonage basis has appeare the more equitable means of allocation to our particula accountants and our company.

In any of these allocations that may be established ther may be other ways which could be suggested, which migh appear at the moment to be a more equitable means o distribution. In turn, they would have their questions Now, it is entirely possible, as you suggested, that w might have established a time record on this departmen and allocated costs on a time record basis as we do wit some of our other costs. It has not appeared advisabl to us, as I say, primarily because the cost element is comparatively small. Another record would have to b 3926 established, additional accounting costs would be incurred, and it just has not seemed to merit that typ of an analysis as yet for a purpose of controlling our expense.

Trial Examiner Ballinger: Mr. Boatwright, is any portion of the expense-salaries-others, as designated in Re spondent's Exhibit 31-H, and amounting to $8,912.32, incurred in connection with Ned's Auto Supply Company?

The Witness: In my judgment and in discussion with the accountants and the personnel of the Detroit field, and the individuals in charge of the real estate and tax departments, no part of their expense during the year 1937 was incurred because of any contact with Ned's Auto Supply.

Trial Examiner Ballinger: Nor in connection with any services rendered?

The Witness: Nor in connection with any services rendered to Ned's Auto Supply.

Trial Examiner Ballinger: Nor in connection with any services that inured to the benefit of Ned's?

The Witness: That is correct.

By Mr. Austin:

Q. And yet you did include Ned's gallonage in making the allocation of expense between channels on Form 189, did you not?

A. Yes, sir; for the reasons as explained that we cannot isolate individual customers as a regular accounting procedure.

3927 Mr. Hanley: Judge, I think it must appear clearly on the record, our position that—we are taking the position of Ned's, on the one hand, and the average of the reseller channel on the other hand, as the comparison here, and I just do not want to make individual objections, if it may be understood to be taking that position, and if Your Honor will understand that is our position I won't make individual objections.

Trial Examiner Ballinger: I think the record is thoroughly clear now on that point.

Mr. Hanley: So do I, Your Honor.

By Mr. Austin:

Q. I was about to read one of the answers which you gave on direct examination, Mr. Boatwright, which I see is somewhat along the lines of the statements you have just made to the Trial Examiner, but I will still quote this answer, page 2498 of the record.

Mr. Hanley: Page 2498?

Mr. Austin: Yes.

By Mr. Austin:

Q. I ask you why the items opposite account 1215 are not in any part allocated to Ned's, and you replied, "The

tax and real estate activities as conducted by employees of the Standard Oil Company were not in any way involved in the tax and real estate problems of Ned's Auto
3928 Supply, who own all of their own outlets, and who took care of all of their tax problems. We had nothing to do with their real estate and tax problems."

Wouldn't that statement be equally true as to any tank wagon reseller customer who did not receive any services from the tax and real estate departments in 1937?

Mr. Hanley: To which question the Respondent makes the general objection.

Mr. Austin: I thought we were not going to have this general objection repeated after every question.

Mr. Hanley: Well, perhaps I do not need to, Judge. I do not know. I would rather not do it if it may be clearly understood that I have—

Trial Examiner Ballinger: It is understood that your general objection is a continuing objection.

Mr. Hanley: All right. I won't interrupt the proceedings with that objection any further.

Trial Examiner Ballinger: The objection is overruled subject to renewal at a later date.

By Mr. Austin:

Q. Can you answer that question "yes" or "no," Mr. Boatwright?

A. Well, it is not—

Q. I only asked that because I think we have had so many explanations, I think it is more or less covered.

3929 A. Well, it is not a question that could be answered "yes" or "no." It is a question that should be explained, at least to this extent, certainly any company, any retail outlet that did not have any call for these services during the year 1937 naturally we incurred no expenses incident thereto. However, we may have incurred an expense on that identical outlet in December, 1937, and when you have four hundred plus accounts, and you have these four hundred plus accounts coming to the company for assistance in respect to their various problems, all 400 are not going to come in in any 12 months' period, but we maintain these services of the tax and real estate man, and they are subject to call for any account at any time when needed.

Trial Examiner Ballinger: Now, Mr. Boatwright, so that the record may be clear, state the number of retail service stations owned by the Standard Oil Company and leased.

The Witness: I am sorry, Your Honor, I do not have the exact number in mind. It is in the testimony and was put in the testimony by Mr. Raupaugh when he was discussing it, and I think that an exhibit was offered listing the individual outlets.

Is that not correct, Mr. Austin? Was not an exhibit put in the record showing each individual outlet of the Standard Oil Company?

Mr. Austin: No, I have such a list for 1937, 3930 however.

The Witness: I see, but it is not an exhibit?

Mr. Austin: It may get into the record eventually, but it has not been offered yet.

Mr. Hanley: Well, if it is important in Your Honor's view, we can develop that. We will give you a list of what are the leased stations and what are the so-called contract stations.

Trial Examiner Ballinger: The Examiner would like to know, and I would like to have had it inserted in the record at this point, the total number of stations owned by the Standard Oil Company and leased, and also serviced by the Standard Oil Company, also the total number of stations owned by the individual operators and serviced by the Standard Oil Company.

Mr. Hanley: Now, we will get that, Your Honor.

Do you mean by that in the territory of Detroit, Hamtramck?

Trial Examiner Ballinger: That is right.

Mr. Hanley: Highland Park, and Dearborn?

Trial Examiner Ballinger: The Detroit area, yes, that is right.

Mr. Hanley: We have to give the field —

Trial Examiner Ballinger: That is correct.

Mr. Hanley: A definition of the territory when we 3931 make the request, but we will get the information for you.

Mr. Austin: I think that Raupaugh's testimony on the first day of the hearings gives figures for the total number of service stations, total number of lessees, and the total number of contract stations.

Mr. Hanley: Well, it may be so, but we will get it again. We will get it in the form that the Examiner desires.

Trial Examiner Ballinger: It seemed to the Examiner that it would be appropriate at this point to clarify the record with reference to the number of these stations which you are now making inquiry about, namely, those that are owned by the operators as compared with the total number owned by the Respondent and leased.

Mr. Hanley: Well, we will make no distinction, Your Honor. We will get that information for you, anyhow. I think we can get it by telephone within the day.

Mr. Austin: I would like to call attention, though, to Your Honor that these costs that we have been discussing here now apply to the entire Detroit field, they are costs for the entire Detroit field, not merely for the Detroit area, for 1937.

Now, in the Detroit area I think Mr. Raupaugh's testimony was that there were about 200 lessee stations which would leave about 136 privately owned stations. I am somewhat puzzled by that figure because other figures 3932 that I have obtained from other sources indicate that the company had over 400 stations, but nevertheless Mr. Raupaugh's testimony must be correct for at least a certain area.

Mr. Hanley: Well, if Your Honor please, if I may suggest, Dr. Boatwright has used certain bases for this computation, and they are subject to inquiry on the part of the Government, and it does not make any difference what Mr. Raupaugh testified to, whatever Mr. Boatwright did is the basis of this computation.

The Witness: Well, may I state here, Your Honor, that the calculations are predicated on the Detroit field, which includes an area outside of the four municipalities that you have been discussing; therefore, may I suggest that if you get the stations, if you get them for the Detroit field, segregated between those located in these four municipalities and those outside the four municipalities, would that meet the requirements?

Trial Examiner Ballinger: That would be satisfactory.

Mr. Austin: And further along that point, Mr. Boatwright, you might state from your Form 189 for 1937 what the total tank wagon gallonage was for the Detroit field, and what the total gallonage was for the lessee stations which would, of course, by subtraction, show the remaining gallonage for the privately owned stations.

3933 Trial Examiner Ballinger: Can that be ascertained without difficulty?

Mr. Hanley: Well, that figure is in the record, Your Honor, in the exhibit.

Mr. Austin: Yes, that is in the exhibit now.

Mr. Hanley: That is, the first figure is in the record. I am not sure about the second figure. I do not think it is. I do not think there was any segregation. If you want it we will try and segregate it.

Mr. Austin: Well, he can read it right now from Form 189, is what I was requesting.

Mr. Hanley: Well, maybe he can; I don't know.

The Witness: Well, if I understand your question, I cannot. I cannot segregate the gallonage other than between company-owned service stations and all other outlets, that is the only segregation I can read.

Now, if you wish a segregation between 461 and P. O. S. S. L., why that would require a recapitulation of the sales records of the individual outlets. I have not that figure.

By Mr. Austin:

Q. Mr. Boatwright, doesn't the 189 form show the total gallonage for all stations which are leased from the Standard Oil Company?

A. It does.

Q. Well, then, if we have that and the total, then 3934 isn't the difference the gallonage for the other stations that are not leased from the company?

A. Well, state that—

Q. I understood that was the distinction the Examiner was making between leased stations and stations which are not leased.

A. The P. O. S. S. L. outlets are first leased from the private owner.

Q. Yes.

A. Then they are sublet to a third party. Now, stations leased from the Standard Oil Company therefore include stations which we owned and stations which we leased.

Q. That is right.

A. Therefore, I cannot give you the total gallonage of stations leased from the Standard Oil Company.

Q. Well, the P. O. S. S. L. stations and the company-owned stations are all included in your column "Leased

Service Stations" under 189, are they not, the gallonage figure at the bottom of that column indicates the gallonage for all stations which are leased from the company whether the company owns them or whether the company leases them in the first instance?

A. I would have to check that.

Q. The form so indicates.

A. Speaking from memory, I could not answer.

Mr. Hanley: If Your Honor please, if there is
3935 any issue on the question that counsel is now developing, the Respondent will give any facts that are pertinent and are requested. I have not understood there was a question of the classification of the different kinds of customers that—this is on the record—I had not understood that there was any difference about the classification of the different kinds of customers that existed in the reseller channel. If there is any difference, that is regarded by the court as material, we will be glad to furnish any facts relevant thereto.

Trial Examiner Ballinger: The Examiner is not certain at all that it is material.

The matter has been inquired into, and I thought that if, in order to determine whether or not it was material, that we ought to have the fullest information.

Mr. Hanley: Well, Judge, we are just not prepared to give it because we did not think it was material. Now, if Your Honor thinks it is we will get the facts, but we just did not think it was material.

Trial Examiner Ballinger: Here is what was in the Examiner's mind:

Questions have been asked here with reference to the allocations of any part of this item of $8,000 to service stations owned by the operators. Now, those are apparently in a different class in the mind of Counsel for the Commission from these stations that are owned by
3936 the Standard Oil Company and leased, and also from those stations that are leased by the Standard Oil Company and sublet.

What the Examiner had in mind was to ascertain if he could, and include it in the record at this point, the number of stations that fell within the two or three separate classes:

Mr. Hanley: Judge, I don't know.

Trial Examiner Ballinger: I don't know that it is material.

Mr. Hanley: I don't know whether it will do any good or not, but if I could go off the record for about two or three minutes maybe I could clarify some of this.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Mr. Ballinger: On the record.

Let us proceed.

By Mr. Austin:

Q. Will you read into the record, Mr. Boarwright, from the Form 189, Detroit, for 1937, the total gallonage of gasoline sold by the company to lessees' service stations if such figure appears on that report.

A. Yes. The figure does appear and it is 40,070,330.3 gallonage. That is the sum total of the volume moving through service stations owned by the company and leased to individuals, service station buildings constructed 3937 on leased ground, the building being owned by the company, the location site leased, in turn the unit is leased to a lessee for operation, and, thirdly, the volume of outlets which are privately owned, entirely leased to the company and sublet to individual operators.

Q. Now, the total gallonage which, of course, appears here, but just so that it will appear alongside the figure, the total tank wagon reseller gallonage for the Detroit field for 1937, was what?

A. 70,629,026 gallons.

Q. At the bottom of page 2485 in the record, Mr. Boatwright, you referred to the "code of accounts," of the Standard Oil Company.

I would like to say parenthetically that the transcript that I have reference to refers to "code of ethics," which I assume was a typographical error.

Is that right, Judge Hanley?

Mr. Hanley: I would assume so. I do not know, but I would just assume so. I am willing to ride with you on the correction. I cannot think of a code of accounts being a code of ethics.

By Mr. Austin:

Q. Well, you did intend to say "code of accounts," did you not, Mr. Boatwright?

A. I did so state.

3938 Q. Now, is that code of accounts used as a guide by the company's accountants in preparing the annual "Comparative Statement of Expense," which is known as Form 189, and which has been introduced in evidence as Respondent's Exhibit 32?

A. The code of accounts is used in the preparation of the comparative statement of expense, Form 189. In addition, it deals with each of the other expense items in great detail, explains just how they should be assigned and allocated.

Q. What do you mean by "each of the other expense items"?

A. All of the underlying forms and individual expense items going to make up the classifications of costs such as are reflected on the Form 189.

Q. That is, you mean certain accounting methods or certain accounting steps which are taken prior to the arrival of the items which go into the 189?

A. Yes.

To illustrate, there may be a description of how different typical expense items would be classified or allocated. Thus we may hold a dealers' meeting. There will be instructions issued in the code of accounts how the expense is incurred in holding a dealers' meeting, will be treated, or there may be a complete explanation of how the time of the selling force shall be allocated upon the different channels of distribution. It is a detailed explanation, illustrating and describing the method whereby each of the principal
3939 typical expenses of the company will be treated and classified in making up its comparative statement of expense.

Q. By "comparative statement of expense," you mean—

A. Form 189.

Q. Form 189?

A. That is correct.

Q. Again to Respondent's Exhibit 31-H, account 1066, miscellaneous operating expense, $40,142.68.

Mr. Austin: I would like to have this paper marked for identification at this time.

Trial Examiner Ballinger: The Reporter will mark the paper Commission's Exhibit No. 81, for identification.

(The document was marked for identification "Commission's Exhibit No. 81.")

By Mr. Austin:

Q. Are you familiar with this paper which has just been marked for identification Commission's Exhibit No. 81, Mr. Boatwright?

A. I am.

Q. Will you state what information it contains?

A. This paper, Commission's Exhibit No. 81, purports to be an approximate breakdown of the account 1066, miscellaneous expense, for the year 1937, in the Detroit field, classifying the various items of expense as just it was possible, according to the principal typical types of miscellaneous expense.

2940 Q. Who prepared that statement?

A. It was prepared under my supervision, and in part personally, certainly under my supervision.

Q. From the records in the Detroit office or in the Chicago office?

A. A combination. You will recall when that expense was requested, and in the original testimony I explained the tremendous task of attempting to pull the expense vouchers, analyze them, and reconstruct the figure for the year 1937.

Q. Yes.

A. You probably will recall the discussion. At that time I stated that to completely classify and reconstruct that item in its entirety would involve a tremendous task. I did suggest, however, that it would be possible for us by general discussion with the man in charge of the accounting department in the Chicago office to review such analyses and breakdown on this expense item as we had made in the past in an effort to control that expense item and to provide you with an approximate breakdown which would represent a high percentage of accuracy, and would have the endorsement of men who are experienced in handling the account, and such analyses as we have been able in the past to take care of in connection with our expense control activity. This paper represents the result of that analyses of the different men in the general office in charge of the accounting department. It is supplemented by 2941 periodic and occasional studies made not only in Detroit but in other fields, to get the principal expense items entering therein, and was checked further in the Detroit office by a partial pulling of actual vouchers and information to determine whether the ratios were representative of the account. They are representative of the account.

Q. Then do I understand that the column under percentage was arived at first, and the dollar column arrived at from the percentages?

A. That is correct.

Q. Those amounts in the percentage column, then, do represent estimates to some extent, do they not?

A. They are estimates checked to a pretty high degree of accuracy. They are estimates that I can support with a great deal of conviction as truly representing a closer approximation of the breakdown of this item.

Trial Examiner Ballinger: We will take a short recess.

(There was a short recess taken.)

Trial Examiner Ballinger: Come to order. You may proceed, Mr. Austin.

Mr. Austin: I offer in evidence Commission's Exhibit No. 81, for identification (handing the document to Mr. Hanley.)

Mr. Hanley: Off the record a minute.

3942 Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Hanley: I have no objection.

Trial Examiner Ballinger: Commission's Exhibit No. 81, for identification, is admitted in evidence.

(The document heretofore marked for identification "COMMISSION'S EXHIBIT No. 81," were received in evidence.)

By Mr. Austin:

Q. Referring now to the Form 189, Respondent's Exhibit 32, and taking up the first item on Commission's Exhibit No. 81, which is entitled "Junked Pumps and Tanks," was that expense charged directly to the tank wagon reseller channel?

A. I think I explained the allocation of this item of 1066 as being either charged direct or allocated on a tank wagon gallonage basis. This particular item of expense would be one that would be charged direct, junked pumps and tanks.

Q. And the tank wagon reseller channel?

A. Yes.

Q. Are there any other of the items listed on Commissions Exhibit 81 which were charged direct to the tank wagon reseller channel?

A. Yes. There are others, yes. Dealers conference,
3943 the second item, being $6,429, is a direct charge.

I think the item "Charges for 1941—Repairs to Equipment, Dealers' Signs, Meeting Equipment, Etc.," $2,700. The item "Construction Items Allocated to 1066 by General Office," $1,667, as I recall, is a direct charge.

Q. What sort of construction items are included there?

A. Construction items of retail outlets.

Q. Company-owned properties?

A. Yes.

Q. There would be no construction items in connection with privately owned stations, would there?

A. I do not know. I do not know whether there would be any in this or not.

Q. Do you know whether the company ever does any construction work on property that they neither own nor lease?

A. Your question is so broad that I have to answer I don't know whether they do any work. I could not answer that. Generally speaking, the work is done on properties which we own or lease, but there may be exceptions.

Q. Are there any others that are charged?

A. I am reviewing them as to the present time.

Q. I do not think it is really necessary to go below the items that are $1,000.00 or more.

A. Well, it is not only a question as to the item, the
amount of the items, as it is a question of the recalling
3944 of the recalling of the exact instructions on each of
these details, which is so difficult.

Now, your code of accounts, which treat with each of these items separately, and explain the exact procedure of allocation.

Q. Would you describe what is included in the expense item? It is entitled "Junked Pumps and Tanks."

A. Just exactly that. Junked pumps and tanks which have become obsolete and are written off as a marketing expense as being junked, no longer worthy of continued use.

Q. Where were those pumps and tanks used?

A. At retail outlets.

Q. Were they pumps and tanks which had been loaned under equipment loan agreements, or were they pumps and tanks which had been leased to lessee stations?

A. Both.

Q. And do I understand that no part of that charge is prorated to the consumer channel?

A. No, no part is prorated.

Q. Nor to other methods?

A. No. This is a direct tank wagon reseller charge.

Q. I believe you have stated your general opinion that no part of these expense items is properly allocable to the business of Ned's Auto Supply Company.

A. That is correct.

3945 Q. Will you explain that as to the junked pumps and tanks?

A. Surely. There were no junked pumps or tanks at Ned's Auto Supply Company. When we changed our contract during the spring of 1938 the few pumps which we had at the Ned's outlet were sold to them. There were no junked pumps or tanks incident to the operation of Ned's.

Q. Well, during 1937, did not the Standard Oil Company supply any of the pumps and tanks used at Ned's stations?

A. Yes, we did supply some. That is shown in Respondent's Exhibit 31-P, which is above the number of signs, the number of pumps; we supplied no tanks.

Q. Well, is that Exhibit 31-P; or isn't that—there is an Exhibit 31-P enumerates that equipment as you will notice in connection with the jewelled globes.

Q. Yes.

A. And above that we list that we had four standard service signs of one size, and one of another. Well, now, wait.

Q. Junked pumps and tanks item does not have anything to do with signs, does it, Mr. Boatwright?

A. It does not. I stand corrected on the number of pumps, all of those pumps for which we furnished jewelled globes may not have been company owned. You referred to another page.

Q. 31-M.

A. 31-M.

3946 Q. The lower part of the page.

A. That is correct. It gives on that page the total amount of investment in equipment to Ned's Auto Supply.

Q. Is it your theory, then, that except for junked pumps and tanks on Commission's Exhibit 81, is allocable to Ned's because none of the pumps or tanks at Ned's were junked during that year?

A. Well it is my theory that junked pumps and tanks as a marketing cost were incurred in the reseller channel, —no such similar item of cost was incurred at this particular customer for which we were asked to isolate the costs, therefore, properly speaking, no part of this charge could be allocated to that account.

Trial Examiner Ballinger: And you refer to Ned's account?

The Witness: Ned's Auto Suply.

By Mr. Austin:

Q. Might that not have been true to a large extent of other stations during the same year?

A. Again we come to the general question—it might well have been true of any one station.

Q. In other words, isn't this an expense which could be directly charged to individual service stations, and isn't that your theory in saying that none of it was chargeable to Ned's?

3947 A. It could be charged to individual accounts providing you are maintaining a marketing cost analysis by individual accounts.

I have stated I feel—several times—that such task would be prohibitive.

Q. I am not urging that you should have done it, Mr. Boatwright.

A. It would be possible, but it would be impracticable.

Q. But my question is whether you are not inconsistent in spreading this charge on a gallonage basis between all stations other than Ned's, and that excluding Ned's from any charge, whereas there were undoubtedly many other stations which I believe you have admitted, which—

Mr. Hanley: Just a moment.

Q. —which also were not responsible during the year for any part of this charge?

Mr. Hanley: Just a moment, Mr. Boatwright.

As I understand, Your Honor, my general objection goes to all of this line of questioning.

Trial Examiner Ballinger: It is a continuing objection to this entire line.

Mr. Hanley: I wish to add to that objection to this particular question that it is argumentive, seeks to elicit a controversial answer from the witness.

Trial Examiner Ballinger: Read the question.

3948 (Question read.)

Trial Examiner Ballinger: The objection is overruled.

A. There is no inconsistency in the procedure followed. We do not allocate this particular item of expense on a gallonage basis, but as I explained previously it is a direct charge to a channel of distribution.

By Mr. Austin:

Q. Well, you have here allocated it on a gallonage basis in Respondent's Exhibit 31 as between all stations other than Ned's, have you not, for the purpose of obtaining a cost per gallon?

A. Yes, we have taken from the Form 189 the exact charge which is allocated under account 1066, and have stated that that account is not applicable to Ned's Auto Supply, one part of account 1066 being junked pumps and tanks to the extent of $9,625, was an item of cost incurred in the tank wagon reseller channel and represents a direct charge to that channel. Now, the request of the Government, as I interpret it, is that we isolate our costs through the reseller channel as distinct from a particular customer. In this particular customer's case there was no item of expense incurred nor is there any likelihood that such item of expense would have occurred unless this relationship had been maintained over an extended period.

3949 Q. You stated that you did not maintain any account of individual service station costs or any similar customer distribution costs; is that correct?

A. We do not maintain costs by customer.

Q. Yes. Now, accepting for the purpose of this question your statement of your understanding of what the government was asking you to do, or perhaps you didn't mean exactly that, but at least accept in your statement of what you considered the Standard Oil cost burden to be in this case—you will accept that as correct?

A. Yes.

Q. Let's assume that instead of Ned's Auto Supply Company, it was some other single tank wagon customer who was to be segregated, then following the same method, Ned's would be grouped with all the others, would it not, for the purpose of making this segregation of expense?

Mr. Hanley: That is objected to as—I will withdraw the objection.

Go ahead and answer the question.

A. Certainly if the lawsuit had or if the complaint had questioned any price difference between any other customer and the reseller channels, I would have followed an identical procedure.

Q. Then, if I understand the method pursued, it was to determine for this item whether there was any 3950 expense of that nature directly chargeable to Ned's during 1937. You found that there was no such expense directly chargeable. Therefore, you charged none of that expense to Ned's but charged the entire expense on a gallonage basis between all other stations regardless of whether any other particular station was responsible for incurring any of that expense?

A. The charge was—

Q. Will you state whether I am correct, and, if you like, the reporter will re-read the question.

A. Well, the difficulty is, your question is a prolonged citation of your interpretation and if it could be boiled down, it would be much easier for me to state whether you are correct or not correct.

Q. Do you wish to have the question re-read?

A. Yes.

Trial Examiner Ballinger: Read the question.

The Reporter: (Reading) "Then, if I understand the method pursued, it was to determine for this item whether there was any expense of that nature directly chargeable to Ned's during 1937."

The Witness: (interrupting) May I ask what is referred to by "this item"?

By Mr. Austin:

Q. Junked pumps and tanks.

A. My inquiry was directed, first, as to whether 3951 or not there was any miscellaneous operating costs assignable to the business of Ned's Auto Supply. In the discussion of that particular item of expense, I recall discussing with the personnel in the Detroit area questions of dealer conferences, the item of junked pumps and tanks, and the broad classification as enumerated here as to whether any of those were involved in Ned's Auto Supply, and upon learning that they were not affected by this particular customer, the charge of miscellaneous operating expense, tank wagon reseller channel was assignable to the regular tank wagon reseller business in total.

Q. Was there any effort made to determine how many customers were responsible for this charge in the year 1937?

A. That would be a practical impossibility short of an extended period of time.

Mr. Hanley: May I inquire, Mr. Austin, what charge you are talking about?

Mr. Austin: Junked pumps and tanks.

Mr. Hanley: O. K. Do you so understand?

By Mr. Austin:

Q. Is your answer to that question "no"?

A. My answer to the question was that it would have been a practical impossibility to have traced that particular item to individual accounts.

Q. That doesn't answer it. You are stating why you didn't do it, but I wish you would just answer the
3952 question, first, as I am not really asking for the reason or asking you to justify why you did not do it.

Mr. Hanley: May I ask your Honor to instruct the witness that he does not have to answer any question yes or no unless he can answer the question yes or no fully and truthfully.

Trial Examiner Ballinger: He may answer it yes or no and then offer any explanation of his answer, if he desires.

Mr. Austin: Of course, I object a little to that, your Honor. If I can ask a question of the witness whether he did or did not do a certain thing and he can answer that yes or no, I don't know that it is always necessary for him to explain why he did or why he didn't.

Trial Examiner Ballinger: The Examiner will afford the witness an opportunity to offer an explanation.

Mr. Austin: Because, frequently, I am not interested in that, nor am I questioning the propriety of what he did or didn't do. I am simply trying to find out—I know of no reason for encumbering the record with reasons unless either I or Judge Hanley see fit to ask for them.

Mr. Hanley: Judge, I haven't any objection to the witness answering yes or no, if that is a full answer and it is a truthful answer, but I don't want the witness put in position of having to answer yes or no if it isn't
3953 an honest answer.

Mr. Austin: Neither do I.

Mr. Hanley: That is all I want.

Trial Examiner Ballinger: Will you answer the question?

Read the question.

The Reporter: (Reading) "Was there any effort made to determine how many customers were responsible for this charge in the year 1937?"

A. There was not, for the reasons stated.

By Mr. Austin:

Q. The next item on this list, Commission's Exhibit 81, is "dealer conferences, $6,429."

Will you explain what is included there?

A. Yes. Periodically dealer training conferences are held either at one central location or at several locations throughout the field. The pattern of a dealer conference does not remain constant, year to year, but it varied from time to time in an effort to secure increased effectiveness in the training of our dealers in merchandising procedure. They may have one conference a year held at a central point; they may have two conferences a year, one in the spring and one in the fall, or they may have a series of conferences held at principal points throughout the division. These conferences are called for the purposes of bringing to the dealers and the dealer helpers
3954 and to present a sales story to them outlining the
advertising efforts for the forthcoming advertising campaigns, to explain carefully and thoroughly any product improvement or changes, to explain carefully and thoroughly ways that have been tried and developed for improving the profits of dealers, and other factors influencing their profit results.

The expenses of this item include, among other things, generally, a room for which the meeting is held, certain signs or promotional material used as a stage setting for the conference, light refreshments, and so forth.

Q. Those dealer conferences were open to Ned's Auto Supply Company, were they not?

A. Ned's Auto Supply would not have been refused admission, certainly, nor would any of his helpers, but I did ask whether they did participate or attend the dealer conferences and the answer was that they did not.

Q. Did you ask for any list of the dealers that did attend the various conferences?

A. No, I did not. No such list is maintained.

Q. It is your opinion that the dealer conference cost is only chargeable to the dealers who attend the conferences?

A. It is my opinion that the dealer conference cost is chargeable to the tank wagon, reseller channel, and that in an effort to isolate a particular account in which
3955 we were requested not to assume any promotional
activity or driveway training activity, and this particular account refrained and did not attend, nor did its helpers or driveway merchandising men attend those conferences, and certainly I don't think that any part of that is chargeable to that account.

Q. The next item under accounts 1066, on Commission's Exhibit 81, is entitled "Forms 187—Sample Bottles and Cans—Replacement Packages. General Supply Items Under 5 cents, and so forth." The total is $3,857. Will you explain what is meant by that title?

A. The title, as you will note from the reading, is an extremely broad and comprehensive title and covers a broad range of miscellaneous knick-knack items for which small expenses were incurred, thrown together under one general total.

Q. What is form 187?

A. Form 187 is an underlying form for the allocation of charges used in constructing the form 189. This particular item, Mr. Austin, as you can see, is just an extremely broad classification of knick-knacks.

Q. For what purpose are those knick-knacks used? Where are they used, or can you answer that?

A. In the operation of retail outlets.

Q. What retail outlets?

A. The three classifications of retail outlets we have been discussing: Privately owned, leased; 461 ac-
3956 counts; company owned service stations, leased.

Q. Did you mention privately owned service stations as one of those classes?

A. Yes, privately owned.

Q. That would include Ned's, would it not?

A. I said privately owned service stations, leased.

Mr. Austin: Perhaps, Mr. Reporter, you would read back the witness' answer.

The Reporter: (Reading) "The three classifications of retail outlets we have been discussing: Privately owned, leased; 461 accounts; company owned service stations, leased."

By Mr. Austin:

Q. The 461 accounts would include Ned's, would it not?

A. I don't know. I don't know whether Ned's was on a 461 agreement in '37 or not.

Q. Didn't you intend by those three classifications to cover all tank wagon reseller customers?

A. These items are incurred pretty generally on all reseller customers. Now, I did discuss this particular item in the compilation of this information which we furnished to you with the men who allocate the costs on form 187, and I asked them to review some part of the charges therein and express in their judgment whether or not those items would have been incurred in Ned's Auto Supply, and in their judgment they said no, they would not be—that, if so, to a very small extent.
3957 That is the best answer I could give under that particular item.

Q. Was the total expense of the company of the nature represented by this item pro rated between the three channels on form 189?

Mr. Hanley: What items?

Mr. Austin: The ones that we are discussing here opposite form 187.

Mr. Hanley: May we not have it identified specifically?

Mr. Austin: Oh, I have quoted it on the record when we started the discussion and we are still talking about it until we come to the next one. The title begins "Form 187—Sample Bottles and Cans" and there are a number of other things included.

Mr. Hanley: All right.

A. I am not certain that this item is allocated on an all-gallonage basis among the different channels, or whether it is allocated only to tank wagon gallonage between the tank wagon resellers as distinguished from the tank wagon consumer. I am sorry. I can't answer your question.

Q. Do you know what part of it is allocated to tank wagon reseller and consumer business? Is that what you—

A. Yes, part of this item is allocated to tank wagon and consumer business.

3958 Mr. Hanley: If your Honor please, I ask that counsel designate whether he means by that question the part of this particular amount—

Mr. Austin: Oh, I mean—

Mr. Hanley: Whether it is allocated to the consumer.

Mr. Austin: I mean part of the expense of the nature stated here.

Mr. Hanley: All right.

Mr. Austin: In other words, the amount allocated to the consumer channel is in addition to this $3,857.

The Witness: That is correct.

Mr. Hanley: That is all right.

By Mr. Austin:

Q. Was that allocation as between tank wagon reseller and tank wagon consumer made on a gallonage basis?

A. If the allocation was only between the tank wagon reseller and the tank wagon consumer channels, it was on a gallonage basis. If the allocation of this particular classification of expense was between the tank wagon consumer, the tank wagon reseller, and the other methods channel, it was on an all-gallonage basis.

Q. Was the gallonage of Ned's Auto Supply Company included in the tank wagon reseller gallonage for the purpose of making the allocation?

A. Yes, sir.

3959 Q. Is that true of all of the items on Commission's Exhibit 81 except those which were charged directly to the tank wagon reseller channel?

A. Yes, sir.

Q. The next item shown here is "charges from account 9944—gauging tanks—transfer equipment, cleaning and rearranging equipment, checking equipment—and so forth."

Will you please explain your reasons for stating that no part of this expense is chargeable to Ned's business?

A. Well, the cost for this function is incurred primarily in your reseller channel of distribution, your gauging of tanks being a broad function and includes many tanks, most of which in terms of numbers are at reseller outlets. Transferring equipment from one outlet to another, cleaning and rearranging of equipment, would be the cleaning of—I don't know how to state it in other words. It would be the cleaning of the equipment which we make available to reseller outlets and rearranging them, and so forth.

Now, a small part of that might have been incurred with Ned's Auto Supply, or you might state that the gauging of the tank out of which the gasoline was hauled to Ned's Auto Supply from the bulk plant was in part

a proper charge to Ned's as well as to other tank wagon gallonage, but the part that is so chargeable to Ned's is small and would be impossible to isolate out of there.
3960 These items that are enumerated there that would apply to tank wagon and—tank wagon reseller and tank wagon consumer are so allocated on a gallonage basis, and those items which are a direct charge against the reseller outlet would probably be a direct charge to that channel of distribution.

Q. Referring to these last two items we have discussed, the one beginning with "forms 187" and the next one "charges from account 9944," suppose you were asked to allocate or prorate those total charges as between individual service stations. Would you consider that that would be possible?

Mr. Hanley: That is—well, I won't object. If you can, answer it. Go ahead.

By Mr. Austin:

Q. I want to know if it could be done as a practical matter from an accounting standpoint.

Mr. Hanley: O. K. Go ahead and answer, if you can.

A. It could not be done with a high degree of accuracy between individual accounts. It is a physical impossibility.

Trial Examiner Ballinger: Well, would it be practical?

The Witness: No, it would not be.

By Mr. Austin:

Q. In other words, are not those two accounts charges of such a general nature that it would be impossible
3961 to allocate them between service stations?

A. Between individual outlets?

Q. Yes.

A. It would just be an impractical thing to attempt.

Q. What is meant by "charges from 9941, repairs to equipment—dealer signs, meeting equipment, and so forth?" That is one of the items which you stated to be a direct charge to the tank wagon reseller channel, and the amount is $2,700.

Mr. Hanley: And Exhibit what number?

Mr. Austin: Commission's Exhibit 81.

A. I stated that according to my recollection this was a direct charge, and the major portion of it would be a direct charge. In any of these items, as you will notice, there are classifications of expense which are made up in prorated items. Now, the charges from 9941: 9941 is merely an account number. Following the account number I have listed thereunder "repairs to equipment—dealer signs—meeting equipment, and so forth," the principal items making up the total of that account number.

"Repairs to equipment" I think is obvious.

"Dealer signs" is a question of maintaining and repairing the Standard Service signs and other type of signs that we put up at our reseller outlets.

Q. Including Ned's?

3962 A. Yes. If we had any repairs on the signs at Ned's outlet, I assume it would be in that title.

"Meeting equipment" is the principal item. As I explained before, the reseller meetings require equipment for—

Q. Does that have anything to do with dealer conferences mentioned up above?

A. Yes, sir. That is the equipment that we make available for the holding of these conferences. It may be electric signs; it may be a certain amount of painting; and it may be—it is providing the props for the presentation of the show. It is the props that we provide.

Q. Would it also be your opinion that it is not practical to allocate those charges between individual service stations?

A. It would not be practical to so allocate the charges.

Mr. Hanley: I have no objection, but may we understand what charges you are talking about?

Mr. Austin: Yes, the ones that the witness has just described.

Mr. Hanley: Namely, what?

Mr. Austin: Repairs to equipment, dealer signs, meeting equipment, and other items which he states are included in this charge of $2,700.

Mr. Hanley: All right.

By Mr. Austin:

Q. The next item shown here is an item of $2,186

3963 for "non-capital expense from appropriations—rearranging loading facilities at bulk stations, and so forth."

Is the total expenses coming under that heading allocated between reseller and consumer channels and other methods on form 189?

A. Part of it is a direct charge and part of it is allocated between the tank wagon channels, and a part of it may be allocated even to all channels on an all-gallonage basis.

Q. Was the gallonage of Ned's Auto Supply Company included in the tank wagon reseller gallonage for the purpose of making that allocation?

A. It was.

Q. Will you explain why an expense of rearranging loading facilities at bulk stations would not be in any part chargeable to Ned's business?

A. Well, undoubtedly the rearranging of the loading facilities at a bulk plant would have been undertaken to increase the efficiency of our operation. Whether or not Ned's Auto Supply had been served out of that bulk plant, expenditures of that type are predicated upon the efficiency of the operation of the unit and are undertaken to increase the efficiency and to cut down our costs. It would be extremely difficult to state that that charge was in any sense associated with the supplying of Ned's Auto Supply.

Q. It would be equally difficult to show that it was 3964 associated with the business of any other single reseller, would it not?

A. That is correct, and that it why it is allocated on a gallonage basis, and the part that we are attributing to the reseller channel is limited to that portion which the gallonage determines.

Q. And, as you have said, Ned's Auto Supply is included in the reseller channel gallonage?

A. Yes.

Q. And Ned's Auto Supply Company was served in 1937 from the Standard Oil Company bulk plants, was it not?

A. Yes, sir.

Q. All of Ned's Stations were so served?

A. Yes, sir.

Q. What is meant by "non-capital expense from appropriations"?

A. An appropriation may be made to modernize an outlet or to rearrange the facilities at a retail outlet. Prior to the construction it may be necessary to undertake some work at that outlet that can not logically be capitalized as a part of the expenses—capitalized as a part of the property investment. That particular type of an expense would be charged off to marketing costs.

Q. Does that expense mean one which arises only in connection with the lessee service stations?

3965 A. It would arise largely in connection with lessee service stations, yes, sir.

Q. Now, dropping down to an item here entitled—this being still from Commission's Exhibit 81—"club dues—chamber of commerce—subscriptions, and so forth," an item of $1,286.

Will you explain how that item can be allocated upon other than an all-gallonage basis between all customers?

A. It is allocated on an all-gallonage basis.

Q. Between the three channels on form 189?

A. Between the three channels on form 189.

Q. And is Ned's Auto Supply gallonage included in the tank wagon reseller gallonage used for the allocation?

A. Yes, sir.

Q. Upon what theory do you state that none of that charge is properly chargeable to Ned's Auto Supply Company as a cost of sale or delivery?

Mr. Hanley: That is objected to, assuming a fact not in evidence.

Mr. Austin: Well, strike the question.

By Mr. Austin:

Q. You have included this expense among other expenses which you have stated are not influenced by Ned's Auto Supply Company. Will you explain why or how that expense of club dues, chamber of commerce, and so forth, is influenced more by the sale of gasoline to any other service station than it is to the sale and distribution
3966 of gasoline to Ned's Auto Supply Company?

Mr. Hanley: That is objectionable, but I won't object.

If you can make the answer to it, go ahead.

A. Well, I am not exactly certain that I can. In the first place, I am not exactly certain that I have a complete understanding of the question just phrased.

May the question be reread?

Trial Examiner Ballinger: Read the question?

Mr. Austin: May I restate it?

Trial Examiner Ballinger: The question is withdrawn.

By Mr. Austin:

Q. I am asking why all of this expense is charged to tank wagon reseller stations exclusive of Ned's Auto Supply and none of it is charged to Ned's Auto Supply Company on Respondent's Exhibit 31-H.

A. As stated, Respondent's Exhibit 31-H states marketing costs uninfluenced by Ned's Auto Supply. These expense items were and are of a continuous nature, and remained uninfluenced by the Ned's Auto Supply business an' would continue and would remain uninfluenced if Ned's Auto Supply business was lost. It it non—it is just not associated with that particular account.

Q. Is it associated with any particular account?

A. It is not associated with any particular ac-
3967 count, but is associated with the Standard Oil Company's business in the Detroit area and contacts and business done in that community. Do you consider payment of such dues and subscriptions a cost of sale or delivery of gasoline?

A. I most certainly do.

Mr. Hanley: Just a moment. That is objected to as calling for a conclusion and opinion of the witness and on an ultimate issue in the case.

Trial Examiner Ballinger: Read the objection.

(The objection was read.)

Mr. Austin: I suggest the question be reread.

Trial Examiner Ballinger: Read the question.

Mr. Hanley: May I inquire, was it dues and subscriptions you were referring to? I may have overlooked it.

Mr. Austin: The item of $1,286 listed on Commission's Exhibit 81.

Mr. Hanley: I withdraw the objection. The question may stand.

Mr. Austin: He already answered it, didn't he?

The Reporter: "I most certainly did". was the answer.

Mr. Austin: I move for adjournment, if your Honor please.

Trial Examiner Ballinger: The motion is granted and the hearing stands in recess until 2 p. m.

(Whereupon, at 12:45 p. m. a recess was taken until 2 p. m.)

3968 Afternoon Session. 2 P. M.

Trial Examiner Ballinger: Come to order.
You may proceed.

JOHN W. BOATWRIGHT thereupon resumed the stand and testified further as follows:

Cross-Examination (Resumed) by Mr. Austin.

Q. While we are on this Commission's Exhibit 81, which is a breakdown of the miscellaneous item of expense of $40,000 entered for account 1066 on Respondent's Exhibit 31-H, will you state briefly, Mr. Boatwright, what is included in the item of $1,929 for general supplies used?

A. Yes. I think that item is self-explanatory. Those are general supplies used in the operation of our retail outlets and our bulk plants making delivery to those outlets.

Mr. Hanley: Mr. Austin, are you now referring to 31-H?

Mr. Austin: No, Commission's Exhibit 81 which, in turn, refers to 31-H.

Trial Examiner Ballinger: Which is a breakdown of the fifth item on Respondent's Exhibit 31-H; is that correct?

Mr. Austin: That is right.

Mr. Hanley: Commission's Exhibit—

Trial Examiner Ballinger: Respondent's exhibit.

3969 Mr. Austin: I think that is already stated.

By Mr. Austin:

Q. What is the nature of those supplies as distinguished from the supplies which you have described under other items? It does not include station operating tools and equipment?

A. No, it does not. I don't recall the specific items entering into that. They are just the general supplies used in the conduct of the business.

Q. May they be used anywhere, either at the main office, for instance? Would they include paper and stenographic materials, and so forth, at the main office?

A. It does not include stationery in the usual sense of the word, no.

Q. Might it include rubber bands and clips and waste baskets, and a lot of stuff like that used in the office building?

A. It might, but, frankly, I can't tell you the exact items going into this classification.

Q. Does the expense which is entered under general supplies—is that allocated on an all-gallonage basis between tank wagon consumer and other methods channel on Form 189?

A. I think that item is allocated on an all-gallonage basis among the three channels.

Q. You are not sure?

A. The very nature of the item would indicate that it was.

Q. And in making that allocation for 1937 was
3970 Ned's gallonage included—

A. It was included in the tank wagon reseller gallonage channel.

Q. Will you give a brief description of the nature of the expense included under the item "Cleaning Bulk Station Driveways, Office, and so forth," which is $1,672?

A. Well, the cleaning of our bulk station driveways may include such expense item as snow removal, cleaning of other refuse that might be on the driveways, cleaning office might include, likewise, snow removal from sidewalks, and items of that nature. They do not include the regular janitor service in conjunction with the building.

Q. They do not?

A. It does not.

Q. Why is that not included?

A. That is included in operation and maintenance.

Q. Of company-owned buildings?

A. Yes.

Q. Or plants? Which?

A. Our Form 189, janitor services are included. In just a moment I will give you the exact reference of that item.

Q. Getting off the track for just a moment, but—

A. It is not in this account at all.

Q. No. I was just asking whether the building was called plant, or is it included anywhere as the build-
3971 ings come in just through operation and maintenance,
in what account in 189.

I assume it would be either 060, Mr. Boatwright, or somewhere under the 200 accounts and those office expense accounts seem to be a little more specific.

A. No, I think that you are referring to the field office, are you not?

Q. 206 perhaps is where it would be, or water, light, fuel, and so forth.

A. Yes, 206 does cover janitor service and maintenance of our office building. Janitor service, however, because of that classification, is not included in this item at all.

Q. And there is one more item here which I think requires some explanation and that is entitled "Construction Items Allocated to Account 1066 by General Office." The amount is $1,667.

A. Those expense items are incurred when we close out appropriations for particular remodeling or reconstruction jobs. They are expense items not anticipated or covered by the original appropriation on the part of the board of directors for constructing or making this particular improvement, but they are minor items which are closed out when the general appropriation is closed out.

Q. What sort of construction items are they, did you say?

A. Minor items.

3972 Q. Where would they be?

A. Those would be incurred largely at company-owned service stations operating by lessees.

Trial Examiner Ballinger: What is the amount of that item?

The Witness: The amount of that item is $1,667.

By Mr. Austin:

Q. Referring again to the item of cleaning bulk station driveways, office, and so forth, $1,672, will you state your reasons for not charging any of that expense to Ned's Auto Supply Company business?

A. That question has arisen several times in conjunction with this particular breakdown of expense. Throughout this discussion I have admitted at times that there were minor portions of these expense items incurred at bulk plants which were, in turn, serving the tank wagon which were serving the Ned's Auto Supply outlets. It was impossible from our records to isolate and break these costs down by individual customers. Therefore, in the preparation of Respondent's Exhibit 31, we included the sum total as being an item of expense not influenced by Ned's Auto Supply gallonage, and then, to be conservative, although part of these expenses are charged direct, part of them all go allocated on a gallonage basis, are primarily incurred on the reseller channel. Nonetheless, to be as conservative as possible, we used the total gallonage including Ned's 3973 as a divisor, which tends in its total effect—

Q. I would like to interrupt, Mr. Boatwright.

Mr. Hanley: Well—

Mr. Austin: I think you are getting—

Trial Examiner Ballinger: Let the witness finish.

Mr. Austin: You Honor, I object—

Mr. Hanley: Your Honor, I object to the interruption of the witness. He is entitled to make his answer.

Mr. Austin: I think I am entitled to interrupt the witness, and I object to further continuation of the answer because it is unresponsive to the question.

Mr. Hanley: Then I object to the question and the entire answer unless the witness is permitted to answer in full.

Mr. Austin: I am perfectly willing to have the full answer stricken.

Trial Examiner Ballinger: Let the witness finish the answer.

Mr. Hanley: You may proceed.

Mr. Austin: Yes.

Trial Examiner Ballinger: And the Examiner will then determine whether it is responsive. If it is not, it will be stricken.

A. (Continuing) Well, as I stated, these various detailed expense items could not be allocated to indi- 3974 vidual accounts. Therefore, in our calculations we have taken the sum total of the direct charges, of charges which though they may be allocated on a gallonage basis may be incurred primarily in the reseller channel, and then we have divided by the sum total of all gallonage which moved through that channel, according to the books, including Ned's Auto Supply Company, which tends in its effect to understate the true differential which exists because the use of the larger divisor on any direct charge tends to give a per-gallon cost which is less than the actual differential, while the use of the larger divisor on all costs which are allocated on a total gallonage basis, in which Ned's Auto Supply Company was used, tends to reproduce exactly the same per-gallon cost used in the allocation. Therefore, the sum total of the allocation which we have made of these individual items, recognizing that some small part of this is a bulk plant charge, is an understanding of the true differential in our calculations and as presented in Respondent's Exhibit 31-A, B, through Q.

Trial Examiner Ballinger: Will the Reporter read the question?

Is there a motion to strike?

Mr. Austin: I move to strike the entire answer.

Trial Examiner Ballinger: Read the question.

(Question read as follows:

"Q. Referring again to the item of cleaning bulk
3975 station driveways, office, and so forth, $1,672, will
you state your reasons for not charging any of that expense to Ned's Auto Supply business?")

Trial Examiner Ballinger: The motion is overruled.

Mr. Austin: I fail to—I am completely at a loss to know how much of that answer is directed to the question of cleaning bulk station driveways and office. It seems to me that the witness' answer was directed to the general question of division of gallonage of Ned's Auto Supply and the sum of all these items.

Mr. Hanley: The question of counsel is testimony, if it is anything. It is not a question, Your Honor.

Trial Examiner Ballinger: The Examiner has ruled on the motion.

Mr. Austin: I would like to ask the same question again and have the Reporter re-read it, if Your Honor would permit.

Mr. Hanley: Objection is made to a restatement of the question. The question has been asked; it has been answered; the court has ruled upon it.

Trial Examiner Ballinger: Counsel for the Commission is entitled to have the question re-read and the Reporter will so do.

(Question re-read.)

Trial Examiner Ballinger: That question was a
3976 broad question and asked him for his reasons for not
charging any portion of the expense to Ned's Auto Supply business.

Mr. Austin: Yes.

Trial Examiner Ballinger: And his answer was likewise quite broad.

Mr. Austin: I thought his answer was directed to a great many more items than this one.

Trial Examiner Ballinger: He probably encompassed a little more territory.

By Mr. Austin:

Q. Is there any part of that item, cleaning the bulk station driveways and office, which could properly be directly charged to any service station?

A. I don't think so.

Trial Examiner Ballinger: Is there any way under your present accounting system by which it could be done?

The Witness: There is none, Your Honor, nor do I think that it would be advisable or practical to attempt to devise an accounting system that would do so.

Trial Examiner Ballinger: Would the cost be prohibitive?

The Witness: Well, it is just an item of a general nature and it is your guess on an allocation which would be as good as mine if you attempt to put it on an individual unit basis. Better, I feel it would be to follow the practice
3977 which we follow and to allocate that cost on the basis of the gallons moving through the channel.

By Mr. Austin:

Q. You allocated it on a gallonage basis between channels. Now, supposing, Mr. Boatwright, that you were required to make a study of the costs of the distribution of the various individual tank wagon reseller customers. In so doing, when you reached an account such as this account we are talking about, cleaning bulk station driveways and office, or the previous one of general supplies used, would you not allocate that account between the different service stations on an all-gallonage basis, or would you use some other method?

Mr. Hanley: That is objected to as a thoroughly ununderstandable and unintelligible question.

Trial Examiner Ballinger: The Examiner inquires of the witness: Do you understand the question?

The Witness: Well, the question as stated is in such broad terms, Your Honor, that it would be impossible for me to answer it. He is proposing a proposition here which is asking what I would do under an assumed condition. I do not know because I would have to study the limitations of the assignment before I could lay down a course of the procedure to meet the requirements of the assignment.

Mr. Austin: I would like to point out that the assignment which the witness has undertaken here in these

3978 exhibits is just that assignment on a lesser scale. Here he has attempted to allocate costs of one particular customer, Ned's Auto Supply Company. Now, I am simply asking him if he had to do the same thing for all of his customers instead of doing it just for one, how he would divide some of these items.

Trial Examiner Ballinger: But the particular customer to which you make reference is a large purchaser.

Mr. Austin: Yes.

Trial Examiner Ballinger: The others are purchasing in much smaller volume.

Mr. Austin: Yes.

Trial Examiner Ballinger: And what might be done in the case of the purchaser of large quantities might be wholly impracticable in the case of small purchasers.

By Mr. Austin:

Q. Would it be more difficult, Mr. Boatwright, to make a segregation of costs for a smaller station than it has been here to make it for Ned's?

Mr. Hanley: That is objected to, Your Honor, if you please. We get back always to the very sound position which Your Honor took on the occasion of the informal conference at the bench on the question of what the law is in this case. Either we have a responsibility to justify on a cash basis as against an average on our reseller channel cost as against Ned's, or we have the obligation, as Mr. Austin has, on the basis of the lowest single sta-

3979 tion among three or four hundred.

Now, I don't know what the law is. I say the law is this, Your Honor, that we have a right to justify on the basis of the average channel cost, but if that is not the law, then we are entitled to have an interpretation of the law.

3980 Trial Examiner Ballinger: The Examiner has admitted other evidence along this line reserving to counsel for respondent his objection and that at the appropriate time to move to strike.

The objection is overruled with the right of counsel to renew the objection and later to move to strike.

You may answer.

Mr. Austin: Will you read the question again, please?

Mr. Hanley: It is perfectly agreeable to me to have you repeat the question, Mr. Austin, if you want to.

Trial Examiner Ballinger: Let the reporter read the question.

(Question read.)

A. I do not know. One thing that I had learned in repeated research on various problems is that your approach to the solution of a problem must give recognition to the conditions of the problem.

If we were to attempt to isolate out of these costs the absolute expense of doing business to a station, let us assume that it is 2,000 gallons per month, I would have to start again with the function, the responsibility, the assignment of marketing costs and again go through each individual item to ascertain the weight of that particular account in determining that expense item.

3981 Trial Examiner Ballinger: Could it be done with any degree of accuracy?

The Witness: I do not think so, your Honor. I think it would be something that we would have to compute and check and make many arbitrary decisions which in and of themselves would be subject to challenge. I do not think it could be done practically.

By Mr. Austin:

Q. Isn't everything you have just said, Mr. Boatwright, equally applicable to this study you have made here of cost of doing business with Ned's Auto Supply Company?

A. Not by a considerable measure, no, sir. Here is one large account. The entire process of selling that account resulted from a discussion with our field manager and the executive of the large account. It was possible to isolate individual charges incurred or influenced by the account in many cases, and where it was not possible but in the judgment of the man with whom I was working and who was handling these questions consistently and throughout the contract with the account, we adopted the more conservative method of using the larger divisor, so if we erred in any factor we have understated the differential. That condition I think differs widely from attempting to determine the marketing cost of some one small account whose association with the company is on a vastly different basis.

3982 By Mr. Austin:

Q. Referring again to the—well, I will take as an example three items here. The item of $2,186 on Commission's Exhibit 81, and to avoid re-reading the titles I will just give you the dollar amount, $2,186.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Well, referring to the item of non-capital expense from appropriations rearranging loading facilities at bulk stations, the item of general supplies used and the item of cleaning bulk stations, driveway and office, and so forth, all three of which are listed on Commission's Exhibit 81, if your problem or assignment was to allocate those expenses as between individual tank wagon reseller customers of the Standard Oil Company in Detroit, can you suggest any method other than an all gallonage basis upon which to make such allocation?

Mr. Hanley: Just a moment.

Will you please read that question.

(Question read.)

Mr. Hanley: That is objected to, your Honor, for the reason that it suggests on the part of the government a supposition that there should be some other method of accounting than used by the respondent.

3983 The law is, and the respondent is entitled to the benefit of the law to the extent that its accounting method, its costs are paramount as distinguished from any theoretical or hypothetical cost that may be suggested by counsel for the government.

The paramount question is what are the costs of the respondent. The question of its efficiency of operation is not on trial. Whatever costs may be there, they are its costs, and that is the only question that is involved in the action, not any theoretical costs that may be evolved by counsel for the government.

Trial Examiner Ballinger: The Examiner is a little perplexed to know what benefit the expression of opinion will be to this case in the final disposition of this case.

Mr. Austin: It is directed to the question of what is the proper method of allocation of these expenses, and that is a question which goes to practically all of these items, because as I think your Honor said this morning, that is the matter that I am chiefly inquiring into, is accepting at least for the purpose of this cross-examination, that these

figures are correct, as the actual figures that were, the expenses of the company, and without conceding that I am not entitled to go into the propriety of the expenses. Nevertheless, at the present time I am accepting these figures but simply trying to find out whether they have
3984 been properly allocated, whether there is any basis.

Trial Examiner Ballinger: Well, your question is as to whether or not he can suggest any other method. Now, that is a pretty broad question.

Mr. Austin: Any other proper method or practicable method.

Trial Examiner Ballinger: Well, now, if you will qualify that to any practicable method by which he could arrive at a more accurate conclusion, why the Examiner will overrule the objection.

Mr. Austin: Definitely, that is what I meant, your Honor.

Mr. Hanley: Judge, may I say there are a thousand other methods, I have no doubt there are a thousand other methods of accounting that might be used. Are we to be criticized here because we apportion a cost to taking care of the employees of the company on a pension basis, so that they may have a—

Trial Examiner Ballinger: I think counsel for the respondent misconceives what the Commission is apparently after. He is trying to ascertain from this witness whether there is some other method that can be used, and I take it that he may resort to that method to see whether the conclusion arrived at, or whether recourse to that method would produce the same result as the method which
3985 the witness has employed.

Mr. Austin: No, on the contrary—

Mr. Hanley: That is the difficulty I have been having all day. I concede there are other methods, there are many other methods, I have no doubt of that, but it is not important here.

Trial Examiner Ballinger. I do not know.

Mr. Hanley: We have used a method. Our company has used a method. Now, isn't that the only test, as to whether or not on the basis of the method that we have used and spent our money on the one hand serving Ned's, and on the other hand serving the other reseller channel, ~~isn't that the test?~~

Trial Examiner Ballinger: Judge, that is a question that is reserved, and you have an objection, a continuous objection to this line of examination with the right to move to strike.

Mr. Hanley: All right.

I apologize, your Honor. I am sorry to have imposed again, but I just feel very keenly about this thing.

Trial Examiner Ballinger: Will you read the question?

(Question read.)

Mr. Hanley: If your Honor please, I think the
3986 witness ought to be advised that he is being just now asked for an opinion on a matter of accounting. He is entitled to do what he pleases about the expression of opinion.

Trial Examiner Ballinger: That is all he is asked for.

The Witness: Shall I answer the question?

Trial Examiner Ballinger: You may.

A. There are other means which could have been adopted. In my judgment the best means, practical, of allocating this small item of expense is to use the all-gallonage method. That is for the distribution of this cost among channels. Please understand, your Honor, we make no allocation of cost to individual outlets, and if we were asked and had to do so, my answer would not apply equally because I do not know what would be the best allocation on an account basis. Among channels my answer stands as given.

By Mr. Austin:

Q. Now, you say "among channels." The question was among service stations. Did your answer apply to my question as asked?

A. I think it does. My answer is to the effect that there are other means of allocating other than gallonage. Many accountants could suggest others; that I accept and approve in this case the use of gallonage as a factor in determining the allocation among channels.

3987 I stated further that I did not know whether it was the only or the best means of allocating if a company were required to keep expenses on individual accounts. I just do not know.

By Mr. Austin:

Q. Well, in your opinion is the all-gallonage method a proper method of allocating these expenses between—

Mr. Hanley: That is objected to on the ground—

Mr. Austin: I can never finish. We will be three weeks, Judge, on this, because I am going through it question by question.

Mr. Hanley: I will withdraw the objection. Just go ahead and ask your question.

Trial Examiner Ballinger: Read the question.

(Question read as far as asked.)

Mr. Hanley: You are entitled to answer when you understand the question.

Mr. Austin: I have not finished. Now, I will have to start over again.

By Mr. Austin:

Q. Referring again to the item of cleaning bulk stations, driveways, office, and so forth in the amount of $1,672, which appears on Commission's Exhibit 81 under account number 1066, being a breakdown of the miscellaneous item account number 1066 on Respondent's Exhibit 31-H: If that item of expense were to be
3988 prorated or divided as between all of the tank wagon reseller customers of the Standard Oil Company in the Detroit area, what in your opinion would be the most proper method of allocation to use from an accounting standpoint?

Trial Examiner Ballinger: Read that question, please, Mr. Reporter.

(Question read.)

Mr. Hanley: If your Honor please, I must object to that on the ground that, first, it is a complex question. It assumes a fact not in evidence, and it is confusing to both the witness, the court and counsel.

I have no objection, at all, your Honor, to interrogation of this witness as to how and why there was an allocation of this particular item to this particular account, but as to this question I have the objection, as stated.

Trial Examiner Ballinger: Read that question again.

(Question read.)

Mr. Austin: And I would like to change that instead of "most proper method of allocation", I will simply ask the witness what method of allocation he would advise using, if he has more than one method, which he thinks might be used, he can state what they are.

3989 Mr. Hanley: Of course, your Honor, that changes the whole question, and I object to that question as changed.

Trial Examiner Ballinger: Mr. Austin, if that could be determined with absolute accuracy, how could it be of assistance in determining any issue in this proceeding?

Mr. Austin: What I am trying to find out is what method of allocation, whether such an allocation should be made on a gallonage basis, and if not, why not, and what method could be used.

Trial Examiner Ballinger: Well, suppose it could be determined on any kind of a basis, what assistance would it be in deciding any question in this case.

Mr. Austin: The assistance comes from the determining from the answer of the witness, not from any use I intend to make of it in the future.

Trial Examiner Ballinger: But if you could determine the actual proportion of this sum chargeable to any particular station, what assistance would that be?

Mr. Austin: I do not want to find that out.

Trial Examiner Ballinger: Well, then, what is the objection and purpose of the question?

Mr. Austin: To find out the basis for the charging of these expenses on an all-gallonage basis to all the stations for Ned's and leaving Ned's out.

Trial Examiner Ballinger: Well, that is not your
3990 question, is it?

Mr. Austin: Yes. It is directed to that.

Trial Examiner Ballinger: Read the question again.

(Question read.)

Mr. Hanley: Please add to my objection that the question is argumentative.

Judge, may I just say this, please. We have introduced these exhibits, 31-A to Q, and 33-A to some number, I do not remember what. They are Mr. Boatwright's analysis of our costs. Now, there can be no point at all, your Honor, in arguing with Mr. Boatwright about those things. We concede the right of the government to test and analyze his basis for arriving at those costs, but we do not concede that there is any place in this proceeding for arguing with him about whether he is right about his theory of costs.

Trial Examiner Ballinger: The Examiner understands the position of counsel for respondent, but either the Examiner does not understand the question or counsel who propounded it does not fully understand the question.

Now, read the last portion of the question, division between whom. Read the last portion of the question.

(Question read, as follows:

"If that item of expense were to be prorated or divided as between all of the tank wagon reseller customers of the Standard Oil Company in the Detroit area.")

3991 Trial Examiner Ballinger: Now, that means a division between each one of the four or five hundred?

Mr. Austin: What I am asking is as to every one of these expenses this whole thing involves.

Trial Examiner Ballinger: This is off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

The witness may answer, if he can.

Mr. Hanley: May I have that ruling of the court?

(The ruling was read.)

Mr. Hanley: And what is the question? Do you know it, Mr. Boatwright?

The Witness: Well, I think I have an understanding of Mr. Austin's question.

Mr. Hanley: Will you please read the question to the witness with the ruling of the court?

(Question read as follows:

"Q. Referring again to the item of cleaning bulk stations, driveways, office, and so forth, in the amount of $1,672, which appears on Commission's Exhibit 81 under account No. 1066, being a breakdown of the miscellaneous item account No. 1066 on Respondent's Exhibit 31-H. If that item of expense were to be prorated or divided as between all of the tank wagon reseller customers of

3992 the Standard Oil Company in the Detroit area, what, in your opinion, would be the most proper method of allocation to use from an accounting standpoint?")

Mr. Hanley: Now, I wish to add to the objection that the question is hypothetical asked of a witness unqualified by the asking attorney to answer the question, thoroughly theoretical and hypothetical, immaterial, not pertinent to the issues in the case and not applicable to any issue involved in the litigation.

Trial Examiner Ballinger: The Examiner sustains the objection.

Mr. Austin: Are you reversing your ruling now?

Trial Examiner Ballinger: If this is a reversal, I am reversing my previous ruling.

Mr. Austin: You just ruled on the record that the witness could answer.

Trial Examiner Ballinger: I understand, but the Examiner cannot understand how this is material to any issue in this proceeding.

Mr. Austin: I won't press the matter any further at this time, Your Honor, but I may have other similar questions on various other accounts.

Trial Examiner Ballinger: The Examiner will pass on them when they arise.

By Mr. Austin:

3993 Q. Turn to Exhibit 31-I, please, Mr. Boatwright. At the top of Exhibit 31-I you use the total Detroit field tank wagon reseller gallonage, including Ned's gallonage for a divisor in arriving at a cost per gallon for the expense items listed on Respondent's Exhibit 31-H; is that correct?

A. That is correct.

Q. Does this division not result in a cost of .084 cents per gallon for Ned's Auto Company's gallonage as well as for the gasoline sold to the other tank wagon resellers?

A. Inasmuch as the 70,629,000 gallons was used as a divisor for the total expenses incurred, I have explained that the 70,000,000 was adopted as a conservative procedure so that if I erred in any way, shape, or form, the .084 would be an understatement of the different rather than an overstatement of the difference.

Q. Isn't the purpose here to arrive at an accurate result rather than either an overstatement or understatement?

A. That is right.

Mr. Hanley: Just a moment. Read that question.

(Question read.)

Mr. Hanley: Of course, Your Honor, that is objected to. You may answer. I won't interpose the objection.

Trial Examiner Ballinger: The witness may answer.

3994 A. As stated, that is correct, but as also stated as we have discussed the various component parts making up the expense items, I have stated that it was impractical time and again to break down items of a general nature other than on the gallonage basis used in the allocation.

Being impractical to attempt an isolation of actual costs by individual outlets, it seemed my obligation that if I could not get the true absolute figure, which is an impractical and an impossible objective, then when making choices, I should adopt those figures which would lead to a conservative statement rather than attempting in any way, shape, or form to magnify the difference in marketing costs. Absolutely, the true figure is the objective, but what is the true? I don't know.

Q. Well, in using the total gallonage here, the total tank wagon reseller gallonage of 70,629,027 gallons, what happens then to the portion of the expenses listed on Respondent's Exhibit 31-H, which would be represented by a figure obtained by multiplying .084 cents per gallon by Ned's gallonage?

Mr. Hanley: Now, I don't know whether I want to object to that or not.

Trial Examiner Ballinger: One moment, Judge.

Read the question.

(Question read.)

Trial Examiner Ballinger: Are you including in that question all of the various items listed on Respond-
3995 ent's Exhibit 31-H?

Mr. Austin: That is right, yes.

Mr. Hanley: I make an objection at this time, that counsel does not understand the question. I object on the ground that it is unintelligible. If the witness knows what counsel is talking about, I have no objection at all to his answering.

Trial Examiner Ballinger: That is a matter for the witness to determine.

Mr. Hanley: I think so.

You may answer.

The Witness: Well, I am not sure that I do understand what he is referring to, Your Honor.

Mr. Hanley: I am very sure I don't.

By Mr. Austin:

Q. Well, you have taken the figure of $59,186.15.

A. That is correct.

Q. Which appears on Respondent's Exhibit 31-H.

Trial Examiner Ballinger: That is the total of all the items?

Mr. Austin: Yes.

The Witness: Yes, sir.

By Mr. Austin:

Q. And you have divided that by this 70,000,000 gallons, which is the total reseller gallonage including
3996 Ned's Auto Supply gallonage?

A. Yes, sir.

Q. In 1937.

Now, turning to Exhibit 31-A, it will appear that there is—

Trial Examiner Ballinger: One moment.

Mr. Hanley: 31-A?

Trial Examiner Ballinger: Read the question.

(Record read.)

By Mr. Austin:

Q. (Continuing.) —it will appear that there is no expense charged to Ned's Auto Supply Company opposite the item 2-B, but that there is—

Mr. Hanley: I am sorry to interrupt, but what do you mean by 2-B?

Mr. Austin: If you will look at Exhibit 31-A.

Mr. Hanley: Yes, I have it before me.

By Mr. Austin:

Q. But that there is—

Mr. Hanley: Oh, I see.

Q. —an expense per gallon of .084 cents charged opposite item 2-B to regular reseller business.

Now, turning back to Respondent's Exhibit 31-H and I, the charge of .084 cents to regular reseller business as shown on Exhibits 31-H and I accounts for only a
3997 portion of the sum total of $59,186 appearing on
Respondent's Exhibit 31-H. In other words, the portion of it which would result from a multiplication of .084 cents by the tank wagon reseller gallonage other than the gallonage of Ned's Auto Supply Company, so that leaves unaccounted for a portion of this total expense on 31-H which would be represented by multiplying Ned's gallonage by the sum of .084 cents per gallon.

Mr. Hanley: That is objected to as testimony and argument of counsel.

Trial Examiner Ballinger: Is that a question or a statement?

Mr. Hanley: I don't know whether that is a question or not. I haven't any objection to the witness explaining the exhibits.

Mr. Austin: The question is: What happens to the rest of that expense shown on Respondent's Exhibit 31-H, and how is it accounted for?

Trial Examiner Ballinger: Do you understand the question?

The Witness: Well, Your Honor, I don't think we are much closer to an understanding of the question than we were before.

Trial Examiner Ballinger: Well, do you understand what Mr. Austin desires?

The Witness: I fail to understand why he has
3998 stated that the division of $59,186.15 by 70,629,027
gallons does not result in .084 cents per gallon.

By Mr. Austin:

Q. It does. I didn't say that it doesn't.

A. Oh, it does? That is correct.

Q. Yes.

A. Now, your question is, because we had used the larger divisor of 70,000,000 gallons what becomes of some part of this $69,000?

Q. By using that divisor, Mr. Boatwright, your result is a cost of .084 cents per gallon for every gallon of that 70,000,000 gallons; isn't that right?

A. Yes.

Q. And that 70,000,000 gallons includes Ned's gallonage?

A. That is right.

Q. So that when you charge .084 cents per gallon to all of the other reseller gallonage you still have got .084 cents per gallon for Ned's gallonage, which you haven't entered anywhere because there is nothing in Ned's column on Exhibit 31-A.

A. No, but I haven't—

Q. That is what I want you to explain.

A. That is a misapprehension.

Trial Examiner Ballinger: That is what?

The Witness: A misapprehension.

A. This calculation throughout 31-A through Q is
3999 predicated upon individual items of your marketing
expense statement. It is not a balanced item in the sense that you could take each of the different gallonages and extend it and secure thereby our sum total of marketing expense, tank wagon reseller channel, in the Detroit field.

We stated on direct testimony that there were certain items of expense which in our judgment could not be allocated and, hence, were not allocated. We stated there were other items of expense which were not even given considerations in terms of the inclusion in the analysis because of their remoteness.

Now, I stated the explanation of .084 and the use of the 70,000,000 gallons. I stated that these items of the expenditure enumerated as making up the sum total of $79,186.15 were, in my judgment, an expense item or items which were uninfluenced by Ned's Supply business. In discussion of the individual items making up that total, I admitted in cases that there were some expense items incurred which were associated with the bulk plant. In describing the allocation of certain of the different items, I stated that some of them were charged direct, some of them were charged to the tank wagon reseller plus consumer channel, and some were charged on a basis of an all-gallonage divisor. I further stated in the testimony this afternoon that if it were possible each of these could have been divided by the gallonage specifically
4000 applicable to the specific expense—if it were possible—
it was not possible. Therefore, rather than understand—rather than overstate the differential, I used the larger divisor so that, if anything, I am penalizing the differential between Ned's Auto Supply gallonage and tank wagon reseller gallonage. There is no lost expense. It is all in the field expense.

Q. Then is it my understanding that there is no reason for using this larger divisor except just the desire upon your part to understate the expense rather than overstate it?

A. I would go so far as to inform you, sir, that I first made the calculation on the basis of the smaller gallonage and I revised the sheet thinking that I would rather err on the conservative side of the picture than on the other.

Q. Then you reached the conclusion that you would have some margin of error in using either figure; did you not?

A. I reached the conclusion that there is a small possibility of a margin of error, perhaps amounting to thousandths of a cent, and if it came to a choice I would prefer to err on an understatement of the difference than an overstatement I revised the work sheet so I could use the larger figure.

Q. And the larger figure is the same figure which was used by your accountants wherever an all-gallonage allocation was made to the tank wagon reseller channel on Form 189; is that correct?

A. Yes, sir.

4001 Trial Examiner Ballinger: Take a five-minute recess.

(There was a short recess taken.)

Trial Examiner Ballinger: Come to order.

By Mr. Austin:

Q. I will now refer to Respondent's Exhibit No. 31-I, entitled "Semi-direct expense items not incurred in handling the volume of Ned's Auto Supply Company," referring to account No. 1087, general supplies used, in the sum of $1,258.94.

Will you please distinguish that account, Mr. Boatwright, from the item listed on Commission's Exhibit 81, which has exactly the same title, general supplies used, the amount on Commission's Exhibit 81, being $1,929.

A. Well, general supplies used in account 087 is made up largely of rope, brooms, towels, soap, drinking water, bottles, and first aid kits, flashlights, labor, and mailing costs, and are incurred primarily at bulk plants.

Q. And where is the item similarly entitled appearing on Commission's Exhibit 81 primarily incurred?

A. Primarily in the reseller account.

Q. Is it your opinion that this item of expense appearing opposite account No. 1087, which is incurred primarily at bulk plants is in no part incurred in handling the volume of Ned's Auto Supply Company?

Mr. Hanley: That is objected to on the basis that 4002 it calls for an opinion.

Well, Judge, I will withdraw the objection. I am perfectly willing to let that question be answered. I just automatically object sometimes.

Mr. Austin: He has already stated that; and it is in the exhibit itself.

Mr. Hanley: I am perfectly willing to withdraw the objection.

A. Well, the answer is completely in keeping with the exhibit. This item of expense is not influenced by the Ned's Auto Supply business.

By Mr. Austin:

Q. Why not?

A. Because we would not buy any more ropes, any more drinking—bottles of drinking water, we would not buy any more of the items of this nature with that account or without that account.

Q. Is this expense influenced any more than by any other single tank wagon reseller account than it is by Ned's Auto Supply business?

A. Yes, it is, because the other accounts do not buy in the quantities and do not take similar size dumps, and I would say that the rank and file of reseller outlets would probably have a greater influence on it because it requires more personnel per gallon to handle those accounts
4003 than it does to handle an account the size of Ned's.

Q. Well, this is an expense, as you say, of rope, brooms, towels, soap, and so forth, first-aid kits, flashlights; do I understand you to say now that that item of expense is not directly chargeable to Ned's, but is more properly chargeable to any other single tank wagon reseller account?

A. Well, I think that the Ned's business could be added to or detracted, and that expense item would remain unnoticeably—would not be changed noticeably. I do not think that you could find the influence of Ned's gallonage upon that expense item at all.

Q. And in your opinion is that a proper test as to whether to charge any expense item to Ned's business?

A. Well, if this expense item were of such nature that the existence of this account has no bearing on the magnitude of the expense, it certainly becomes a test.

Q. Wouldn't the same thing be true if you should pick out any other single tank wagon reseller account and take an account—I was trying to think of one, I remember Marvin Goldberg, who has a service station; suppose we take Marvin Goldberg's service station, which I believe handles, Mr. Raupaugh said, about 300,000 gallons a year, would not it also be true that these expenses would not be influenced by that account, whether it was retained or lost?

Mr. Hanley: If Your Honor please, may we have
4004 another reassurance on the record, all of this line of testimony is subject to the original—

Trial Examiner Ballinger: Judge, it is not unnecessary for you to repeat that objection. It is reserved to you.

A. Well, I am not acquainted with the Marvin Goldberg account referred to, but your position is correct in that if we were to isolate any one of the regular reseller accounts, that the influence of the withdrawal of that account could not be detected in this item. It is not true to the same extent as it would be true with the withdrawal of Ned's, for the reasons mentioned.

By Mr. Austin:

Q. Is the total of the expenses which are entered under account 087 allocated between channels on Form 189?

A. Yes, sir.

Q. Is the allocation made on an all-gallonage basis?

A. Part of the expenses in 087 are allocated on the basis of total tank wagon gallons, the residual is allocated on the basis of all gallonage.

Q. And the part that is allocated on the basis of tank wagon gallonage, is that allocated on an all-gallonage basis, on an all-tank wagon gallonage basis as between reseller and consumer?

A. Let's phrase the answer this way, that part which is allocated on tank wagon gallonage basis is allo-
4005 cated on the basis of ratio of tank wagon reseller gallonage and tank wagon consumer gallonage to total.

Mr. Hanley: Judge, may I violate the promise I made Mr. Austin, and ask permission to inquire first as to what account they are talking about?

Mr. Austin: The account entitled "General Supplies Used," which has the generic number 087.

Mr. Hanley: And on what exhibit does that appear?

Mr. Austin: Respondent's Exhibit 31-I.

Mr. Hanley: Now, second—087 on 31-I. Secondly, may I have permission to inquire of the witness as to whether or not this item applies only to gasoline.

Trial Examiner Ballinger: You may.

The Witness: It does not apply only to gasoline.

Mr. Hanley: What does it apply to, Mr. Boatwright?

The Witness: It applies to your operations through your plant. Now, part of your expenses might apply only to your tank wagon products. We refer to them as products moving through faucets, and any expense of that nature which apply to that classification of products which

would include our gasoline, refined oils, fuels, tractor fuels, et cetera, would be allocated on the basis of tank wagon gallonage; other items of a general nature which we could
not associate with any particular channel of distribu-
4006 tion is allocated among the channels on an all gallon-
age basis.

Mr. Hanley: Judge, may I inquire if the witness has a knowledge as to the approximate percentage of gasoline to other products that are represented by this item?

Trial Examiner Ballinger: You may inquire of the witness.

Mr. Hanley: Is that a sufficient statement to constitute a question, Mr. Boatwright?

The Witness: But I have a knowledge as to the reseller channel.

Mr. Hanley: That is what I mean, of course.

The Witness: Well, gasoline through the reseller channel represents approximately 98 percent of the volume in the field of Detroit.

Mr. Hanley: That was all, and thank you.

By Mr. Austin:

Q. The figure of $1,258.94 opposite account 1087 on Respondent's Exhibit 31-I represents only an expense which has been allocated to the tank wagon reseller channel; is that correct?

A. That is correct.

Q. So that that figure, as I understand it, does represent an expense which has been allocated to that channel, and, therefore, only to the products included in that channel?

A. That is correct.

Q. Is that right?

4007 A. That is right.

Q. That the products included in that channel are, as I understand it, gasoline and refined oil, and some tractor fuel, perhaps?

A. Well, I think there was a little burning oil. I think the quantity is a little less than a thousand gallons in the Detroit field, it is a negligible—it can be forgotten. The rest is division between gasoline and refined oil.

Q. Is it not true that all of the expense figures which appear opposite account numbers—in Respondent's Exhibit 31, and all the various letters, and wherever those expense figures have been lifted from Form 189 as they have in the case of Respondent's Exhibit 31-I, those figures included expense for refined oil, tractor fuel, and burning oil, as well as for gasoline; is that correct?

A. Wherever a total figure has been lifted from the 189, we have taken it from the tank wagon reseller channel except for those particular items of property investment, which I enumerated under the service station channel, but in the main, your statement is factual, and wherever the charge is made direct or upon an allocation of time basis, it is allocated to the channel wherever an allocation is made by the usage of gallons, the allocation is determined upon the ratio of gallons among the channels. Having determined the ratio of gallons among the channels, any suit cost going to make up that total is a unit 4008 of a gallon of any product, in the exception of that to reach the total it is extended largely by gasoline gallonage because I say about 98 percent of the volume through this channel is gasoline.

Is that a clarification?

Q. Yes. I wanted to bring out, though, that any expenses here which are based upon tank wagon channel allocations, whether the allocation is made on a gallonage basis or on a time basis, that any expense figure here which results from the use of your allocation to the tank wagon reseller channel does include a portion of about 2 percent, which is not a charge of the sale or delivery of gasoline?

A. That is correct. That is why we have to divide it by the total of the gasoline and the refined oil to get a unit cost. I think that is clear throughout the exhibit and throughout the testimony.

Mr. Hanley: Well, if Your Honor please—I do not know whether this need be on the record or not.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record. Proceed.

By Mr. Austin:

Q. And you referred a moment ago to the method used for allocating this 087 account expense between channels on Form 189, and when such an allocation was 4009 made as between all three channels, or as between tank wagon consumer and reseller channels, was the gallonage on Ned's Auto Supply Company in each case included in the tank wagon reseller gallonage for the purposes of making the allocation?

A. Yes, sir.

4010 Q. Now, this item which is comprised of numerous and sundry items such as drinking water, bottles, ropes, brooms, towels, soaps, first aid kits, flashlights, labor in handling mailing items, and so forth; As you stated on direct examination, "defying classification of the usual expense items," were these supplies used by the company and its employees, or were they used by service station operators?

Mr. Hanley: That is objected to, your Honor. It calls for a conclusion on the part of the witness—what somebody else thought.

Well, I will withdraw the objection again, Judge. I want this witness to testify fully.

By Mr. Austin:

Q. You have already stated, Mr. Boatwright, that these items were used chiefly at the bulk plants?

A. That is right.

Q. It would follow, would it not, they were used by the company and not by service stations?

A. Well, they are used primarily by the company employees of the plant.

Q. Is there any reason in your opinion why the expense of labor in handling mailing items is not equally chargeable to Ned's gallonage as to the other gallonage; that is, other tank wagon reseller gallonage?

A. Oh, yes, there would be no mailing of items to 4011 Ned's Auto Supply Company. You see, we made the delivery to Ned's Auto Supply; the driver didn't even collect. The recipient of the product just signed a receipt; we billed them once a month; and there wasn't the usual knick-knack mailing and handling constant back-and-forth transactions between that distributor and the rank and file of our distributors. Even in the collection of the account, it was simplified to the nth degree, where all we did was submit a monthly statement and we got a check.

Q. Is your answer then that this particular mailing expense would not be allocable to Ned's because you had less mail, less correspondence with Ned's, or does not that item refer to general mailing expense entirely aside from service station correspondence?

A. Now you are referring to the itemization of expense items making up account 087, are you not?

Q. Yes. I don't want to waste much time on that because it is, no doubt, a very tiny thing, but one of the many things going into that account, and it struck me as a rather difficult item of expense to attempt to allocate upon anything but an all-gallonage basis.

A. Well, I just can't conceive as I sit here now of there being any mailing from the bulk plant to Ned's Auto Supply unless to correct an error or something like that. They would be an insignificant number and I can't think
4012 of that expense being incurred in any way, shape or form in connection with Ned's.

Q. That expense, of course, is not one which relates to bulk plants, is that right, or does it relate to bulk plants?

A. Well, it may relate to bulk plants. In other words, we have a mailing cost at our bulk plant as well as from the general office.

Q. Well, perhaps the general office would be included in your office expenses somewhere else.

A. Well, we have a separate classification of expense here having to do with mailing cost. I don't see it just this minute.

Q. Well, if you have any difficulty there, let's just drop the question.

A. I don't see the particular enumeration of expense and mailing cost of the general office. It is included in one of these items but would require review of my notes to determine the exact item in which it is included, but we do have a cost at bulk plants and at the Detroit field office for mailing.

Q. I am curious what is meant by "labor in handling mailing items."

A. Probably it involves the question of wrapping or packing of any item of a packaged nature that may have been mailed from the bulk plant.

4013 Q. Referring now to account 088, station operating tools and equipment, in the sum of $6,013.23. It appears on Respondent's Exhibit 31-I. You have enumerated the principal items going into that account at pages 2519 and 2520 of the record. Do not the majority of the items enumerated by you as being included in account 088 constitute articles which are used at the bulk plant offices and other properties operated by the company?

A. The majority of the items enumerated are used in the operation of the bulk plants.

Q. Will you explain as to those items, why they are not chargeable equally to each gallon of gasoline sold?

A. Well, again it is a question that this classification of expense items was uninfluenced by the tank wagon gallonage sold to Ned's Auto Supply. I don't see how these expense items would have been influenced one way or another by this volume, and again because this item has been allocated on a gallonage basis, I think you will find that my divisor in this case was a divisor which included Ned's again. In discussing this item with the accountants who actually made the allocations of the cost, it was their opinion in which I shared, that it could not properly be charged to the volume of Ned's Auto Supply.

Q. Does this account 1088 include any station operating tools and equipment furnished to service stations?

4014 A. No, those are in a separate account.

Q. Is it not true that such tools—

A. May I check that just a moment? For 1937. We change these classifications at times between years and I would have to check to see whether that split was made during '37 or not.

During the year 1937 account 1088 was an allocation of station operating tools and equipment employed at the bulk plants and at reseller outlets operated—or leased by lessees and operated by those individuals. Since that date, namely, in 1940, we have segregated out of the composite account 088 a subdivision identified as 088-A having to do with station operating tools and equipment, service station owned properties complete; 088-B, station operating tools and equipment, service station owned buildings on leased ground; and 088-C, station operating tools and equipment, P. O. S. S. L. properties, leased out during the year 1937. Therefore, station operating tools and equipment was a broader classification and included such tools and equipment as may have been utilized by facilities in addition to the bulk plant operation.

Q. What is the total of the station operating tools and equipment items for tank wagon reseller channel and tank wagon reseller channel on form 189 for 1937?

A. Account 088, station operating tools and equipment, portion allocated tank wagon reseller channel, $6,013.23. 4015

Q. Do you have an account 088-A or 088-B or 088-C on your form 189 for 1937?

A. No, that segregation of cost is made at a later date.

Q. Then do you have any expense entered for station operating tools and equipment in the leased service station column?

A. In 1937?

Q. Yes.

A. No, sir, that is included in the general classification and was allocated.

Q. Was the allocation between channels on form 181 for 1937 for account 088 made on an all-gallonage basis?

A. It was made on either one of two allocations. You see, the individual items of expense entering into this total would have been allocated to our form for the distribution of costs to these individual expense classifications on the basis of one of two procedures. Such items as were chargeable to tank wagon business were allocated according to the ration of the volume moving through tank wagon reseller channel and tank wagon consumer channel. That part of the expense which could not be associated solely with tank wagon business would be allocated on the basis of an all-gallonage basis.

Q. And was Ned's gallonage included in the tank wagon reseller gallonage used in both instances in prorating 4016 this expense?

A. Yes. Yes, it was.

Q. Do you know the portion of this item of $6,013.23 which was an expense incurred by the supplying of tools and equipment to leased service stations, and what portion represents the balance incurred principally at the bulk plants?

A. Oh, no. No one knows that, because we did not have a separation of that account at that time. It would mean a going back and determining the items entering into the total and then allocating them on the basis of our present allocation, which not only is impractical but I am afraid it would be impossible.

Q. Are not the station operating tools and equipment furnished to 461 contract service stations account for as an E. L. A. expense under account 070?

A. No.

Q. Does account 088 include for 1937 any station operating tools and equipment furnished to the 461 contract service stations?

A. If there were any station operating tools made available to these accounts, it is in 088.

Q. Do you know whether there was any made available to them?

A. I think the likelihood is that they would be limited, if any.

4017 Q. But it is your opinion that there was a substantial amount of such tools and equipment used at the leased service stations?

A. Both at the leased service stations and the P. O. S. S. L.'s, if you are including that in your statement.

Q. I do.

A. Yes.

Q. I might say, Mr. Boatwright, just for facility, whenever I refer to leased service stations, I mean a service station that is leased from the company regardless of whether the company was the owner or the lessee of the property.

A. I see. Well, if the different ones using these terms have been using them differently, and I just want to be sure that we are using the terms and implying the same meaning.

Q. Yes. I think for the benefit of the Examiner and counsel it would be convenient to make that distinction between 461 stations and leased stations as two broad classes, which I believe will include on that basis all tank wagon reseller stations.

A. I shall try to observe that in any discussions.

4018 Q. And any time, of course, that you feel that some further expression should be made, you are always at liberty to make it, but that is what I mean unless I indicate to the contrary.

A. All right. I just wanted to be sure we were operating under a common understanding.

Q. And is it your opinion that none of this expense of station operating tools and equipment, in so far as that expense is incurred at the bulk plant, is properly allocable to the expense of sale and delivery of gasoline to Ned's Auto Supply Company?

A. Well, I do not think that it is.

Mr. Hanley: Will you inquire as to what time you mean, Mr. Austin?

Mr. Austin: 1937.

Mr. Hanley: Is that your understanding?

The Witness: Yes, sir.

By Mr. Austin:

Q. Referring now to the last item at the bottom of Respondent's Exhibit 31-I, which is account No. 1204, office expense exchange, $6,181.50. On page 2521 of the record, you stated: "Account 1204, entitled 'Office Expense Exchange,' is in reality the sum total of the cost of performing the banking function which is incurred in conjunction with the distribution of gasoline. Thus our driver may deliver gasoline to a reseller outlet. That reseller may have cashed several checks for his customers, and in
4019 turn in payment of his account to our driver or to the company he endorses those checks. Those checks then are handled individually through our account and proceed with any clearance or fee incident thereto being charged." By the last two words, "being charged," do you mean being charged to this account?

A. Yes, any fee for the cashing of checks or performing the banking function or transmitting of funds is chargeable to this account.

Q. Now, did you state a moment ago that Ned's did not pay for gasoline delivered to other service stations in the same way as other service station operators paid?

A. Yes, I did.

Q. Will you explain that, please?

A. Yes. Deliveries to Ned's Service Station were made on a complete dump basis except as per our convenience as outlined in testimony yesterday. Ned's Auto Supply Company were anxious to keep their driveways open at all times. The driver dumped the load, he pulled the truck off the driveway, and the attendant at the outlet signed for the receipt of the product. The receipt of the product being acknowledged, Ned's Auto Supply Company's account would be billed once a month for this merchandise rather than making a settlement with each delivery.

Q. Was any other customer extended that privi-
4020 lege of credit and payment in that manner?

A. I do not think any other reseller was on that basis. I would say our general policy is that the distribution of gasoline is the payment upon receipt basis.

Q. Gasoline is generally sold for cash, is it not?

A. That is correct.

Q. And collection made by the driver?

A. Yes, sir.

Q. But you say that Ned's was billed on a monthly basis.

A. Yes. It was a convenience to us to do it in that manner as well as a convenience to them to do it in that manner.

Q. But you stated a moment ago in your answer to the previous question that deliveries to Ned's were all full dump deliveries except where some partial dump delivery was made for convenience.

A. At our convenience.

Q. Do you know that as a fact, or is that based upon hearsay from other employees of the company?

A. Where hearsay stops and factual information begins is never clear to me in testimony of this type. I talked to drivers, I talked to the tank wagon superintendents, I talked to the men who operated the plant making deliveries to this account. These men individually told me that they were full tank deliveries with the exception of where, for our convenience in cutting our costs, we could make partial dump 4021 deliveries on return trips rather than pulling back to the yard with maybe two compartments filled.

Now, I can say this, it was impossible to examine the individual tickets because those have ceased to exist. They are only retained a year.

Mr. Austin: Well, I would like to state, Your Honor, that I make no objection or motion to strike any of that because I think it is proper in so far as it states the witness' reasons for the conclusion he has reached as an accountant and an economist in preparing these statements.

Trial Examiner Ballinger: And the sources of his information.

Mr. Austin: Yes. However, I do wish to make a notation upon the record that I object to such testimony as hearsay in so far as it might be considered proof of the method of delivery to Ned's or of the number of full dump deliveries which Ned's received, because as proof of that fact it is purely hearsay. As a basis for the witness' act in preparing these exhibits, of course it is a proper answer, as Your Honor has just stated, but I think that perhaps something should appear on the record to indicate that the answer, as given by the witness, not in answer to—well, I would, my question to the witness, I believe, was as to the source of his information on that point, and I think it appears that is hearsay.

4022 Now, I am a little at a loss to know how to express the objection, but I do not want to receive that as proof.

Trial Examiner Ballinger: Well, the Examiner is strongly of the opinion that it rises to higher dignity than mere hearsay. Here is an employee of the company whose business it is to know about these things.

Mr. Austin: Well, he does not know what happened in 1937, and the only people who do know where the people in charge of the deliveries to Ned's at that time, or the information, of course, could be obtained from the records, but they do not exist.

Trial Examiner Ballinger: Well, he has made an investigation by inquiry of those in the employ of the company that know.

Mr. Austin: Yes.

Trial Examiner Ballinger: And I think that rises to higher dignity than mere hearsay, and that if it is to be questioned that the employees of the company should be called.

Mr. Austin: Well, of course, if the Respondent should offer testimony upon the question of full dump deliveries to Ned's in 1937 obviously they could not call Mr. Boatwright for that purpose, and I believe if they did—they might call him, but if they did I believe Your Honor would exclude such testimony on the ground it was hearsay, and that they should call the employee who was in charge of those deliveries.

4023 Now, as I said before, I am not in any way questioning the competency and relevancy of this testimony in connection with these cost studies, but I feel that it is no proof of the fact of the size and quantities of deliveries made to Ned's in 1937.

Trial Examiner Ballinger: Didn't Mr. Raupaugh testify with reference to the deliveries?

Mr. Austin: Not to 1937, no, I do not think Mr. Raupaugh gave any testimony regarding deliveries to Ned's when Ned's was on a tank wagon basis. I did not want to go any further with it except to make my own notation on the record to preserve a position, that is all.

Mr. Hanley: I do not know what these notations on the record mean. After all, this argument between Counsel for the Government and the Court, the Respondent has this to say, that the Government asked a question and they got an answer, and I think they are bound by it. It does not make any difference whether it is hearsay on some theoretical rule, or whether it is not. It is the testimony in the record, and counsel ought not to be entitled after he gets an answer that he has asked for to make a long statement to qualify a witness's answer. The answer is the witness' answer. It is not a matter of qualification for counsel. He asked for it. He got it. Now, that is all, and that is all there is to it.

Trial Examiner Ballinger: Proceed.

4024 Mr. Austin: I was satisfied with the witness' answer to the question I asked, but the question I asked was as to the source of the information and the answer discloses the source of the information which I think is clearly hearsay.

Mr. Hanley: Well, everything is hearsay, in the last analysis.

Mr. Austin: It is perfectly competent, as I said before, for Mr. Boatwright to use that, and even not as good evidence, for his opinions on cost study, so perhaps this is—maybe I am trying to make a distinction which is unnecessary, now.

I will proceed.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

Proceed.

By Mr. Austin:

Q. Do you know whether any cash discount was allowed Ned's Auto Supply Company for payments promptly or within a certain length of time after the first of the month on bills submitted to them?

Mr. Hanley: I am sorry. I did not hear that.

Will you read that question, please, Mr. Reporter?

(Question read.)

4025 A. No cash discount is applicable to tank wagon sales of gasoline. There is no such thing.

By Mr. Austin:

Q. Well, what is your answer to that question?

A. That is the answer to the question. There just is not any such thing as cash discount on tank wagon sales of gasoline to any customer.

Q. You mean no such discount was allowed to Ned's in 1937?

A. No such discount was allowed to Ned's, or any other customer.

Q. Why is not the expense entered in this account No. 1204 allocable to all gallonage equally as much as the expense listed in the accounts stated in Exhibit 31-Q?

A. Why is not office expense exchange, being account No. 1204, synonymous with expense items enumerated in 31-Q?

Q. Yes.

A. Because it is definitely of a different nature. This item of expense was not involved at all with Ned's Auto Supply business. His billing and his payment of the account to the Standard Oil Company was not comparable with, in any way, shape, or form, our regular means of settling accounts with resellers. It remains an item of marketing cost on the statement, and no part of that cost can be attributed to Ned's.

It has by no means any justification of being considered in the same classification of items of expense at all as was enumerated under 31-Q.

4026 Q. And just one more question: Consider accounts 1087 and 1088 on Respondent's Exhibit 31-I, and consider account number 1000 on Respondent's Exhibit 31-Q—and I might ask this question regarding a number of different accounts, but I think we will use this—

Mr. Hanley: If your Honor please, that sounds awfully complicated. I think if we are going to adjourn, we ought to adjourn; if we are not, we ought to keep on, one of the two.

Mr. Austin: I haven't even stated the question. I simply referred to three account numbers.

Mr. Hanley: Yes, but the accounts are so complicated that whatever the question is, it is still complicated.

I have no objection to the question, your Honor, except to his asking it, if we are going to adjourn. I don't care which it is.

By Mr. Austin:

Q. Will you explain why it was more difficult to make a division of expense under account No. 1000 between

Ned's and other stations than it was to make a division of expenses on 1087 and 1088?

Trial Examiner Ballinger: Read the question.

(Question read.)

A. Yes. I think honestly that a small part of the account 1000 should be chargeable to Ned's Auto Sup-
4027 ply and to that gallonage. It is a fact that Mr. Raupaugh and the assistant, Mr. Blau, made a business agreement with these gentlemen; they discussed it; it took part of their time; and they worked with this account. Now, as such a part of that, and I must confess that I gave serious consideration as to including the account 1000 as an item which is influenced to a negligible extent by Ned's, but I thought it would be better to put that in the back part under Exhibit 31-Q, because in all honesty it is influenced by Ned's and should receive in part a charge for expenses of that gallonage. In the same consideration and honesty, I don't see how it would be physically possible for the item of office expense exchange to be influenced by a magnitude in excess—

Q. No, please, Mr. Boatwright. I am referring to 1087 and 1088.

A. I will go all through the three of them.

Q. I didn't refer to 1204 in the question. I just wanted to relieve you of that.

A. Well, looking into account 1088, station operating tools and equipment, the amount being in total $6,013.23, I don't believe that the insignificant proportion of that item that could be attributed to Ned's Auto Supply business—

Trial Examiner Ballinger: Which item are you referring to?

The Witness: Account 1088, station operating
4028 tools and equipment, shown on Respondent's Exhibit 31-I.

Trial Examiner Ballinger: All right.

A. —is comparable with the account 1000, where I know that the supervision function of the Detroit field did spend time and did incur costs in handling the Ned's Auto Supply outlet.

Now, referring to account 1087, general supplies used, a small part of that may be attributed to Ned's gallonage. I enumerated the items and I don't believe that we would have purchased any more rope or any more of these little items with the account or without the account. I think that honestly there is a difference in the classification I have employed and I have stated in one case that I can't allocate supervisory costs between this account and this account, although I know from my experience that it is incurred to a greater extent on the rank and file of reseller accounts than it is on the gallonage of Ned's Auto Supply. Therefore, I have just put it in a classification of conservative items on 31-Q and I think that is where it belongs.

By Mr. Martin:

Q. Would Mr. Raupaugh's salary have been any less if the Standard Oil Company had lost Ned's business?

Mr. Hanley: Just a moment. Read that question.

(Question read.)

Mr. Hanley: Well, Judge, I just haven't made any objections at all to this cross-examination, and I don't
4029 know whether I ought to object to this or not, but your Honor can certainly see how thoroughly objectionable that kind of a question is.

If you can answer it, go ahead.

A. Well, there is only one answer I can give to that. I don't know. I have no control over Mr. Raupaugh's salary.

Mr. Hanley: It doesn't seem to me the government ought to ask that kind of a question, Judge.

Mr. Austin: I don't want to continue this further. I intended that would be the last question.

Trial Examiner Ballinger: Are you through?

Mr. Austin: I move we adjourn, your Honor.

Trial Examiner Ballinger: The motion is granted, and now, at 4:40 p. m., the hearing stands adjourned, to be reconvened at 10 a. m., June 18, 1941, in Room 332, Federal Trade Commission Building, Washington, D. C.

(Whereupon, at 4:40 o'clock p m. the hearing was adjourned to Wednesday, June 18, 1940, at 10 o'clock a. m. in Room 332, Federal Trade Commission Building, Washington, D. C.)

4030

Room 332, Federal Trade
Commission Building,
Washington, D. C.,
Wednesday, June 18, 1941.

Met, pursuant to adjournment, at 10 a. m.

Before:

Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., appearing on behalf of the Federal Trade Commission.

Harold R. Hanley, Esq. (910 South Michigan Avenue, Chicago, Ill.), appearing on behalf of the Respondent.

PROCEEDINGS.

Trial Examiner Ballinger: Come to order.

This is a reconvening pursuant to notice of Docket 4389, in the matter of Standard Oil Company, at 10 o'clock a. m., Eastern Standard Time, June 18, 1941, in Room 332, Federal Trade Commission Building.

The last hearing was held in Washington, D. C., on June 17, 1941.

The Reporter will not Counsel for the Commission and for the Respondent present.

You may proceed.

JOHN W. BOATWRIGHT thereupon resumed the stand and testified further as follows:

Cross-Examination (Continued) by Mr. Austin.

Q. Mr. Boatwright, will you turn to Respondent's Exhibit 31-Q, the second item on that page, account No. 1008, salaries—warehouse labor.

What is meant by warehouse labor?

A. Those are the regular employees working in a warehouse, handling merchandise, inventories, and stocks, and so forth, of the company.

Q. What do you mean by warehouse and merchandise and stocks?

A. We refer to a bulk plant as being a warehouse, 4032 and classify the labor employed at that bulk plant as warehouse labor.

Q. Then, is that mostly labor at the bulk plants or entirely labor at the bulk plants?

A. Yes.

Q. The expense shown for that account in the tank wagon reseller channel is $21,913.13. Is that correct?

A. That is correct.

Q. In your opinion, is that expense chargeable equally to each gallon of gasoline moving through those bulk plants?

A. No. It is not chargeable equally because the amount of labor and the amount of time spent in connection with an account such as Ned's Auto Supply would not involve an equal amount of the time of these individuals as would volume being distributed to accounts of a smaller nature.

Q. You mean not as much time per gallon of gasoline sold?

A. Not as much time per gallon of gasoline sold.

Q. Why is that?

A. For the reason that deliveries to Ned's Auto Supply were larger deliveries; the checking, the measuring of the tanks involved for full time deliveries takes a lesser amount of time than would the per-gallon cost for deliveries of a smaller nature.

Q. Well, do you mean by that that some trucks go out only partially filled?

4033 A. Some do.

Q. Or isn't it generally a matter of a full truck stopping in several stations?

A. We attempt at all times to get our trucks to operate on routes so that we can avoid partial truckloads moving out of the plant. That is merely an effort directed to secure the maximum efficiency from the operation of our tank wagons. There are times, however, when trucks do go out with partial loads. In addition to that, there are some smaller trucks than the trucks of the 1,500-gallon capacity, which are utilized on the smaller reseller outlets, moving out of the yard perhaps with a full load, but that full load comprising maybe a 600-gallon capacity rather than a 1,500.

Q. How many of those small trucks do you have?

A. I don't know.

Q. Are there not many of them compared with the larger gallonage?

A. That is not correct. There are not many, but there are some.

Q. Do you not also have some 2,000-gallon trucks?

A. We have ~~some~~ 2,000-gallon trucks which load at a loading rack at River Rouge and pull out of there. We did not have the 2,000-gallon trucks operating out of any of these plants in 1937.

Q. Is it not true that when the truck is loaded 4034 fully, that the loading expense is the same whether that truck is destined to stop at several stations or to make a full dump delivery?

A. That need not follow. It may be the case. The reason it need not follow is because when you are making a series of stops you will load quite frequently your truck. Let us say having five compartments, you will load perhaps three different products, maybe one compartment of Solite, and then the truck will be moved and maybe the three compartments will have Red Crown and maybe the fifth compartment of Standard. It takes a little more time and a little more effort to make such a load as it would if we were able to pull under the loading pipes for Standard Red Crown and drop on a load of 1,500 gallons and pull out.

Q. Have you ever made any test to determine what proportion of the deliveries made to Ned's Auto Supply Company in 1937 were deliveries of full truckloads of Red Crown gasoline?

A. No. Such a check is not necessary for the reason that Ned's Auto Supply did not at that time, and do not today, sell our third grade gasoline. The only products that they merchandise are Solite and Standard Red Crown. Standard Red Crown will run in the neighborhood of 85 percent of the requirements of Ned's Auto Supply. Running in that neighborhood, the deliveries of Solite were comparatively few relative to the deliveries of Red Crown.

Q. Well, you have five compartments in the truck, 4035 do you not?

A. Yes.

Q. Are those compartments of equal size or are they of varying sizes?

A. They are of varying sizes.

Q. Then there are some compartments which do not contain more than 15 percent of the entire truckload?

A. No, that would not be the correct way to look at the problem.

Q. Isn't that true? If they were all equal, each one would be 20 percent. Therefore, if they are not equal there would be some that had 15 percent or less of the entire capacity of the truck?

A. Well, the difficulty—

Q. I am just asking you that now as a physical question regarding the truck.

A. And as a physical question it must be answered in the same manner.

A tank is divided into compartments by placing bulkheads in the tank. Now, the very mechanical task of placing these bulkheads in the tank many result in one compartment when calibrated indicating a capacity of 263 gallons. The adjacent tank may have a capacity of 310 gallons. As a rule, it is desirable, when you have a truck of 1,500-gallon capacity, to have at least two com-
4036 partments with larger capacity than an equal division of your tank, an exact equal division.

I have never seen in any tank that has been divided into compartments. I just never have seen any tickets indicating an equal apportionment of the space.

Q. Isn't it true that if Ned's business were 15 percent Solite Ethyl and if they took their deliveries proportionately in equal amounts from time to time which, of course, they would not do exactly, but assuming that they did, every truck that went there could have one compartment filled with Solite Ethyl and still no more than satisfy Ned's requirements for that product; isn't that correct?

A. Physically—.

Trial Examiner Ballinger: Unless—one moment.

Mr. Austin, how could you assume a condition that didn't exist?

Mr. Austin: Assume what condition?

Trial Examiner Ballinger: Read the question.

(Question read.)

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

A. In reply to your question, if we assume the hypo-

thetical conditions which you enumerated, it would have been possible for Ned's to have taken one compartment of Solite with each delivery of gasoline, but it would
4037 have been impractical in terms of cost of doing business.' The fill pipes leading into the tanks underground on the driveway are not the same. To drop four compartments of the Standard Red Crown, and then to move—the driver get in the truck, move the truck, make a second hose connection with a second fill pipe, and to drop one compartment of Solite would have been undesirable from the point of view of the purchaser and from one point of view of the supplier. It is undesirable from the point of view of the purchaser because Ned's Auto Supply Company were constantly eager to insure that their driveways were left open for customers rather than be partially clogged with a truck. Every delivery to those outlets was made in the shortest possible time and our truck was then driven off of the driveway. Now, if we had to stop and make two connections, it would have been undesirable from their point of view; it would have been undesirable from our point of view, in terms of cost, because the time of making the movement of the truck, the connection of the hose, unlocking the fill pipe, and other operations incident thereto, is the equivalent of the time necessary to drop a compartment of gasoline in the tank.

Trial Examiner Ballinger: Let me interrupt just a minute.

Would you permit a statement that I overlooked at the convening of the session?

The Examiner overlooked stating when the hearing
4038 convened that Counsel for the Respondent has a continuing objection to this line of examination, and that there is reserved to him at the conclusion of the witness' testimony, or at any time prior to the closing of the record, the right to move to strike.

Mr. Hanley: Thank you.

Trial Examiner Ballinger: And this will continue throughout the remainder of the examination of the witness.

By Mr. Austin:

Q. Is your assumption that it was not customary in 1937 to make single compartment deliveries of Solite Ethyl to Ned's Auto Supply Company based upon the reason which you have just stated?

A. Is that a question?

Q. Yes.

Mr. Austin: Would you read it, please, Mr. Reporter.

(Question read.)

Mr. Hanley: Well, if Your Honor please, I object on the ground that it assumes an assumption on the part of the witness. If the witness understands the question and is willing to answer I do not persist in the objection.

Mr. Austin: I will carry it further.

Mr. Hanley: If he does, I think it is objectionable as to form.

Trial Examiner Ballinger: Do you understand the 4039 question?

The Witness: I do not.

Mr. Hanley: I did not think he had assumed anything. I thought Mr. Austin had made the assumption.

The Witness: I do not understand the question, and would request you to rephrase it, if you can.

By Mr. Austin:

Q. Well, you have stated reasons why it would not be practicable or desirable for—strike out "practicable"—desirable either to the Standard Oil Company or to Ned's Auto Supply Company to take deliveries of Solite Ethyl at the time, along with deliveries of Red Crown. As a result of that reasoning, have you assumed that they did not engage in that practice, and by "they" I mean Ned's or the company.

Mr. Hanley: If Your Honor please, that is objected to for the reason that it is not the best evidence even on cross-examination.

Dr. Boatwright made an investigation of the actual delivery tickets which outlined the deliveries of each kind of gasoline to Ned's over a period of time. Now, in line with the consistent policy of the Respondent, we are willing to make those actual tickets available to the Government so that they can see on what day and when, and how much gasoline was delivered to Ned's.

Mr. Austin: I understand those tickets are de-4040 stroyed, Judge.

Mr. Hanley: Well, they were, as I understand, for 1937, but the calculations made on the basis of 1940, and those tickets do exist.

Mr. Austin: Those were not deliveries to Ned's.

Mr. Hanley: Yes.
The Witness: No.
Mr. Hanley: Weren't they?
The Witness: No.
Mr. Hanley: Well, perhaps I am wrong about this. May I ask a question on voir dire, Your Honor?
Trial Examiner Ballinger: You may.

Examination on Voir Dire by Mr. Hanley.

Q. What tickets did you use, Mr. Boatwright, in determining this particular question?

A. We used the tickets on two trucks in their operation to reseller outlets during the year 1940. The 018 tickets for the year 1937 have long since been destroyed. Starting in the early part of 1938 Ned's became a tank car buyer, and thereafter there are no tank wagon deliveries for delivery to that distributor.

Q. But there are tickets in existence for 1940 applicable to these particular two units, to trucks?

A. Yes, but there are no tickets for 1940 applicable
4041 for delivery to Ned's. They are deliveries to other resellers.

Mr. Hanley: Well, Judge, I think perhaps I am wrong in my objection; but I still want to make the offer to the Government that we do have the tickets for 1940 applicable to these trucks that Mr. Boatwright used, and we offer them, if the Government desires, for examination, but I withdraw my objection to the question.

Trial Examiner Ballinger: Do you understand the question?

The Witness: I understand the question.

Cross-Examination (Continued) by Mr. Austin.

Q. Let me put another question, please, and then you can perhaps answer both together. I do not want to pursue this at any length, but have you made or has it been possible for you to make any check as to the actual number of full time deliveries made to Ned's in 1937 either of Red Crown or Solite-Ethyl, or the actual number or percentage of partial dump deliveries which were made during that year?

Can you answer this latter question?

A. Certainly.

Such an analysis would be a physical impossibility as the tickets have been destroyed.

In 1936 I did make a study of deliveries, not to Ned's, and in connection with this study I made a study of 4042 the tickets of full dump deliveries. I know that it is the desire and it is the effort of the company when full dump deliveries are made to deliver one product unless a full dump delivery be taken by a dealer whose total tank capacity and sales volume does not permit him to take any tank truckloads of one product.

Q. Well, the only thing I was trying to bring out, Mr. Boatwright, is that your statement of assumption or opinion, whichever it may be, that Ned's did not customarily take partial dump deliveries either of Solite-Ethyl in 1937—well, I will cross that, because I do not know whether you have said that or not. But hasn't your answer to this question regarding the quantity and methods of deliveries to Ned's been based upon your knowledge of the business rather than upon any factual study of what happened in 1937?

A. It is definitely based upon my analysis of the business, and the analysis upon thousands and thousands of these delivery tickets, and upon time studies of truck operations, time studies of dumps of gasoline. We have standards established for all of these things. We know how long a truck should be at a driveway dumping 1,500-gallon load.

Q. I am not questioning your knowledge of the business. I am simply bringing out for the record the facts and the answer.

A. That is absolutely correct. It is based upon my knowledge of the business.

4043 Q. Now, we have been talking about warehouse labor, and that is included in Respondent's Exhibit 31-Q, account 1008. Turning now to Commission's Exhibit 81, an item of expense is included there, several of them, I believe, referring to bulk plants, but we will refer particularly to the item of cleaning bulk stations, driveways, office, and so forth, which is $1,672.

Will you explain how you differentiate between the treatment of the expense salaries-warehouse labor on Exhibit 31-Q and the treatment of the bulk station item of $1,672 on account 1066, for the purpose of this cost study?

Mr. Hanley: Now, just a minute.

This may be off the record.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

Do you have the question?

The Witness: I have the question.

A. The item of warehouse labor, as shown on Respondent's Exhibit 31-Q, when it was directly concerned with the distribution of gasoline from a bulk plant as the item of warehouse labor, as shown on Commission's Exhibit 81. I know from the nature, the function performed by warehouse labor as classified on Respondent's Exhibit 31-Q, that a large part of that warehouse labor has to do
4044 with warehousing functions incident to Atlas tires,
motor oil, cleaning barrels, painting barrels, and movements of stock in addition to unloading of cars of gasolines, checking tanks, and other operations of that type. Knowing that, and knowing the manner in which this particular account is allocated on our books, it did not seem fair to me to include this item of warehouse labor because the allocations do not accurately reflect costs incident to gasoline; therefore, rather including it in any calculation of a cost differential applicable to gasoline it seemed to me the better course of procedure to place this item of cost in a classification having to do with the conservative feature of the calculation rather than making an attempt to break that item down where so much of arbitrary judgment would be necessary. We have no accurate record of time of this class of employees working on gasoline.

4045 Q. Now, how about the other item here? How does that differ, what you have just said, from this item of cleaning driveways, offices and so forth?

A. The second item does not have to do with the items other than gasoline to the same extent. Cleaning of driveways so that our trucks can get in and out with their loads of petroleum products. It is more directly associated with these faucet products because the majority of our loads moving out of the plants are of that nature. Secondly, I think I stated in the testimony yesterday that a small part of that item in my mind is attributable to other than gasoline, and you will recall my discussion wherein I stated to be on the conservative side I used total gallonage to provide an offsetting influence to any small portion of that item that may have not been truly assignable to gasoline.

Q. For the purpose of allocation of this expense to the gallonage passing through the bulk plants, is there any difference in your opinion between these two items insofar as both of them relate to gasoline only?

A. I think I have explained that difference, sir.

Q. Well, I think that you explained the difference as to products but that you thought that the items of warehouse labor perhaps involved to some extent other products more than the item on Commission's Exhibit 81, but I am asking you now whether insofar as the expense in each of 4046 those accounts is attributable to gasoline, the account should be treated similarly in this cost study.

A. If it were possible for me to have felt the same degree of assurance of the true reflection of gasoline cost in the item of salaries warehouse labor account No. 1008 as I felt applied to the account 1066, miscellaneous expense, I would have treated the account 1008 differently. I don't believe it is possible to get out of that figure at this remote date the portion of time that could be attributed to gasolines and refined oils. If the question were one of current operations, obviously a study and distribution of time could be made. I couldn't go back four years and make that distribution.

Q. I realize you couldn't do it, Mr. Boatwright. I simply asked you whether if you could do it, you would have treated that portion of the account 1008 in the same manner that you have treated the bulk plant items entering into account 1066.

A. Well, may I state, sir, that had it been possible to have broken these various items listed in Respondent's Exhibit 31-Q down, I would have done so, but it would not have been possible to do it four years after the time when the incident occurred.

Q. I realize that. My question is one directed to accounting principles rather than to any figuring of actual amounts.

Mr. Hanley: Off the record.

Trial Examiner Ballinger: Off the record.

4047 (Discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin.

Q. Will you turn to Respondent's Exhibit 31-J? At the top of the page, certain items which are stated to be of a semi-direct nature are charged against the business of the retail service stations served by the Standard Oil Company other than Ned's. There are several account numbers listed: Account 1510, losses by bad debts, $2,078.73. There is also account 1511, a small amount for expense of collecting bad debts, current year, and 1512, the sum of $437.31 for expense of collecting bad debts, prior years; and there is also a figure in red for bad debts collected which had been written off in prior years. That latter figure is for account 1400. And it appears that the figure for bad debts collected has been set off against the charges so that there is a profit to the company shown of $1,541. Perhaps "profit" isn't exactly the right word but, at least, it is a credit rather than a charge when it is figured net.

Were these expenses listed opposite the account 1510, 1511, and 1512 charged direct to the various sales channels on form 189?

A. They are.

Q. What sort of indebtedness is included in these bad debts?

4048 A. Why indebtedness which has been incurred on the part of the purchaser, failure to pay his account with the company.

Q. Does that mean tank wagon reseller customers?

A. Yes.

Q. Entirely?

A. Yes, sir.

Q. For what products were the debts incurred? Or if it was for something besides a product, state that. Was any of it for gasoline?

A. Yes. Yes.

Q. Isn't gasoline sold for cash?

A. Yes, sir, pretty generally. There are times, however, when deliveries are necessary; the station will be in charge of a helper. It is sometimes necessary for us to carry a retail outlet for a one-dump basis. As a rule, however, the delivery is made and the collection is made on the following delivery.

Q. You stated yesterday that Ned's was the only customer who had the privilege of paying monthly for gasoline and receiving it on credit.

A. That is correct.

Q. What portion of these bad debts here are for gasoline?

A. I don't know.

Q. Might some of them be for non-payment of rentals?

4049 A. That is a possibility. Uncollected rent is written off as a bad debt.

Q. Did you make any effort to determine what proportion of these bad debts were debts for gasoline sold?

A. I did not.

Q. These figures were "lifted" directly from form 189, were they not?

A. Yes, sir.

Q. In your opinion have they any place in this cost study if they do not relate to gasoline?

A. They do relate to gasoline and, in my opinion, they have a definite place in this study.

Q. In other words, your opinion is, you say, that they relate to gasoline, even though they were not debts for payment for gasoline sold.

A. I said that they would encompass in part any unpaid obligation for gasoline. Then I explained the occasions where such an obligation may arise. In addition, there is a source of bad debt charges, as you mentioned, on rents. Should not some part of that be charged to gasoline when that is the principal product that is distributed and sold to the reseller?

Q. These are direct charges, are they not, Mr. Boatwright?

A. Yes, sir.

Q. Then it would be possible, would it not, to charge—not only possible but proper to charge any bad debts marked off to the customer who failed to pay the debt?

4050 A. It would be possible—

Mr. Hanley: Just a moment, Mr. Boatwright. Will you read that question, please?

(Question read.)

By Mr. Austin:

Q. To rephrase that question, is not a loss from a bad debt an expense which can be charged directly to the debtor's business?

A. It could be.

Q. And isn't that what is actually done by the Standard

Oil Company in assigning these bad debts directly to the different channels?

A. We do not maintain costs by accounts. If a bad debt be incurred in the tank wagon reseller channel, the charge is entered against the channel. It is not entered against an individual account because we do not maintain marketing costs on the basis of individual accounts.

Q. If a debt were marked off, which was an indebtedness of a tank wagon reseller customer for motor oil, which channel would it be charged to?

A. Other methods.

Q. And if it were an indebtedness for gasoline, which channel would it be charged to?

A. Tank wagon reseller channel.

Q. If it were an indebtedness for rent, which chan-
4051 nel would it be charged to, in a leased service station?
A. It might be distributed on an all-gallonage
basis.
4052 Q. Or would it appear in your leased service station column?

A. That portion which was allocable to the leased service station column would there appear in that column.

Q. Isn't it true that where there are items in the leased service station column, Form 189, that no such expense is entered in any of the other columns; that is, any of the three channel columns?

A. Yes, that is correct.

Q. Then—

Mr. Hanley: If Your Honor please, if this is important—and it apparently is not entirely clear in the witness' mind, we will find out.

Mr. Austin: The witness knows. He has answered.

Trial Examiner Ballinger: The witness has answered.

Mr. Hanley: Well, he says he is not entirely sure.

Mr. Austin: I think he is sure.

Mr. Hanley: And we want it definite on the record, whatever the fact is, and we will find out if it is regarded as important.

The Witness: I have, in further answer to your question, I have before me the 189 for the year 1937. A charge is not made to the service station channel, but the charge is made to tank wagon reseller channel. The items separately enumerated in the service station channel are items of property.

4053 By Mr. Austin:

Q. Yes, and the item of bad debts is allocated between the three channels, is it not?

A. Yes, sir.

Q. On a direct charge basis?

A. On a direct charge basis wherever it can be charged direct. There are cases of bad debts where it is necessary to allocate the bad debts on a gallonage basis among channels.

Trial Examiner Ballinger: Such as what?

The Witness: An allocation, Your Honor?

Trial Examiner Ballinger: Yes.

The Witness: Well, I am satisfied that a rental bad debt would be allocated on a gallonage basis because a lessee pays us a rent on the retail operating unit, which is used not only in the sale of gasoline but other products including motor oils and other lubricating products as well. It would be unjust to charge the sum total of a bad debt so incurred to one product; therefore, that would be thrown in the classification to be allocated on a gallonage basis.

By Mr. Austin:

Q. Mr. Boatwright, this is not a large figure, but isn't it true that bad debts for gasoline are practically nonexistent?

Mr. Hanley: Answer that, if you can.

A. I can't answer that.

By Mr. Austin:

4054 Q. Isn't it true that a very small proportion of gasoline is delivered on credit to retail service stations?

A. You asked me a moment ago if I had made an analysis of the products on which the bad debts were incurred. I answered that I had not, and I just could not answer your question other than guess.

Q. In so far as any of these losses by bad debts may involve rentals, they would have no application to a nonlessee service station, would they?

A. The 461 type account?

Q. Yes.

A. They would not.

Trial Examiner Ballinger: We will take a five-minute recess.

(There was a short recess taken.)

Trial Examiner Ballinger: Come to order.

You may proceed.

By Mr. Austin:

Q. Do I understand from this exhibit that it is your opinion that none of the company's losses by bad debts in the year 1937 are chargeable to distribution of gasoline to Ned's Auto Supply Company?

A. Definitely no part of these losses by bad debts were chargeable to Ned's Auto Supply Company.

Q. Is that because Ned's did not fail to pay any of 4055 their obligations during the year?

A. Ned's did not fail to pay any of their obligations. All obligations were met promptly.

Q. Is that the reason why you consider none of this expense chargeable to Ned's?

A. I suppose in part, would have to be your answer. There was not a credit risk in the true sense of the word involved with Ned's Auto Supply Company.

Q. Well, isn't that based upon the fact that they paid their debts promptly?

A. Yes, sir.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Why are these expenses listed here, accounts 1510, 1511, and 1512, charged to any service stations not having defaulted on a debt if not to Ned's?

A. These accounts are charges made to the channel. Our effort was to determine the cost of serving an individual account, which means that we attempted to pull out of our general record of marketing expenses those expenses incident to this particular account. There were none of these expenses listed on Respondent's Exhibit 31-J, applicable in any sense of the word to Ned's Auto Supply, and therefore they should not have been included as a cost of doing business through this particular account.

4065 Q. Isn't that equally true as to any other service station who did not default in payment of any obligation during that year?

Mr. Hanley: Just a moment. It seems to me, your Honor, that calls for a conclusion of the witness, that it goes to the ultimate issue on the fundamental difference as between the theory of law on which the government is proceeding and on the theory on which the respondent is defending. I have no objection to the witness stating the fact as to whether or not certain bad debts are created as to X station and not created as to Y station.

Trial Examiner Ballinger: Well, the witness may go further and express an opinion. The objection is overruled.

The Witness: Would you read the question?

(Question read.)

A. The question can be answered rather briefly. I feel, however, that I should offer in conjunction with the answer a certain explanation. Credit for a purchaser is an infinitesimal graduation of differences. The man who has excellent credit, as a rule, doesn't need it; the man who needs it, doesn't have it. Between these two extremes there are different gradations of satisfactory or unsatisfactory credit risks. Ned's Auto Supply was a satisfactory credit risk in every sense of the word. An individually operated service station by a lessee involves a credit risk not
4057 backed by physical assets to anywhere near the extent that would a large organization like Ned's Auto Supply be. Therefore, even though an individual station, if you select one of this four hundred some, may not have defaulted on any obligation in a given year, the risk is greater and his default may come immediately after or prior to the year in question. And an insurance element requirement on the small individually operated outlet against the credit losses is greater than it is against an organization the size of Ned's Auto Supply.

Q. Well, this account has nothing to do with the credit expense, does it, Mr. Boatwright, or credit information?

A. This account has to do with the losses by bad debts, collections current year and prior years, and bad debts collected.

Q. Loss by bad debt means just what it says, doesn't it, the actual debt which has been marked off as a loss?

A. Yes.

Do you mean, however, that bad debts are not associated with credit function?

Q. I mean that losses by bad debts have nothing to do with any credit expense. Isn't it true that a loss by a bad debt is the exact amount of money that was not paid and nothing added and nothing subtracted from that?

A. Losses by bad debts are the exact amounts of money not paid. In my mind losses by bad debt are directly associated with credit function.

4058 Q. They may be, but as a cost or expense listed in this account, the only thing listed in this account is the actual amount of the bad debt; isn't that right?

A. That is correct.

Q. And your credit information and expense is listed under another account, is it not?

A. That is correct.

Q. Now, at the bottom of page 2525 of the record, at the top of page 2526, you were questioned regarding the use on Exhibit 31-J of the gallonage divisor of 66,388,527; which excludes Ned's gallonage. That is what you have referred to as the lower divisor?

A. That is correct.

Mr. Hanley: Page 2526?

Mr. Austin: Yes.

By Mr. Austin:

Q. You said in answering that question that you used that divisor "because we had no bad debt losses. We had no expenses of collecting bad debts prior years or no credit cost function involved on Ned's account. Therefore, the credit function in the reseller channel was incurred on reseller accounts other than Ned's."

A. That is right.

Q. "Therefore, I should use the gallonage excluding Ned's."

A. Correct.

4059 Q. Could you not more properly have ascertained the number of service stations who were responsible for these bad debts and then have excluded the gallonage of all other service stations including Ned's who were not responsible for any of those bad debts?

A. No.

Q. Why not?

A. Because it would have resulted in a figure of cost that was higher and was not representative of the continuing and prevailing cost for bad debt losses through our tank wagon reseller channel. It would have been a false and improper representation of that cost item in the cost analysis.

Q. That would have resulted in a segregation of tank—or, rather, a division of the tank car reseller service stations into two classes: Those which were responsible for bad debts for those years and those which were not; is that right?

A. It would have.

Q. And since that is a direct charge, is there any reason why any station—

A. Your statement is not accurate as being a direct charge to an outlet. It is a direct charge to a channel.

Q. Well, that is your accounting procedure.

A. Yes, sir. It is our accounting procedure. We do not maintain marketing costs by individual outlets. It is a practical impossibility from terms of cost of doing business.

4060 Q. Well, what I am getting at is this: Is there any reason why any loss by bad debts should be charged to any service station who was not responsible for any such bad debts? You have said that as to Ned's no part of this expense should be charged to Ned's because they weren't responsible for any part of it. Now, isn't that equally true as to any other service station that was not responsible?

A. That is why I gave you the explanation that I did, the differences—

Mr. Hanley: Just a moment, Mr. Boatwright.

Judge, may we have added to the general objection which your Honor has accorded the respondent, that to all this line of testimony the further ground that there now appears to be an effort on the part of the government to dictate to the respondent the type of accounting that the respondent should use in the operation of its business, and that there is no authorization in either the Robinson-Patman Act, Clayton Act, or the anti-trust laws, or any other laws which authorizes any such activity on the part of the government.

Mr. Austin: I am only suggesting, your Honor, not that a different method of accounting might have been used by the respondent in the conduct of its business, but only that a better method of accounting might have been used in the preparation of this cost study.

Trial Examiner Ballinger: That is what the
4061 Examiner—

Mr. Austin: By "better" I mean more accurate.

Trial Examiner Ballinger: That is what the Examiner understands. If counsel for respondent desires to reserve the objection, it will be reserved for him.

Mr. Hanley: I just ask, your Honor, that that may be considered as part of the objection which your Honor has reserved to us.

Trial Examiner Ballinger: It will be so considered.

4062 Q. Did you have anything further to say on that point, Mr. Boatwright?

A. The question was not answered.

May the question be read?

Trial Examiner Ballinger: The Reporter will read the question.

(Question read.)

The Witness: Read as much of the answer as I gave, will you please.

(Answer read.)

A. That is why I gave you the answer that I did of the differences in types of credit risk. Had the procedure been employed that you suggest, it would have resulted, as I previously stated, in a false and untrue representation of our typical or representative cost incurred by bad debts. This is the representative—the anticipated, the normal bad debt losses.

By Mr. Austin:

Q. Perhaps I did not catch all of that. You just stated that this is the anticipated and normal bad debt loss.

A. That is correct. It is more truly representative of a cost of bad debts in the Detroit field for one year than would be the case had I isolated the service stations first as to those where bad debts were incurred, and those which were not, and then had I isolated the accounts where 4063 we collected bad debts previously written off, and those that were not, and then had I divided the bad debt loss by the volume of the stations involved upon which bad debts were incurred. My per gallon cost would not have been representative of the bad debt losses that could logically be charged against a channel of distribution. It would have been unfair procedure in calculating the cost.

Q. Of course, if you had done that Mr. Boatwright, you would have been able to state as against your larger bad debt loss for the stations responsible for them, you would have had also a gallonage larger than Ned's gallonage, which was responsible for none; is that right?

A. We had no stations larger than Ned's stations.

Q. No, gallonage, total gallonage for all stations which were not responsible for bad debts, you would have been left with two classes, those two, which were responsible for bad debts and those which were not. Here you have taken Ned's alone, and then charged your bad debts to all of those. My suggestion was that the other method, while it would have resulted in a larger bad debt cost for the station gallonage included there, it also would have resulted in a certain amount of gallonage over and above Ned's which would have been charged with no bad debts.

Trial Examiner Ballinger: Do you know whether or not it would have amounted to the total gallonage, 4064 lower than Ned's?

The Witness: Your Honor, this whole line of questioning leaves many uncertainties in my mind. I do not know what the Counsel for the Government would have done with the bad debt recovery. How are you going to classify that? Those organizations are no longer in existence.

Now, if I am going to classify the accounts on which we lost money, what am I going to do with the recovery? Am I going to classify those, and throw them out, or am I going to say that our total bad debt cases resulted in "X" cost for channel distribution. In previous years we charged off "Y" amount. We had a recovery. Here is our cost. Take from it our recovery, it leaves us a net credit. What am I going to do with the recovery, I do not understand the line of questioning at all.

By Mr. Austin:

Q. Will you explain, Mr. Boatwright, how can bad debts for previous years, or any expense incurred in connection therewith, or the collection of bad debts written off in former years, influence the cost of the current year?

A. Bad debts and our collection for former years, a bad debt written off in 1937 is predicated upon sales actually made in 1936. We write off our bad debts when they are uncollected at the end of 12 months, so the bad debt loss charged off in 1937 represents the sum total of the 4065 charge off to bad debts on sales made during 1936.

Recovery from bad debts written off in prior years, our collection made after, in the judgment of the credit men, and the accounting men, we assume that the money was lost; that, too, is on sales made prior to the year 1937.

Now, bad debts written off and collections of bad debts previously written off are a continuous item of expense, and it becomes a practical impossibility of going back and altering your books for previous years when you collect a bad debt previously written off after you have submitted your operating statement, your income tax reports, and every other type. This, I think, is completely acceptable to the Department of Internal Revenue as a regular means of handling our accounting.

Q. I have no doubt of that, but that is a different purpose, Mr. Boatwright.

A. Well, it is a statement, it involves a statement of our profits and our operating costs.

Q. I must ask you one final question on this subject, and that is in your opinion are losses by bad debts occurring in prior years an expense of sale or delivery of gasoline in the current year?

A. I think that question has been answered.

Trial Examiner Ballinger: You may answer it.

By Mr. Austin:

4066 Q. Is your answer "yes"?

A. Well, I say, sir, that a bad debt written off in this year is predicated on sales made the preceding year, I think that is the answer to your question.

Q. I am asking you whether you consider the expense resulting from the writing off of that debt an expense or cost of the sale of or delivery of gasoline in the current year?

A. Our business is a going organization. It is a flow. Costs incurred are of a—likewise of a flow nature. Therefore, we regard it as being a logical charge against current business when we write off bad debts incurred on sales made in previous time periods.

Trial Examiner Ballinger: Mr. Boatwright, in the light of your explanation, will you answer the question "yes" or "no."

Read the question.

(Question read.)

Mr. Hanley: Well, just a moment, please.

May I have the ruling of the Trial Examiner read?

(Record read.)

Mr. Hanley: Can you do that, Mr. Boatwright?

The Witness: Yes, I can answer it "yes" or "no." The sale was made in the prior year, the cost was incurred with the write-off of the obligation. It is a cost against current business operation.

4067 By Mr. Austin:

Q. And your answer is "yes"?

A. Yes.

Q. Will you turn now to Respondent's Exhibit 31-J, item 4, that is the Roman numeral, selling cost, and that analysis of selling cost continues through Respondent's Exhibit 31-K, L, and M..

Mr. Hanley: Is that a statement or a question?

Mr. Austin: It is a statement.

Mr. Hanley: Do you verify it?

Mr. Austin: Yes, here it is.

Mr. Hanley: I know, but does the witness verify it? Will you read it, please?

Trial Examiner Ballinger: The statement was testified to by the witness when he was first called.

Mr. Hanley: I am not sure if the witness is clear on it. I am perfectly satisfied.

Mr. Austin: I am just trying to refer to the pages of the exhibit, Judge.

Mr. Hanley: All right.

By Mr. Austin:

Q. On Respondent's Exhibit 31-L, it is stated, "It was estimated by Mr. Raupaugh and Mr. Blau that Robinson spent 35 percent of his time at Ned's, of which 7 percent was on gasoline; Meulenberg spent 25 percent, of which 5 percent was on gasoline; Couchie spent 25 percent, of
which 5 percent was on gasoline." I believe that you
4068 testified that these percentages were secured by
you in 1941, or possibly late in 1940, and that they represent the estimates of these three salesmen's time applicable to the Ned's Auto Supply Company account for the year 1937?

A. That is correct.

Q. What was the basis of these estimates?

A. Knowledge of the operation of the men covering the account; knowledge of the negotiations conducted between the Standard Oil Company and Ned's Auto Supply.

Q. Were they prepared from any factual or objective cost studies?

A. Your statement is broad. We have a factual study on the allocation of time of different salesmen. These naturally were used in preparing estimates. That, however, is an estimate as to the channel allocation of the time, as you are aware, the estimate as to the product proportion of the channel allocation of time was not based on factual records brought into existence in 1937; but were based upon the knowledge of the responsibilities of the salesmen.

4069 Q. Did you have available any reports prepared by the salesmen in 1937 which would have enabled you to check these estimates?

A. Such reports are not available.

Q. Are they no longer in existence?

A. I don't know the exact time period that we retain that particular report in our files. The retention of the different reports are for different time periods. Some we keep to eternity; some we retain six months; some a year; some three years; and some five years; and I don't recall the exact time period for which we retain the time breakdown by individual men.

Q. Are the salesmen's quarterly estimates for 1937 still available, do you know? Or is that what you were just referring to?

A. Yes, that is the report I was referring to, but I do not know whether the quarterly reports of the salesmen for 1937 are still available.

Q. Are the daily time reports still available?

A. I don't know.

Q. The quarterly time estimates are for product estimates, are they not?

A. The quarterly time estimates are channel estimates with a memorandum showing product estimates ignoring channels of distribution.

4070 Q. Did you make any effort to determine whether these reports and estimates of these salesmen could be located when you were preparing this exhibit?

A. No, I did not.

Mr. Hanley: If your Honor please, at this time the respondent offers to the government the opportunity to investigate any of these records that may be in existence, that we still have. We will furnish them upon request, if they are available, for examination in any way the government desires.

By Mr. Austin:

Q. You stated on direct examination, Mr. Boatwright, that each of these three salesmen, Robinson, Meulenberg and Coutchie has territory, or, rather, has territory which encompassed about 40 reseller outlets.

A. That is correct.

Q. And it appears from Respondent's Exhibit 31-L, that Robinson spent 35 percent of his time at Ned's, Meulenberg and Coutchie each spent 25 percent of their time at Ned's. That would indicate, would it not, that Ned's was considered an important account which justified a large amount of selling effort?

A. Yes, sir.

Q. Were you present when Mr. Raupaugh testified that in 1937 and early 1938 the Gershenson boys told him of receiving offers from other oil companies to sell them gasoline on a tank car basis and that they threatened 4071 on more than one occasion to transfer their gasoline patronage?

A. I was not in court when that testimony was taken.

Q. Are you familiar with the facts indicated by what I have just said?

A. I have not read the testimony of the other witnesses.

Q. Well, I think that counsel for respondent will not object if I ask you to assume that Mr. Raupaugh did give such testimony.

Mr. Hanley: I haven't been objecting to anything. Go right ahead and assume it, if you want to.

By Mr. Austin:

Q. Now, isn't that a situation which in the case of a customer having the volume of Ned's that might well be considered as calling for a more than average amount of selling effort in order to hold the customer?

A. Not on the part of the salesman.

Q. On whose part?

A. That would be on the part of Mr. Raupaugh and Mr. Blau. The salesman calling on Ned's account, as I have stated, primarily did the leg work involved. Upon discussing and analyzing this time allocation as best we could, it was the opinion, first, that the amount of time spent on gasoline by our salesman was an insignificant time and perhaps could be better stated at zero.

4072 A man on a driveway looking into sales of Quaker State Motor Oil, Iso Vis Motor Oil, Polarine and Stanolin, however, is bound to do some selling directly or indirectly on the product gasoline. It seemed fair, therefore, to allocate after a careful discussion and consideration what we regarded as the maximum chargeable time that could be allocated to this product, which was 7 per cent in the case of Robinson, and 5 per cent in the case each of Meulenberg and Coutchie.

Q. When were those estimates made?

A. When I undertook the collection of this data, which was either in the closing weeks of 1940 or the opening weeks of 1941.

Q. And these estimates are estimates relating to the activities of the salesmen in 1937?

A. That is correct.

Q. Respondent's Exhibit 31-L states that the total selling expense for covering Ned's outlets was $241 for 1937; is that correct?

A. That is correct.

Q. Do you really believe, Mr. Boatwright, that the Standard Oil Company in 1937 spent only $200 in selling its largest tank wagon reseller account in Detroit, an account that purchased over $400,000 worth of gasoline during that year?

A. Do I really believe it?

Q. Yes.

4073 A. I think it is high.

Q. You do?

A. I do, for this reason: That salesman did not make the agreement with the customer. The agreement with the customer was made and the contact was made by Mr. Raupaugh, Mr. Blan, and others of the supervisory force, whose costs and whose expenses were not allocated to this. The only item that is allocated, as you will note, is the item of salesmen's salaries, and the salesmen primarily worked on the sale and distribution of products allied to gasoline such as the various motor oils and the other specialty products that we may have sold to Ned's Auto Supply Company. I think in all fairness that it is a high charge against gasoline.

Q. Don't you know that in 1937 and early 1938 the Detroit division was trying to hold Ned's Auto Supply Company as a tank wagon gasoline customer in the face of repeated demands by Ned's for a tank car deal?

A. I know we are trying to hold in Detroit and any other field every possible customer all the time, and an opportunity to purchase from another supplier is just as frequent as comes the dawn, if you have got an alert buyer.

4074 Q. That isn't true as to the operator of the lessee service station, is it, Mr. Boatwright?

A. Yes, sir. We have no control over the merchandise sold to a leased service station. Not only do we not have control but lessees do sell other merchandise.

Q. Other gasoline?

A. Yes, sir.

Q. On properties leased from the Standard Oil Company?

A. Yes, sir.

Mr. Hanley: If Your Honor please, may I inquire what the materiality of this line of questioning is?

Mr. Austin: I will concede that the last two questions have no—

Mr. Hanley: Are you trying to find the basis for another complaint?

Mr. Austin: No. I am only—

Mr. Hanley: Well, I move that the last three answers be stricken. We object to the questions on the ground that they are not material or relevant to the issues in this case.

Mr. Austin: I think they were suggested by the answers of the witness, and I am simply bringing out the fact that there is a customer which purchased something over $400,000 worth of gasoline from the Standard Oil Company as shown from the figures on the exhibit, and who was, according to the Respondent's testimony,
4075 threatening to leave or, at least, suggesting that it should have a better deal from the company and yet it is suggested here that so little selling effort was needed that only $200 was assigned to that account for 1937 for selling expense.

Trial Examiner Ballinger: The answer is in no wise prejudicial to the case of the Respondent. The motion to strike is denied.

By Mr. Austin:

Q. Mr. Boatwright, why is it that Robinson is estimated to have spent 35 percent of his time at Ned's while the other two salesmen are said to have spent only 25 percent of their time there?

A. You get no uniform estimate of time between the

different salesman for the different accounts. Robinson may have been an individual who actually did spend more time at Ned's. He may have helped in checking inventories. The actual control of a salesman is something that the company strives at all times to see that his efforts are directed in the most profitable manner possible. Actually, we know that some salesmen like to sell certain products and to devote a major portion of their time to those products. Also, we know that certain salesmen like to call on certain accounts. You can take their call record reports and you can find that frequently salesmen who like to call on
4076 certain accounts will spend the major portion of their time with those accounts, not in the most profitable way, perhaps, but it is a human tendency.

Now, Robinson may have within the knowledge of the men who supervised his efforts have spent more time with these accounts than did the two men subsequently covering the territory.

Q. Have you ascertained since your direct examination whether these three salesmen were assigned to the same territory or to different territories in 1937?

A. I have not.

Q. Do you know how many of Ned's stores were visited by these men in the course of their duties?

A. I do not.

Q. Do you know whether it was the duty of more than one of these salesmen to call on Ned's during any part of 1937?

A. I am afraid your question isn't clear.

Q. I mean whether, say, during the same month or during any similar period two of these salesmen were calling on Ned's?

A. Simultaneously?

Q. Well, not necessarily the same day or same hour, but whether it was their duty to do so during the same period.

A. Well, the difficulty with your question—my interpretation, I am afraid—do you mean by your question that during the same time period two salesmen may have been contacting the same customer?

4077 Q. Yes.

A. The answer would be "No."

Q. That is true even though Ned's had four outlets?

A. Yes.

Q. Do you know whether any salesman other than Robinson, Meulenberg and Coutchie called at any of Ned's outlets in the course of his duties during 1937?

A. They did not.

Q. How do you know that?

A. Because I inquired and if they called at any of Ned's outlets they did not do so in the conduct of their regular duties.

Q. Did these three salesmen spend all of their time on tank wagon reseller customers?

A. When you say "all of their time" it is difficult. There were tank wagon reseller salesmen—any reseller salesman who, if he hears of a lead on the part of a tank wagon consumer or if he has a personal contact that is a tank wagon consumer will use his personal influence to attempt to secure the business for the company. Predominantly, they were tank wagon reseller salesmen, but no man is limited to a channel as such. We all work to secure customers irrespective of channels.

Q. Well, was their duty as outlined to them by their superiors to call upon tank wagon reseller customers?

A. As stated, that was their principal duty. Our 4078 duty is to get customers. It is my duty to get customers.

Q. Well, but there are other salesmen assigned to tank wagon consumer business?

A. To different classes of customers, but you said all.

Q. Well, that is—

A. By stating all, that meant exclusive.

Q. Yes.

A. And no one works exclusively in a channel.

Q. Well—

A. Predominantly, my answer was they were tank wagon reseller salesmen.

Q. Mr. Boatwright, since Ned's has been buying on a tank car basis, did the change affect the amount of salesman's time devoted to that business? In other words, now Ned's is still operating retail stations, and do the company salesmen still call on those stations?

A. I don't think so in the normal course of their business. The contact with Ned's is with the home office of that purchasing company.

Q. They still buy other products from the company, I assume?

A. They do. They do.

Q. While perhaps it is not as directly involved, do they buy those other products in the same manner that they did in 1937, or are they on a jobber basis for other things than gasoline?

A. I don't know the purchasing arrangements
4079 on products other than gasoline.

Q. I believe you just stated that you do not think that these three salesmen, or any other salesmen, are assigned to Ned's now. If you don't know, please say so. I would like to get a positive answer or no answer on that, as to whether or not there is selling expense incurred now in connection with Ned's in the same manner as in 1937, and by that I mean salesmen assigned to a territory, including Ned's, who call there in the course of their duties.

A. There is still a selling expense incurred on handling any jobber account. The actual selling time will differ compared with what it was, when he was perhaps not—when he was not on the jobber arrangement.

Q. Of course, you are aware that Ned's business differs from that of other jobbers in Detroit in the respect that it is principally a retail business. Now, is it nevertheless your understanding that the fact that the gasoline is delivered now at Ned's bulk plant instead of being delivered directly to the service station affects the selling effort expended on the account?

Mr. Hanley: Now, just a moment.

Mr. Austin: Perhaps it does, Judge. I don't know. If the witness doesn't know, I will abandon it. We can find out from Mr. Raupaugh.

Mr. Hanley: Maybe the witness does know, and I
4080 am perfectly willing that he answer, but I am not willing that the witness answer any question qualified by a speech on the part of counsel. If you ask the question, I am perfectly willing that the witness answer, but with all the qualifications involved in your prologue, the question—I am just not willing that the witness attempt to answer it.

Mr. Austin: I will withdraw it because I think I would rather ask the question, if it becomes material, from one of the men directly in charge.

Trial Examiner Ballinger: The question is withdrawn.

By Mr. Austin:

Q. On page 2538 of the record, you made this statement, Mr. Boatwright, as a part of an answer to a question asked by the Trial Examiner:

"In this particular case these salesmen each had a territory which encompassed approximately 40 reseller outlets, four of which were Ned's."

Is that a correct statement?

A. This is a correct statement: "In this particular case, these salesmen each had a territory which encompassed approximately 40 reseller outlets, four of which were Ned's."

4081 Mr. Austin: I would like to have a document marked for identification as Commission's Exhibit.

Trial Examiner Ballinger: The reporter will mark the document as Commission's Exhibit No. 82-A and 82-B for identification.

(The document was thereupon marked "Commission's Exhibit 82-A and 82-B," for identification.)

Mr. Hanley: Off the record, please, Mr. Examiner.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

Proceed.

By Mr. Austin:

Q. I show you Commission's Exhibit 82-A and B for identification and ask you if you will please describe the contents of that document.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

A. Your request was for a description of the Commission's Exhibit?

By Mr. Austin:

Q. Yes.

A. Commission's Exhibit 82-A and B describes in a condensed manner the accounting procedure followed 4082 in allocating selling costs in terms of salesmen's salaries only in the Detroit field for the month of June, 1937.

Q. Did you describe both Commission's Exhibit 82-A and Commission's Exhibit 82-B?

A. Commission's Exhibit 82-A and 82-B is in total what I have described the Commission's exhibit to be.

Mr. Austin: Well, I offer Commission's Exhibit 82-A and B in evidence.

Mr. Hanley: No objection.

Trial Examiner Ballinger: Without objection, Commission's Exhibit 82-A and B is admitted in evidence.

(The document heretofore marked "COMMISSION'S EXHIBIT 82-A and B," for identification, was received in evidence.)

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Austin: I will move, Mr. Examiner, that the hearing stand in recess until 1:45 p. m.

Trial Examiner Ballinger: The motion of counsel for the Commission is granted and we will now, at 12:25 p. m., stand in recess until 1:45 p. m.

(Whereupon, at 12:25 o'clock p. m. a recess was taken until 1:45 o'clock p. m.)

4083

Afternoon Session.

Trial Examiner Ballinger: Come to order.

You may proceed.

JOHN W. BOATWRIGHT thereupon resumed the stand and testified further as follows:

Cross-Examination (Continued) by Mr. Austin.

Q. It appears from Respondent's Exhibit 31-L that 20 percent of the time spent by each of these three salesmen at Ned's was spent on the sale of gasoline; is that correct, Mr. Boatwright?

A. Yes, sir.

Q. How many hours does a salesmen put in per day?

A. I don't know. There is no hourly restriction on salesmen would be probably a better way to answer your question.

Q. How are they paid?

A. They are paid on a monthly basis.

Q. Do you know what the customary amount of time is for salesmen to put in, in his territory during the day?

A. There is no customary amount. He has the responsibility for the sales of our merchandise in a definitely indicated geographic area. He spends the amount of time necessary to do what in his judgment is a sound job in that respect.

Q. Is the salesmen's job a full time job?

A. Yes, sir.

4084 Q. Would you say he puts in on the average of eight hours per day?

A. Yes, sir; plus.

Q. Would it then be correct to state that these three salesmen spent on the average two hours or more a day at Ned's, of which about 25 minutes was devoted to the sale of gasoline?

Mr. Hanley: I just don't like to object to this line of questioning or any line of questioning, but we are just getting into a hypothetical situation here that just really doesn't make sense. I want to object to that as utterly immaterial. The exhibit speaks for itself.

Trial Examiner Ballinger: The Examiner understands that he is trying to ascertain the basis of computation used by the witness.

Mr. Hanley: Judge, I just don't have any objection to his attempt to ascertain that, but when he asks the witness whether or not John Jones or John Doe spent 25 minutes or 23 minutes talking about gasoline in 1937, of course, it just doesn't make any sense. No witness can answer that question.

Mr. Austin: May I say, Your Honor, that I am afraid if I said the same thing about these estimates made in 1941, which were used as a basis for these exhibits, an estimate of the time spent in 1937, there probably would be a lot of objections from the Respondent. As a matter of fact,
4085 an estimate has been made here three years later that one salesman spent 35 percent of his time at Ned's and two others spent 25 percent each.

Mr. Hanley: I will withdraw the objection. If the witness can answer it, O. K. I will just withdraw the objection.

Trial Examiner Ballinger: You have a continuing objection to this line of examination.

Mr. Austin: This whole thing is based on estimate, and I am asking for estimates from Mr. Boatwright right now.

The Witness: Would you read the question?

(Question read as follows:

"Q. Would it then be correct to state that these three salesmen spent on the average two hours or more a day at Ned's, of which about 25 minutes was devoted to the sale of gasoline?")

A. No, I don't think that would be quite the correct way to state it. You don't call on every account every day. That is a physical impossibility. You call on an account and you conduct your business or your affairs with that account, and you cover as many accounts as you can and do a thorough job on each call in a day's time. Twenty-five minutes' stops would be primarily order taking; it wouldn't be selling.

By Mr. Austin:

Q. Isn't order taking selling?

4086 A. Oh, order taking is the ultimate result of selling.

Q. It is a selling expense, isn't it?

A. Oh, definitely.

Q. I wasn't attempting to state how much time any salesman spent at Ned's on any day, but there is an estimate here of 35 percent for one salesman and 25 percent for each of two others, so that covering the total time there there is an average of more than one-fourth of their time at Ned's. That is stated right on the face of the exhibit. I am just asking you to translate that into hours instead of percentages. In other words, how much time is 25 percent or 35 percent of the salesman's time and how much is 20 percent of that? That is just an arithmetical computation, I believe.

A. My difficulty is that I have stated that we have no limitation on hours. Now, if you state the limitation of hours as an assumption as being eight, then the application of the 25 percent in the case of Mr. Coutchie would be that he would spend on an average two out of eight hours in dealing with this customer. Then if 20 per cent of that time were allocated to gasoline, then 20 percent of 120 minutes would be chargeable to gasoline.

Q. Well, that is all I was trying to bring out, Mr. Boatwright.

A. It is merely an application of the percentages which appear in the exhibit.

4087 Q. Is 20 percent about the average proportion of a salesman's time which is spent on gasoline at retail reseller service stations?

A. No, it is slightly under the average amount of time spent on gasoline at retail service stations.

7

Q. On Commission's Exhibit 82-B, there is a memorandum entitled "Distribution of Time by Product, Not Reflected on Comparative Statement of Expense, Form 189." The percentage of salesman's time there shown for naphtha and gasoline is 29.6 percent. Does that indicate that the average salesman spends 29.6 percent of his time or did in 1937 spend that much of his time on gasoline or, if not, will you please explain?

A. It indicates that for the salesman on the pay rolls indicated in Commission's Exhibits 81 and 82, as explained on that exhibit, that 29.6 percent of the time of the salesman was allocated to gasoline in all channels of distribution, not 29.6 percent in any given channel of distribution.

Q. Well, I think you said in the previous answer that slightly more than 20 per cent would be an average for a retail reseller salesman, so that that would fit in rather nicely with 29.6, but I don't know whether you were referring to 29.6 at all or whether it just happens that that is also more than 20 percent.

Mr. Hanley: Now, just a moment. Is that a question?

Mr. Austin: It suggests that the witness may make
some further explanation, which he may do if he
4088 pleases, I assume. It doesn't demand an answer. It
explains my previous question.

Mr. Hanley: All right. If you care to make any further statement, go ahead.

Trial Examiner Ballinger: Do you care to make any further observation? If you do, you may do so.

A. Why, I think I should explain, first, that the 29.6 percent referred to on Commission's Exhibit 82-B is a coincidence with the statement that I previously made. The reason for my previous statement was the knowledge of the manner in which our salesmen work when selling gasolines and other products on our driveways. Their function is not so much to get the product in stock of the reseller but to aid the reseller in adopting proper merchandising methods, to see that that stock is moved. The retail salesman in selling gasoline devotes a large part of his time to the training of the attendants in the proper merchandising procedure. Therefore, with the rank and file of our reseller business, the percentage of time devoted by a salesman would be greater than would be devoted in handling the business of Ned's auto account, because our salesman was requested not to assume the responsibility of training.

4089 By Mr. Austin:

Q. Did you ask Mr. Raupaugh or Mr. Blau or any of the other officers of the company that you talked with in this connection to make a similar estimate of the proportion of salesman's time spent on gasoline of any other customers served by them, that is other than Ned's?

A. No, I did not.

Q. If they were able to make such an estimate as to the time of these salesmen spent at Ned's Auto Supply Company, could they not, in your opinion, or would they not, in your opinion, be equally qualified to make such an estimate for any other single customer?

Mr. Hanley: Oh, Judge—well, I won't make the objection.

Answer it, if you can.

A. Really, I can't answer it. I don't know.

Mr. Austin: I will withdraw that—or, let it stand. The witness has answered it.

By Mr. Austin:

Q. But I will ask you whether you know of any reason why a similar estimate might not be made with equal accuracy for any other single tank wagon reseller station served by these three salesmen?

A. Oh, yes, with 400 approximately reseller outlets, no one of these 400 would be as clearly and indelibly im-
4090 pressed upon the minds of the supervisory force as would an account being in the neighborhood of 4,000,000 gallons per year, so that it would require quite a different degree of ability to estimate time devoted to gasoline at any other given individual little reseller outlet than would be with an account of this size.

Trial Examiner Ballinger: Would it be possible to allocate the cost of servicing a small station separately?

The Witness: I do not know, your Honor, that it would be possible. I would think that it would be a highly impractical effort.

Trial Examiner Ballinger: Well, does the Examiner understand from your testimony a truck might be loaded with gas, and a small portion of the load dumped at an individual station, the truck goes on and unloads at other stations. Now, how would it be possible to compute the exact cost of the transportation and delivery of the gas that was dumped at the small station?

The Witness: I do not know, your Honor, short of a special time study, which even if conducted would require the exercise of judgment on the fairness of the allocation even after the time study were made.

Trial Examiner Ballinger: Well, could there be any possible approximation?

The Witness: I just don't know, your Honor. It does not seem possible to me, nor practical.

4091 By Mr. Austin:

Q. Well, hasn't that actually been done here, Mr. Boatwright? You have these 018 tickets, and as I understand it a record is kept of the time spent by a truck on every trip and the amount of gallons delivered, and if you know the number of stops made would it not, and the gallons delivered, would it not be possible to make the same sort of computation you have done here in these labor cost studies?

A. No, it is not. What has been done, the comparison that we have made in the labor cost part of the delivery function is predicated upon the knowledge that one type of outlet purchased in full load quantity with the exception of where a partial load were dumped for our convenience.

On the other hand, we compare that with the deliveries to the rank and file of other reseller outlets in attempting to break down the cost of any given load or loads among the different retail outlets that may have been served by the same truck while on one route. It is not what we have done.

Q. It may not be exactly what you have done, but you do know for every truck that goes out and comes back, the amount of time spent on that, do you not?

A. We do.

Q. And you know the number of gallons delivered?

A. Yes, but the assumption is that the number of gallons delivered determines the allocation of time which 4092 should be charged to any one of the outlets served while on the route. I do not know that that is the condition.

Q. Well, that might be arguable, whether you make the cost the same per outlet regardless of gallons, which I do not agree with.

A. Yes, whether or not the outlet basis would be the better, if it was to be done, whether it should be done on a per outlet basis or per dump basis or per gallon basis, I do not know.

Trial Examiner Ballinger: Does the distance of the stations enter into a computation?

The Witness: Oh, yes.

Mr. Austin: Yes, they should, your Honor. I do not believe that was used in this exhibit.

Mr. Hanley: Just a moment. May I have the Court's statement?

(Trial Examiner's statement and the answer of the witness read.)

Mr. Hanley: May I say, your Honor, that this does enter into the computation and is reflected in the matter of time and cost as reflected by these various exhibits, even though distance itself is not a specific item of cost and treated as such. It is definitely reflected.

Trial Examiner Ballinger: Distance does enter into the cost of the operation.

Mr. Hanley: Surely.

4093 Trial Examiner Ballinger: Of the cost, it enters into the cost of the driver's salary, the portion of the driver's salary, and also the quantity dumped at each station, and considering all of these various elements, the Examiner was in doubt as to whether any computation was possible.

Mr. Hanley: Well, Judge, to answer your first question, distance very definitely does enter into the picture, and if there can be any question about that I think the obligation is upon counsel to develop it. It certainly is in the picture.

Secondly, the question that is now propounded is should our company, respondent, have kept records pertinent to every one of the single individual filling stations. We just did not do it.

Trial Examiner Ballinger: Proceed.

Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. What is the normal or average proportion of a tank wagon reseller salesman's time which is devoted to the sale of gasoline?

A. I do not know. The allocation is by product and ignores channels.

Q. Can you tell me, Mr. Boatwright, on what prod-
4094 ucts did these three salesmen here spend the other 80 per cent of their time at Ned's?

A. On other products that were sold to the Ned's Auto Supply Company.

Q. What were they?

A. I do not know all of the products but I do know that they bought Quaker State Motor Oil, they bought Iso Vis Motor Oil, Polarline, and Stanolin Motor Oil from our company, and they may have put in many other articles.

Q. Are the salaries shown on Exhibit 31-K the total salaries of these salesmen?

A. Are you referring to the salaries shown including the 3 per cent insurance and unemployment cash item enumerated on 31-K?

Q. Yes, salaries including 3 per cent insurance and unemployment tax.

A. That is the total compensation of these salesmen during the time that they were calling on Ned's Auto Supply.

4095 By Mr. Austin:

Q. On Commission's Exhibit 82-B, there is a statement of distribution of time by products relating to salesmen's time. Would the list there include all of the products which might have been sold to Ned's by these salesmen?

A. These are all product classifications, and I think that it would encompass the total of the products that were sold to Ned's.

Q. You stated that there were tank wagon reseller salesmen. However, it slipped my mind at the moment, I was not trying to catch you here, but just as I asked this question I recalled that statement.

Now, tank wagon reseller salesmen, I thought his duties were to sell gasoline and refined oil.

A. And other products.

Q. Oh, he sells everything that is sold to the tank wagon reseller?

A. Yes.

Q. Then where his time is spent upon motor oils, and so forth, that portion is allocated to the other methods?

A. That is correct.

Q. I see. I was afraid I had gotten confused there for a moment.

A. Your understanding is correct.

Q. However, none of the time of these salesmen
4096 would be devoted to automobile supplies, would it,
in so far as that time is reflected in these exhibits?

A. No, in so far as the time is reflected in these exhibits our process is that the salesmen provide the sales promotion department with their estimates of breakdown among the channels, and their estimate of the amount of time devoted to automobile supplies as a separate channel; then to distribute our costs to petroleum products, the amount of time spent on automobile supplies is taken out of the total and the residual ratios are translated upon a basis of 100 percent time devoted to petroleum products. The time effort of the sales personnel devoted to nonpetroleum products is not in these exhibits, or these calculations at any point, to the best of my recollection.

Q. Then, that means that none of these three salesmen named here devoted any part of their time to the sale of automobile supplies?

A. We do not sell Ned's Auto Supply tires, tubes, batteries and accessories. They are Firestone distributors.

Q. Well, you do sell them some things, don't you, other than gasoline, oils—I do not recall now. I do not know that it is material. I thought there had been some mention of that.

A. Well, we do sell them specialty products. Special
byproduct is a product classification which we give to petro-
leum items packeged usually in smaller packages, and
4097 things of that type, but we do not.

Q. Like anti-freeze, things of that sort?

A. Well, if we sold Ned's any antifreeze. This Permaguard is an anti-freeze packaged. Now, in our allocation of time, Permaguard is secured through the Atlas Supply Company, and it is classified as an automobile supplies item; and I am thinking of such an article as fine oil, or some small packages of lubricating oil to be sold for household purposes, things of that sort. They may have sold that to them, I do not know.

Q. On direct examination you were asked the following question by Counsel for the Respondent:

"As a result of your study, Mr. Boatwright"—

Mr. Harley: The page number, please?

Mr. Austin: Page 2534.

By Mr. Austin:

Q. "As a result of your study, Mr. Boatwright, and without respect to any particular individual salesman, do you or do you not know what the usual percentage of time is that is spent by the salesmen on the various allocations of his duties?" and you answered that question in the affirmative, your answer was as follows: "That is an important part of our regular annual studies of profit by product, by channels, by fields, and the result of this analysis results in the sales promotion department frequently redirecting their selling efforts according to the
variation of operations; thus we may find an indi-
4098 vidual or individuals who are on the pay roll as sales-
men that are devoting themselves primarily to some
function which could be better performed by an office boy, or something like that, and not devoting their time and attention to the job of selling merchandise. Therefore, those analyses bring out annually the different ratio of effort in different fields by channels; yes, sir."

Can you not tell us, then, Mr. Boatwright, the percentage of time spent by the average reseller salesmen on gasoline, motor oils, and refined oils?

Mr. Hanley. Now, just a moment, Mr. Boatwright.

In the first place, that question is objected to on the ground that counsel has undertaken to make an argument in his question, and then he said that the witness had answered the question affirmatively. I move that that be stricken; the answer speaks for itself.

I object, Your Honor, to counsel making an argument on law and fact when he asks a question of the witness.

Furthermore, I object to the specific question as now propounded for the reason that it has no relation at all to the answer given by the witness on page 2535, to the question there propounded to him. I have no objection to the question as such if counsel cares to propound it as an independent question.

Trial Examiner Ballinger: Was the answer given
4099 by the witness as stated by Counsel for the Com-
mission?

Mr. Austin: I read it from the record, Your Honor, and the answer shows itself, that the question was answered in the affirmative.

Trial Examiner Ballinger: The objection is overruled.

The Witness: May the question be re-read?

(Record read.)

4100 The Witness: May the question be re-read, please?

Trial Examiner Ballinger: Read the question.

(Question read.)

By Mr. Austin:

Q. I mean each one of those separately. I will also add lubricating oils for the fourth.

A. I can't tell you that from memory. Once a year we attempt to determine the manner in which our salesmen spend their time in the promotion of our products in an effort to determine whether the promotional efforts or the sales effort is allocated approximately in keeping with the profit importance of the different items. There are 28 fields—no, 27 fields. Each of these fields provide us with different estimates of time used in the different channels on different products, and from my own memory, without consulting records, I am sorry, I can't give the product ratio breakdown from memory in the Detroit field by products. It is just too many figures to depend upon accurately for your memory to recall.

Q. Could you give us the figures after consulting your records as applied to reseller salesmen?

Mr. Hanley: Just a moment. May I have that question, please?

(Question read.)

A. I could give you the estimate of the supervisory force in the Detroit field on gasolines and naphthas, 4101 refined oils and motor oil after consultation with my records. I do not have those records with me in the courtroom. I may have such a study with me, although I am not certain that I do, in Washington.

Mr. Hanley: The question and the answer are objected to, your Honor, as immaterial because of its generality, but if the court deems it material at all, respondent now offers to develop any records respondent has as to the figures concerning which counsel is questioning.

Trial Examiner Ballinger: The witness has only been asked whether such records exist, as I understand.

The Witness: They do not exist, your Honor, as a part of our official accounting procedure but, as I say, once a year we attempt to determine whether the sales effort is allocated in the manner conducive to best profitable operations and we seek estimates of supervisory staffs in different fields.

By Mr. Austin:

Q. I would like to have such a statement of distribution of time, Mr. Boatwright, if you could furnish one which you believe to be reasonably accurate.

Mr. Hanley: Let the record show that we are willing to furnish any figures that are desired by the Commission, but let the record also show that we want a specific request so we know exactly what we are supposed to furnish.

4102 Mr. Austin: I will call attention again to the question which I previously quoted on the record, which was asked by Judge Hanley on direct, and that was whether Mr. Boatwright knows what the usual percentage of time is that is spent by a salesman on the various allocations of his duties. That is exactly what we have been talking about and that is the question that was asked on direct.

Trial Examiner Ballinger: What is the answer?

Mr. Austin: The answer was what I read into the record, your Honor.

Mr. Hanley: Well, it is a long answer, Judge, and there isn't any use going into this argument. If counsel will make his request, we will undertake to furnish the material.

Mr. Austin: The last two words of the answer were "yes, sir." But if you will bear with me a moment, I only referred to that again because I now wish to refer again to Commission's Exhibit 82-B.

By Mr. Austin:

Q. And it is true, is it not, Mr. Boatwright, that the answer to that question as applied to salesmen generally and without restriction to any one channel appears on Commission's Exhibit 82-B?

Mr. Hanley: Do you understand that question, Mr. Boatwright?

The Witness: I am not certain that I do.
4103 Will you read it?

(Question read.)

A. I think my answer is already in the testimony. We make no allocation by products, by channels in our official set of books and our official accounting activities.

By Mr. Austin:

Q. Can you answer that question yes or no, Mr. Boatwright?

A. I can not.

Q. Because I am referring here specifically to this list of percentages under the heading "memorandum" on the bottom of the end of Commission's Exhibit 82-B.

I think your Honor has a copy of it there.

And I am simply asking you if that is not a breakdown by percentages of the time spent by salesmen generally without the restriction to any particular channel.

A. Then I didn't understand your question.

Mr. Hanley: Now, just a moment. Is that a question?

Mr. Austin: Yes.

Mr. Hanley: Your Honor—

Mr. Austin: He says he didn't understand my question, so now I think I made it clear.

Mr. Hanley: All right.

A. If that be the case, Commission's Exhibit 82-B, the memorandum figure at the bottom of the page, is a distribution of time by product which ignores channels. 4104

By Mr. Austin:

Q. Now, what I have asked you to produce, if you can, is simply a similar breakdown for the tank wagon reseller channel. You have produced here in general, as I understand it, for all salesmen in all channels. I would like to have it for the tank wagon reseller channel, if it can be done.

Mr. Hanley: Mr. Austin, we have produced it for the tank wagon reseller channel. You have that.

The Witness: No, Judge. That is all channels, that memorandum figure.

Mr. Hanley: It is on the bottom of 82-B, to be sure, but now you are asking us, as I understand you, to break out of that the tank wagon reseller channel.

Mr. Austin: Well, this is a percentage list, Judge. The percentages would not necessarily be the same and, in fact, would probably be different for the tank wagon reseller channel.

Isn't that right, Mr. Boatwright?

Mr. Hanley: Certainly, they will be different.

The Witness: Yes.

Mr. Hanley: There is no question about that.

Mr. Austin: Yes.

Mr. Hanley: But, Judge, I wonder if your Honor understands what this is about?

4105 Trial Examiner Ballinger: Yes, I think I understand.

Mr. Hanley: On the bottom of 82-B is a percentage allocation by products. Now, that isn't the way we keep our books.

Trial Examiner Ballinger: I appreciate that.

Mr. Hanley: In naphtha and gasoline, for instance, on the first item, that applies to the sale of naphtha and gasoline through tank wagon reseller channels and through tank car and consumer channels and what have you. It is an arbitrary classification.

Trial Examiner Ballinger: Well, he is asking for another arbitrary breakdown.

Mr. Hanley: He is asking us now for tank wagon reseller classification and, as a matter of fact, that is what he has got. That is what Exhibit 31, Exhibit 33 and all the rest of the exhibits that we have put in here are. I just don't understand the request.

Mr. Austin: No, this is a distribution of time by product for all salesmen, and I want a similar distribution of time by product for tank wagon reseller salesmen.

I think you understand it, do you not, Mr. Boatwright?

Trial Examiner Ballinger: I think the witness understands the request.

4106 The Witness: Well, I understand your request.

The question in my mind is whether you understand the difference in the figures that you have requested and these figures as shown on Respondent's Exhibit 82-B. These figures as indicated on Respondent's Exhibit 82-B are a result of the time distribution as furnished by the individual salesmen and are used in the allocation of our costs. Once a year we attempt to get an estimate of the supervisory group over these reseller salesmen to ascertain whether we can get a product breakdown within channels. It is not a part of any of our regular accounting functions, nor is it a part of any of the means whereby we spread our costs.

By Mr. Austin:

Q. I realize that.

A. It is merely an effort to evaluate the effort of our men and it is not predicated upon the reports of the individual salesmen. I can't duplicate exactly the distribution of time by products within any channel of distribution.

Mr. Hanley: May we go off the record, Judge?

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

We will have a recess.

(A short recess was taken.)

4107 Trial Examiner Ballinger: Come to order.

You may proceed, Mr. Austin.

Mr. Austin: I would like to have this paper marked as an exhibit, for identification.

Trial Examiner Ballinger: The Reporter will mark the paper as Commission's Exhibit No. 83, for identification.

(The document was marked for identification "Commission's Exhibit 83.")

By Mr. Austin:

Q. I show you Commission's Exhibit 83, for identification, and ask you if you are familiar with that document.

A. I am familiar with this document in a general way. I did not prepare the document.

Q. Will you describe the information shown therein.

A. Commission's Exhibit 83, for identification, illustrates the distribution of time by classes of salesmen among channels and by class of products ignoring channels.

Mr. Austin: May it be stipulated that that exhibit, Commission's Exhibit No. 83, for identification, was supplied to the Commission by the Respondent during the course of hearings in Detroit at the Commission's request, and was prepared by the accounting staff in the Detroit division office.

Mr. Hanley: It may be so understood, Your Honor.

May I reserve, however Your Honor, any objection to its materiality if it is offered.

4108 Trial Examiner Ballinger: This comes within your general objection.

It is reserved.

By Mr. Austin:

Q. What period does this compilation or for what period was this compilation made?

A. The period is indicated in the upper righthand corner. As I recall, it was during the month of March, was it not, 1941—and would be the distribution of time among channels and among products ignoring channels for the first quarter of 1941.

Q. Have you any reason to believe that the distribution of time shown here for reseller salesmen would be substantially different in 1941 than it was in 1937?

A. I do not know.

Q. Do you know of any factors as to change in the method of doing business of the company or change in salesmen's duty which would result in a difference in the relative time spent by salesmen on different products in 1941 than in 1937, referring now to reseller salesmen?

A. I know of no major change in the company's policies or sales practices between the years mentioned that would cause, to the best of my knowledge, any marked deviation.

Q. In your opinion, would a computation made from this Commission's Exhibit 83, for identification, of 4109 the percentages of time spent by reseller salesmen upon different products regardless of channels be as accurate as any estimate which now could be made of the same distribution of time for 1937?

Mr. Hanley: Just a moment.

Will you read that question, please?

(Question read.)

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

Proceed.

Read the question again, please.

(Question read.)

A. Do you mean by your question that a calculation of the proportion of time devoted to different products by the reseller salesmen during the first quarter of 1941, that the ratios so derived would be representative of the distribution of time by the reseller salesmen during the year 1937?

By Mr. Austin: Q. Yes.

A. I do not know for this reason: Our sales of merchandise varies by seasons, thus during the first quarter considerable effort is devoted to the sale of motor oil and to the sale of automobile supplies which might reflect a seasonal influence as compared with the proportionate time of these two products on an annual basis; there- 4110 fore, I can't state that a calculation predicated upon one quarter would be completely representative, even barring any changes of sales policy that might have taken place during that time period without checking.

Q. I assume, Mr. Boatwright, that these distribution of time reports similar to Commission's Exhibit 83, for identification, are available for the last nine months of 1940?

A. I am quite sure that they are.

Q. And if the three reports covering those nine months were added to this report we would have the coverage for a full year, would we not?

A. Yes, sir.

Mr. Austin: I would then like to call upon the Respondent to produce the similar report entitled "Schedule No. 4, Detroit Field Distribution of Time—Salesmen—Method—Class of Product," for the months of June, September, and December, 1940.

Mr. Hanley: Let's see, June, September, and December, 1940?

By Mr. Austin:

Q. Those are the correct months, are they not, Mr. Boatwright?

A. Yes, sir.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

4111 Mr. Austin: And pending the receipt of those other time reports, I will not offer this report in evidence at this time.

By Mr. Austin:

Q. Are you familiar with Mr. Gershenson's testimony about his conversation with Mr. Raupaugh and the salesmanship used by Mr. Raupaugh in persuading Ned's Auto Supply Company not to leave the Standard Oil Company?

A. No, I am not.

Q. You did make some reference today to the fact that Mr. Raupaugh and Mr. Blau were the men who really were responsible for selling gasoline to Ned's Auto Supply Company, did you not?

A. I did state today that the contract of sale, or the agreement of sale was undoubtedly made by Mr. Raupaugh or Mr. Blau and Mr. Gershenson.

Q. And do you know that when any question arose as to better contract, or a different contract between Standard Oil Company and Ned's Auto Supply Company—I mean, when such question was raised by Ned's, that those matters were discussed with Mr. Raupaugh and Mr. Blau by the Gershenson Brothers?

Mr. Hanley: If you know.

A. Do you mean if I know from my personal knowledge? I do not.

By Mr. Austin:

4112 Q. Well, do you know from your discussions with these men whom you talked to in connection with this report?

A. I do not know whether all discussions were better deals, were held only with Mr. Raupaugh and Mr. Blau.

Q. Who else might they have been held with?

A. I do not know.

4113 Q. Have you heard the references made today by the Trial Examiner and I believe by counsel for respondent as to certain sales talks and discussions of contracts between Mr. Raupaugh and Mr. Blau, on one hand, and Mr. Gershenson, on the other?

A. I have.

Q. Have you charged any of Mr. Raupaugh's or Mr. Blau's salary as an expense of selling to Ned's Auto Supply Company?

Mr. Hanley: That is objected to, your Honor, as repetitious, already having been asked and answered, and already being disclosed by the Exhibit 31-Q wherein it appears that those salaries were definitely not charged to the cost of selling Ned's or not charged to the other reseller channel, either.

Trial Examiner Ballinger: It is simpler to let the witness answer.

Have you the question?

The Witness: I would prefer to have the question re-read, your Honor.

Trial Examiner Ballinger: Read the question.

(Question read.)

A. I have not.

Mr. Austin: May is be stipulated on the record, in view of the fact that the witness has not read the testimony, and in order to save the time of going back and referring to it now, that is, reading it now, that Mr. Raupaugh's 4114 testimony and Mr. Gershenson's testimony show that numerous conversations were had between Mr. Gershenson and Mr. Raupaugh and Mr. Blau during 1936 and 1937 regarding the sale of gasoline by the Standard Oil Company to Ned's Auto Supply Company and that, according to that testimony, those conversations involved discussions of a better gasoline deal desired from time to time by Ned's Auto Supply Company, and that Ned's Auto Supply Company was retained as a tank wagon reseller customer until the spring of 1938?

Mr. Hanley: The respondent will agree.

By Mr. Austin:

Q. Mr. Boatwright, don't you think that Mr. Raupaugh's conversations with Mr. Gershenson at that time had as much value to the Standard Oil Company as a selling service as the time spent at Ned's on gasoline by these three salesmen mentioned in Respondent's Exhibits 31-K and L?

Mr. Hanley: If your Honor please, that is objected to as calling for the conclusion and opinion of the witness as to a matter relative to the value of the service of an employee of respondent. It must be perfectly obvious that sometimes an employee may do a splendid job and sometimes he doesn't do such a good job.

Trial Examiner Ballinger: This is off the record.

(Discussion off the record.)

Mr. Austin: On the record:

4115 I will withdraw the question, if your Honor please.

Trial Examiner Ballinger: All right. The question is withdrawn.

By Mr. Austin:

Q. In preparing Respondent's Exhibit 31-A to P, Mr. Boatwright, particularly in connection with Respondent's Exhibits J, K, and L, and M, under the title "selling costs" did you attempt to obtain any estimate from Mr. Raupaugh or from Mr. Blau as to the amount of time that they spent during 1937 in conversations, correspondence, and other contacts with Ned's Auto Supply Company?

A. I did attempt. In discussing in their office, the question was raised and they emphasized that it would be a guess. I did not get such an estimate. Frankly, I was seeking a way to allocate the salary account of 1000. I am satisfied that the salary account of 1900 which if it could have been allocated would have favored the cause of the respondent by enlarging the differential shown, for this reason: Approximately 7 per cent of the gallonage shown in tank wagon reseller business was done through the Ned's Auto Supply Company. I was satisfied that Mr. Raupaugh and Mr. Blau did not spend 7 per cent of their time with that account.

Q. That, of course, might well be, but would that be conclusive, Mr. Boatwright? Might it not be that upon sound accounting principles, that the time of Mr. 4116 Raupaugh and Mr. Blau which was spent on their regular and usual duties other than these special contracts for the purpose of computation of selling costs in Respondent's Exhibits 31-J to M, inclusive, have been allocated on an equal gallonage basis between all stations but that the time that they spent in selling effort on Ned's should be charged to Ned's in addition to the per gallon expense which would be arrived at from a general all gallonage allocation.

Mr. Hanley: Just a moment, Mr. Boatwright.

That question is objected to as being unintelligible and for the further reason that Exhibit 31-Q, inclusive of the salary of Mr. Raupaugh and Mr. Blau, is an allocation of expense that was not allocated to either the reseller channel or to Ned's Auto Supply Company in the breakdown of expense set out in Respondent's Exhibit 31-A to Q, inclusive, and that if there be any breakdown of expense as set out in 31-Q, that the same should be set up on the basis of a proportionate gallonage as between Ned's, on the one hand, and the reseller channel, on the other hand, and it now appears from the testimony of the witness that such an allocation would be inaccurate for the reason that approximately 7 per cent of the gallonage was handled by Ned's Service Station but that not 7 per cent of the time was used by Messrs. Raupaugh and Blau in servicing Ned's account; and, consequently, any such allocation would be unfair and would be an overburden on the Ned's Auto 4117 Supply Company.

Trial Examiner Ballinger: Do you understand the question?

The Witness: I would ask that the question be read.

(Question read.)

4118 Mr. Hanley: Counsel has revised his question. I have an objection to it, that it is argumentative.

Mr. Austin: Please, Judge, I did not want to interrupt you, but I wanted to get the question straight, please.

Just read the last part of that, please.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

Do you understand the question?

The Witness: No, sir.

Trial Examiner Ballinger: Does Counsel desire to reframe the question?

Mr. Austin: I shall try.

Mr. Hanley: Just a minute.

Off the record, please, Mr. Examiner.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: All right. On the record.

Proceed.

By Mr. Austin:

Q. I will try and rephrase it, Mr. Boatwright.

Suppose you had set out to make an allocation of Mr. Raupaugh's salary upon the assumption that the time he spent with Mr. Gershenson was a selling expense 4119 chargeable to Ned's Auto Supply Company, in your opinion would it have been unsound from an accounting standpoint to have segregated that portion of Mr. Raupaugh's time as a selling expense chargeable to Ned's Auto Supply Company business and then to have made an allocation of the balance of Mr. Raupaugh's time between all accounts on all gallonage basis?

When I asked you if you had set out to do that, I meant if you had set out to do that in connection with the preparation of this cost study which has been received in evidence. I am not referring to any method of accounting employed by the Standard Oil Company for its own benefit.

Mr. Hanley: Judge, I just have difficulty in restraining myself from objecting—if you can answer the question, if you understand the question and can answer, go ahead.

Trial Examiner Ballinger: Do you understand the question?

The Witness: I am not certain that I do.

If I understand properly, your question breaks down first, assuming a possible allocation of the salary item of supervision, would I have charged to, one, Ned's Auto Supply a given amount which would then have been divided by the gallonage of Ned's Auto Supply, and, two, have charged to the remainder of the tank wagon reseller account the residual—

By Mr. Austin:

4120 Q. Including Ned's Auto Supply.

A. Well, I am sure I do not understand it now, because it would not have been sound for me to have included as well as excluded in the same calculation, would it?

Q. I think so, because of the fact that this was an unusual situation which led to these conversations.

Now, it may be that in every other year but in 1936 and 1937, it may be in 1939 that the only way that Mr. Raupaugh's and Mr. Blau's salary could be allocated would be on an all-gallonage basis, that may be true for 1937 for as much as any other year except for this special situation which was covered by these conversations, so that I am asking you whether in your opinion it would have been unsound from an accounting standpoint to have first segregated the time spent on Ned's on this particular selling situation and charged that to Ned's, and then to have charged the balance of the time of all stations including Ned's on an all-gallonage basis?

Mr. Hanley: That is objected to as thoroughly argumentative. It is just a speech in support of an attempted conviction of the Respondent for not doing what counsel thinks Respondent ought to have done.

Mr. Austin: I asked for his opinion as an accountant, Your Honor.

Trial Examiner Ballinger: The objection is over-4121 ruled.

A. Well, Your Honor, I don't know whether—the question would I have taken the proportion of the cost incident to Mr. Raupaugh's and Mr. Blau's testimony with Mr. Gershenson and charged that off to discussion?

Trial Examiner Ballinger: If that could have been ascertained.

The Witness: Yes, and then would I have taken the rest of their cost and divided it by all gallonage tank wagon resellers, including Ned's, or would I have taken the sum total of the selling effort of the supervision force if it had been possible to ascertain, devoted to Ned's Auto Supply, and state this is the cost of supervision incident to Ned's to be divided by Ned's gallonage while on the other hand the remainder of the supervision time is to be divided by the rest of the gallonage and get a per-gallon cost. I do not know what I am to charge this discussion to even if it had been possible to ascertain. I cannot answer the question as phrased.

By Mr. Austin:

Q. You could have obtained an estimate from Mr. Raupaugh, could you not, as to the amount of the time he spent with Mr. Gershenson on these conversations about Ned's deal with Standard Oil Company?

Mr. Hanley: Oh, that is objected to as a conclusion, Your Honor. I have no objection to his asking whether or not he attempted to obtain any estimate or not,

4122 whether he could have obtained it or not is something that is in Mr. Raupaugh's mind.

Trial Examiner Ballinger: That objection is sustained.

By Mr. Austin:

Q. I believe you already said you made no effort to do that, Mr. Boatwright?

A. That is not true. You asked me previously if I had attempted, and the testimony will show that I raised the question while in discussion in Mr. Raupaugh's office, and we did not feel that an honest calculation could be made based on that memorandum.

Q. And did you obtain any such estimate of the time spent?

A. I did not.

Q. But you did obtain from Mr. Raupaugh and Mr. Blau an estimate of the time spent by Mr. Robinson and Mr. Meulenberg and Mr. Contelhie in 1937 with Ned's Auto Supply Company?

A. I did.

Q. When one of your salesmen, reseller salesmen, happens to take an order for one of these products, that is classified as automobile supplies, in what channel is his time prorated for that sale?

A. When an order is taken it is not taken for a product; it is taken for products.

Q. Well, let's don't be technical about that. I

4123 want to know whether some of the time of the tank wagon reseller salesmen is charged to the other methods channel?

A. Some of the time of the tank wagon reseller salesman is charged to other methods channel.

Q. And is some of it ever charged to automobile supplies channel?

A. Yes.

Q. And didn't you say that he does not ordinarily sell automobile supplies, or did you?

A. No, I did not. I said that ordinarily he did sell automobile supplies, and that was a part of his regular responsibilities. The tank wagon reseller salesman does regularly sell automobile supplies, and does submit quarterly an estimate of his time devoted to the sale of that line of products.

Q. Well, perhaps I am recalling some testimony about this canned materials. Didn't you say that they do not sell tires?

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Well, if you cannot answer the question I asked you a moment ago, Mr. Boatwright, can you answer this question: For the purpose of the comparison of selling expense made in your Exhibits 31-K, L, and M, in your opinion would it be improper to include Mr. Raupaugh's salary for the time spent by him with Mr. 4124 Gershenson in 1937 as an expense of sale for Ned's Auto Supply Company?

Mr. Hanley: Well, now, in the first place that is objected to because it assumes that the witness could not answer a question previously put to him, and that is unfair to the witness.

I object to the form of the question.

Mr. Austin: The witness said he could not answer it.

Mr. Hanley: It is unfair to the witness.

Mr. Austin: The witness said he could not answer it.

Mr. Hanley: If counsel has a question to ask he should propound the question and not say to the witness if you cannot answer such and such a question I will ask you this question.

Trial Examiner Ballinger: The objection is sustained on the form in which the question was asked.

Counsel may reform it.

By Mr. Austin:

Q. Did you not state, Mr. Boatwright, that you could not answer a question I asked a moment ago?

A. You have asked so many—I did state in the course of the afternoon I could not answer a specific question. I do not recall which question.

4125 Mr. Austin: I would like, if Your Honor please, for the stenographer to go back, and I would like to re-ask the question to which I have reference.

Mr. Hanley: Is it important, Your Honor? If counsel has a question may he not just ask the question?

Mr. Austin: I have not that written out.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. For the purpose of the comparison of selling expense made in this Respondent's Exhibit 31-K, L, and M, in your opinion would it be improper to include Mr. Raupaugh's salary for the time spent by him with Charles Gershenson in 1937 as an expense of sales to Ned's Auto Supply Company?

A. It would not have been improper had I been able to determine the cost so incurred.

Mr. Austin: That is all.

I will now move to adjourn, Your Honor, until we can read the record of what has been said.

Trial Examiner Ballinger: The motion of counsel for the Commission is granted, and now at 4:40 p. m. the hearing stands adjourned to be reconvened at 10 a. m., June 19, 1941, at Room 332, Federal Trade Commission Building, Washington, D. C.

(Whereupon, at 4:40 p. m., June 18, 1941, the hearing was adjourned.)

4126

Room 332, Federal Trade
Commission Building,
Washington, D. C.,
Thursday, June 19, 1941.

Met, pursuant to adjournment, at 10 a. m.

Before: Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., appearing on behalf of the Federal Trade Commission.

Harold R. Hanley, Esq. (910 South Michigan Avenue, Chicago, Ill.), appearing on behalf of the Respondent.

4127

PROCEEDINGS.

Trial Examiner Ballinger: Come to order.

This is a reconvening pursuant to notice, Docket No. 4389, in the matter of Standard Oil Company, at 10 a. m., June 19, 1941, Room 332, Federal Trade Commission Building, Washington, D. C. The last hearing was held in Washington, D. C., June 18, 1941.

The Reporter will note Counsel for the Commission and Respondent present.

You may proceed.

Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Hanley: I just want to make an offer of proof on the record.

It has been suggested by Counsel for the Commission that there should have been an allocation of Mr. Raupaugh's time to sales cost in connection with Ned's Auto Supply Company, and other costs, including Mr. Blau's salary, the assistant manager, and the other items which appear in Exhibit 31-Q, all of which were in the Respondent's calculation of cost.

It appears from the testimony of the present witness that had those costs been included, that it would have had the effect of widening the differential as between the

4128 cost of selling through the reseller channel and selling to Ned's Auto Supply Company. It further appears from the witness' testimony that in the interest of conservatism and because he could not find an accurate means of allocation, he excluded all of the items which appear in Exhibit 31-Q from any calculation of costs. Further, it appears from the testimony of the witness that if any allocation be made in respect of the items appearing in 31-Q on the basis of gallonage, that on that basis approximately 7 percent of that cost would be chargeable to Ned's Auto Supply Company, and the witness has stated as a part of his testimony that he knows of his own knowledge that there was not 7 percent of the time or effort of Mr. Raupaugh or Mr. Blau or the other individuals involved in 31-Q applied to sales effort on Ned's Auto Supply Company. Further, that however it is figured and assuming its inclusion, it amounts to somewhere in the neighborhood of 43 1000ths of a cent per gallon, which is an infinitesimal amount when we are considering the question of cost.

Trial Examiner Ballinger: I do not recall any testimony of the witness as to what it would result in if included.

Mr. Hanley: I think Your Honor is right about that, but all the basic figures are in the record, Judge; the exhibits are in and the gallonage is in, and it is just a matter of mathematics.

4129 However, I want to make this offer now: That if in the judgment of the court or the Commission the Respondent has been in error in excluding Exhibit 31-Q from a computation of cost, we now offer, Your Honor, to include on any basis, any basis at all, that in the judgment of the Commission is fair and reasonable.

Mr. Austin: That statement has been taken down. I don't understand that it is going into the record, Your Honor.

Mr. Hanley: It is in the record. I certainly want it in the record. I am making the offer.

Mr. Austin: I move to strike it completely, Your Honor. It is absolutely nothing but an argumentative statement. I was amazed when I saw the Reporter taking it down. I see no possible excuse for it.

Trial Examiner Ballinger: The motion to strike is denied.

Mr. Austin: I would like to have it reread because if it is the kind of a statement I think it is, I shall have to appeal on it; if not, why, then—

Trial Examiner Ballinger: Read the statement.

(Record read.)

Mr. Austin: I amend the motion to strike, Your Honor, to apply to all but the last sentence.

Trial Examiner Ballinger: The amended motion is denied.

4130 Mr. Austin: Now, I strongly urge, Your Honor, that such statements should not be permitted on the record in any case tried before the Commission.

Trial Examiner Ballinger: Well, that, Mr. Austin, is undoubtedly the opinion of counsel. It is not the opinion of the Trial Examiner. Similar statements have been permitted in this case and I see no reason why an exception should be made in this instance.

You may proceed.

Mr. Austin: Off the record. May I, for a moment? May we go off the record?

Trial Examiner Ballinger: Certainly. Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Let us proceed. On the record.

JOHN W. BOATWRIGHT thereupon resumed the stand and testified further as follows:

Cross-Examination (Continued) by Mr. Austin.

Q. I will ask you just one more question about the subject we were on yesterday, Mr. Boatwright.

In your opinion did the time of Mr. Raupaugh spent in conversations with Mr. Gershenson which were re-
4131 ferred to yesterday represent a selling expense or constitute a selling expense of the company as much of the time spent at Ned's on gasoline by these three salesmen mentioned on Respondent's Exhibit 31-L, and by "as much" I mean from an accounting standpoint, was the time spent by Mr. Raupaugh as much a selling expense as the time spent by these salesmen? I am not speaking about amount.

A. Ignoring amount or per gallon cost, Mr. Raupaugh's time negotiating with the Ned's Auto Supply Company was assuredly a selling cost of retaining the Ned's Auto Supply outlet.

Q. Now, will you please turn to Respondent's Exhibits 31-L and M, the subheading "Selling Expense Incurred on Reseller Gallonage Other Than Ned's."

Are the expense items listed opposite the account numbers at the top of Exhibit 31-M lifted from the Detroit Form 189 for 1937?

A. They are, with the exception that we have added the 3 percent Social Security and Unemployment Tax to the salary item.

Q. That is account 1004?

A. That is correct.

Q. The salesmen whose salaries and expenses are listed in those accounts sold some products other than gasoline, did they not?

A. Yes, sir.

Q. What products did they sell?

4132 A. Any of the products of the Standard Oil Company that we distribute through reseller outlets, or if opportunity presented itself any of the commodities that we sell through any outlet.

Q. What allocation of the salaries and expenses of these salesmen has been made as between products?

A. The allocation is made between channels—the allocation which you see of account 1004 is a channel allocation to the reseller channel.

Q. Is the allocation to which you refer the allocation shown on Commission's Exhibit 82-B, the top two divisions on that page?

A. The top part of Exhibit 82-B is an illustration of the means of allocation employed in making the allocation in 1937.

Q. And was the allocation to which you refer an allocation between channels—that is, between tank wagon reseller, tank wagon consumer, and other methods?

Well, that is not complete because I suppose as shown on Commission's Exhibit 82-B there may have been also some allocation to non-petroleum merchandise.

A. That is entirely possible.

Q. But the question I am trying to ask is whether,—referring to Commission's Exhibit 82-B, in the middle of the page, there is a statement headed "Percentages Used

in Distributing of Salaries, Salesmen, for June, 1937,
4133 as to Method of Delivery and Products." Then appear the figures "Tank Wagon Reseller, 20.5 Percent; Tank Wagon Consumer, 21.2 Percent; Other methods, 58.3 Percent." The total is 100 percent.

Were those the figures used for the allocation of the salesmen's salaries and other expenses to the tank wagon reseller channel on Respondent's Exhibit 31-M?

A. They were the ratios of time that were used in allocating these expenses for the quarter following June of 1937. You will recall that I explained that we make a direct time distribution once a quarter. The quarterly distribution of time for the second quarter of the year becomes the basis of distribution of costs during the third quarter of the year. Likewise, the distribution of time during the third quarter is used as a basis for the distribution of time in the fourth quarter.

I am afraid that the top part of Commission's Exhibit 82-B is not entirely clear. May I explain it?

Q. Yes.

A. Just a moment?

You will notice under point No. 1, salaries of the salesmen, pay roll No. 5, an amount of $15,551. Now, the first act in allocating that is to remove the influence of non-petroleum products, which is the second item shown as $793.10. Now, the salaries charged directly to sub account
7004, which is petroleum products, is $14,757.90,
4134 which is the residual after taking out the non-petroleum products. After taking out non-petroleum products, we add that portion of the time of agents and agent salesmen who are in charge of salaried stations devoted to selling according to their time allocation, giving us a total direct selling charge which is shown as $15,979.14. That amount is directly chargeable to petroleum products only. That amount is the amount which is spread among the three channels, and during the third quarter of the year, the ratios as shown, referred to in the middle of the page, were used in spreading subsequently monthly direct selling costs on Form 189, the marketing expense statement of the company.

I wasn't certain that you understood that we had taken out the non-petroleum products.

Q. Yes.

A. I just wasn't clear that you had.

Q. Well, I am glad to have the explanation.

The selling expenses listed at the top of Respondent's Exhibit 31-M includes expenses of sale of what products?

A. All of the products, petroleum products.

Q. Well, the selling expenses at the top of Respondent's Exhibit 31-M include the sale of all petroleum products?

A. The selling expenses at the top of 31-M is that portion of the direct selling charges allocated to the reseller
channel, of which approximately 98 percent com-
4135 prised gasoline. The residual 2 percent comprised
refined oils.

Your will recall that in the testimony yesterday, I stated that any time devoted to the sale of motor oil and the other products were allocated to the other methods channel.

Q. Yes.

A. That is why on Commission's Exhibit 82-B the other methods channel receives 58.3 percent of the selling cost.

Q. Well, these figures would be the figures, at the top of Respondent's Exhibit 31-M, that would result after applying these percentages stated for the channels, in the middle of Commission's Exhibit 82-B, would they not? At least for the quarter covered?

A. If this were a quarterly figure, your statement would be correct. This is a composite of four such similar allocations.

Q. Now, in addition to gasoline and refined oils, did those figures at the top of Respondent's Exhibit 31-M also include some small amount of tractor fuel?

A. I think it included less than 1,000 gallons of tractor fuel.

Q. Was there any other product included therein?

A. No.

Q. Have you stated for the record just what are refined oils?

A. I think I have. I should be glad to do it again,
4136 if there is any question about it.

Mr. Hanley: You have answered it. Go ahead again.

A. Our refined oils classification includes Perfection Kerosene, Eosene, Neosene, Fortnight Long Time Burning Oil, and Long Time Burning Oil. All of the products named, after naming Perfection Kerosene, are of a similar nature but used for rather specialized purposes, some of which enter into insecticides, some of which are sold to railroads for the torches used for thawing out switches, some are used for torches placed on the streets as warning signs, and so forth. That is our refined oils classification.

Mr. Hanley: Judge, may I ask one question as a matter of clarification?

Trial Examiner Ballinger: You may.

Mr. Hanley: All of these refined oils to which you have referred, Mr. Boatwright, like Neosene and Eosene and Perfection are just kerosene and coal oil in layman's language, are they not?

The Witness: They are submitted to slightly different refining processes. They are, in the layman's language, a part of the family of kerosene. None of the products other than kerosene would be found in the reseller channel at all.

By Mr. Austin:

Q. Mr. Boatwright, the computation of selling expense
on Respondent's Exhibit 31-L has apparently been
4137 made for gasoline only. Why has not a similar seg-
regation of expense been made for reseller gallonage
generally on Respondent's Exhibit 31-M? In other words,
even if there may be 2 percent of the kerosene included on
31-M, why should that not have been eliminated if it was
eliminated in the computation of selling expense for Ned's?

Mr. Hanley: I don't understand that question. Do you, Mr. Boatwright? If you do, go ahead and answer it. I don't understand it.

The Witness: Yes, I understand.

A. And again I would merely have to point out that the process of dividing—I have divided by the total gallonage excluding Ned's gallonage, which results in a unit cost, and the unit cost on gasoline and refined oil to the reseller channel is the same. I could have taken out 2 percent of the cost, 2 percent of the volume. I would have gotten the identical unit cost.

By Mr. Austin:

Q. Isn't that on the assumption, Mr. Boatwright, that the cost is the same amount to sell a gallon of kerosene as it does to sell a gallon of gasoline?

A. It is an assumption, but it is not an assumption

without a pretty good foundation of fact, because the same tank wagon delivers the same product, frequently at the same time, by side rack delivery, in barrels, or if
4138 he buys a slightly larger quantity, then they have one compartment of kerosene. They are loaded the same, they are gauged the same, they are dumped the same, they are handled the same, they are delivered at the same time by the same unit.

Q. Now, aren't you off the track there a little? You are talking about handling and delivering, and what we are concerned with here is selling. In other words, I didn't ask you that question in connection with labor costs, but we are talking here now about salaries of salesmen.

A. I see.

Q. And salaries and expenses of salesmen, and I would like to call your attention to Commission's Exhibit 82-B, which contains a distribution of time by product, and shows 29.6 percent for naphtha and gasoline and 13 percent for refined oils. In other words, nearly half as much time, on the average, the salesman spent for refined oil as for gasoline.

Now, I realize that that statement of distribution of time on Commission's Exhibit 82-B is not applicable to any one channel, but, nevertheless, I think that calls for some explanation.

A. I should be glad to give it.

Mr. Hanley: Let me interpose an objection first, Mr. Boatwright.

The question is objected to because it seeks to develop costs as applied to products, whereas the Respondent
4139 does not keep its books in connection with costs as applied to products and is not seeking to make any justification in the present hearing on the basis of costs by product. Further, that that fact is recognized by the question of counsel wherein he says he understands that his question has nothing to do with allocation through channels. Further, that this memorandum on Commission's Exhibit 82-B, which was furnished at the request of the Government, and believed not to be material by the Respondent, has to do with all kinds of channels, be it tank car or tank wagon or other methods, or what not, and there just is no basis at all of comparison of costs as between the memorandum on Commission's Exhibit 82-B

and any figure allocable to selling gasoline through the reseller channel as such.

Trial Examiner Ballinger: The objection is overruled.

Mr. Austin: Your Honor, I feel I must object to statements of that sort by counsel on the record which are really an answer to the question. I know Judge Hanley doesn't feel it necessary to make any suggestions for Mr. Boatwright, but I don't think that counsel should answer questions addressed to the witness. If he wants to make a legal objection, all right.

Mr. Hanley: That is all I am making, Judge.

Mr. Austin: The last half of that objection was 4040 directed to the facts and accounting practices of the company, which is a matter that the witness is fully qualified to discuss.

Mr. Hanley: Judge, may I suggest that we take a recess?

Trial Examiner Ballinger: Take a recess.

Mr. Austin: Your Honor, I think the question is pending and it should be answered before the recess.

Trial Examiner Ballinger: You may answer the question.

Mr. Austin: Just as a matter of continuity, and we will remember what it is all about.

Trial Examiner Ballinger: You may answer the question.

The Witness: Will you read the question?

(Question read.)

Mr. Hanley: If you understand that, go ahead and answer it.

A. I am afraid I shall have to answer the question in probably three parts.

No. 1. I can understand that where it would seem to you that we were off the track, my difficulty constantly in speaking of selling costs is to limit it to a concept of one expense item. We honestly and sincerely regard any individual working on the pay roll as a salesman. Sal- 4141 aries to drivers is an expense item. Drivers are excellent salesmen, and they are important to us as salesmen.

Passing from that point to No. 2: Our greatest difficulty in the distribution of kerosene through the tank wagon reseller channel is to get our salesmen to devote some time to the product. I don't understand really why that is, but it is a product for which there is a potential far wider than our sales to tank wagon resellers indicates. In almost any metropolitan area there still remains a tremendous kerosene market for lamps, space heaters, garage heaters, and other appliances utilizing the product in that manner. The consumer purchases in small quantities. We try sincerely to get our salesmen to devote the amount of time to the product that they should. I don't think we have succeeded.

No. 3. In reply to your inquiry as to why refined oils constitute 13 percent of the total time, I would explain that it is due almost entirely to the influence of the consumer salesmen classification, wherein a preponderance of our sales in the rural channel and in the non-contract consuming channel are made up of the classification of products, refined oils.

Now, in this particular allocation, I feel I should add one further explanatory note to the previous designation of products included as refined oils. For this allocation we classify also standard tractor fuel and Stanolex furnace oil in the refined oils classification rather than giving 4142 them a separate classification.

Q. You mean in the distribution of time by product?

A. Yes. So you see the sum total of our tractor fuel sales, our furnace oil sales, and our kerosene sales made in the tank wagon consuming channel causes this item to appear as large as the 13 percent indicated. It is not a result of the reseller channel.

Q. Who are the consumers in general that account for this 13 percent of salesman's time; I mean, just as in a general way, I do not mean any names.

A. Certainly.

Our entire company sales and promotion effort is directed towards two fold classification of customers. I think I said primarily in that answer. Those customers are, first, the reseller customers; secondly, there is a broad classification which we call non-contract customers. Third, individuals who buy direct from tank wagon. The greatest single portion of that class of customers is the rural buyer.

You will recall in the testimony I stated there were in the neighborhod of 70 stations operated by commission agents in the Detroit field. Now, these commission agents serve our reseller customers, and in addition to that they load their wagon and operate regular routes direct to the farms. These are in the main the non-contract customers that I refer to.

4143 Does that help?

Q. Yes.

I am not still quite clear whether this 13 percent of salesmen's time which is assigned, or was assigned in 1937, to refined oils, how much of that goes into various channels. I do not know whether you know how much goes into the various channels, but it would not appear that you have very much difficulty having salesmen put time on kerosene, at least as to the consumer salesmen. Somebody spends that time. I do not know who it is.

A. Don't you see the market—

Mr. Hanley: Just a minute.

That is objected to as argumentative and a statement, just testimony on the part of counsel. If counsel wants to ask a question there is no objection, but a long argumentative statement is not a question.

Trial Examiner Ballinger: Do you understand the question?

Mr. Hanley: Well, is there a question?

Mr. Austin: I am sorry if it was argumentative, Judge. I am just trying to bring out the facts.

The Witness: Would you rephrase your question?

Mr. Austin: Yes.

By Mr. Austin:

Q. Have you any knowledge, or have you made any 4144 estimate of the percentage of reseller salesmen's time which is devoted to the sale of refined oils?

A. No, I have not.

Mr. Hanley: Now, Judge, while nothing is pending on the record, may I again suggest that we might have a recess?

Trial Examiner Ballinger: We will take a recess for five minutes.

(There was a short recess taken.)

Trial Examiner Ballinger: Come to order.

You may proceed, Mr. Austin.

Mr. Austin: Will you read the last question and the answer, please.

(Question and answer read.)

By Mr. Austin:

Q. Turning to Respondent's Exhibit 31-L, it is stated there that Mr. Robinson spent 7 percent of his time at

Ned's on gasoline, and Meulenberg spent 5 percent on gasoline and Coutchie spent 5 percent on gasoline. That is not quite accurate. I would like to correct. The 7 percent and the 5 percent and the 5 percent are percentages of the total time of the salesman which was spent at Ned's on gasoline; is that correct?

A. Yes.

Well, now, may I restate it? I am not certain that that would be interpreted properly. The proportion of time spent at Ned's first was estimated, then, of that time, 4145 using the same date for the calculation of the ratio seven, five, and five, were used, which in turn represent 20 percent of the time devoted to a particular product at Ned's.

Q. Now, in stating those percentages, what was the time which those salesmen spent at Ned's on the sale of refined oils included?

A. No, not in the seven, five, and five.

Q. And if the time spent on the sale of refined oils had been included, would not that have resulted in a higher cost figure per gallon of selling expense to Ned's?

A. I do not know. I do not even know that we sell refined oil to Ned's Auto Supply.

Q. You do not know whether that is sold?

A. I do not know whether that is one of the products that they buy from us.

Q. If refined oils are sold to Ned's Auto Supply Company, or were sold in 1937, should not the time expense on the sale of that classification of products have been included here for the purpose of making the cost comparisons shown on Respondent's Exhibits 31-L and M?

A. Only if I had included that same volume in the divisor. You will recall that the divisor was 4,250,000 gallons, approximately. That is purely gasoline sales.

Q. Is that purely gasoline?

A. Yes, that is purely gasoline, and had the cost 4146 of refined oil been included it would have been necessary for me to have included the refined oil volume to get a unit cost comparable with the other figure.

Q. Is that figure, 66,388,527 gallons, used on Respondent's Exhibit 31-M, gasoline gallonage only, or does it include refined oil?

A. No, that includes refined oils, that divisor included refined oil, the cost included refined oil costs.

Q. Now, that figure of 66,000,000 odd gallons was obtained, was it not, by deducting from the total gasoline and refined oil gallonage for the reseller channel in 1937 of gasoline gallonage to Ned's Auto Supply Company?

A. Yes, sir.

Q. So that if any refined oils were sold to Ned's, those refined oils are included in the 66,000,000 gallon figure used for other stations?

A. Yes, as well as the cost of selling that is included in the selling cost, you see. The only cost that we deducted was the cost allocable to gasoline to Ned's. That cost was divided by Ned's gasoline volume. The residual cost we divided by the residual gallonage, therefore my unit cost in this comparison is strictly a valid comparison.

Q. Well, isn't the net result, Mr. Boatwright, that if there was any expense of selling refined oil to Ned's that both that expense and also Ned's refined oil gallonage
4147 is included in the computation made for the reseller cost generally at the top of Respondent's Exhibit 31-M?

Mr. Hanley: Well, just a moment. That is objected to in the first place because it assumes a fact not in evidence, it not appearing that there was any refined oil sold to Ned's.

Your Honor, I am willing that the witness answer the question subject to the objection.

Trial Examiner Ballinger: You may do so.

The Witness: Would you read the question, please?

(Question read.)

Trial Examiner Ballinger: The Examiner will sustain the objection to the question.

Mr. Austin, there is no proof here of any sale to Ned's, and we are indulging in an assumption, and there is nothing to support it.

Mr. Austin: Well, Your Honor, that can be brought out later, but the witness has stated he does not know whether any refined oils were sold to Ned's or not. Now, may I not ask the witness that question, and if it turns out later that no refined oils were sold to Ned's, of course, then, the question would have no value; on the other hand, if it turns out that Ned's did buy substantial quantities of refined oils it may have some importance.

4148 Mr. Hanley: Judge, there just isn't any objection to counsel interrogating the witness about any item that appears on these exhibits at all if he wants to analyze those items. There is an objection to counsel injecting something into the record that hasn't been proved. That is all we are undertaking to do here.

Mr. Austin: There may have been refined oil sales—

Trial Examiner Ballinger: In view of counsel's statement, the question may be answered subject to the limitation—

Mr. Hanley: Answer it if you can.

Trial Examiner Ballinger: Within the objection, the limitation of the objection.

By Mr. Austin:

Q. Can you answer that yes or no, Mr. Boatwright? I intended it to be a very simple question.

A. I can answer it yes or no; it wouldn't be fair to do so. The answer is yes, but a further explanatory comment should be made, and that is that both the cost and the gallonage—in other words, if there was any refined oil cost incident to sale of kerosene to Ned's, if any were made, that cost is in the calculation. Likewise, the gallonage is in the calculation. And if it errs, it is because we have assigned or assumed an assumption of the identical unit cost to Ned's that prevails with all of the rest of the tank
4149 wagon reseller business.

I think actually that we have—if the hypothetical conditions exist, we have leaned over backward in the process of calculation on the side of conservatism.

Q. Didn't you consider it important to determine the amounts of refined oil sold to Ned's for the purpose of making this comparison of selling expense of gasoline?

A. Frankly, I did not; I do not still regard it as important. If refined oil was sold to Ned's, it was sold on the identical price basis that it was sold to other tank wagon resellers. It is not to my knowledge any question of controversy.

Q. Did you testify yesterday, Mr. Boatwright, that it is not the practice of the company to have more than one salesman assigned to one customer at one time?

A. I think that was the gist of my testimony. Whether it was given yesterday or at an earlier date, I don't know.

Q. I asked you whether you had checked to ascertain whether or not any two of these three salesmen were calling on Ned's outlets during any one period.

A. I think you are correct. That was during the discussion yesterday.

Q. I think that your answer was that that is not done, that the practice is not to have more than one salesman assigned to one customer at one time.

4150 A. That is correct.

Q. And that it was your belief that that was true as to Ned's in 1937?

A. Yes. The only exception that I can think of in an account of that nature might be in case a reseller salesman calling on an outlet thought there was an opportunity to sell some specialty product in which his knowledge of the sales values and features of the product was not as good as he thought it should be. He might invite one of the specialists to go out with him but it is pretty generally at his invitation.

Q. Referring to Respondent's Exhibits 31-K and L, did you compute the selling cost to any other tank wagon reseller or resellers?

A. You mean other than Ned's?

Q. Other than Ned's, by the same method used for the computation of cost of sale to Ned's.

A. No, I did not.

Q. Is there any reason why this could not have been done?

A. Only to repeat an answer as given to similar questions under similar conditions in previous testimony, the principal reason being that here was an account of large magnitude in which our business relationships were not the same as were our responsibilities, services and relationships to other accounts. It would have been extremely
difficult to have isolated the cost of any other tank
4150-A wagon reseller account because of these differences.

Mr. Hanley: At this point, your Honor, I call attention to the fact that at the request of the government, respondent furnished to Mr. Austin at his request a list of all of the reseller service stations supplied by the respondent in the Detroit area, no one of which had more than one outlet except Ned's, and I think the total was upward of 300. Respondent now requests that the government offer that list in evidence and if the government does not care to do so, respondent now, as a part of the cross-examination of the present witness and in connection with this question, offers that list in evidence.

Mr. Austin: I don't know. I won't object to any ruling your Honor makes on that. I don't propose to offer it at this time, and it is quite possible that I may decide to do so later, but if the respondent desires to interrupt the cross-examination to offer that list of service stations in evidence now, I have no objection to it going in evidence.

Mr. Hanley: I do so offer it. I have just done so.

Trial Examiner Ballinger: Produce the paper, the document.

Mr. Austin: I don't think I have it right here at the moment. I will be glad to get it and bring it down after lunch, Judge, if that is agreeable to you.

Mr. Hanley: Sure.

4151 Mr. Austin I am quite sure I haven't it here.

Mr. Hanley: All right.

Trial Examiner Ballinger: When the paper is offered, it will be admitted, there being no objection.

Mr. Austin: It is my intention to offer it at some later date but it had not occurred to me right at the moment.

By Mr. Austin:

Q. What difficulties would there have been, if any, Mr. Boatwright, in making a computation of selling costs for certain other individual retail service station customers other than the difficulty of obtaining an estimate of the time spent by the salesman on gasoline at such stations?

Mr. Hanley: Just a moment.

I understand that I have a general objection, your Honor, but this is specifically objected to because it does not specify what other stations counsel has in mind, and it does not specify what particular costs he refers to as being allocated to those unspecified stations.

Mr. Austin: I am referring to computation of selling costs such as was made for Ned's Auto Supply Company in Respondent's Exhibit 31-J, K, and L, and this question simply carries on a question which was asked and answered yesterday. I asked the witness at that time if an estimate of time spent on gasoline could not have just as well been
made for other stations than Ned's and he stated, in
4152 substance, what he has just stated today, that it was
easier for Mr. Raupaugh and Mr. Blau to make an estimate on Ned's because it was a bigger account and because they had a better recollection of what happened three years ago as to Ned's and were better able, as I believe

he said, to make an estimate on Ned's than the other stations.

May I pause there to ask you whether I have made a substantially correct resume of your testimony, Mr. Boatwright?

Mr. Hanley: Well, just a moment. Don't answer that yet.

The statement of counsel may be explanatory of the theory in his mind but it does not improve the question at all, your Honor. There has now been offered in evidence a list of all of the service stations supplied by the Standard Oil Company in the Detroit area. If counsel desires to ascertain whether or not a cost analysis could have been made as to any one of them, we have no objection to his asking that question, but we do object to the generality of this particular question because there is no norm, no basis on which the witness can predicate an answer.

Trial Examiner Ballinger: Read the question.

The Reporter: (Reading.) "What difficulties would there have been, if any, Mr. Boatwright, in making a computation of selling costs for certain other individual retail service station customers other than the difficulty of 4153 obtaining an estimate of the time spent by the salesmen on gasoline at such stations?

Trial Examiner Ballinger: Do you understand that question?

The Witness: Well, it is a—

Trial Examiner Ballinger: What information is desired?

The Witness: It is a hypothetical question, your Honor, that if I were given some assignment different than the one I was given, would I encounter greater or lesser difficulties in preparing an answer.

Trial Examiner Ballinger: Is that the gist of the question?

4154 Mr. Austin: The witness has already stated that it would be more difficult for him to make an estimate of time spent on gasoline at some other station than it would at Ned's. I am asking him whether that is the only additional difficulty he would encounter in making a similar computation for other stations.

Trial Examiner Ballinger: You may answer the question, if you can.

A. I do not recall the testimony exactly as you have paraphrased it in your last speech, but it is difficult, Your Honor, to answer a question as to whether greater or less difficulty would be encountered, assuming a different problem than the one you have worked out without examining the problem.

Now, there are many reasons that I could explain briefly, a few of them why the problem would assume quite a different significance.

Early in the testimony I stated that we had no driveway training responsibility for Ned's Auto Supply outlets. There is a question in my mind as to whether driveway training is incident to unit of operation or is incident to number of employees on the driveway. Some of my colleagues tell me that in their judgment it is better to allocate on a unit basis, being the number of outlets. Others have stated that it would be better to allocate on a gallonage basis. Still others, that it might be better to allocate on the number of employees at the outlet. Now, 4155 obviously, inasmuch as a salesman's duties are partially training and supervision to the extent that it is training, it is a question of personnel. That raises a question of personnel turnover, the number of helpers on the driveway, the manner in which the helpers are paid, for the simple reason that if a helper is paid on a commission basis he follows his training better than if he is paid $60 a month by the reseller, and you see the variables that enter into the picture under this hypothetical problem propounded to me are quite different than the variables which entered into the picture upon which I actually made a computation.

It is all hypothetical, you understand that, but I just don't know of anything else that I could add to that.

Q. You made a computation here of selling expense to Ned's Auto Supply Company, and that was based upon the time the salesman spent there and the salaries of the salesman; is that right, and certain other things, including such as the maintenance of the salesmen's automobiles and incidental expenses?

A. That is correct.

Q. Traveling expenses.

A. Yes, sir.

Q. Would it not have been possible to, by using the same method, to have compared the selling expense of Ned's Auto Supply Company with the selling expense of several other representative gasoline stations located near Ned's outlets?

4156 Mr. Hanley: That assumes, Your Honor, a conclusion on the part of the witness as to what are other representative stations, and I object to it, therefore.

Mr. Austin: If there is an objection upon that ground, "representative," I would have meant any stations which the Standard Oil Company might have picked out as representative; in other words, I am talking about an accounting question here, not about what was representative.

Trial Examiner Ballinger: Now, when you ask him whether any would have been possible, do you mean possible on the existing records?

Mr. Austin: Yes, Your Honor. I mean could the same method used for computing selling costs to Ned's in 1937 have been used to obtain a similar cost figure for some individual station, and I was simply trying to find out if there was any reason why that could not have been done.

Trial Examiner Ballinger: If the witness knows—

Mr. Hanley: If Counsel will state his question just the way he now has done it, I withdraw the question.

Trial Examiner Ballinger: The witness may answer it.

Mr. Austin: That is all right.

A. Now, to be sure that I have the question in mind as stated by the counsel upon revision, would you read that question?

(Question read as follows:

4157 "Your Honor, I mean could the same method used for computing selling costs to Ned's in 1937 have been used to obtain a similar cost figure for some individual station, and I was simply trying to find out if there was any reason why that could not have been done.")

Trial Examiner Ballinger: Answer the question.

A. Well, it is not so much a question of method, it is a question of the validity of your logic. In making your estimate, the estimate as such could have been used. I would not have been able to defend the method as vigorously as I am able to defend the calculation made unless I had had the opportunity to first look into the logic upon which the estimate was predicated, these various factors which I have enumerated to you in answer to your preceding question. Method itself could have been used, would the logic employed have been equally valid? I do not know.

By Mr. Austin:

Q. You mean that the same method you used here in computing the cost to Ned's might not have been as accurate method if used for some other station?

A. That is exactly what I mean.

Q. Well, let us proceed to dispensing equipment loaned. The subject is treated beginning on Respondent's Exhibit
31-N. Were the figures for the three accounts, Nos.
4158 1070, 1111, and 1513 listed on Respondent's Exhibit
31-N lifted directly from Detroit Form 189 for 1937?

A. The items under account Nos. 1070, 1111, 1513, being the following amounts: $17,144.69, $4,305.86, $672.31, were lifted direct from the form 189, tank wagon reseller channel for the year 1937, the item which is not given an account number being identified as personal property taxes on dispensing equipment loaned; may I quote the title, Personal Property Taxes, $107,646.50 at $3,0146, amounting to $3,245.11 this last item was not lifted from Form 189 for the year 1937, but is an application of the tax rate to the personal property tax value on this equipment.

Q. It is an application of the tax rate to the sum of the preceding three items, is it not?

A. It is an application of the tax rate of the taxable value of the equipment actually loaned, you see, it is not an application of the rate to the above items. The above items are expenses. It is an application of the rate to the taxable value of the property.

Q. The taxable value of the property, according to Respondent's Exhibit 31-N was obtained by expanding the depreciation expense of $4,305 to a hundred percent.

Mr. Hanley: That is objected to, Your Honor, as a statement of a fact not in evidence at all.

4159 Mr. Austin: It is right in the exhibit.

Mr. Hanley: If it is desired to elicit how the figure of personal property value was obtained, there is no objection to that kind of a question. We do object to counsel constantly testifying as a prelude to his questions.

Mr. Austin: I was reading from the exhibit, your Honor.

Trial Examiner Ballinger: Counsel may reframe his question.

Mr. Austin: I don't think it is necessary. I read from the exhibit. This exhibit is in evidence.

Trial Examiner Ballinger: But you have made a statement to the witness.

Mr. Austin: Which is a statement—

Trial Examiner Ballinger: It is not a question.

Mr. Austin: It is a statement which is in the exhibit.

Mr. Hanley: In 31-X?

Mr. Austin: Yes. I have to refer to the exhibits for all of these questions.

Trial Examiner Ballinger: Read the question, will you, please?

The Reporter: (Reading.) "The taxable value of the property, according to Respondent's Exhibit 31-X was obtained by expanding the depreciation expense of 4160 $4,305 to a hundred per cent."

Trial Examiner Ballinger: That doesn't ask him whether or not that is a fact.

Mr. Hanley: I will withdraw the objection, to iron the thing out. Go ahead and answer it.

By Mr. Austin:

Q. How was the investment in E. L. A. equipment arrived at for the purpose of computing the personal property tax actually paid by the company for 1937?

Mr. Hanley: May it be understood, Judge, that E. L. A. means "equipment loan account"?

Trial Examiner Ballinger: It is so understood.

A. Yes, the value was calculated by taking the depreciation rate on its equipment at the 4 per cent and expanding the total of the depreciation by the rate of 4 per cent to a full value as indicated, $107,646.50.

Q. You have to have the full value before you get the depreciation rate, don't you, Mr. Boatwright?

A. Yes, sir.

Q. Now, here it looks as if we started with the tail and went forward. I am trying to find out whether this figure of $107,646.50 is a more or less theoretical figure or whether the personal property tax was actually paid upon that figure in 1937.

A. Oh, yes, it was.

4161 Q. Wasn't it possible for you to obtain your personal property tax on E. L. A. equipment from some actual figure of taxes paid, or was this the only way that it could be arrived at?

A. No. The difficulty had we attempted the approach that you suggested—we have the full value of the pumps and the equipment and so forth that we calculate the 4 per cent upon. We do not have an account on each piece of equipment. In other words, let us assume that one part of the E. L. A. equipment happened to be a gasoline pump. This year that gasoline pump is at a reseller outlet. As such, the charge is to the reseller channel. The next year we may lose that account and the gasoline pump will be pulled, and its next utilization may be found in some farmyard or some large consumer with a sunken tank. To maintain an accurate record on the current location of each piece of this property by channel would involve an expense which is not practical or necessary.

Q. How is the depreciation expense of $4,305.86, Detroit form 189, 1937, arrived at? That is, from what source was it originally calculated?

A. It was calculated on the basis of the value of the equipment at reseller outlets, but that is quite different than for me taking the value of each of these pieces of property and classifying them individually and recapitulating the value of each of these pieces of property purchased at different levels.

4162 I see now what I believe to be the difficulty. In our accounting procedure on form 189, taxes, real estate and personal property, sub-account 086, is broader than on any separate group of items. It is a total. It was necessary to break that down. We had two alternatives: The one which is in your mind, which would have involved literally months of work, or the other one, taking the full value of the property, which personal property tax was paid, and we have the approval of the Internal Revenue Department of the United States of 4 per cent on that class of merchandise. So we could take the amount of the value or the amount of the depreciation charged on equipment loan agreement, expand that to 100 per cent and apply the cash rate.

Q. Was the figure $107,646.50 taken from your books or does that appear on the books of the company anywhere other than in connection with the preparation of this statement?

A. No, but the $4,305.86, which is a depreciation on this class of equipment, does appear on the books.

Q. Well, the difficulty I am having is how you could obtain that figure of $4,305.86 without first having had your total investment in E. L. A. equipment.

A. We have the total investment in E. L. A. equipment, but my memory is that investment in E. L. A. equipment is both reseller and consumer. The depreciation is charged direct to the channel. Therefore, we took the channel 4163 amount of depreciation and expanded it to get the value upon which that depreciation was predicated.

Q. I think that clarifies it. Well, in other words, did you have a total investment on E. L. A. equipment, Mr. Boatwright, and obtained a total depreciation, and then allocated the depreciation between channels.

A. The allocation is made in the preparation of form 189. It was not necessary for me to do the allocating. That was done.

Q. I mean, it was done by the company?

A. Yes.

Q. In other words, if I understand you correctly, the depreciation was figured on such equipment, for all such equipment, and then after the total depreciation figure is obtained, that figure is allocated? If that is the fact, it would explain to me what I didn't understand here.

A. I think that is true but to be absolutely certain, I would have to consult the code of accounts. We have gotten into a detail that my memory just does not support.

Q. Can you state how the annual expense for depreciation on E. L. A. equipment is allocated between channels on form 189?

A. I am afraid I would again have to consult the code of accounts. I am quite sure I know but I would want to be certain in answer to your question.

4164 Mr. Hanley: I don't know how important that is, Judge, but if it is regarded as important we will get it.

Trial Examiner Ballinger: Off the record.

(A discussion ensued off the record.)

Trial Examiner Ballinger: On the record.

Mr. Hanley: I will offer, on the record, your Honor, that if it is regarded as important by the court, we will find out how this allocation was made. Apparently, it is just a matter of formal code of account allocation, and we can find out, if it is regarded as of sufficient importance to warrant that effort.

Mr. Austin: I don't know that it is important enough for further investigation by the respondent, but I feel that the method of arriving at this total investment in E. L. A. equipment was not satifactorily explained on these exhibits, and I simply wish to try to get a more full explanation. As far as I am concerned, I am not asking the respondent to do anything further on it.

Trial Examiner Ballinger: The Examiner would suggest to counsel for the respondent, that he has no power to pass on questions as to whether or not it is important, and he would suggest to counsel that he cover in redirect every—

Mr. Hanley: We just will, in view of the expression of counsel. We certainly will cover it. If he is not satisfied, why, we want to be sure it is clearly expressed and we
4165 will cover it.

Mr. Austin: I would suggest that we adjourn for lunch, your Honor. I have just noticed it is 12:30.

Trial Examiner Ballinger: The motion is granted, and now, at 12:35 p. m., the hearing stands at recess, to be reconvened at 2 p. m.

(Whereupon, at 12:35 p. m. a recess was taken until 2 p. m.)

4166 Afternoon Session.

2 P. M.

Trial Examiner Ballinger: Come to order. You may proceed.

JOHN W. BOATWRIGHT resumed the stand and testified further as follows:

Cross-Examination (continued) by Mr. Austin.

Q. We are now discussing the subject of dispensing equipment loaned under which there is an attempt made on Respondent's Exhibit 31-M and N to differentiate in the expenses of doing business with Ned's Auto Supply Company with the expense of doing business with other service stations. In determining the tank wagon reseller expense of equipment loaned both to Ned's and to other service stations on those exhibits was any separation of this expense made between different products?

A. No, only as the expense item is allocated among the different channels. I can clarify that further to inform that E. L. A. expense, account 070 is a direct charge, gasoline and refined oil being in the tank wagon reseller account.

Q. Some equipment loaned is used for dispensing products other than gasoline, is it not, Mr. Boatwright?

A. Yes, some equipment may be loaned for dispensing motor oils, as an illustration, that will be found in your other methods.

4167 Q. That would not be included in any of these three account numbers?

A. No.

Q. Listed on Respondent's Exhibit 31-N?

A. No.

Q. When you refer to total capital investment in equipment of Ned's, the figure being $2,878.87, does that include all equipment loaned to Ned's, or does it include only equipment loaned for the dispensing of gasoline and refined oil?

A. It includes only equipment loaned to Ned's which would fall within the same classification as the account 070. A sign which may be installed at Ned's would be classified as an advertising cost, but classification of equipment is identical.

Q. Well, we are referring only to E. L. A. equipment. Now, signs are not considered loaned equipment, are they, at least for the purposes of the E. L. A. account?

A. That is correct, they are not in the classification, and the classification of items going to make up the total investment of equipment loaned to Ned's is exactly the same as the equipment loaned agreement classification on the tank wagon reseller channel.

Q. Does the expense for equipment loaned going into the tank wagon reseller channel include any expense for equipment used in connection with the sale of refined oil?

4168 A. It might, but it would be a very insignificant part. The refined oil equipment that might be loaned to a reseller account would be limited to the loan of what we classify as an old "Lubster". If you will recall on my direct examination I explained what was meant by that term, being a tank with a small hand pump mounted on the top, holding in the neighborhood of 50 gallons. Any other dispensing equipment for refined products is usually limited to an old barrel on which there has been a hand operated faucet installed. In practically every case the old barrel hand faucets are the property of the operator but not the property of the supplier.

Q. How was the figure $2,878.60 obtained representing "total capital investment in equipment at Ned's?"

A. We have a property account maintained upon the property owned by the company at every outlet. From this record we took the actual equipment loaned to that account and calculated the actual value of said equipment.

Q. What is the Detroit office form 16?

A. That is a record of the equipment installed at different individual outlets.

Q. Then is the same information available for equipment loaned to other service stations in 1937?

A. It is.

Q. This charge of .016 cents per gallon for dispensing equipment loaned to Ned's in 1937 is made here as
4169 a direct charge, is it not?

Mr. Hadley: Referring to Exhibit what, please?

Mr. Austin: Exhibit 31 M and N. It is at the top of N.

A. Yes, that is a direct charge against doing business through Ned's Auto Supply outlets.

By Mr. Austin:

Q. Was a similar direct computation made for any other service station in connection with this study?

A. No, there was not.

Q. Couldn't such a computation be made for other individual service stations in this same manner as made on Respondent's Exhibit 31 M and N for Ned's?

A. Yes, it could.

Q. Do all service stations signed on No. 461 agreements borrow dispensing equipment from the Standard Oil Company?

A. Your question is quite inclusive. I would say that the major portion of them do. There are cases, however, within my personal knowledge where individuals do not borrow such equipment.

Q. Do you have any knowledge based upon the company's records as to the number of 461 contract service stations in Detroit or the percentage of them who borrowed dispensing equipment from the Standard Oil Company in 1937?

A. I couldn't give you a percentage. I don't have
4170 any direct personal knowledge. I know of illustrations of both types but they are individual illustrations.

Q. Insofar as your knowledge will cover the subject, Mr. Boatwright, may it not be that there are some stations who did not in 1937 borrow any dispensing equipment from the company?

A. I think that is entirely possible.

Q. Borrowing of such equipment is optional with the reseller, is it not?

A. Yes. It depends primarily upon what equipment the reseller owns.

Q. In other words, whether he needs it or not?

A. That is right.

Q. I suppose it also follows that some service stations borrow more equipment than others.

A. I would think that would be expected, yes.

Q. Then it is correct to state that the cost per gallon of .092 cents stated on Respondent's Exhibit 31-X is an average only and does not purport to be the actual cost of the loaning of dispensing equipment to any particular service station?

Mr. Hanley: Just a moment. Will you please read that question?

(Question read.)

Mr. Hanley: No objection, your Honor.

Mr. Boatwright, if you understand that, go ahead
4171 and answer it.

By Mr. Austin:

Q. Can you answer that yes or no?

A. Yes, I can answer the question. The cost as reported is an average cost and may not represent the actual cost at any one given outlet in the entire field.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Hanley: Any facts or figures that the respondent has are available to the Commission, and we not only are willing but anxious to supply those figures if we know just what figures the Commission wants.

Trial Examiner Ballinger: Proceed.

By Mr. Austin:

Q. It is stated on Respondent's Exhibit 31-N that "this expense was incurred on accounts signed on agreement numbers 461 and 385" and the "net total expense" is divided by the gallonage distributed by these outlets.

Does it follow that none of this expense of $24,708.35 is charged to service stations leased from the Standard Oil Company?

A. It follows that this particular expense classification is limited to the 461 accounts. As you recall, on direct
testimony, a similar question was raised wherein I
4172 explained that the expenses of a similar nature on
the leased stations were included in another account.

Q. I think you did, Mr. Boatwright.

A. Yes.

Q. Can you just give me a yes or no for that.

A. Yes, I can. This cost of $24,708 is limited to the 461 accounts.

Q. You stated on direct examination, at page 2571, that the company has about six different reseller contracts and that you would have to review them. Have you done that?

A. No, I have not.

Q. Can you describe the different contracts to which you referred other than forms 461 and 385?

A. To describe would mean to include the principal provisions of the contract, would it not?

Q. And state what they are used for, what sort of contracts they are.

A. I don't believe that I could do that without consulting the contracts.

Q. I thought perhaps you might have done that since the direct examination.

A. No, I have not.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

4173 Mr. Austin: May we have a five minute recess, your Honor?

Trial Examiner Ballinger: The hearing will stand in recess for five minutes.

(A short recess was taken.)

Trial Examiner Ballinger: Come to order.

You may proceed.

By Mr. Austin:

Q. The first item of expense stated on Respondent's Exhibit 31-O is account number 1005, salaries—advertising. The total for that item after the addition of 3 per cent for federal insurance, and so forth, is $3,637.34.

Trial Examiner Ballinger: How much did you say?

Mr. Austin: $3,637.34.

Mr. Hanley: That is your calculation.

Mr. Austin: No. It is right there.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record. Proceed.

By Mr. Austin:

Q. What salaries are included in that figure?

A. Members of the field advertising department. In each of the fields we maintain an advertising representative. In some fields and especially in the Detroit field, 4174 we would have an advertising clerk. Some time of either a full time stenographer or some time of the stenographic department predicated upon the amount of the work done for the advertising would be in that figure.

Q. What are the duties of the—what did you call them, advertising representatives?

A. Yes, sir.

Q. And his assistants.

A. The advertising representative is charged with the responsibility of merchandising our advertising efforts to secure the maximum results for our expenditures. He is charged with the responsibility of seeing that our signs are in presentable order. He appears at dealer meetings and has a part on that program in explaining and outlining advertising efforts of coming campaigns and doing all things incident to attempting to secure the maximum benefits for our advertising expenditures in the field in which he is located. The clerks obviously are intended and do maintain such physical records as may be necessary for the proper conduct of his office.

Q. Does he have the responsibility of preparing the advertising material itself, such as copy for newspaper advertising, the content of posters and signs, and so forth?

A. No, no. Not at all.

Q. Who does that?

That is done in the general office and is done in
4175 cooperation between our advertising department
which is under the general manager of sales and our advertising agency.

Q. Then, are the signs, posters and printed matter, newspaper advertising, the advertising material which requires either literary or art work in its preparation prepared by the Chicago office, and is their dissemination directed from the Chicago office?

A. Creative work in advertising is done in the Chicago office. Distribution of that creative work among the different field divisions is controlled by the Chicago office. The advertising representative's creative work would be limited to providing the advertising signs and props incident to the conduct of dealer meetings, sales meetings of our B station agency, and that type. It is very limited, but you can't say that he does not. It is strictly limited to such local meetings.

Q. Does he have charge of the posting of outdoor posters, the locations where they are to be posted, the maintenance and installation and withdrawal of the signs at the service stations, and so forth?

A. He is consulted about the distribution of posters but he does not have charge of it. That is generally handled by general office and is handled on an arrangement through the advertising agency which makes plans for the actual
posting. Now, if there are certain billboards in given
4176 areas, let us say in Detroit suburbs where there has
been an unusual population growth that are not being utilized, the adverstising representative in the field and he write to the general office asking that billboards at certain locations be used if at all possible, and his advice is naturally given consideration, but the general office fundamentally makes the allocation.

Q. Is there an advertising agency in Detroit that handles that work for the Detroit field?

A. No, the advertising agency that handles our account is the McCann-Errickson Agency, headquarters in New York. The branch that handles our particular account is in Chicago That agency also handles or also has a branch office in Detroit, but the Detroit branch does not work on our account. Our account is assigned to the Chicago office.

Q. Does the advertising representative have charge of keeping records of advertising matter at service stations, and supervising or—well, supervising the installation, maintenance and withdrawal of signs at service stations?

A. The advertising department in the field is responsible for knowing where the different signs are located. A clerk in the advertising department will maintain a record of point of sale, installations. I do not think the physical installation of signs is made by the advertising department but that is under the jurisdiction of the construction
4177 department.

Q. Are the expenses stated opposite accounts numbers 1033, 1048 and 1103 on Respondent's Exhibit 31-O expenses incurred by the persons whose salaries make up account 1005 including operation, maintenance and depreciation of vehicles used by them?

A. May I be certain I have your question clear?

Mr. Austin: All right. Will you read the question, please?

(Question read.)

Mr. Hanley: Off the record.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

A. Account 1033, traveling expense, advertising, are the traveling expenses for the individuals whose salaries are shown in sub-account 1005. Account—

By Mr. Austin:

Q. Can you answer the question yes or no? I do not want you to if you can not.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record. Proceed.

A. Accounts 1048 and 1103 are the operation and
4178 maintenance of vehicles and the depreciation expense of the vehicles used by the individuals whose salaries are in account 1005.

By Mr. Austin:

Q. Which of the figures in the right hand column on Exhibit 31-O are listed directly from Detroit form 189 for 1937?

A. All of them with the exception of the top figure which includes the 3 per cent as you stated in the early part of your discussion of this exhibit.

Q. And as to the top figure, is it the fact that the sum of $2,637.34 is the figure appearing on Detroit form 189?

A. That is correct.

Q. For account 1005?

A. Yes, sir.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

A. The figures in the right hand side of Respondent's Exhibit 31-O, following account numbers 1033, 1048, 1103, 1075, are taken direct from form 189, tank wagon reseller channel, Detroit field, 1937. The figure to the right of account 1005 includes 3 per cent unemployment and old age insurance on the salary item of $3,637.34, which amount is taken direct from form 189, Detroit field, year 1937, tank wagon reseller channel.

4179 By Mr. Austin:

Q. At the top of the page, Exhibit 31-O, you state that the advertising expense incurred at Ned's outlets was deducted from cost figures. What deductions were made and from what figures?

A. The amount deducted as a cost of advertising at Ned's Auto Supply outlets is $1,085.42, which is deducted from the total shown immediately above on Respondent's Exhibit 31-O reading $159,096.17.

Q. Then the deduction of $1,065.42 is the only deduction made from any of those figures lifted from form 189, is it not?

A. It is.

Q. And that figure of $1,065.42 is the figure for expenses shown on Respondent's Exhibit 31-P?

A. Yes, sir.

Q. And the cost figure for Ned's of $1,065.42 was arrived at as shown on Respondent's Exhibit 31-P, was not?

A. Yes, sir.

Q. Referring to the expenses shown on Respondent's Exhibit 31-P, and which make up the total of $1,065.42, all of those expenses are expenses which would be and were included on Detroit form 189 for 1937 in account 075; is that right?

A. Yes.

Q. Does it not follow, then, Mr. Boatwright, that

4180 the deduction of $1,065.42 on Respondent's Exhibit 31-O is in reality a deduction only from the figure of expense for account 1075 and not a deduction from any of the figures listed from form 189 for the other four accounts?

A. Yes, that is true.

Q. In your opinion is none of the expense listed on Respondent's Exhibit 31-O for account numbers 1005, 1033, 1048, and 1103 properly allocable to Ned's business?

A. Well, sir, there might actually be some part that would be assignable to Ned's but it is so small that I couldn't find it. You see, the sum total of these items we are discussing, anyhow, are small. Now, maybe the advertising representative did in going out on some trip or something circle out of his way a little bit to see whether the signs of Ned's outlets were all right, but the signs were up and there were no changes made. It is just such a small portion that I couldn't isolate it.

Q. Is a portion of the total expense for account 005 allocated to the consumer channel and a portion to the other methods channel on form 189?

A. Yes.

Q. Is that also true for the expenses entering into accounts 033, 048, and 103?

A. They are all allocated on the same basis.

Q. And what basis is that?

4181 A. An all-gallonage basis.

Q. Did the gallonage of Ned's Auto Supply Company in 1937 enter into the tank wagon gallonage which was used for the purpose of those allocations?

A. It did.

Q. You stated on direct examination, Mr. Boatwright, "Our advertising representative in any given field is charged with the responsibility of maintaining records on every piece of advertising equipment that is in existence in the area. Thus, he has a list at any given time of every sign, where that sign is installed, and so forth."

And again you testified that "on that (number) is the estimate of the advertising representative in the Detroit division, who had charge of the distribution. We do not keep a record for four years on the exact number of maps per outlet."

And again: "Q. Is he the same man that has charge of the distribution of the games and displays and other advertising material of that sort?

"A. Yes, sir."

Now, Mr. Boatwright, in view of the fact that Respondent's Exhibit 31-P shows that the company did have a certain number of signs and jewel globes installed at Ned's outlets in 1937, and that an estimate of 2,000 maps were supplied to Ned's and that certain banners, games 4182 and displays were supplied to Ned's, and it appearing from your previous testimony that all of this was done by and kept account of by the advertising representative, is it still your opinion that no part of the expenses entering into accounts 1005, 1033, 1048, and 1103 as shown on Respondent's Exhibit 31-O should be assigned to Ned's?

Mr. Hanley: Just a moment. Judge, I think I will not make the objection. I believe the witness ought to explain perhaps what these items are that counsel has referred to as distinguished from the accounts named. I just won't make the objection.

Trial Examiner Ballinger: I assume the witness is thoroughly familiar with them.

Mr. Hanley: If you can answer them, Mr. Boatwright, do so, please.

The Witness: Yes, I can answer it.

A. The allocation of maps takes an insignificant part of the time of the advertising representative.

I would like to correct one statement that you made in posing your question, if I may, before I continue my answer. You asked "are you still of the opinion that no part of this cost is attributable to Ned's?"

Q. I accept the correction because you did say that some part of it might be.

A. My statement was that there might be a part. 4183 It is so insignificant that I could not find it.

Now, to continue with the answer: Whenever our product goes into the station, it becomes automatic that a jewel globe goes on the distributing pump, be those pumps owned by the distributor or be they owned by the operator. That is automatic. That doesn't take any time of the advertising department, nor thought. All that amounts to is that when the report comes in, "five Jewel Globes installed at its location." Write it down.

The allocation of the maps, as I have stated, is set up once a year predicated on the previous year's gallonage. Series of ratios are established. When the supply of maps is secured, the ratios are applied. The entire scheme for the distribution of maps can be handled efficiently in less than one-half day by the advertising department, one-half day a year.

Q. Pardon me. Who did you say distributes those maps physically?

A. The salesmen do it physically, the physical distribution. It is just a process of allocations made with the advertising department.

What other items was your question referring to?

Q. It was the question of banners, games, and displays, and also—

A. Oh yes. The same ratios are used for the 4184 distribution of banners, games, displays, and so forth, as is used for the distribution of maps.

4185 Q. And there is also the fact that you testified to both this afternoon and on direct that the advertising representative keeps a record of all point of sale advertising for every service station which I should think would —well, stop there.

A. I think that that is a broader statement than I had made. If I have made the statement that broad, I erred. I stated that he kept a record of all of the advertising signs, but not all point of sale.

For instance, a point of sale may well be a temporary banner suspended across a driveway. He would make no book entry of that. It would be only the temporary type of signs used at stations that a record is maintained of.

Mr. Hanley: Judge, may I ask a question on voir dire, just a matter of qualification?

Trial Examiner Ballinger: Wait until the witness has completed his answer to the question.

Have you finished?

The Witness: I have.

Trial Examiner Ballinger: You may, Judge.

Mr. Hanley: I think the witness probably has answered the entire question, but as it was asked, the question was asked of you, Mr. Boatwright, reference was made to 1005, 1033, and 1048, and 1103 and perhaps 1075.

The Witness: The question did not apply to 1075.

Mr. Hanley: Well, all right, eliminate 1075.

4186 Now, with reference to these specific account numbers, will you please answer counsel's question.

Mr. Austin: Well, I think he has already answered.

Mr. Hanley: I think he has, but I just wanted it to be applicable to these account numbers, because that is the way the question was propounded.

Trial Examiner Ballinger: Do you care to make any further answer?

The Witness: Well, before making any further statement, may I ask that the record be read; and then I will say I will confirm the previous answer, or make any modification that is necessary in the light of the record.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Hanley: Let's put this on the record.

I have just asked Mr. Austin if we may have the understanding that the questions which he has asked, and the answers which the witness has given refer to the items of account on Exhibit 31-O, with the exception of Item 1075. As I understand it, Mr. Austin says "Yes."

Mr. Austin: Yes.

Trial Examiner Ballinger: Proceed.

By Mr. Austin:

4187. Q. What you did refer to on your previous direct examination was, all items of advertising equipment, Mr. Boatwright, and then you referred to signs specifically, so I assume that advertising equipment, while perhaps not as broad a term as point of sale, advertising may include something besides signs.

Do you wish to clarify that?

A. Advertising equipment, as I used that term on my direct examination, did refer to signs which advertised our products. I am afraid my lack of clarity will be due to a distinction that is not made, to the best of my knowledge, any place on the record. A warning sign is not an advertising sign for a given property.

Q. That comes under safety expense, does it not?

A. Yes, and that is the distinction I had in mind at that time. I think of no records maintained at the present time by the advertising representative that would not come under the classification of signs of a permanent nature or jewelled globes at outlets.

Q. He does keep a record of signs and jewelled globes, does he not, covering each separate service station in his area?

A. He does.

Q. Now, referring to that same practice of keeping records of advertising signs, but in another connection: Referring to Respondent's Exhibit 31-P, would it not have been possible to have made a direct computation of 4188 advertising expense of this nature, that is, of the nature of the items shown on Respondent's Exhibit 31-P at any other single service station in the same manner that you have made it here for Ned's?

A. It would have been possible.

Q. Was this done for any other service station selling more than an average annual gallonage of gasoline?

A. It was not done for any other service station.

Q. And may I assume that the records are still available from which this computation was made?

A. They are.

Mr. Hanley: And in view of the statement of counsel, we offer them, if they are desired.

The Witness: The only difficulty would be in those cases where the exhibit is clear that an estimate has been used. Any place reference is made to a record it is still available.

Mr. Austin: Well, we are still on 37, that is the only reason I had for asking at all, and I assumed, of course, Judge Hanley, if you have them that they will be available.

Mr. Hanley: Yes, that is what I mean to say. I do not know what these boys down in the accounting department have, but anything they have I can give you, you may be sure of that.

Judge, I am just sure that the continuing objection goes on here, but—

4189 Trial Examiner Bailinger: Your objection continues on throughout this entire line of examination.

By Mr. Austin:

Q. If Exhibit 31-P sets forth a complete and, as you have said in the exhibit, perhaps an overstatement of advertising expense incurred by the company which is chargeable to Ned's business in 1937, then would not a similar computation of like expenses for any other individual reseller service station give an equally correct result?

Mr. Hanley: Just a minute.

Would you please read that.

(Question read.)

Mr. Hanley: Judge, that is just objected to for a thousand reasons.

I do not think I will object to it. If you can, answer the question, Mr. Boatwright.

Trial Examiner Ballinger: Proceed, if you can; answer the question.

Mr. Hanley: Can you do it? Do you know what it means?

Mr. Austin: Your Honor, I really hate to get up and make these objections directed to the remarks of counsel because I feel entirely friendly towards counsel for the Respondent, and I do not think there should be repeated objections and statements simply "I have no objec-
4190 tion, but the witness will answer if he can." The
witness won't answer any question if he cannot, and I think those remarks encumber the record and delay time, and I think the witness should have entire freedom to proceed and not have the suggestion, however well in good faith it is made, that he should answer if he can. It certainly implies a suggestion that maybe he cannot. Now, I do not see why anyone except the witness, himself, would suggest whether or not he can answer the question.

Mr. Hanley: Well, Judge, I want to direct those remarks entirely to the Court and not to the witness and not to Counsel.

I have undertaken in the utmost good faith to accord with Counsel's request that I do not ask my own witness any questions on his cross-examination, and I have not done so for three days since he has made that request. But, Your Honor, I just do think that I am entitled to call attention of the Court to the character of the questions that are asked by counsel, and if I do not want to make the objection I just do not have to make it, and if the witness can answer I think I am entitled to ask him to answer over an objection.

I do not understand the comment of counsel, I just do not understand it.

Trial Examiner Ballinger: The witness on the stand is one of unusual intelligence and thoroughly familiar with the subject matter about which inquiry is being made,
4191 and I am sure that the witness would not attempt to
answer any questions that he did not understand.

Mr. Hanley: Judge, I certainly subscribe to that. I can't tell this fellow anything about arithmetic or accounting. He knows so much more about it than I do.

Trial Examiner Ballinger: If Counsel for the Respondent desires to object to a question on other and different grounds than that reason embraced in his general objection, he may do so, but otherwise the Examiner would suggest that he permit the witness to determine whether or not he understands the question.

Mr. Hanley: Well, I think perhaps that I owe Your Honor and Counsel an apology because I just automatically start to object to some of these questions, and then withdrew it.

Trial Examiner Ballinger: Proceed.

The Witness: May the question be read?

Trial Examiner Ballinger: Read the question.

(Question read.)

A. Not quite. I am facing a little difficulty in the answer to that question.

Let me state that if all of the advertising signs at Ned's corresponded with advertising signs at other outlets, your question would be answered "Yes." It would be an over-
charge in the case of any other reseller outlet as
4192 well as it is truly an overcharge of the advertising
expenditure allocated to Ned's for these items because I think you will recall that on direct testimony I brought out that "The normal Standard Service Sign" has an average life of approximately 7 years, and I have charged the sign off in this calculation on a one-year basis.

By Mr. Austin:

Q. Nineteen months, did you not?

A. No. That was a special sign.

Q. Yes. You are right. I see.

A. Do you recall my pointing that out?

Q. Yes.

A. The Standard Service signs I charged off on a one-year basis, and to that extent this is an overstatement of these expense items chargeable to Ned's.

Q. Well, if a similar computation were made for other service stations, and the sign; the actual cost of the signs there were charged on an annual basis just as they are here, would not the result be equally correct?

Mr. Hanley: That is objected to until other service stations are designated specifically.

Trial Examiner Ballinger: The objection is sustained.

Mr. Hanley: What do you mean by other service stations?

4193 Mr. Austin: I mean other tank wagon reseller stations, the ones who are referred to in the exhibit.

Trial Examiner Ballinger: The question is amended with the inclusion of the last statement of Counsel for the Commission.

The witness may answer.

The Witness: May the question be read with the amendment.

(Question read as follows:

"Q. Well, if a similar computation were made for other service stations, and the signs, the actual cost of the signs there were charged on an annual basis just as they are here, would not the result be equally correct? I mean other tank wagon reseller stations, the ones who are referred to in the exhibit.")

A. Well, the number of signs at the Ned's Auto Supply outlets, and other outlets, would differ. The responsibility of the advertising man and his time in teaching the proper merchandising of our advertising effort on the part of the other tank wagon reseller outlets would differ in terms of the specific items as enumerated on 31-P. Barring the difference in number of signs, the calculation for any other one service station would be as accurate as the Exhibit 31-P.

By Mr. Austin:

4194 Q. As far as numbers are concerned, is that important, Mr. Boatwright, because this being a direct allocation the expense for each station would depend upon the exact actual expense there, would it not, whether it be one sign or three?

Mr. Hanley: Just a moment.

That is objected to for the reason that it does not specify the—the Respondent, at the request of the Government, has furnished the Government with a list of all of its service stations supplied in the Detroit area, and that list has now been offered in evidence by the Respondent.

Trial Examiner Ballinger: It has not been received.

Mr. Hanley: Whether or not it has been received, I do not know, but it has been offered and there has been no objection.

If there is any desire to determine the cost of advertising, or any other expense of any service station service other than Ned's, it ought to be made specific, and it can be made specific because the list has been offered in evidence.

4195 Trial Examiner Ballinger: The objection is overruled.

The Witness: Will you read the question?

(Question read.)

A. Well, I don't think the numbers would make a great deal of difference. I answered you as I did because I thought you were placing so much emphasis upon the burdensome task of keeping a record of the numbers.

Q. No.

A. But—in your previous examination. No, I don't think the numbers would make much difference.

Q. If such a computation made separately for each retail reseller outlet in the Detroit district took into account only expenses of signs, globes, and point-of-sale advertising such as is included in Exhibit 31-P, it would leave unaccounted for the major advertising expenses of the company; would it not?

A. It would leave unaccounted for the major advertising expenses as classified under Account 1075.

Q. Then I would like to ask, Mr. Boatwright, how you justify Exhibit 31-P as a complete statement of advertising expense chargeable to Ned's business.

A. Because I have charged to Ned's business all of the advertising assignable to that account that I could isolate. I think said twice this afternoon in the testimony that as far as the advertising department in the Detroit

4196 field and the expenses incident to the operation of that department, that there was an insignificant amount, if it could be isolated, but I can't.

If that answer doesn't meet your question, could you either rephrase or break your thought down?

Q. Yes, I will.

A. Into other questions?

Q. To take a particular and substantial item going into the account number 1075, you stated on direct examination that in your judgment metropolitan newspaper advertising is a reseller advertising cost. Why then have you charged no part of the Detroit reseller newspaper advertising cost for 1937 to Ned's business?

A. There are many reasons for it.

First, we received a reciprocal benefit in advertising from Ned's Auto Supply. Whereas our advertisement does call attention to the general public of the merits of our merchandise, Ned's Auto Supply likewise insert newspaper advertisements which not only advertise our products but name them as such. For that the Standard Oil Company pays nothing.

Second, a study of advertising allocation—and may I state at this point that I am a member of the advertising committee of the company and follow this all the time in my regular work?—a study of advertising allocation leaves the merchandiser at any time faced with the quan-
4197 dry: "Should advertising be allocated on the basis of
potential or on the basis of my sales?". There is one school of thought which would advocate that an advertising budget should bear a fixed relationship to accomplishment. There is another school of thought which would advocate that an advertising expenditure should bear a relationship to the potential that the supplier hopes to achieve. In our advertising we allocate among the sales, the 27 sales fields, and among newspapers in an effort to give recognition to both potential and sales. Any advertising that is allocated on the basis of potential I think you will concede would be impossible to allocate to a given outlet in that community. Any advertising allocation which is predicated upon a sales volume could be allocated to definite outlets on the basis of the gallonage moving through those outlets, but as advertising expenditure recognizing potential does not recognize any individual outlets. Of the total expenditures of the Standard Oil Company, the field in which it is most under-spending, according to a normal relationship with the potential, is Detroit.

Trial Examiner Ballinger: Is what?.

The Witness: Detroit.

A. (continuing) We are spending less in the Detroit community in view of the potential than we would be
spending on similar calculations in any of the 27
4198 fields.

Three. Our advertising expenditures for newspapers in Detroit would not be increased nor would they be decreased if this account be lost.

Number four. Our advertising effort is similar to our sales effort in that it is an effort to get customers. Customers are associated with company and brand. That is the object. Therefore, it is not an outlet allocation.

Fifth. Because the Ned's Auto Supply outlets were large distributors of many other lines of products hauling and resulting in a heavy traffic across the driveways of their outlets, the very presence of our merchandise on those driveways resulted in a derived advertising benefit to the popular brands of our gasolines and motor oils in the Detroit area, which has a value, the calculation of which would be impossible to prepare.

As I have been giving this testimony there seems that there were other reasons in my mind. I think I have enumerated the principal ones which led to the conclusion which is expressed in the exhibit.

Mr. Hanley: No. 31-Q.

The Witness: Yes.

By Mr. Austin:

Q. You stated that the loss of Ned's business would not have affected the advertising expenditure for the Detroit field; did you not?

4199 A. I did.

Q. Then you don't think that the benefit from that advertising displayed at Ned's was so great that if they had ceased the company would have had to expend in Detroit something greater than it does now?

A. It is possible that we might have.

Q. Would the loss of the business of any other single tank wagon reseller customer in Detroit have affected this advertising expenditure?

A. No, because, relatively speaking, they don't—they are not of that importance.

Q. And the loss of Ned's account would have affected it, if at all, more than the loss of any other station, would it not?

A. Yes.

Mr. Austin: If your Honor please, I would like to have a paper marked for identification.

Trial Examiner Ballinger: The reporter will mark the document Commission's Exhibit 84-A, B, and C.

(The document was thereupon marked "Commission's Exhibit 84-A, B, and C," for identification.)

By Mr. Austin:

Q. I show you Commission's Exhibit 84-A, B, and C, for identification, Mr. Boatwright. Will you describe what is contained therein?

4200 A. Commission's Exhibit 84-A, B and C presents an analysis of the advertising expenditures by media chargeable to the reseller channel in the Detroit field for the year 1937, segregating the cost as shown on form 189 according to the principle of component parts.

Starting in the middle part of Commission's Exhibit 84-A and continuing on 84-B and 84-C are explanatory notes explaining the treatment of advertising costs in our accounting setup.

Mr. Austin: I offer the exhibit in evidence.

Mr. Hanley: No objection.

Trial Examiner Ballinger: Without objection, Commission's Exhibit 84-A, B and C is admitted in evidence.

(The document heretofore marked "COMMISSION'S EXHIBIT 84-A, B and C," for identification, was received in evidence.)

By Mr. Austin:

Q. It is stated on Commission's Exhibit 84-B that "advertising expenditures are allocated to sales channels, form 189, according to the ratio of gallons sold through each channel to the total gallons sold;"

Is that the accounting practice of the Standard Oil Company as to newspaper advertising?

A. It is.

Q. Is it the accounting practice of the Standard 4201 Oil Company as to printed matter and direct mail advertising?

A. It is.

Q. Is it the company's accounting practice as to motion picture advertising?

A. It is, unless there be a rare exception of a picture preparation on a particular product by the technical department. I don't think that such an exception would be included in account 1075, but the answer generally is "yes."

Q. Is the same true as to outdoor posters?

A. Yes, sir.

Q. Is the same true as to dealer trade papers and magazines? I assume that means advertising in dealer trade papers and magazines.

A. That is right, and it is true.

Q. Is the same true as to the method of accounting for expense of signs and dealer outlets?

A. It is.

Q. Is the same true for the sum total of the miscellaneous items which are included in making up the expense figure of $26,558.31 on Commission's Exhibit 84-A?

A. I can't speak of the general classification. In making up our account 1075, advertising costs, some charges are direct by channel, some are allocated upon a tank wagon gallonage basis only, and some are allocated on an all-gallonage basis. There may be included in the
4202 miscellaneous items which were too small to classify some direct charges or there may have been some that were charged only to the tank wagon reseller and tank wagon consumer channel and allocated among those. Likewise, if we carried across in the allocation of the account 1075, I am satisfied we would find several direct charges in the other method channel for specialty displays, let us say on canned goods, motor oils, and things of that type.

Q. Is that under miscellaneous?

A. It would be under the miscellaneous classification in another channel, Mr. Austin.

Q. Yes.

A. And that is why I say I can't give a general answer to this last item, which is a miscellaneous classification of individual items or media too small to give separate classification to.

Q. Why are not these signs at dealer outlets charged direct to channels other than on an all-gallonage basis?

A. Oh, they advertise our products. They advertise our products to those who see it. Those who see the signs may be a tank wagon consumer or they may be a tank wagon seller customer. Advertising is not according to where a particular sign may be physically posted. The effect of the advertising is on the consumer's mind.

Q. Nevertheless, you have on Respondent's Ex-
4203 hibit 31-B attempted to charge the expense of certain signs directly to the stations where they were located; have you not?

A. Yes, because I was attempting to isolate an advertising charge to Ned's Auto Supply outlet in compliance with the request and, as I have stated, I have overcharged the advertising to that account.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record. Proceed.

By Mr. Austin:

Q. Taking the cue from Judge Hanley, it is true, is it not, Mr. Boatwright, that the sums which you have charged directly to cost of doing business with Ned's Auto Supply Company on Exhibit 31-P is the actual cost to the company of the signs there listed?

A. It is.

Q. May it not well be possible in view of your testimony regarding the number of people that drive past Ned's, that the value to the company of those signs is much larger than their cost?

Mr. Hanley: Well, I guess I opened that.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

4204 Proceed.

The Witness: Your question was phrased, may it not be possible.

By Mr. Austin:

Q. Yes.

A. It may be possible, is the answer.

Q. We have been referring to an allocation of advertising expenses between the tank wagon reseller, the tank wagon consumer and the other method channels on form 189; and you stated that such ~~an~~ allocation was made on an all-gallonage basis for the items newspaper advertising and so forth listed on Commission's Exhibit 84 except as to miscellaneous items, as to which you did not state definitely what part was allocated in that manner. Is that a correct statement? I am just trying to tie up what we have been over.

A. Yes. I think that is a correct statement. The only qualification I should like to see in the record in that connection is there may be some part of some one of these items that is allocated, but I think it is a small part.

Q. In making this allocation of advertising expenses between channels for 1937 was Ned's gallonage included in the tank wagon reseller gallonage used for the allocation.

A. It was.

Q. On Commission's Exhibit 84-B it is further stated that in July, 1937, tank wagon reseller gallons repre-

4205 sented 78.8 per cent of the total gallonage. What is referred to by total gallonage?

A. I see the statement. The total gallonage is the sum total in the gallonage used in making allocations. It excludes direct shipments to customers.

Q. What do you mean by direct shipments?

A. Just exactly what it states, shipments which do not move to our bulk plants. Thus we may supply General Motors with the gasoline purchased on specification and they may purchase several trainloads. That volume is not used in the allocation of costs. We also supply many other large purchasers over there on that basis. Where it is shipped direct, not moving through our plants that volume is not used in allocating costs.

Q. Is it your opinion that advertising such as newspaper advertising, outdoor posters and signs at dealer outlets have no advertising value in connection with the business of customers who purchase by direct shipment?

Mr. Haniey: May we go off the record a moment?

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

A. No. Advertising has little influence, if any, on sales of that type. Such sales result purely in price buying,
producing a commodity for the specifications as out-
4206 lined by the purchaser. They are not shipments of
our usual products sold under our usual brand names.

By Mr. Austin:

Q. Was the Citron Kolb Oil Company and the Wayne Oil Company direct shipment purchasers in 1937?

A. I stand corrected to the effect of the Citron Kolb Oil Company, the Wayne Oil Company, what is the other?

Q. Steickman Oil Company.

A. And the Steickman Oil Company, I stand corrected to that extent. They are included in direct shipments.

Q. And was none of this advertising expense allocated to their business in 1937?

A. My answer stated, I am afraid somewhat in reverse to your question. Their volume was not used in the allocation of our advertising costs. Is that what you had in mind?

Q. Yes.

A. That is correct.

Q. Because obviously no specific allocation of costs was made, of any costs was made to their business?

A. That is right, that is right.

Q. Unless you had some occasion to do it that I know nothing about.

A. That is correct.

Q. The business of those three companies depended directly upon the amount of gasoline sold by the retail

4207 outlets served by them, did it not?

A. I thought those three companies had some consumer business also. Hasn't the testimony of the witnesses called indicated they did have a tank wagon consumer business?

Q. They may have possibly some, but I think the testimony shows that the majority of the gasoline purchased by them was resold to tank wagon reseller stations.

Mr. Hanley: We will concede that, Mr. Austin.

The Witness: All right. Upon conceding that point.

Mr. Hanley: We will concede that. Most of their business is either sales to leased stations or sales by themselves through a service station.

By Mr. Austin:

Q. Well, they did some retail, I think most of it was wholesale business to the service stations.

A. Now, may I have the exact wording of the question, please?

(Question read.)

A. I think counsel for the respondent conceded your statement.

Mr. Austin: Yes.

The Witness: That takes care of the answer, doesn't it?

Mr. Hanley: That is the answer.

The Witness: That is the answer, yes.

4208 By Mr. Austin:

Q. That being true, why was no part of the gallonage of those three jobbers included in the gallonage used for the allocation of these advertising expenses in 1937?

Mr. Hanley: Off the record.

(Discussion off the record.)

Mr. Austin: On the record. I am referring to the expense as to which you stated allocation was made on an all-gallonage basis.

The Witness: That is correct.

Mr. Hanley: Well, go ahead, Mr. Boatwright. Answer the question, just be sure—

Trial Examiner Ballinger: What is your answer?

The Witness: It is correct, is an answer given to the question raised by counsel for the respondent. I have not answered the question as put by counsel for the government, and before attempting to do so I should like to have the question read.

(Question read.)

A. It was not used in the allocation of advertising expenses, 1937, prior thereto or subsequent thereto.

The reason we do not use direct shipments in allocating costs, such as advertising, is because it would result in a meaningless figure. Now, it is possible that may be 4209 we should use part of direct shipment and exclude part of direct shipment in an allocation. That is subject to discussion. Our business, Standard Oil Company, is set up primarily to serve a tank wagon market. Our expenses are incurred primarily in a tank wagon market. For a proper expense control I think it is the underlying thing that we allocate our costs primarily on the basis of the volume for which those costs were fundamentally incurred. It has been the policy and is the system upon which our system of bookkeeping is established.

By Mr. Austin:

Q. Does that total gallonage referred to on Respondent's Exhibit 84-B—well, I understand that it does not include tank car or transport truck shipments, is that correct? In other words, are tank car and transport truck shipments synonymous with direct shipment?

A. Yes.

Q. It does include oils and greases, does it not?

A. What are you referring to by the use of the word "it"?

Q. The phrase "total gallonage" on Respondent's Exhibit 84-B, about which I asked you a moment ago and you stated that it included the gallonage in the three channels but did not include direct shipments. Now, since that time we have been discussing direct shipments. I now am asking you as to products whether it includes all products sold by the company.

4210 A. Well, I did not know whether by "it" you mean direct shipments.

Q. I mean total gallonage as used on this exhibit.

A. I understand the question.

The total gallonage as used in the preparation of what is now Commission's Exhibit 84-B would have included greases or motor oils, provided they were not direct shipments of these products. Again we come to a case where the large industrial organizations in this particular area buy large quantities of what we refer to as formula oils. They are made to their specifications, and it would be an unjust thing to use the volume of those products in allocating advertising costs:

Q. Would that come under direct shipment?

A. If it is made direct, shipped direct it would, and we do not have storage facilities for formula oil as a general practice at any of our bulk plants.

Q. Referring now to the total sales of all products sold by the company in the Detroit area.

A. Yes.

Q. Does this total gallonage as referred to on Exhibit 84-B include the total of all petroleum products except direct shipments?

A. Yes, it does.

Mr. Austin: Your Honor, may I have this paper 4211 marked for identification?

Trial Examiner Ballinger: The reporter will mark the paper "Commission's Exhibit 85," for identification.

(The document was thereupon marked "Commission's Exhibit No. 85," for identification.)

By Mr. Austin:

Q. Are you familiar with this exhibit, Mr. Boatwright?

A. I am.

Q. Will you please state what it is?

Mr. Hanley: May I see it, please?

Mr. Austin: It is a newspaper advertisement.

(Commission's Exhibit 85, for identification, was handed to Mr. Hanley.)

Mr. Hanley: All right.

A. This is a copy of a newspaper advertisement that was run in various newspapers throughout the midwest during the summer of 1937 by the Standard Oil Company of Indiana.

Q. Is this advertisement characteristic of the Standard Oil Company's newspaper advertising in the Detroit field for 1937?

A. Characteristic—

Mr. Hanley: Judge, I don't know what that question means.

Mr. Austin: Neither do I. I would like to have the witness answer. Maybe he can tell me.

4212 Trial Examiner Ballinger: Does the witness understand the question?

The Witness: Counsel for the respondent merely beat me to the same question. I didn't know what was meant by "characteristic."

By Mr. Austin:

Q. Well, is this advertisement an unusual example of advertising or is it merely representative of general product advertising of the company? I say "general product" because it appears on the face of this advertisement that it refers to other things than gasoline, and I believe that it is—correct me if I am wrong—intended to advertise—

Mr. Hanley: Judge, I don't know what counsel is getting at but the fact is, and we will agree to it, that in 1937 and every year since the respondent, Standard Oil Company, has advertised in newspapers, metropolitan newspapers and local newspapers, farm newspapers. As to whether or not this is representative, I wouldn't undertake to say, but we have made advertisements of our petroleum products, primarily our gasoline and our motor oils.

Trial Examiner Ballinger: Would you say whether or not it is illustrative of the advertising?

Mr. Hanley: I don't think it makes any difference, does it, Mr. Austin, whether it is one kind of an advertisement or another? The fact is we do do that advertising and 4213 we have done it in 1937 and since.

Mr. Austin: I think I used the word "characteristic."

Would it make the question easier for you to answer if I asked you if it is representative of the newspaper advertising in the Detroit area in 1937?

The Witness: No, it doesn't help. If you mean representative in terms of theme in our advertising appeal, if you mean representative in terms of products having a part of the ad, if you mean representative in terms of whether it is broadside to all of the papers, if you mean whether it is representative of both advertising in metropolitan papers and farm papers—"representative" is too broad.

Mr. Austin: May it be stipulated on the record that this advertisement was supplied to the Commission by counsel for the Standard Oil Company in response to a request for an example of representative advertising in the Detroit area? Because that request was made and this advertisement was given.

The Witness: Not in that manner.

Mr. Hanley: No. We will agree to this, your Honor: That we supplied this ad as having been an advertisement offered or made by the Standard Oil Company. I don't know what counsel means by this term "representative."

I am willing to concede, Judge, that our company
4214 advertises in the newspapers. I just don't know what
this thing "representative" means at all. We do advertise. We try to sell our gasoline, and we advertise it, and I am willing to concede that fact.

Trial Examiner Ballinger: Now, off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Austin: In any event, I offer this in evidence.

Mr. Hanley: We have no objection to it, Judge. We are perfectly willing that it go into evidence.

Trial Examiner Ballinger: Commission's Exhibit 85, for identification, is admitted in evidence.

(The document heretofore marked "COMMISSION'S EXHIBIT 85," for identification, was received in evidence.)

Mr. Austin: Your Honor, I move that we adjourn until 1:30 p. m. tomorrow afternoon.

Trial Examiner Ballinger: Without objection, the motion is granted, and now, at 4:40 p. m., the hearing stands adjourned, to reconvene at 1:30 p. m., June 20, 1941, in Room 332, Federal Trade Commission Building, Washington, D. C.

(Whereupon, at 4:40 o'clock p. m. the hearing was adjourned to Friday, June 20, 1941, at 1:30 o'clock, p. m.)

4245

Room 332, Federal Trade
Commission Building,
Washington, D. C.,
Friday, June 20, 1941.

Met, pursuant to adjournment, at 1:30 p. m.

Before:

Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., appearing on behalf of the Federal Trade Commission.

Harold R. Hanley, Esq., (910 South Michigan Avenue, Chicago, Ill.), appearing on behalf of the Respondent.

4246

PROCEEDINGS.

Trial Examiner Ballinger: Come to order.

The hearing of Docket No. 4389 in the matter of Standard Oil Company is reconvened, at 1:30 p. m., June 20, 1941, in Room 332, Federal Trade Commission Building, Washington, D. C. The last hearing was held in Washington, D. C., June 19, 1941.

The Reporter will note Counsel for the Commission and Respondent present.

You may proceed.

Mr. Austin: An offer was made by Counsel for the Respondent yesterday, I believe, to introduce in evidence a list of reseller accounts in the Detroit field for the year 1937, such a list having been supplied by the Respondent to the Commission at the Commission's request. I have that list here now and will be glad to offer it.

Trial Examiner Ballinger: It was agreed yesterday that it should be admitted in evidence. The document will be marked Commission's Exhibit 86, for identification, and as so marked is admitted in evidence.

(The document was marked "COMMISSION'S EXHIBIT 86-A to 86-R," both inclusive, and received in evidence.)

JOHN W. BOATWRIGHT thereupon resumed the
4217 stand and testified further as follows:

Cross-Examination (Continued) by Mr. Austin.

Q. At the close of the hearing yesterday, Commission's Exhibit 85 was admitted, being an advertisement that was published in certain newspapers in Detroit in the summer of 1937. Do you know in what papers this advertisement was published, Mr. Boatwright?

A. In all of the papers in the Detroit area in which we carry newspaper advertisements.

Q. What papers are those?

A. I thought I might have a record of all newspapers used in the Detroit field. I find I do not have, but the Detroit Free Press would be an illustration of a newspaper in Detroit in which that ad did appear.

Mr. Hanley: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. My recollection is that there are three newspapers in Detroit. Would all of those have been used, at least, the three major newspapers? One is the "Times," one is the "Free Press."

Mr. Austin: Do you recall the other one, Your Honor?

4218 Trial Examiner Ballinger: The "News."

The Witness: The Detroit "News."

By Mr. Austin:

Q. Oh, yes.

A. The Detroit "News," I am sure, and I think all three papers are used.

Q. You referred a moment ago to the Detroit area. Did you mean to say the Detroit field, or would this advertisement also be advertised in papers, in local papers in Lansing or Ann Arbor, or other cities?

A. That insertion would be published in papers other than in the Detroit metropolitan area.

Q. Does the name of any Standard Oil dealer appear in this advertisement?

A. The name of no individual dealer appears in this newspaper insertion. The ad, however, is signed according to Standard Oil dealers, in the plural.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Austin: The advertisement is signed "More than 23,000 Standard Oil Dealers are at your service."

By Mr. Austin:

Q. That refers to the total number of Standard Oil dealers in the entire territory served by the company,
4219 does it not, Mr. Boatwright?

A. Yes, sir.

Q. Does this advertisement in form represent the practice of the company as to naming or not naming individual dealers in the advertising?

A. It represents a practice of the company. Frequently, however, dealers at their own expense will buy space adjacent to our newspaper advertisement and will put in their small ads adjacent to our larger ad over their own signature as individuals.

Q. Does any of the newspaper advertising inserted in newspapers by the company ever refer to any particular dealers by name?

A. No.

Q. Are some of the newspaper advertisements used by the Standard Oil Company advertisements for gasoline only?

A. Your statement is too broad, or, if I may correct, your question is too conclusive. We seldom put an ad in the paper that is meant for one product and one product only. We do have ads in which gasoline will receive the major portion of the space devoted. However, even such ads will carry a block on our motor oils or perhaps advertising to the public our credit card convenience, and things of that type.

Q. This advertisement which is in evidence as Commission's Exhibit 85 advertises a number of products and
4220 services, does it not?

A. It does.

Q. Would what you have said about gasoline advertisements apply to other products such as motor oils or lubricating oils; that is, does the company purchase advertising space or use advertisements restricted to motor oils or lubricating oils or greases?

A. Well, again, a motor oil campaign in the sense of which you appear to have it in mind and the various newspaper insertions incident to the campaign may give motor oil the more prominent place in the ad. However, in their turn they will carry a block or plug on our fine gasoline or on the credit card services.

Q. I had nothing particular in mind. I just wanted, having answered the question as to gasoline, to find out as to the other products.

A. Yes. Well, you see, the reason that we adhere to the belief is that the object of an advertisement is to do a mass selling job and to attract customers toward the driveways of our dealers. Some customers are attracted primarily to the driveways because of their belief in the quality of gasoline. Some are attracted primarily because of their belief in the quality of motor oils. Some are attracted because of the unusual services, they feel, but the end object of any is to get the customer on the drive.

4221 Q. Is any effort made by the company in its accounting practice to allocate advertising expense as between different channels on Form 189 according to the product advertised in the respective advertisements?

A. An allocation by product by channels; is that your question?

Q. Is the allocation by channels made in the case of any advertisements according to the product advertised? In other words, is the expense of any advertising allocated other than on an all-gallonage basis between channels?

A. Within a channel, no.

Q. Well, I mean as between channels.

For instance, to make clear what I am getting at, if an advertisement was, at least as to space and display, directed chiefly to motor oils, would any more of the expense of that advertisement be allocated to the other methods channel, than would an advertisement, the expense of an advertisement directed chiefly to gasoline?

A. Not in our regular accounting practice in allocation of costs in the 189; no, sir.

Q. And that for the reason you have just stated, that the purpose of the advertising is to get customers into the driveway?

A. It is. That subject you are discussing has been one concerning which there has been more discussion and con-

troversy as to how we might be able to accomplish
4222 an accurate and valid allocation among products
within a channel. It is a very difficult problem of accurate solution.

Q. What is the general purpose of this general class of newspaper advertising which you described, I might say as represented by Commission's Exhibit 85?

A. The purpose of any newspaper insertion or any other advertising effort is to do a mass selling job.

Q. You mean selling to the consumer.

A. Yes.

Q. And is the purpose of such advertising to create consumer acceptance for Standard Oil products.

A. Definitely.

Q. Will you describe what is meant by printed matter and direct mail advertising?

A. Yes.

Mr. Hanley: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

A. Printed matter and direct mail I think is completely descriptive of what the expense item actually represents. Perhaps I can clarify the question in your mind better with an illustration:

By Mr. Austin:

Q. Yes. I want a description of the nature of the
4223 advertising matter itself.

A. Yes.

We introduced an improved Stanolin gasoline and the octane rating of the product was increased so that it would give better performance in the motors. Incident to the introduction of this new product, different advertising media were used to announce to the public the improvement that had been made. In that campaign was a considerable amount of printed matter which was furnished which was mailed direct to consumers. It may have been a folder describing the improvements of the product; it may have been a description of the improvements made; or it may merely have called to the consumer's attention the fact that an improvement in the product had been made and the greater satisfaction would result from its use; or again we might have a mailing piece that would be furnished to the dealer for the dealer to forward to his customers.

Another illustration would be the insertion of little folders at the end of the month when a statement is presented to credit card purchasers. It is items of this nature going to make up that classification of expense.

Q. When you used the word ''consumer'' were you referring to consumers who purchase from tank wagon resellers, or were you referring to what is known as a tank wagon consumer?

A. I was referring to both, tank wagon resellers—
consumers who purchase from tank wagon resellers as
4224 well as consumers who purchase direct from the
tankwagon.

Q. You used the phrase in the exhibit ''printed matter'' and ''direct mail.'' Does that refer to the same thing or to two things, or does ''direct mail'' apply only when the printed matter is mailed and not delivered or distributed by some other method?

A. It refers to two different types of advertising expenditures, in a sense.

Now, to illustrate the type of printed matter, as a part of the educational program of a reseller operating an outlet, it is folly for a company to introduce and make available an improved product without educating their reseller customers on the quality characteristics of the product. It likewise has seemed advisable to us over a period of the past several years to keep our dealers thoroughly informed of the plans of the company relative to future advertising campaigns. An advertising campaign may be laid out in its entirety over a period of four months. Prior to the insertion of the first ad a brochure will be forwarded to each and every dealer selling our products, in which ads will be reproduced on a miniature basis, or a tear sheet, or something of that type, so they can be used for window posting.

You see, that type of an expense is unrelated to a direct
mail classification to consumers, but it is a printed
4225 matter pure and simple.

Therefore, the term was used, ''printed matter'' and ''direct mail'' to illustrate that this expense classification is a sum total of our expenditures of that type allocated to the Detroit field.

Q. The circulars, for instance, that you said might be sent to customers with—did you say with credit cards or with receipts for payments? Maybe you will repeat that?

But I want to know whether that would be printed matter or direct mail, just as an illustration.

A. That would be printed matter.

Mr. Austin: Well, off the record.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

The Witness: A credit card holder in our company, as well in most companies, indicates a continuity of purchasing on the part of the individual who is establishing his credit with the company. In a sense he is a preferred customer, as we recognize the value of the continuity of your association with our company as a supplier of your petroleum and other automobile needs. At the end of each month, if we assume you to be the holder of a credit card in our company, we would forward you a monthly statement on your account. The monthly mailing makes possible at no direct mailing cost to the company an
4226 opportunity to advertise to you different products or services that we have available by enclosing in that letter, which carries a statement on your account, small circulars advertising our products. Such a procedure is frequently followed just prior to the Christmas season, when a folder might be inserted in the credit card statement on Christmas candles. We know by experience that such a folder has produced remarkable sales results. Or, again, if you have made application for a credit card, your credit has been investigated and approved by the credit department, upon forwarding to you your first credit card a folder is included in the mailing explaining to you the services and conveniences and the quality of the products which we have available.

Now, it is these insertions which illustrate a part of the advertising expense which we classify as printed matter.

By Mr. Austin:

Q. Were holders of credit cards able to buy on credit at Ned's Auto Supply outlets in 1937?

A. Only if Ned's Auto Supply outlets honored the credit card. You see, the credit card is a credit to a customer extended by the Standard Oil Company. A dealer to accept or honor that credit card assigns the sales ticket to the supplying company and is reimbursed therefor.

Most of our dealers do as a practical business application
honor credit card accounts, for the simple reason
4227 that it brings customers on to their driveway, from
which they make a margin of profit.

I could not tell you whether any one reseller in the Detroit area, or, in particular, whether Ned's Auto Supply did or did not honor credit cards and assign sales tickets to the company at that time.

Q. Is there any disadvantage to a dealer in honoring a credit card?

A. Well, I think not. It seems to me a short-sighted policy when they do not honor, but there are some who will not do it.

Q. Would a concern like Ned's, itself having credit with the Standard Oil Company in paying its bills monthly—would not the credit given by Ned's to credit card holders be merely offset at the end of the month against the bill sent to Ned's for gasoline?

A. I don't know how the credit card tickets were handled at Ned's Auto Supply outlets, if such credit tickets were made. I would think it would be a logical thing that at the end of each month any credit card ticket that had been made out by Ned's Auto Supply Company would be forwarded with their payment of their account as a partial offset of that account.

Q. Isn't it true that a smaller dealer who buys his gasoline for cash, if he gives credit on the strength of the credit card, that he cannot—can he or may he not use that charge in part payment to the driver for gasoline delivery?

4228 A. A sales ticket made to a credit card customer and assigned by a dealer to the company becomes for all practical purposes equivalent to cash in the compensation to the company for products purchased.

Q. If there is a failure to pay the bill, that is, the credit card holder fails to pay a bill, who takes the loss?

A. The Standard Oil Company. The dealer loses nothing.

Q. And when any such debts are unpaid is that marked off by the company as a bad debt? I do not mean to get into the question as to when it is marked off, Mr. Boatwright, but—let me strike that and phrase it in another way.

Would bad debts or losses by bad debts incurred by credit card holders be included in the bad debts expenses which we have discussed in connection with Respondent's Exhibit 31-J, account No. 1510?

A. Yes. I think we might clarify the series of questions for you slightly if I stated that the extension of a credit card is wholly the supplying company's responsibility. All credits incident thereto, all costs of maintaining records, all costs of billing, and all bad debt losses incurred are purely the supplying company's obligation.

Q. In what account are the expenses of issuing credit cards, maintaining those accounts included?

A. Under accounting.

Q. Under accounting?

4229 A. Yes. You see, it is primarily an accounting function. The maintenance of a record in your credit card accounting, the tabulation or classification of the sales tickets, it is all done by the accounting department.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Proceed.

By Mr. Austin:

Q. What is the purpose of printed matter and direct mail advertising?

A. To secure customers. That is the purpose of any advertisement.

Q. Then you would say the purpose of printed matter and direct mail advertising is the same as the purpose of the newspaper advertising?

A. Yes, merely a different media, which we hope will accomplish the same objectives, perhaps in even a little better manner.

Q. Will you please describe what is meant by motion pictures advertising?

A. Oh, yes. We hold annual meetings of our sales staff, from field managers down through the people who contact the public in an effort to sell our merchandise, early in each year, and frequently in these meetings we will show a motion picture designed to sell our merchandise thoroughly and completely to our own employees.

4230 After the annual meetings in the early part of the year this same motion picture is frequently shown at the dealer meetings, which are held throughout the field for their educational and institutional value.

Subsequent to the showing of the pictures, first, to our own employees, second, to our dealer tank wagon customers, the films become a part of the local library and are then shown to Kiwanis clubs, meetings of the Lion clubs, chambers of commerce, church socials, and what will you, likewise in an effort to sell our merchandise.

Frequently these pictures have to do primarily with the service rendered on the driveway of our reseller outlets. It is a glorification of the dealer function and the glorification of the driveway courtesy.

Q. Then, would it be correct to say that this expense for motion pictures is in part—the purpose of it is in part dealer acceptance and in part consumer acceptance?

A. Yes. I think that would be a correct statement, although the emphasis on a motion picture of that type is not the same as the emphasis on a newspaper advertisement. The primary object, let us say, of a motion picture training film will be directed to educating the dealer and his helpers as to the type of services and conveniences that the rank and file of the American public wants and desires when they come on to his driveway—the
4231 cleanliness of his outlets, the courtesy of his service, the availability and ease of entry, and all other factors having to do with the desire of the purchasing public as that desire is increased or decreased according to its reaction to the courtesy extended to the customer by the dealer. Because of this a motion picture, you see, is more directly assignable to a channel than is a newspaper insertion. I think—I hope the distinction will be—has been clarified by a description of the different emphases that we attempt to get in the motion picture as distinguished from a newspaper insertion.

Q. You say that it is more directly allocable to a channel?

A. I think that it is, yes. Yes, I think it is.

Q. Well, is any allocation to channels of that expense made other than on that basis?

A. No. We allocate that item the same as we allocate newspaper insertion. It is a question of degree, Mr. Austin.

Q. The aspects of the motion picture advertising as you have described are directed, then, toward increasing dealer sales; is that correct? I am trying—

A. Definitely.

4232 Mr. Hanley: Just a minute. What is that question?

(Question read.)

The Witness: May I continue with the answer of that?

Trial Examiner Ballinger: If you haven't finished it, you may.

A. I have one further thought. In the direct testimony which was taken at Detroit, I recall great emphasis being placed on the significance of price as a determinate of consumer patronage. It is. Service on the driveway, as you all know from your personal observation, is likewise a very important determinate of patronage. For that reason we attempt continuously to keep our service standards, to keep the standards of our dealers on a sufficiently high rank that it becomes an important competitive asset.

By Mr. Austin:

Q. Are the dealer meetings at which those motion pictures are shown meetings of Standard Oil service station operators?

A. In the main, plus their helpers, individuals who may work either on the driveway or in greasing stalls or wash racks, frequently the families or wives of the dealers are present, while not infrequently we find that dealers of competitive oil companies have a fairly good representation at some of the meetings. It is an important means of selling a dealer on the advantages of the company.
4233 Some competitive dealers are invited to attend; others come without the invitation and are gladly admitted.

Q. I suppose all of the Standard Oil service stations are notified of these meetings?

A. Oh, yes.

Q. I don't mean of every meeting but—

A. They are notified of the dealer meeting which will be held in their community or their area.

Q. That is what I mean.

A. But, they wouldn't follow the troupe about the sales field and attend all of the meetings because the meetings themselves are repetitions.

Q. What is the purpose of outdoor poster advertising?

A. The purpose of an outdoor poster again is to do a mass selling job to the motorist or public.

Q. Does that again mean creation of consumer acceptance?

A. Definitely so.

Q. What is the nature of advertising in dealer trade papers and magazines?

A. I do not know whether you are acquainted with illustrations of magazines or papers which are published to the dealer trade or not. We have and maintain in our company what is known as "Standard Service News." That is the equivalent of a house organ which is published by the company and is distributed, I think it is on
4234 an every-two-week basis to all the dealers throughout our territory. The principal contact of the little organ is to bring to our dealers as a class various merchandising efforts which have been found by some one or more of our dealers to be quite successful. It may be a means of selling tires, it may be an unusual sales approach on gasoline, it may be an unusual sales approach on motor oil, but it is a success story of a dealer or dealers.

Now, that is one type of publication referred to.

Q. While you are on that, is the entire expense of printing and publishing that paper included in this advertising expense?

A. Yes. Yes.

Q. I assumed so, but I just wanted to bring out that this doesn't refer to advertising in that paper; it refers to the paper itself.

A. No. It is the paper itself because the paper itself is purely an advertising article.

Q. All right.

A. Then are you acquainted with such magazines as "Super Service Station"? The name of the magazine?

Q. No.

A. Well, that is a magazine which has a circulation primarily among operators of service stations. Now, operators of service stations are potential customers for the distribution of our brands of merchandise. It is ad-
4235 vantageous to attempt to sell through such media our products. It is such a classification of advertising effort that is reflected under the item "dealer trade papers and magazines."

Now, there is still a broader inclusion under that which should be mentioned, and that would be advertisements of some of our specialty products in the magazine classification on industrial oils, wherein the major emphasis of advertising is given to a particular industrial product.

That illustrates I think adequately the content or the type of expenditures included under that classification.

Q. Now, will you describe the purpose of that advertising?

A. I think I would have to use the same words that I have used in the description of the purpose of any advertising: The development of consumer acceptance and the effort to acquire customers.

Q. There is some distinction between those two things, is there not? For instance, the advertising in this magazine that you referred to that has a distribution among service station operators, the purpose of that would be—or it would have as its purpose consumer acceptance, or would it be chiefly a matter of dealer acceptance?

A. The first step in securing a sound consumer acceptance is to have a complete acceptance on the part of the individuals who meet consumers. A dealer who isn't thoroughly sold on his product isn't any good.

4236 Q. Then your feeling is that any work or advertising—well, leave out "work." That might be something else.

A. Yes.

Q. But any advertising that the company does or circularization of its dealers in the manner which you have described has as its ultimate end the increase of sales to the consumer?

A. Surely. It avails nothing to a company to fill the stock or shelves of the retailers. The supplying company is only successful which helps the retailers to move that merchandise off of its shelves at a profit.

Mr. Hanley: Judge, is this line of examination helpful at all? I don't want to interrupt and I haven't. I haven't said a word all during the hearing. But we advertise and we advertise for the same reason that the Pepsodent Tooth paste Company advertises or any other company advertises its product. It just seems to me we are building up a lot of record here. It just doesn't make very good sense. Of course we advertise, and we do it to sell our products. That is all there is to that.

Trial Examiner ~~Ballinger: Well,~~ counsel for the Commission is within his rights.

Mr. Hanley: I think he is if he wants to pursue it.

By Mr. Austin:

Q. Can you name some of the principal items entering 4237 into the item on Commission's Exhibit 84-A of $26,558.31 entitled "miscellaneous items too small to show by separate classification"?

A. If I could I would have done so in preparing the information requested by you and now embodied in Commission's Exhibit 84-A, B and C.

You will notice that we carried the individual breakdown, down to an item as small as $2,920.89 out of a total of $154,000. Therefore, we have carried it down to a point where it represents less than 2 per cent of the expenditure. The miscellaneous items which were too small to classify would have required the study of an infinite number of expense items. I don't know as there is any so called principal items of the miscellaneous classification. Certainly, there is no item that would be more than 2 per cent of the total.

Q. 2 per cent of what total?

A. Out of the $154,635.04 shown as a total for the tank wagon reseller channel under account 1075 for the Detroit field for 1937.

Q. How about the cost of maps? Is that included in the miscellaneous items?

A. Maps are included in printed matter. I am sorry. I should have mentioned that.

Q. That is a rather substantial part of the printed matter expense, is it not?

4238 A. Oh, it is, yes, definitely so. Games, give-aways and things like that would be there to.

Q. How about jewel globes?

A. I don't recall whether that is included under signs or whether that would be a part of the miscellaneous items.

Q. That is a rather substantial item, isn't it, Mr. Boatwright?

A. Not so great. It used to be but it no longer is because processes have been found now whereby a jewel globe gets renewed life merely by a rebaking process. It used to be because the enameling would grow dim after a year or two and the globe became useless. Now those globes are returned and the luster and brilliancy is added to the old globe by a processing process. It no longer is a major item. It was once.

Q. I notice that on Respondent's Exhibit 31-P, the jewel globes are figured at $5.23 per globe, and since there are likely to be several of those at one service station, I would have assumed that for the entire Detroit area that that expense would have amounted to several thousand dollars.

A. It would be, Mr. Austin, if we followed the same practice of writing off the full original cost of every jewel globe in the Detroit field every year, but, you see, that isn't necessary. It is of a continuous nature and the only part of the jewel globe expense which enters into your
current advertising effort is either a reprocessing or
4239 a replacement of breakage. You see, in the Exhibit
31-P, as I stated, as we were explaining the exhibit, we wrote off all of that equipment on an annual basis, a one-year basis, and a jewel globe may last 10 years.

Q. Then that item, whatever the amount is, for 1937, is included in the miscellaneous?

A. Well, as I stated.

Q. Or under signs? You are not sure, I take it?

A. I am just not sure but it is in this total item.

Q. What is the meaning of the term "point of sale advertising"?

A. It is largely advertising which is in terms of location at the tank wagon reseller outlets.

Q. What does it consist of?

A. It may consist of banners suspended across the driveway; it may consist of give-aways, games, or it may consist of maps, or hats for youngsters, 28 by 44 signs which are furnished to the dealer outlets and are mounted by the dealer outlets in standard size frames which are placed near the curb of the outlet; any type of an advertising effort which is incident to or associated with the point at which parts are distributed.

Q. Have you named the principal kinds of advertising of that nature? Is the jewel globe, for instance, considered
a point of sale advertisement?
4240 A. I would certainly so classify it, in my thinking.
The term is a general term and no two men would give the same definition perhaps of point-of-sale advertising.

Q. Well, I would like to know what the definition is for it.

A. I have so given it.

Q. And that is your definition insofar as the term has been used in any of these cost studies?

Mr. Hanley: The witness has so stated, Judge. Do we have to go over it three or four times?

Mr. Austin: I want to be sure it is inclusive, and he has mentioned certain things.

Trial Examiner Ballinger: The witness may answer.

Mr. Austin: And the witness ought to go into it.

A. I have stated in a general way what I regard point-of-sale advertising to be. I can not stand here and take every individual item of advertising expenditure on the part of the Standard Oil Company and place it in pigeon holes as to whether I would or would not classify that particular item as a point-of-sale ad. I just can't do it without having before me a rank and file of every single advertising effort we exerted in the year 1937, but I think that my answer relative to the general meaning of the term is clear on the record.

By Mr. Austin:

4241 Q. Can you state what portion of the total expense of $154,633.04 shown on Respondent's Exhibit 31-O for account 1075 represents point-of-sale advertising?

Mr. Hanley: Just a minute. All right, no objection.

A. No, I couldn't answer that question. You see, I have already testified and I couldn't give you a complete classification. If I can't do that, then I can't give you an estimate of the proportion which such a classification would result in.

Q. Would all point-of-sale advertising be included in the two items on Commission's Exhibit 84-A entitled "signs at dealer outlets and miscellaneous items"?

A. Not necessarily. There might be some point-of-sale advertising under the item of outdoor posters. There may be in some of our Detroit stations retaining walls, sides of buildings, fences, or other unsightly objects near the confines of a service station property where such conditions exist. It is infinitely better for the company to utilize that space for the poster purposes, whether it be a posting of bulletins or whether it be a painted sign. There may be some of that.

Q. Perhaps I should have asked you which items on Commission's Exhibit 84-A include point-of-sale advertising. I didn't mean to assume that miscellaneous included it or not. I assumed it did. But will you answer the general question?

A. If you will rephrase your question and ask 4242 which ones are not likely to be included, I could answer it much easier.

Q. Well, then, which items on Commission's Exhibit 84-A probably do not include point-of-sale advertising?

A. Newspaper advertising and motion pictures are the two which quite likely do not contain any point of sale advertising. You see, printed matter will have a good deal of point of sale advertising.

Q. How?

A. Among the illustrations that I mentioned to you, give-aways, maps, products of that type are given away at point of sale.

Q. You would consider maps point-of-sale advertising?

A. Oh, definitely, yes.

Q. Outdoor posters would probably include very little in the nature of posters at point of sale?

A. I couldn't estimate accurately the ratio. It would be my expectation that the major part of the item on outdoor posters would be other than point-of-sale advertising.

Q. Would dealers' trade-papers and magazines exclude any point-of-sale advertising?

A. Yes. What is a house organ that you send direct to your dealer and which carries nothing but a sales story to your dealer?. Would it be other than a point-of-sale advertising, as your effort is to get that dealer to properly merchandise the true merits of your products? Yes, 4243 I think that is a point-of-sale advertising.

Mr. Austin, now that I think about it, a motion picture after it has been shown to our managers' meetings, our sales people, and our dealers is frequently utilized by dealers who borrow the films and display it on their own premises. You see, it starts as other than a point-of-sale advertising but a part of its use is and does become point-of-sale advertising.

Q. I don't know whether it is possible to draw a line or whether there is any particular point to the distinction between the one and the other, but I wanted to bring it out as far as I could.

A. I understand perfectly.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Will you turn to Respondent's Exhibit 31-P? There is an item there for banners, games, and displays.

A. Yes.

Q. Of $143,393.52 for what is called "total field." What do you mean by "total field"?

A. Standard Oil Company of Indiana territory.

Q. You don't mean the Detroit field?

A. No.

4244 Q. Then that figure is the total expense of the company for banners, games, and displays in 1937?

A. Yes, sir.

Q. What part of that expense was allocated to the Detroit field?

A. I don't know.

Q. Would it be the figure of $6.33 multiplied by the number of outlets in the Detroit field?

A. I have to answer that: I don't know.

Q. Well, if you had divided that figure here by the total outlets of the company, wouldn't you have reached the result of $6.33 per outlet?

A. That is correct.

Q. Would it not follow that the portion of that expense allocated to these Detroit fields would be the number of outlets in the Detroit field multiplied by $6.33?

A. Not necessarily complete concurrence. This was an effort to isolate that part of this item of expenditure which could be assignable and honestly attributable to Ned's. Now, the number of banners which are assigned to a given field depends upon the number of driveways. The number of games depends, to a large extent, upon the number of driveways and the number of outlets. Therefore, in an effort to isolate that part which would be assignable out of this total to four outlets, we used that process of allocation.

4245 Q. Well, this expense of $143,393 was pro rated among the different fields of the company, was it not, in 1937?

A. There is no question about that.

Q. And you do not know how that was done?

A. I am sorry, I can't tell you how that was done.

Q. Where would that expense be included among the items on Commission's Exhibit 84-A?

A. Most of that would be included under the classification of printed matter and direct mail.

Q. Are banners printed matter?

A. I don't know whether they are so classified for the purposes of this expense classification or not.

Q. And games, would they be printed matter?

A. A great many of them are, yes.

Q. You mean it depends on the type of game?

A. That is possible. If we give away checkers, why, then, that isn't printed matter, but if we give away games which are printed or kites which have a picture or sales story on the kite, that is printed matter.

Q. Where did you obtain this figure of $143,393?

A. Off the general office books.

Q. It is carried there as a separate item?

A. Yes, sir.

Q. Then why is it that it is not shown as a separate item in Commission's Exhibit 84-A unless it can all
4246 be included in miscellaneous, which you say is not the case?

A. Well, it would be rather difficult—

Mr. Hanley: Just a moment.

Will you please read that?

(Question read.)

Mr. Hanley: Go ahead and answer it.

A. It would be difficult to include an item of $143,000 in a total of $26,000. The $143,000 is a general office expense. The general office expenditure is made through its advertising department and its advertising agency. The general office expenditures is shown on our books in a lump sum. It is then allocated to the various fields. That part of the $143,000 which is allocated to the Detroit field is included in the $154,635.04 shown on Commission's Exhibit 84-A and the breakdown of the account 1075.

By Mr. Austin:

Q. From what records was this breakdown of figures on Commission's Exhibit 84-A obtained?

A. General office records.

Q. Chicago?

A. Yes, sir.

Q. I am still not clear, Mr. Boatwright, why the general office has a separate record apparently for its expenditures for banners, games, and displays, and yet no separate statement is made of that expense on Commission's
4247 Exhibit 84-A, which is taken from the same records.

Mr. Hanley: That is assuming a fact not in evidence and objected to for that reason, your Honor. It is not a question, it is a statement on the part of counsel.

Trial Examiner Ballinger: If the statement is incorrect, the witness can correct it.

The Witness: Will ~~you read the~~ question?

(Question read.)

Mr. Austin: From the same records?

The Reporter: Yes, "which is taken from the same records."

A. Well, the only difficulty with the question is the statement that they are taken from the same records. It is an assumption on the part of the lawyer. I do not know whether they were taken from the same records or not.

By Mr. Austin:

Q. I was relying on your statement that you got both of these statements from the records in the Chicago office. That is all I meant by "taken from the same records."

A. I did get both of them from the general office. One of them may have been obtained from that record; one of them may have been obtained from the actual payment or from the vouchers.

Q. Is there any separation of advertising expenses in the general office between newspaper advertising, printed matter, direct mail, motion pictures, and so forth, on Exhibit 31-P? 4248

A. I think I see a difficulty. The breakdown of 1075 and these classifications are not maintained consistently and regularly. This was an effort to dig out of the record on 1075 a breakdown as per your request and Mr. Wormack's request while in Detroit to attempt to help you in your evaluation of 1075. We did not maintain this classification and this grouping of costs as a regular accounting procedure. It is neither needed nor do I think practical to undertake such a constant classification. Therefore, when we got the item of newspaper advertising we had to go behind the form on which our advertising records are maintained to make up those items equally, too.

Q. Do I understand you do have on your books in Chicago a separate statement of the company's expense for banners, games, and displays?

A. Well, that is a very easy thing to get. Banners, games, and displays are in each case a part of the advertising campaign, and we can get that direct from the billing.

from the advertising agency of the company. Just pull that off. I guess that is easy to get.

Q. Now, when you assumed this task of preparing Commission's Exhibit 84-A and obtained your figures and you came to the expense for banners, games, and displays, where did you put it on Commission's Exhibit 84-A?

4249 Mr. Hanley: Where?

Mr. Austin: Yes.

Mr. Hanley: That is objected to, because the exhibit speaks for itself. We furnished it at the request of the government, and here it is. It has been offered and received in evidence.

Trial Examiner Ballinger: Does it appear on that record?

Mr. Austin: No, it does not. That is why I am asking.

Mr. Hanley: Will you read the question?

Trial Examiner Ballinger: Was it included in that exhibit?

The Witness: Yes, sir.

Mr. Austin: But not separately. The witness says it may be mixed up in several places, yet when he goes to construe Respondent's Exhibit 31-P he has it all separated.

Trial Examiner Ballinger: Can you explain what counsel desires to obtain?

Mr. Austin: I would like to have the question re-read, if your Honor please.

(Question read.)

The Witness: Your Honor, if I may, I would like to read from a memorandum given to me in Detroit relative to account 1075. I shall not read the entire paper, 4250 but I should like to point out the principal request.

Trial Examiner Ballinger: Who furnished you the paper?

The Witness: This was the request as made by the counsel for the Commission and Mr. Wormack for a breakdown of the account 1075 prior to my departure from Detroit.

Trial Examiner Ballinger: You may read it.

The Witness: (Reading.) "No. 1. Account 1075; year, 1937:

(a). Show total amount of newspaper advertising allocated to gasoline and refined oil tank wagon reseller channel for the Detroit field for the year 1937. If possible, take an individual ad for the same year and state exactly how that ad was allocated to certain field on a circular basis.

"(b). Billboards. Give total expenditure computed in 1075 for outdoor posting during the year 1937 and a brief explanatory notation of any allocations that have been made in establishing our booking records.

"(c). Radio advertising—total, if any, as well as including an explanatory notation on the method of cost allocation employed with this type of medium.

"(d). Signs. Under this caption attempt to give the entire funds expended during the year 1937 for signs, various types, put up at reseller outlets.

"(e). If possible, give total charges for transpor-
4251 tation of advertising material in the forms of postage, freight, express, and so forth.

"(f). If there are any other major items entering into this total expenditure, if at all possible, isolate, classify, and explain the allocation."

That is the request, and that is what we attempted to comply with in supplying what is now Commission's Exhibit 84-A, B and C, and we have attempted to break down by pulling out our various expense items and classifying them as nearly as possible according to the request of the counsel for the Commission, and although no mention was made of dealer trade papers and magazines in some of those other items, it seemed advisable, because of their significance, to give them a separate classification. It was so done.

By Mr. Austin:

Q. Well, Mr. Boatwright, you say you do not know what portion of the expense of the company for banners, games, and displays was charged to the Detroit field in 1937; is that right?

A. That is what I have said, but I have said that whatsoever amount was charged to the Detroit field is included in this item.

Q. Then, did you have in preparing Commission's Exhibit 84-A the amount of the company's expense for banners, games and displays charged to the Detroit field for 1937?

4252 Mr. Hanley: Just a moment.

May I ask your Honor, is there some complaint by this Commission of the accuracy of this breakdown or the extent to which it goes? Are there more figures that you want?

Mr. Austin: I want to find out the amount of the Detroit—expense assigned by the company to Detroit for banners, games and displays for 1937, and I am also asking the witness where he put that expense. Since he says that it was a separate expense, where did he put it on Commission's Exhibit 84-A?

Mr. Hanley: The respondent at this time offers to get for the Commission the cost of banners and whatever else was indicated in counsel's statement allocated to the Detroit field. We will get it as accurately as it is shown, your Honor.

By Mr. Austin:

Q. Now, Mr. Boatwright; can you—

The Witness: There is one statement on the record that I should like to have reread as it merits a correction. It was not what the witness said. May I request a reading of it?

Trial Examiner Ballinger: You may. The reporter will read it.

(The record was read.)

Trial Examiner Ballinger: Off the record.

4253. (Discussion off the record.)

Trial Examiner Ballinger: Now, you may correct that statement on the record.

The Witness: Now, will you read that again?

(The reporter read as follows:

"Mr. Austin: I want to find out the amount of the Detroit—expense assigned by the company to Detroit for banners, games and displays for 1937, and I am also asking the witness where he put that expense. Since he says that it was a separate expense, where did he put it on Commission's Exhibit 84-A?")

The Witness: On reading the question I feel that the record should reveal that in the testimony given banners, games and displays were indicated as being easy to secure from billings on the part of our advertising agency, but that I did not testify that a separate expense classification of these particular types of advertising was carried as a regular part of our bookkeeping procedure.

By Mr. Austin:

Q. Was the total expense of the company for 1937 for banners, games and displays as such allocated between the different fields?

A. It was.

Q. Does it follow from that that the total expense for each field does appear on the company's books as well 4254 as the total?

A. It does not appear on the company's books as a separate item under these classifications. The allocation is probably made on the basis of total billing, these items referred to representing a component part of the total billing.

Mr. Austin: May we have a recess, your Honor?

Trial Examiner Ballinger: The hearing will stand in recess for five minutes.

(A short recess was taken.)

4255 Trial Examiner Ballinger: Come to order. You may proceed.

By Mr. Austin:

Q. We will now turn, if you please, to Respondent's Exhibit 33-A to E.

Respondent's Exhibit 33-B states: "The total tank wagon reseller expense for 1940" amounting to $1,145,399.13. Is this figure taken from the Detroit Form 189 for 1940?

A. It was.

Q. Form 189 is the form which was introduced in evidence as Respondent's Exhibit 32, is it not?

A. I can't tell you whether that was Respondent's exhibit number.

Mr. Hanley: We concede it, Judge. That is right.

Q. What does "total tank wagon reseller expense" as here used mean?

A. That means the sum total of the marketing expense assigned on our expense statement Form 189 to the tank wagon reseller channel for the year 1940 in the Detroit field.

Q. Is that figure the grand total of all expenses included in the column marked "tank wagon—reseller" on Form 189 for Detroit in 1940?

A. It is under the broad classification listed as petroeum products. You see, the column that you gave the heading was the subdivision under a broader caption.

4256 Q. Do the expenses entered in that column include expenses of distribution of gasoline, refined oils, and tractor fuel?

A. The expenses entered in that column includes the expenses of gasoline, refined oil, and tractor fuels to the extent that less than a thousand gallons bears to 70,000,000 gallons, plus, or 69,000,000 gallons.

Mr. Austin: Will you read that?

(Answer read.)

Q. I don't understand that statement, Mr. Boatwright, since it includes gasoline.

A. I shall see if I can rephrase it.

The total expense referred to represents marketing cost of gasoline through the tank wagon reseller channel plus marketing cost of refined oil through the tank wagon reseller channel, plus any cost for marketing an amount in the neighborhood of 1,000 gallons of Standard tractor fuel.

Q. Are the expenses of distribution of any other product included in that channel?

A. The distribution of cost on Form 189 is a channel distribution. It is not a distribution of costs by products within a channel.

Q. I still don't think that answers my question, Mr. Boatwright.

Trial Examiner Ballinger: Read the question.

(Question read.)

4257 By Mr. Austin:

Q. Now, that question emphasizes products, any other product.

A. Well, would you illustrate, please?

Q. Yes. You have stated that the expenses entered in that channel include the expenses of distribution of gasoline, refined oils, and tractor fuel through the tank wagon reseller channel. Are the expenses of distribution of any other product through the tank wagon reseller channel included in that column?

A. Well, by an illustration do you mean are expenses that may be incident to the distribution of the motor oil—

Q. Yes.

A. —as an illustration in that column?

Q. Yes, that is correct.

A. No.

Q. That as far as products are concerned, the only products the expense of which or any expenses of which are included in that column are gasoline, refined oils, and tractor fuels?

A. Yes, sir.

Q. Does that column set forth the total expenses charged by the company,—total of all expenses charged by the company,—to the distribution of gasoline, refined oil, and tractor fuels to tank wagon reseller customers in the Detroit field?

A. That column represents the total marketing 4258 cost charged to the customers in this particular charge for the products enumerated.

Q. Are there any other expenses of marketing such products to such customers?

A. No; there are not.

Q. Which are not included in this column?

A. No other marketing costs; no.

Q. What do you mean by "marketing costs"?

A. Exactly what the term designates. In other words, this does not include any manufacturing cost, or does not include transportation cost that we would pay common carriers to get the product to our bulk plants.

Q. Well, by marketing costs, you mean all costs of sale and delivery?

A. Yes, sir.

Q. As far as transportation which you have just mentioned, I will take up more specifically later.

Respondent's Exhibit 32, Form 189, is entitled "Comparative statement of expense"; is that correct?

A. Yes, sir.

Q. Is this form prepared for each field?

A. It is.

Q. Where is this form prepared for the Detroit field?

A. Do you have before you a copy of the form? Those items which are enumerated under the broad heading 4259 "Direct Field Expense" are prepared and allocated in the Detroit field office. That part which is encompassed under the caption "All Other Expense" approximately half way down your statement?

Q. Yes.

A. Are prepared and allocated to the field by the general office.

Q. Is the general office located in Chicago?

A. It is.

Q. And where is the data appearing on Form 189 when it is filled out assembled? In other words, does the Detroit office forward its figures to Chicago and is the whole form completed there or does Chicago forward its figures to Detroit and is the whole form completed there?

A. The Detroit field forwards to Chicago the form completed under the caption "Direct Field Expense." The lower part of the form "All Other Expense" is added thereto in the Chicago office to comprise the total marketing cost for the Detroit field. The form is completed in the general office in Chicago.

Q. Then I assume that all the totals and the percentages are computed in the Chicago office?

A. You question is too broad.

Q. Well, it is—

A. When you say "all" I don't know which item, of course, you are referring to.

4260 Q. I mean totals and percentages which apply to the entire group of figures prepared as you have stated at both places. In other words, the final completion of the form, all of the separate figures which are available which go opposite the various account numbers.

A. The final completion of the form is in the Chicago office.

Q. Perhaps I could be more specific.

A. I don't know what more I can say to answer.

Q. The computations which appear on the last nine lines on Respondent's Exhibit 32—

A. The Form 189?

Q. Yes.

—are computed and entered in the Chicago office, beginning with the line "Total All Other Expense"?

A. Well, that line obviously has to be considered in the Chicago office.

The next line "Average Per Unit This Year" likewise would have to be computed in the Chicago office.

The following line "Average Per Unit Last Year" is taken from the comparable form for the identical month, the preceding year.

The grand total, "all expense," is a Chicago computation.

"Total Units Including Direct Shipments" I think 4261 would have to be a Chicago calculation in its very nature.

The following line would be a Chicago calculation.

The same would be true of the "Total Units" item 1 less item 2.

Yes, I think all of the last eight lines would be prepared in their final form by the Chicago division with such information as would be needed for their preparation and calculation secured direct from the Detroit office.

Q. Is not one exception to the statement you made regarding the accounts listed under the general title "All other Expense," Account No. 106? Is not that account expense computed in the Detroit office?

A. No. The depreciation expense, vehicles, trucks, motors, and so forth?

Q. Yes.

A. No, that is computed in the Chicago office.

Q. I see.

A. Yes.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. What is Form 439, Mr. Boatwright?

A. Form 439 is a record of sales by products through types of customers.

4262 Q. Can you elaborate that a little?

A. I think I could elaborate it enough to clarify the question that may be in counsel's mind.

We have used this form in connection with the leased service station tank wagon gallons, and we have taken the report of sales to this class of outlets to break down the total gallonage between gasoline and motor oil.

Q. Did you say that was used only in connection with lessee service stations, or did I misunderstand you?

A. I can't tell you. I said that the Form 439 is used in connection with lessee service stations; whether it is used only in that connection, I couldn't tell you.

Q. Is that a field form or is it a general office form?

A. It is a form that is filled out in the field and submitted to the general office.

Q. Is it prepared annually or on what basis?

A. The time period covered by the form would have to be determined from the instructions. I don't recall.

Q. You don't know how often it is prepared?

A. I don't know sufficiently accurate that I could testify under oath.

Q. Well, is it a form which is used in every field?

A. It is a form used in every field. It is used currently; it is prepared currently, but whether it be a form that is
used only for purposes of control such as it might well
4263 be in connection with leased service stations, or
whether it is used as a sales promotion form, I don't at the moment recall. My impression is that it is an operating form.

Q. Respondent's Exhibit 33-B refers to Form 439 for the year 1940. Does that indicate that the form was prepared on an annual basis?

A. Not at all. Many forms prepared on a monthly basis or on a quarterly basis are recapitulated at the end of the year for an annual picture. All this means was that it was a form upon which a recapitulation had been made for the calendar year of 1940.

Q. Have you a copy of that form with you?

A. I do not.

Q. Can you state little more in detail as to just what data appears on that form?

A. I am sorry. I cannot. We have thousands of forms and I can't at this moment give you complete detail of the heading of that particular form.

Q. I suppose that those forms for 1940 are available in case we desire to see them?

A. Yes, sir.

Mr. Hanley: I am just not clear as to what that means. Is there a request on the part of the Commission? If there is we will comply with it.

Trial Examiner Ballinger: Off the record.

4264 (Discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Austin: I will ask the Respondent to produce form or forms 439 for the Detroit field for 1940.

Mr. Hanley: You want the records of the company? You just don't want the form? You want the record?

Mr. Austin: No, I want the completed form, the record, yes.

Mr. Hanley: I see.

Mr. Austin: As it has been completed for the year 1940.

Mr. Hanley: All right.

Mr. Austin: In the company records.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Let us proceed. On the record.

Mr. Austin: I would also like to have Respondent supply the Commission with a blank form No. 439, if possible.

Mr. Hanley: We will comply with the request, Your Honor.

By Mr. Austin:

Q. Can you state how Form No. 439 was used in the preparation of Respondent's Exhibit 33-B?

A. Yes. From this form we determined the pro-
4265 portion of gallonage which moves through the leased service station channel. That would be gasoline or that would be motor oils and greases. Having determined this ratio of 98.44, which appears upon Respondent's Exhibit 33-B, that ratio was applied to the $48,506.44, which is the net cost assignable to the column on Form 189 for the Detroit field for the year 1940 under the broad caption "Petroleum Products, Subdivision:, Income and Expense, Leased Service Stations." The application of the 98.44 percent resulted in a charge of $47,749.74 applicable to the over-all tank wagon reseller channel. The $47,749.74 was added to the totals shown on Form 189 for the Detroit field in 1940, the reseller tank wagon, $1,145,399.13 giving us a grand total of expense assignable to the reseller channel, including such property expenses as may be incident to the operation of leased service stations of $1,193,148.87.

Q. Does Form 189 for the Detroit field show all of the company's expenses of sale and delivery of all products to all customers in that field?

A. No, sir.

Q. What expenses of that nature are not shown on Form 189?

A. All expenses are shown. All expenses, however, are not allocated on the basis of all customers.

Q. I didn't ask anything about allocations.

A. I am sorry. I misinterpreted your question.

All expenses of marketing assignable to the Detroit
4266 field on all products is shown on the Detroit comparative statement of expense, Form 189.

Does that answer your question?

Q. Yes. That also includes all customers in the Detroit field, does it not?

A. Expenses incident to all customers are included; yes, sir.

Q. Does Form 189 include all general office expenses allocated to the Detroit field?

A. Form 189 does include all general office expenses allocated to the Detroit field.

Q. Does it include all other expenses of the company?

A. What do you mean by "all other"?

Q. Expenses which are not considered a direct field expense. Does it include all other expenses of the company allocated to the company's business in the Detroit field? Now, in explanation of that question, an expense which was purely a Detroit field expense presumably would not be allocated between fields; it would be a direct expense so far as the field is concerned.

A. That is right.

Q. I am asking you whether all other expenses than direct field expenses of the Detroit field—does Form 189 include all other expenses of the company allocated to the company's business in the Detroit field?

4267 Mr. Hanley: Mr. Austin, do you mind qualifying that by saying "marketing expense"?

Mr. Austin: Yes, I mean marketing expense.

A. Yes. The Form 189 is the sum total of the marketing expense in the Detroit field, all marketing expense.

By Mr. Austin:

Q. Whether the expense originates in the Detroit field or in the general office or wherever it may originate?

A. Yes. Point of origin has no bearing. It is the grand total of the marketing expense for the Detroit field.

Q. By "for the Detroit field" you mean charged by the company to the Detroit field?

A. Yes, sir.

Q. Do the expenses entered on Form 189 include any expenses of sale or delivery to any customer not located in the Detroit field?

A. Yes.

Q. Will you explain, please?

A. Yes. Frequently accounts are sold at the headquarters of an account. It may be what is regarded as a cross-country account. General Motors may buy and delivery may be made at Detroit, at Indianapolis, or other branches. The sale and expenses incident to the sale are a part of the expenses incurred in the general office. The allocation is made on the basis of the part of the total gallonage 4268 that is sold in the Detroit field.

Q. Do you mean sold or do you mean delivered?

A. Delivered in the Detroit field.

Q. Because I think you stated that the sale was made at Detroit.

A. Yes.

Q. But the delivery might be made in several places; is that correct?

A. That is correct.

Q. And in such a case is the only expense allocated to the Detroit field the expense of the delivery of the products delivered in the Detroit field?

A. Well, the actual delivery cost would be handled as a part of the upper half of your Form 189.

Would you give me the exhibit number, please?

Q. Respondent's Exhibit 32.

A. Respondent's Exhibit 32. And would be shown as a delivery cost. The part of marketing expense that I was referring to would be in the allocation of the expenses of the refined oils and gasoline, bulk sales division, in the Chicago office, which made the actual transaction with the headquarters of the purchaser.

Now, the expenses of the refined oils and gasoline department would be allocated among the various fields on an all-gallonage basis.

4269 Q. Might not the sale be made in Detroit rather than by the general office?

A. It is, entirely.

Q. Assuming General Motors was concerned.

A. It is entirely possible. On the other hand, some other field with another customer might make a sale to some company having a branch in Detroit. Now, the contact is done by the field representatives, in most cases. Sometimes a specialist from the Chicago office will go to headquarters and help the fields consummate the sale. That frequently happens with highly specialized industrial products where the ordinary field salesman doesn't feel quite qualified to handle the deal.

Q. Do the expenses entered in Form 189 for a given field include any expenses of delivery of any product delivered anywhere else than in that field?

A. No.

Q. And even as to the example that you put where the sale is made to a customer for delivery in more than one field, do I understand that only a portion of the selling expenses of such a sale is allocated to the field where delivery is made, to each field where delivery is made?

A. That is correct. It is an extremely small item.

Trial Examiner Ballinger: The Examiner would like to ask a question at this point.

4270 Did I understand you to say that the item appearing on Respondent's Exhibit 33-B of $1,193,148.87 represented the total marketing costs in the Detroit area, or did I understand that it represented the costs that could be properly allocated to that field, that there were other costs which could not be properly broken down and included in that amount?

The Witness: No. The understanding should be clarified. Form 189 represents the sum total of the costs for marketing all of our various products in the Detroit field where such costs are included in the Detroit field, plus the allocation of all other marketing costs among the various fields, so that the sum total as reported on the bottom of Form 189 represents the complete marketing cost either directly incurred or allocated to the Detroit division, and the sum total of all 189's for the various fields represents the sum total of the cost of marketing our products for the Standard Oil Company.

Now, the item that you specifically read, being $1,193,148.87, is the sum total of all costs of doing business to the tank wagon reseller channel, plus an item of $47,749.74, which represents 98.44 percent of the total cost for income and expense, leased service stations, as shown on the Detroit field Form 189 for the year 1940.

Trial Examiner Ballinger: The reason for my question is, and I direct your attention to Respondent's Exhibit 31-Q—

4271 The Witness: Yes.

Trial Examiner Ballinger: —that purports to set out a list of expenses, some portion of which probably should have been allocated to the field but which it was impossible to do?

The Witness: The problem we were confronted with in preparing Respondent's Exhibits 31-A through Q was quite a different problem than the one we were confronted with in preparing Respondent's Exhibit 33-A through E. The problem on the first part as set forth in 31-A through Q was a justification of a one-half cent differential between reseller accounts, both of whom were served by tank wagon deliveries from our bulk plants. As such we took only those expense items which we could with definiteness and honesty assign to the different customers within a channel. Here we are confronted with the problem of showing a differential between our total reseller marketing costs and marketing costs on direct shipments to jobbers, which is not carried as a separate channel of distribution on our marketing expense statements. In other words, the direct cost incurred in serving jobber accounts is included in our Form 189, but is not allocated to a separate channel.

Mr. Austin: I move that we adjourn, Your Honor.

Trial Examiner Ballinger: Motion of Counsel for the Commission is granted, and now at 4:45 o'clock p. m., the hearing stands adjourned to reconvene at 9:30 a. m., June 21, 1941, in Room 332, Federal Trade Commis-
4272 sion Building, Washington, D. C.

(Whereupon, at 4:45 o'clock p. m., June 20, 1941, the hearing in the above-entitled matter was adjourned.)

4273

Room 332, Federal Trade
Commission Building,
Washington, D. C.,
Saturday, June 21, 1941.

Met, pursuant to adjournment, at 9:30 a. m.

Before:

Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., appearing o[illegible]half of the Federal Trade Commission.

Harold R. Hanley, Esq. (910 South Michigan Avenue, Chicago, Ill.) appearing on behalf of the Respondent.

4274 PROCEEDINGS.

Trial Examiner Ballinger: Come to order.

This is a reconvening of Docket No. 4389, in the matter of Standard Oil Company, at 9:30 a. m., June 21, 1941, in Room 332, Federal Trade Commission, Washington, D. C. The last hearing was held in Washington, D. C., June 20, 1941.

The Reporter will note Counsel for the Commission and Respondent present.

You may proceed.

JOHN W. BOATWRIGHT thereupon resumed the stand and testified further as follows:

Cross-Examination (Continued) by Mr. Austin.

Q. At what points do the expenses in the Detroit field commence, Mr. Boatwright?

A. The marketing expenses?

Q. Yes. Do they include transportation by tanker to the marine terminal?

A. I see.

Q. At River Rouge.

A. The marketing expense does not include the transportation by tanker to River Rouge.

Q. Do they include the expenses of operation and maintenance of the marine terminal?

4275 A. They do not.

Q. Do the Detroit field-expenses include transportation from the marine terminal to the company's bulk plants?

A. They do not.

Q. That transportation takes place in Detroit, or, at least, in Michigan; doesn't it?

A. That is correct. It takes place in the field actually, but it is an expense which is incurred not in a true marketing sense. It is a cost of getting our products to the market and, accordingly, we do not regard it as a marketing expense subject to allocation on Form 189.

Q. Where and how is the expense of transportation from the marine terminal at River Rouge to the company's bulk plants accounted for? You say it is not an expense of the Detroit field. How is it treated by the company?

A. Well, it is transportation to our bulk plant carried in the records in the general office and enters on our general books from which the operating statement is made up at the end of the year.

Q. Is any part of that expense allocated to the Detroit field?

A. Any part of the transportation cost?

Q. Yes.

A. Well, naturally, we have a breakdown of freight
costs incurred so that we can follow them and study
4276 them. No part is allocated to the Detroit field on
the marketing expense statement 189. In other
words, our only purpose—

Mr. Hanley: Just a moment.

Judge, if that is regarded as important, we will supply information in so far as we can, but we are now getting into a manufacturing cost which I understood was entirely out of this picture, that we weren't supposed to regard at all.

That is what it is, Mr. Austin, so far as our records are concerned. It is a manufacturing cost.

Mr. Austin: I certainly wouldn't consider it such, Judge. Now, maybe you do, but I don't.

Mr. Hanley: Maybe you wouldn't, but that is just the way they keep the books. We will develop that information but we are just going to get into an awful complicated situation, Judge, here.

Trial Examiner Ballinger: Counsel for the Commission has the offer to furnish the information if desired. If he desires it he will advise you.

By Mr. Austin:

Q. That transportation expense of gasoline from the terminal at River Rouge is a cost of delivery, is it not, Mr. Boatwright?

A. It is not so regarded in our marketing expense. The transportation leg from the refinery or terminal to our bulk plants is not an expense of marketing subject
to the control of the field manager. It is carried
4277 as a classification of expense other than marketing
cost chargeable to the marketing department of our company.

Q. Well, that is based upon the company's accounting procedure, is it not?

A. Certainly.

Q. Now, aside from that, just in your opinion as an economist and an accountant, you would not say that the cost of transportation from the marine terminal is a manufacturing cost; would you?

A. No, I don't classify that as a manufacturing cost. Our marine terminal is merely a relay point and is operated by the manufacturing department. Therefore, whether the stock be produced and stored by the manufacturing department at Whiting or whether the stock—the inventory be carried at some relay point would make no difference in my thinking. Up to the delivery to the public carrier, it is manufactured. That brief leg in the process of product movement where it is carried by either rail or motor truck transport by some hauler I do not regard as manufacturing, nor do I regard it as marketing. I regard it as purely a transportation cost subject both to a better control and better follow-through if it is given a separate classification, which we do.

Q. You stated, I believe, that manufacturing ends when
the product is delivered from the refinery to the
4278 tanker or carrier, which transports it from Whiting;
is that correct?

A. No, that isn't correct.

Q. Pardon me. Is the refinery at Whiting?

A. Yes.

Q. I wanted to be sure I was right on that.

A. In my thinking, the manufacturing function and costs terminate with the delivery of the product to the common carrier.

Q. What common carrier?

A. Railroad.

Q. Rather, where? Whiting?

A. At River Rouge.

Q. Oh.

A. In other words, the manufacturing process involves the sum total of the production and inventory of those quantities required by the sales department. Now, whether they maintain that as a part of their inventory in a tank at Whiting or whether their inventory be Whiting plus River Rouge plus other terminals, I am not concerned with that, but the manufacturing department's responsibilities end with the delivery of a specified product to the common carrier at River Rouge, in this particular case.

Q. Who owns and operates the tankers to transport the gasoline from Whiting to River Rouge?

A. The Standard Oil Company of Indiana.

4279 Q. Those are your own tankers?

A. Yes.

Q. I see.

A. Yes.

Q. Is the transportation from the River Rouge terminal to the company's bulk plants accomplished by transport truck hauling?

A. Most of the time. Occasionally an emergency may arise and a carload be moved onto the siding at our bulk plants and unloaded.

Q. Was it formerly accomplished by tank car shipments by rail?

A. I am sure it was.

Q. Can you state when the change took place from tank car shipments to transport truck?

A. No, I cannot. I have only been with the company 8 years.

Q. Well, as recently as 1937 weren't shipments made by tank car? I think there is some testimony in the record on that, and I was under the impression that the transport truck hauling commenced quite recently, within the last couple of years.

A. No.

Mr. Hanley: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Off the record.

4280 Mr. Hanley: I now offer, if it is regarded as important, the information, of course, as to when the Detroit field went on the basis of delivering gasoline by truck transport as distinguished from delivery by railroad tank cars.

Mr. Austin: It appears that the change from tank car delivery to transport truck delivery to the bulk plants and now, including for the purpose of this statement, the bulk plants of the company and also the jobber bulk plants, may not have taken place at the same time, so that I would like to find out when the change in method of transportation was made, both in regard to the various bulk plants of the company in the Detroit area and also as to the bulk plants of customers to whom delivery was made.

Mr. Hanley: Off the record.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Austin: I would like to have the information requested as to all of the seven bulk plants shown on Respondent's Exhibit 92 in red letters.

Mr. Hanley: The map, Respondent's Exhibit 92, indicates the bulk plants as being Strathmoor, North Detroit, Clay, Lycaste, Bellview, Scotten, and Dearborn.

By Mr. Austin:

Q. From an accounting standpoint, Mr. Boat-
4281 wright, is it correct to state that there are two general classifications of costs, production costs and distribution costs?

A. Well, I think that some accountants classify a third group as transportation costs; production, transportation, and marketing.

Q. Have you made up a third classification for the purpose of segregating these costs of transportation from terminals to bulk plants which we have been discussing?

A. Well, our calculations do not include the leg from the terminal to the bulk plants at all.

Q. Is that transportation cost treated by you as a production cost?

A. Given a separate classification in our bookkeeping process? Separate from both production and from marketing?

Q. Yes.

A. Yes, sir.

Q. Then you do treat it as a separate class of costs?

A. Yes.

Q. Is the practice of the company in connection with the transportation costs in any of the fields from the terminals to the bulk plants to assign or prorate or allocate those costs as between any different customers or different classes of business or different channels of distribution?

A. Why, no. Your transportation cost in reaching your bulk plant is going to be the same irrespective 4282 of the channel of distribution at which that gallon of gasoline might be sold.

Q. It is true, isn't it, Mr. Boatwright—we will get into that more directly—that some gasoline is sold in an area without going through the bulk plants? In other words, gasoline that is sold by direct shipment from the marine terminal?

A. That is right.

Q. So that it wouldn't be true that all of the gasoline sold in the field goes through the company's bulk plants?

A. Yes, that is correct. Any gasoline going through our bulk plants, however, is broken down through the channels. I thought your question was, do we allocate them among the channels, and the answer was "No."

Q. No. My question was: Are the transportation expenses, total transportation expense of transportation from the marine terminal regardless as to what bulk plant it goes, allocated between channels or between any different divisions of gallonage?

A. There is no allocation made.

Q. You don't attempt, then, to allocate that transportation expense as between, for instance, tank wagon business and jobber business?

A. No.

Mr. Hanley: We haven't put that in as a cost. I don't understand the materiality.

I am sorry. Go ahead.

4283 By Mr. Austin:

Q. Then I understand, do I not, Mr. Boatwright, that no expense of transportation from the marine terminal at River Rouge to any bulk plant, either the bulk plant of the company or the bulk plant of the customer, is included in the expenses entered on Form 189?

A. Your understanding is correct.

Q. Does the company incur expense in the loading of the transport trucks at the marine terminal?

A. There is always a loading expense; any time that you move a product, you have a cost. Loading expense at a terminal is a part of the cost to the manufacturing department.

Q. You charge the cost of operation of the marine terminal to the manufacturing department?

A. They do so operate it. The sales department does not operate the marine terminal at all. That is purely a manufacturing department operation.

Q. And the expense of loading trucks is treated as a part of that operation?

A. Yes.

Q. How is gasoline transported from the marine terminal at River Rouge to bulk plants in Lansing, Ann Arbor, and Pontiac?

A. If you are asking about specific terminals, I cannot answer. I can say that the majority of gasoline served to the bulk plants in the Detroit area—

4284 Q. Detroit area?

A. Detroit field. I am sorry.

—is handled by truck transports. The movement of a product at any time is a selection of the most economical means of movement. If your truck rate gives you an advantage over your rail rate, your truck rate will be used; if your rail rate gives you an advantage over your truck rate, your rail rate will be used. It is merely a selection of the lowest cost means of movement.

Q. Are all of the bulk plants of the company in the Detroit field served directly from the marine terminal at River Rouge?

A. I think that is correct. There is a possibility that one of them might be served out of the marine terminal at Muskegon. I could say that 99 per cent of the volume in the Detroit field is moved directly from the River Rouge terminal, and any movement out of the Muskegon terminal would be in the magnitude of one percent or under.

Q. Are you familiar with the terms of the contracts with the transport truck haulers pursuant to which gasoline is transported from the marine terminal to the various bulk plants?

A. No, I am not.

Mr. Austin: I would like to have those contracts produced for the years 1939 and 1940.

Mr. Hanley: We will produce them, Your Honor. 1939 and 1940. I haven't the vaguest idea of what their 4285 materiality is, if any, but we will produce them if the Commission wants them.

By Mr. Austin:

Q. Is the transport truck transportation paid for on a gallonage basis or on a mileage basis?

A. Not being familiar with the provisions of the contract, that would be a difficult question to answer. I happen to know what the transportation cost figures out at some few stations, but I do not know whether that is the result of a division or whether it is stated in that manner in the contract.

Trial Examiner Ballinger: The information desired will be obtainable when the contracts are produced?

The Witness: That is correct.

Mr. Hanley: Your Honor understands this is not in our cost at all.

Trial Examiner Ballinger: I understand.

Mr. Austin: Well, perhaps it should be. That is the purpose for the examination.

Mr. Hanley: If you are willing that we add to our cost, then it would be very nice.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

By Mr. Austin:

Q. Did you state, Mr. Boatwright—I believe you 4286 did—the number of fields that you have such as the Detroit field?

A. Yes; 27.

Q. Have you made any studies, or do you annually make a study to determine the cost and profits in each field?

A. Total field?

Q. Yes.

Mr. Hanley: You mean of gasoline?

Mr. Austin: Well, I will restrict it to gasoline. I was making the question broader first, or perhaps such a study has been made as to all products.

A. Well, naturally, the profitability of the products are followed by the management of the company.

By Mr. Austin:

Q. Well, in any such study, Mr. Boatwright, are production costs or transportation costs assigned to the various fields?

A. I am not acquainted with any such study.

Q. I suppose, Mr. Boatwright, you are not familiar now either with the variations, if any, in the cost of transportation of gasoline as to whether there is a difference between one bulk plant and another bulk plant?

A. Well, usually there is a difference unless they are approximately the same distance from your point of loading. That is true whether you adopt the rail means of transportation or motor truck transport. It is just common sense that there is a difference.

4287 Mr. Hanley: May I inquire what the purpose is of all this examination about transportation costs in view of the fact that they are not included in the Respondent's computation of costs?

Mr. Austin: Well, in my opinion, it is a matter that we must inquire into. All this gasoline starts from the marine terminal at River Rouge, and the first step to getting that to the customer is the transportation of it to the various bulk plants, and, therefore, in my opinion, all costs incurred from the time the gasoline leaves the terminal at River Rouge are costs of delivery within the meaning of the Robinson-Patman Act.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Let us proceed.

By Mr. Austin:

Q. Turning again, Mr. Boatwright, to Respondent's Exhibit 32, Form 189.

A. Yes.

Q. Please state the products covered by the distribution expenses which are listed under the heading "Tank Wagon-Consumer" when the form is filled out.

Mr. Hanley: That has been asked many, many times. If Your Honor is still in doubt as to what the answer is, I just do not care to make the objection. It is certainly
4288 repetitious. It has been answered.

Mr. Austin: Perhaps you are under some misapprehension, Judge Hanley. The question now is as to tank wagon consumer. Previously the question has been asked as to tank wagon reseller.

A. It will take hours to enumerate the products in answer to that question.

By Mr. Austin:

Q. It will?

A. Yes; and I could not recall 5 percent of it.

Q. Well, that is of interest, Mr. Boatwright. I was under the impression that the tank wagon consumer column, for instance, there were expenses of gasoline and refined oils; in other words, that they are the same products as to which expenses are entered in the tank wagon reseller.

A. I am sorry. The long list would be included in the other methods channel.

The principal products entered under tank wagon consumer channel are the three brands of motor gasoline. If there is any cleaning naphtha, or anything like that, in small quantities sold, that would likewise be in there. That is gasolines and naphthas. There would be kerosene, Standard tractor fuel, Stanolex furnace oil, Standard heater oil, Stanolex Diesel fuel, and Standard Diesel fuel. Now, that would represent the great bulk of it. There may be
4289 some little quantities of some specialized type of product.

Q. Do all of those oils that you have just mentioned fall within the classification of refined oils?

A. Well, gasolines and naphthas we give one classification, and in the remainder of the products they would be classified as either refined oils or at times we make a breakdown within the refined oils classification of distillates. The products which were enumerated starting with Standard tractor fuel are all distillates.

Q. Including the Stanolex—

A. Yes.

Q. —and the various fuel oils that you mentioned? Diesel fuel?

A. Yes. Those are all distillates, and we sometimes regard those as just a little separate classification within the refined oils classification.

Q. Do the columns headed "Tank Wagon Reseller" and "Tank Wagon Consumer" in the completed Form 189 contain a statement of all expenses of sale and delivery to these two classes of customers, or do they contain expenses of sale and delivery of only certain products to these classes of customers.

Mr. Hanley: I don't understand that question.

The Witness: Will you break your question down into the component parts and let me answer them? It would be much easier to take care of it on a simplified basis.

4290 Mr. Austin: All right. Will you read back the first part now? Let Mr. Fineun take it down but you read it back.

(Record read as follows:

"Q. Do the columns headed 'Tank Wagon Reseller' and 'Tank Wagon Consumer' in the completed Form 189 contain a statement of all expenses of sale and delivery to these two classes of customers?")

A. Yes.

By Mr. Austin:

Q. Well, isn't the answer to that question "No," Mr. Boatwright?

Mr. Hanley: Well, he said "Yes."

Mr. Austin: Well, I—

The Witness: Well, here is the trouble. You are asking me if this is a cost to a class of customers. Yes, it is a cost to a class of customers on gasolines and refined oils, and this first column "Tank Wagon Reseller Business." Now, those same customers may buy other products.

By Mr. Austin:

Q. Yes.

A. And the cost of the other products will be found in the "Other Methods Channel."

Q. Well, that was my question, Mr. Boatwright, and that is why I put it in the conjunctive, in the first
4291 instance. The question was whether these two columns contained all expenses of sale and delivery to these two classes of customers or do they only contain the

expenses of sale and delivery of certain products to these classes of customers?

A. There is no need for repetition of my answer inasmuch as I was on the record.

Q. I don't think so.

Mr. Austin: Will you read it back.

(Record read as follows:

"The Witness: Well, here is the trouble. You are asking me if this is a cost to a class of customers. Yes, it is a cost to a class of customers on gasolines and refined oils, and this first column "Tank Wagon Reseller Business." Now, those same customers may buy other products.")

By Mr. Austin:

Q. What expenses of distribution to tank wagon reseller customers are not included in the tank wagon reseller column?

Mr. Hanley: Just a moment, please, Mr. Austin. That just assumes a fact that is not in evidence at all, Your Honor, that there is something excluded.

Mr. Austin: He just said that there was, in the previous answer, as I understand it.

Mr. Hanley: As between different classes of customers. You are now asking him, if I understand your question, what costs to the reseller channel are excluded in 4292
189 under the reseller column.

Mr. Austin: That is correct. He has stated that the costs of certain products to tank wagon reseller customers do not appear in the tank wagon reseller column, Form 189.

Mr. Hanley: Then the question is objected to because it now appears, by the explanation of counsel, that he is referring to a difference in products and not a difference in costs.

Trial Examiner Ballinger: Read the question.

(Question read.)

Trial Examiner Ballinger: The objection is overruled.

Mr. Hanley: Judge, may I ask the witness if he understands the question?

If you do, I withdraw the objection, and you can go ahead and answer it.

The Witness: Well, I think I understand what the desire is.

Trial Examiner Ballinger: If there is any doubt in your mind as to the question, will you state what you understand the question to be and then answer it?

Mr. Austin: Your Honor, I insist upon an answer to the question as asked unless the witness must answer that he doesn't know or if he says he does not understand
4293 the question I would like to have him say so.

Trial Examiner Ballinger: If the witness is in doubt as to the question, he may state what he understands it to be, and answer it.

Mr. Austin: If he states what he understands it to be, then I have the right to say that is what I have asked him.

Trial Examiner Ballinger: Of course. You may then rephrase your question.

Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

A. It is my understanding that your question inquires if, in fact, a part of the reseller salesman's time, as an illustration, is included in some channel other than the tank wagon reseller channel. I used "salesman" merely because it was an obvious illustration. If that be the content of your question there are costs incurred in the marketing through tank wagon reseller channel which are found allocated to a channel other than the tank wagon reseller channel.

By Mr. Austin:

Q. The question was, what expenses of distribution from tank wagon reseller customers are not included in the tank wagon reseller column, 189. I don't know whether you can give me a list of such expenses or not.

4294 A. Well, it would require starting at the top of our Form 189 and again reviewing every allocation as we have done in the past week. I used salesmen's salaries as an illustration. Now, there are many others, commissions. The only commissions that are shown in the tank wagon reseller channel are on the products that I have enumerated repeatedly as being in that channel for the actual delivery. A commission paid for the delivery of motor oil would be in Other Methods.

Trial Examiner Ballinger: Mr. Austin, do you desire him to start at the top of the list and enumerate each and every item?

By Mr. Austin:

Q. Can't a general statement be made as to products, Mr. Boatwright? Would it be correct to state that all expenses in distribution of products other than those which you have enumerated for the tank wagon reseller channel, that is, gasoline, refined oils, and tractor fuels, are included elsewhere than in the tank wagon reseller column?

A. Yes. That would be a statement that would not be subject to very much question. Of course, as long as you include tractor fuel, I trust that the record is clear that the quantity of tractor fuel in this field to the tank wagon reseller channel is maybe one truckload in a year, a basis like that. It is just insignificant. But, predominantly, you will find your motor oils, specialty products in the Other Methods Channel. That is where all of the
4295 gallonage is shown.

Q. Are all of the distribution expenses to tank wagon reseller customers in connection with the sale and delivery of products other than gasoline and refined oils and a small amount of tractor fuel included in the Other Methods column on Form 189?

A. May I ask that question be re-read, please?

Trial Examiner Ballinger: The Reporter will read the question.

(Question read.)

A. Well, with the exception of the auto supplies—the petroleum marketing cost?

By Mr. Austin:

Q. Yes.

A. Would be in the Other Methods. Auto supplies is shown as a separate column. You understand that.

Q. Yes.

A. Yes.

Q. I forgot about supplies temporarily in asking the question.

A. Yes.

Q. Turning now to the column on Form 189 headed "Other Methods," the distribution expenses of what products are included in that column?

A. Well, I will name a few and then you stop me. Isoviz motor oil, grades 10 through 50; Polarine,
4296 similar grade classification; all of the different grades of Stanolin motor oil.

Q. Well, can't you just cover those by just saying motor oil, Mr. Boatwright, or refined oils or lubricating oils or greases, and give me a few broad classifications like that?

A. I can certainly give you some broad classifications. All the motor oils, the industrial oils, the specialty oils, cold spray oils, industrial fuels, specialty items such as auto polish, furniture polish, liquid gloss, floor glaze, material of that type, greases, both of an industrial nature and of the type that is packaged and sold to the reseller outlets. And then I am sure there are others that I have given you of the big major classifications.

Q. Are any marketing expenses of gasoline included in the Other Methods column? Perhaps I should say entered in the Other Methods column since we are talking about a blank form.

A. I don't know whether there would be any in the Detroit field, but there is a possibility that there might be some. Iron barrel shipments of specialty naphthas or packaged gasolines out of our bulk plants might be in there. It is a very insignificant amount, if any.

Q. Are any expenses of distribution of gasoline to the jobber accounts included in the expenses entered in the Other Methods column?

4297 A. The expenses of distribution to jobber accounts are not segregated according to any channel. The gallonage of jobbers is not used in the allocation among the channels. It exists throughout the entire statement of marketing expense.

Q. Well, for instance, does the accounting expense incident to the jobber business appear on Form 189?

A. Well, accounting expense incident to jobber business is allocated among the channels. The total accounting expense is allocated among the channels on a distribution of time basis, and this distribution of time recognizes only the tank wagon reseller, the tank wagon consumer, and the other method, and the auto supplies channel. We make no separate allocation at all on the accounting that might be incident to the jobber operation.

Q. How about expenses that are allocated on a time basis such as salesmen's expense? Do any salesmen call upon any of the jobber accounts?

A. Why, they might do some calling upon jobber accounts at the request of the office. There is a selling cost incident to jobber operation.

Is that an answer to your question?

Q. Yes. And where does it appear on Form 189?

A. Well, again, we don't have a separate channel. It is again based on the time allocation among the four channels that I mentioned. Now, if a salesman called on a jobber account, the presumption is that it would be a 4298 reseller salesman that would make the call. That is the likely event.

Q. But on his time estimate, where would that be estimated between channels?

A. You are really asking me to give an answer on what some other man would do in making an estimate. I know what I would do but whether or not each of the salesmen have actually done that, I don't know.

Q. Have they not instructions on that subject?

A. Well, we have no instructions on the jobber channel. Our instructions apply to the four channels I have named.

Q. What classes of business are embraced by the expenses entered in the Other Methods column?

Mr. Hanley: Judge, the witness has just answered that question. I object to it as repetition. I think I have exercised a great deal of restraint in the last two days on this examination. That has just been answered so many times I now interpose the objection and insist upon it.

Trial Examiner Ballinger: Is it a repetition of your question?

Mr. Austin: I don't so understand. I previously asked the witness as to products. Now I am asking him as to classes of business, by which I mean I have more reference to customers than products.

Mr. Hanley: Well, all right. If you clarify your 4299 question I will withdraw the objection.

Trial Examiner Ballinger: You may answer.

A. Well, our classification is predicated upon the method of delivery, the channel to which the delivery is made. Now, what class of customers is represented by other methods—

By Mr. Austin:

Q. For instance, I would call jobber business a class of business; I would call perhaps a tank car consumer a class of business. I believe that you ship some of the motor companies such as General Motors in tank car lots; do you not?

A. I think so.

Q. And those would be tank car consumers. Perhaps there are other types of customers of others of these numerous products, and I am referring to classes of business in that respect. Perhaps when I phrased this question originally I had in mind a classification such as the jobber business, tank car consumer and so forth.

A. I think perhaps that your whole situation may be clarified slightly if we go back a number of years in the accounting procedure. We made two primary distinctions. The first was what we regarded as faucet merchandise.

Trial Examiner Ballinger: What kind of merchandise?

The Witness: Faucet.

A. (Continuing) The lighter products which were distributed by tank wagon and were handled through the
faucets. Now, the other broad classification was all
4300 merchandise of a petroleum nature that didn't move
through the faucets. That was all barreled goods, no matter to what customer the shipment was made. That was the origin of the breakdown which has been carried on through a period of years, has been refined and has been modified. Now, the other methods refers primarily to a system, a method of delivery.

Q. Well, that was going to be my next question. After asking you about classes of business, I was going to ask you what methods of delivery were included.

A. Because it represents this method of delivery to any class of customer.

Q. You see, as I see it, there are three things that might be divided, products, classes of business, and methods of delivery.

Now, if it is easier for you to talk about classes of business and methods of delivery at the same time, please do so.

A. Well, you see, by the very fact that merchandise in that channel, the other methods channel, is not faucet merchandise, nor the costs thereon, in my calculations I have just excluded consideration of that because this involved only a question of the price of gasoline.

Q. I suppose, I don't know whether there would be any point to the question as to whether all expenses of delivery
of gasoline by tank car are included in the other
4301 methods channel, because you have stated that the
expense of the delivery itself to the bulk plant is not included. So perhaps you can tell me whether that ques-

tion would have any meaning or whether there are any expenses of delivery to tank car customers which are included in the other methods channel, in Form 189?

Mr. Hanley: Just a moment, Mr. Boatwright.

I would like to have the Reporter read that question, and, if Your Honor please, I would like to have you listen to that question. I have an objection to make to it.

(Question read.)

Mr. Hanley: Now, this is objected to, Your Honor, as calling for the conclusion and opinion of the witness. It propounds a question to the witness by counsel which places upon the witness an obligation to tell counsel whether counsel's question makes sense or not. It just is not a proper type of question to ask of any witness.

Trial Examiner Ballinger: Do you understand the question?

The Witness: I can answer the question. The question means nothing to me in its present form.

Trial Examiner Ballinger: Well, in answer, please state what you understand the question to mean so that the record may portray what answer you are conveying.

The Witness: Your Honor, that statement includes,
4302 first, a question, then a review of what I am reported to have previously testified, and then a question as to whether the question has any meaning, and then ultimately a question. Now, what is it that I am to answer? The conglomeration—

Trial Examiner Ballinger: Now, if you are in doubt about it, the Examiner requests counsel to rephrase the question.

Mr. Austin: Will you read the last part of the question?

(Record read as follows:

"* * * whether there are any expenses of delivery to tank car customers which are included in the other methods channel, in Form 189?")

By Mr. Austin:

Q. Can you answer that, Mr. Boatwright?

A. The delivery from the River Rouge terminal to the bulk plant, you mean?

Q. Or any expenses in connection therewith. I am talking about delivery to tank car customers.

A. You understand that I have stated we maintain a separate classification of transportation cost?

Q. Yes.

A. Therefore, none of that is in the 189 at all. Now, any expenses incident to that transportation, I assume you mean any records that we maintain on our movement
4303 of goods will be found in the conglomerate of the 189, as we do not carry any separate channel on that class of business. Part of it will be in other methods, part of it will be in tank wagon consumer, part of it will be in tank wagon reseller.

Q. What portion, if any, of the company's gasoline sales in a given field such as the Detroit field is used or included in "Other Methods" gallonage for the purpose of allocating expenses between channels when the allocation is made on a gallonage basis?

A. Well, the proportion that the gasoline gallonage that is included in the other methods channel would represent to the total.

Q. Well, the question is, what gasoline gallonage is included in other methods gallonage for the purpose of making an all gallonage allocation of expense?

A. That question has been answered on the record when I stated at your request whether there was any gasoline in there, and I enumerated the expenses that would be in there: Packaged lines, steel barrel movements, naphthas.

Q. Who buys gasoline in steel barrels?

A. Customers. I don't know.

Q. This is the first time I have heard it intimated that gasoline has ever been sold in steel barrels. I was just curious.

A. Oh, yes. We have many barrels of gasoline sold a year.

4304 Q. Are those sold to reseller or consumers?

A. Consumers. It is special cuts. It isn't the motor gasoline. It is the product classified as gasoline and naphthas. Now, naphthas include a wide range of special cuts, but it is gasolines, and it would quite likely be in the other methods channel.

Does that clarify it?

Q. That explains it, yes.

Mr. Hanley: As a matter of fact, gasoline is naphtha. That is just a trade name.

By Mr. Austin:

Q. Is any of the gasoline purchased by jobbers in the Detroit area included in the other methods gallonage used for the purpose of making an allocation of expense between channels on an all-gallonage basis?

A. It is not.

Q. Then do I correctly understand that gasoline sold to jobbers is not included in prorating the expense for any account between channels on an all-gallonage basis?

Mr. Hanley: Just a minute.

Would you read that, please?

(Question read.)

Mr. Hanley: That is objected to as a misstatement of the witness' testimony. He has repeatedly said that that gallonage is included in the four channels, somewhere.

4305 Trial Examiner Ballinger: Objection overruled. The witness may answer.

A. It was in the testimony of yesterday when we were discussing Ned's Auto Supply, that I testified that that volume was used in allocation. The shipment of gasoline to jobbers is regarded as a direct shipment and is not used in making any expense allocation on Form 189. That is made by the field offices, direct field expenses. In allocating some of the administrative expense of the company on direct shipments may be made to allocate to fields as a part of the gallonage. Having allocated the field, the allocation within a field is made on a basis excluding jobber direct shipments.

By Mr. Austin:

Q. I would like to ask the question again, then, Mr. Boatwright, and ask you if you will please answer it "yes" or "no," if you can, so that I will have the answer next to the question without the intervening material.

Do I correctly understand that gasoline sold to jobbers is not included in prorating the expense for any account between channels on Form 189 on an all gallonage basis?

A. Gasoline sales to jobbers—

Q. Can you answer the question "yes" or "no"?

A. Why, no. I told you of an exception where I said that in the allocation of an administrative expense of the company—

4306 Q. Between fields.

A. Among fields.

Q. Yes.

A. After allocated to a field, no direct shipment is included in allocating among the four channels.

Q. Form 189 is only a field form, is it not?

A. Form 189 represents a composite of our marketing cost for given geographical areas. The upper part is prepared in the field; the lower part is an allocation of costs to the field by the general office.

Q. Well, your exception is one which applies, if I understand you correctly, only to an allocation or proration as between fields?

A. Among fields.

Q. Yes.

A. That is right.

Q. But my question is directed only to expenses which are prorated to the prorating of expenses between channels in a field.

A. To the extent of the proration among the channels within a field, direct shipments or gasoline sales to jobbers are not used.

Q. For any account?

A. I don't think of a single exception.

4307 Q. And is that answer the same whether the expense in the particular account is prorated between channels on an all-gallonage basis or on some other basis?

A. Such as the distribution of time, you mean?

Q. Yes.

A. I think it is the same. The answer would remain the same.

Q. What is the nature of the figures which are entered on the line at the bottom of Form 189 opposite the words "Total Units (Item 1 less Item 2)," in the reseller and consumer columns?

A. There is no deduction made following that. Item 3, total unit Item 1 (less Item 2) does not reflect a subtraction under the tank wagon reseller channel at all.

Mr. Austin: I didn't hear that answer. Will you read it back?

(Answer read.)

A. Maybe my answer would be clearer to you if I just said that the 69,361,586 gallons is just the total units of gallonage of the products that we have discussed moving through the tank wagon reseller channel.

By Mr. Austin:

Q. My question was: What was the nature of the figures on that line, and—

A. Shall I continue across on the 189, you mean?

4308 Q. I just asked you for the two columns, the reseller and consumer channels.

A. Those are the exact gallons that have been sold through those channels of the products that we have discussed, gasoline, refined oils and the small quantity of the tractor fuel in the reseller channel plus other distillates in the tank wagon consumer channel that have been used in our allocation of cost.

Q. Then do these figures represent the annual gallonage for these two channels?

A. They do.

Q. And that, in turn, would mean, would it not, the annual gallonage for these classes of customers for the products which you have enumerated as going into those channels?

A. For these classes of customers served by this method of delivery.

Q. Yes. Well, the words "tank wagon" at the top covers that, doesn't it, which appear over both of those channels?

A. Except that we have one tank wagon which delivers motor oil. You see, there is pretty nearly always some minor exception to these inclusive questions.

Q. Does this gallonage include the same products for which you have stated that the expenses in these two columns are computed?

A. It does.

4309 Q. What are the figures entered in this line about which we have been speaking on Detroit Form 189 for 1941 in the columns, first, tank wagon reseller? Can you answer that?

A. Tank wagon reseller shows a gallonage of 69,301,586

Q. Next, tank wagon consumer.

A. 32,265,489.3 gallonage.

Q. Third, leased service stations.

A. 54,255,291 gallons.

Mr. Austin: I am just at a breaking point, Your Honor, before starting on another subject. Perhaps it would be better not to attempt to use five minutes on something that I probably can't finish in less than a half hour. So I will move that we adjourn until Monday morning at 10 o'clock.

Trial Examiner Ballinger: Motion of Counsel for the Commission is granted, and now at 11:25 a. m., the hearing stands adjourned to be reconvened June 23, 1941, in Room 332, Federal Trade Commission Building, Washington, D. C., at the hour of 10 a. m.

(Whereupon, at 11:25 o'clock a. m., June 21, 1941, the hearing in the above-entitled matter was adjourned.)

4310

Room 332, Federal Trade
Commission Building.
Washington, D. C.,
Monday, June 23, 1941.

Met, pursuant to adjournment, at 10 a. m.

Before:

Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., appearing on behalf of the Federal Trade Commission.

Harold R. Hanley, Esq. (910 South Michigan Avenue, Chicago, Ill.), appearing on behalf of the Respondent.

4311 PROCEEDINGS.

Trial Examiner Ballinger: Come to order.

This is a reconvening pursuant to notice, Docket No. 4389, in the matter of Standard Oil Company, at 10 a. m., June 23, 1941, in Room 332, Federal Trade Commission Building, Washington, D. C. The last hearing was held in Washington, D. C., June 21, 1941.

The reporter will note counsel for the Commission and the Respondent present.

You may proceed.

JOHN W. BOATWRIGHT resumed the stand and testified further as follows:

Cross-Examination by Mr. Austin (Resumed).

Q. Perhaps there is one point that needs a little clarification, Mr. Boatwright.

I believe that you said on Saturday the expense of transporting gasoline from the marine terminal at River Rouge to the company's bulk plants in the Detroit field is not included in the expenses entered on form 189.

A. I did so testify and that is correct.

Q. Is the same true as to the expense of transporting gasoline from the marine terminal at River Rouge to bulk plants where gasoline is received by jobber customers?

A. That would be true.

4312 Q. I don't know that that was covered. The Standard Oil Company does pay the expense of transportation from the marine terminal to the bulk plant on tank car shipments to tank car customers; is that correct?

A. Yes, sir.

Q. In other words, do tank car buyers such as the four jobbers concerned in this suit purchase f.o.b. their own bulk plants?

A. Yes.

Q. Will you please turn again to form 189, which is in evidence as Respondent's Exhibit 32?

A. For the year 1940?

Q. Well, Respondent's Exhibit 32 is a blank form.

A. I see.

Q. I believe that you have before you a copy of form 189 completed for the Detroit field for the year 1940.

A. I do.

Q. What figures are entered on Detroit form 189 for 1940, in the Other Methods column on the lines numbered (1), (2) and (3) at the bottom of the form?

A. Those are gallonage figures under the Other Methods channel of distribution. The first line referred to is 51,391,592.6 gallons. Line 2 referred to represents direct shipments in the amount of 46,471,455.6 gallons. And the difference between those two figures is shown on line
4313 3, being 4,920,137 gallons.

Q. What is the meaning of the figure 51,391,592? I believe you said it was gallons, but what gallons is it?

A. Well, that is the gallons of all products used in allocating cost to that channel plus all gallonage units of petroleum products used or sold, rather, by direct shipments.

Q. What is the meaning of the term "direct shipments"?

A. That has been previously testified to as being shipments which do not pass through the bulk plants of the company. They are shipments direct to the purchaser.

Trial Examiner Ballinger: From the refinery?

The Witness: From the refinery or terminal, sir.

By Mr. Austin:

Q. How are the shipments made to the four jobbers or jobber accounts classified? Are they classified as direct shipments?

A. They are.

Q. Are those shipments all made directly from the terminal at River Rouge?

A. Yes.

Q. Mr. Boatwright, I don't want to use that word "all" too comprehensively. I believe there is some testimony that there are isolated cases where shipments have come from Whiting, Indiana, so I really intended to ask you the question as to the general practice, and would your answer still apply?

A. It would.

4314 Q. Does the figure that you have read 46,471,455 represent direct shipments to customers in the Detroit field in 1940?

A. It does.

Q. Is it true that none of this gallonage is used for the purpose of allocating expenses among channels on what you have referred to as an all-gallonage basis?

A. That is correct.

Q. Does the gallonage represented by this figure, that is, the 46,000,000 figure—

A. Yes.

Q. —include shipments made from Whiting, Indiana, or other points outside the Detroit field?

A. If any shipments were made from Whiting, Indiana, or any other point outside of the Detroit field, to the customer, it would be in the figure of 46,471,455 gallons.

Q. Then in determining the gallonage that goes into the direct shipment figure, would it be correct to state that the destination of the shipment rather than the origin determines the inclusion of that gallonage in the Detroit field?

A. It is the destination which determines the magnitude of that figure.

Q. If shipments were made to any of the four jobbers in Detroit from the marine terminal at Muskegon, Michigan, would those shipments be included in the direct shipment gallonage shown on the Detroit form 189?

4315 A. They would.

Q. Would it be possible for you to state what products are included in the gallonage represented by the direct shipment figure?

A. Do you mean what products?

Q. Yes.

A. Why, I could enumerate the products which were principally responsible [illegible] that figure as being gasolines, motor oils, special naphthas, refined oils, distillates, and some gas oils, and fuel oils. Those would be the principal ones.

Q. Did you mention motor oils or greases?

A. I did.

Q. Are there any classes of customers which are principally included in the direct shipment gallonage?

A. Well, it is all customers who buy in quantities or who receive by direct shipment method. Such customers are predominantly large industrial organizations buying in large quantities or are jobbers of the type of the four we are discussing.

Q. And as to methods of delivery, we have already mentioned tank car and transport truck shipments as being direct shipments. Are there any other methods of delivery that are involved in direct shipments to any extent?

A. Well, if your term "tank car" is broad enough to include carloads of barreled merchandise, you have 4316 enumerated the principal types of products movement which enter into direct shipment. However, there are times when customers buy carloads of barrels filled with specific merchandise. That might be indirect shipments.

Q. Referring now to the figure of 4,920,137, which you stated was the difference between the total Other Methods gallonage and the direct shipment gallonage, are the products included in the gallonage figure of 4,920,137 for 1940 the products you described on Saturday in stating what expenses go into the Other Methods column?

A. I don't recall the testimony of Saturday in connection with the question as worded. The 4,920,137 gallons is made up predominantly of motor oils and greases.

Q. Oh, it is?

A. Yes.

Q. I recall on Saturday that you said that there were so many products going into the Other Methods column that it would be difficult to give a complete list of them.

A. That is correct.

Q. I wondered if that were true as to this figure.

A. Yes, but in terms of gallonage those other products aside from motor oils and greases constitute a small part.

Q. I see.

A. Of the gallonage. But if there is any Semdac liquid gloss, floor glaze, or furniture polish and
4317 articles of that type, it will be in the Other Methods gallonage, but it is a comparatively small percentage of the total.

Q. You have just stated that the figure of 4,920,137 gallons is predominantly motor oils and greases. Is that also true or is that not true of the figure of 46,000,000 odd gallons of direct shipments?

A. No, that would not be true to anywhere near the extent. The 46,000,000 plus gallons would be made up to a much larger extent of gasolines and refined oils than would the proportion of these products be that is included in the 4,920,000 plus gallons.

Q. I suppose that is true, isn't it, Mr. Boatwright, because direct shipments of gasoline are included in your direct shipment figure in the Other Methods column, whereas, tank wagon shipments of gasoline are all over in the tank wagon reseller and tank wagon consumer columns and, therefore, would not fall into the 4,000,000 figure under the Other Methods column.

A. If you would change your words instead of "tank wagon shipments" to "tank wagon deliveries" I would concur. As I stated Saturday, practically the only gasoline which finds its way into the Other Methods column is a very insignificant proportion of the packaged merchandise.

Q. You don't mean that strictly, do you, as to the Other Methods column? You mean the 4,000,000—

A. I mean in allocating cost.

4318 Q. Yes.

A. Yes. In the 46,000,000, the direct shipments of gasoline are included.

Q. But aside from that, it is only these—what did you call them—packaged—

A. Yes, I call them packaged specialty gasolines, maybe a special naphtha or something of that type, and that would represent a comparatively small proportion of the 4,920,000 gallons, while gasoline as a part of direct shipments would represent a substantial proportion.

Trial Examiner Ballinger: Mr. Boatwright, your use of the term "comparatively small proportion" is rather indefinite. Could you more clearly define what you mean? In other words, 5 per cent might be a small proportion.

The Witness: Well, I would say that gasoline would represent less than 5 per cent of the 4,920,000, but I would expect in the Detroit area that gasoline would represent over 50 per cent of the figure 46,471,000 gallons.

Does that help clarify it?

Trial Examiner Ballinger: That helps to clarify it.

By Mr. Austin:

Q. Does the figure of 4,920,137 include gallonage of any oils or greases shipped direct from the marine terminal?

A. We don't have bulk storage for motor oils or
4319 greases at River Rouge. Motor oils and greases are
supplied direct from our refinery plants located at either Whiting or at Wood River, which is just east of St. Louis.

Q. Referring to oils and motor oils and greases shipped in steel barrels, is that the frequent method of shipment?

A. Except for unusually large purchasers, large purchasers sometimes—well, in fact, quite frequently order oils made according to certain formulas and buy those oils by tank car quantities.

Q. Are shipments regularly made or frequently made to customers in the Detroit field of motor oils and greases direct from Whiting, Indiana, or some other refinery?

A. Yes, that would be particularly true of the Detroit field because of the large automobile units producing and operating in that area.

Q. Would those shipments be included in your direct shipment figure or in your 4,000,000 gallon figure in the Other Methods column?

A. Those figures would be included in the direct shipments but would not be included in the 4,900,000 gallons.

Q. Where are the deliveries made from or what sort of deliveries are included in the 4,000,000 gallon figure referring to motor oils and greases?

A. All of that merchandise is delivered out of our bulk plant.

4320 Q. Then you do keep a supply of motor oils and greases at the bulk plants?

A. Oh, yes. You see, we ship our leading brands of motor oils to a select point in a given field by tank car quantity, and then we do our barreling in the field. It is a means of providing for more economical transportation of the merchandise, because your tank car shipment will include so many more barrels than would be possible if we were to take a box car and load it with barrels filled with motor oil at the refinery. So we make our first shipment in a tank car; that is unloaded through special storage facilities; and then we barrel right in the field and deliver by our stake trucks operating out of our bulk plants.

Q. If I understand you correctly, those shipments in tank cars are made directly to the bulk plants rather than going through River Rouge and being repackaged there?

A. Yes, your understanding is correct.

Q. Are motor oils sold by the gallon?

A. Yes, at times. Now, certainly, the answer to that would be yes if you are referring now to the reseller sales to the customer. The answer is still yes, but to a much lesser degree if you are referring to the sale by the company to the reseller distributor. In most of those cases the resellers buy by barreled quantities. Now, even a large part of the farmers buy either in barreled packages

4321 or in half barrel packages, but, of course if any farmer or any customer who might be served by our tank wagons wishes is a five-gallon delivery of motor oil, as an illustration, we are delighted to accommodate him.

Q. Well, greases are sold by the pound, are they not?

A. Greases usually are sold by the pound. I think it is the exception—in fact, I do not recall an exception at the present time where greases are sold by the gallon unless it be a formula product.

I wonder if you are clear in your mind when I speak of formula products?

Q. No. But what I was leading up to was simply to ask you how oils and greases were transformed into the gallonage figures which we have just been discussing in the Other Methods column.

A. I see. Oils, although they may be delivered in barrels, each sale represents so many gallons. That is an easy figure to transcribe into a gallonage unit. Greases are transcribed into gallons on the basis of 8 pounds to the gallon. So if we sell greases by the pound, each 8 pounds represents a gallon of grease.

Q. Eight pounds to the gallon?

A. Yes, sir.

Q. How is that figure of 8 pounds to a gallon arrived
at, Mr. Boatwright? Is that an arbitrary figure or
4322 is that the result of measurements or is it an average for various sorts of greases, or what is it?

A. Well, it is an average for various sorts of greases. I don't know that every single grease would weigh out exactly 8 pounds to the gallon, but based on the flow of merchandise that we have out of our refineries, 8 pounds to the gallon is a good representative means of converting, as it represents about the average of the different brands of greases.

Q. Do the expense figures entered in the Other Methods column on form 189 include all of the company's expenses of sale and distribution incurred in connection with direct shipment business?

A. No.

Q. I think there was some discussion of that jobber business the other day, but I just wanted to ask the question at this time.

A. The answer is definitely no. I shall attempt a clarification of that point again.

The total cost of the Standard Oil Company for marketing in the Detroit field in the year 1940 was $2,675,896.51. That is what it cost us to do business through all channels by all methods. That is the sum total of all of our marketing costs. Now, in breaking that down, we first take out the costs that are assignable to automobile supplies. Then
the residual we spread between these three channels
4323 of distribution indicated as tank wagon reseller, which
includes the 461's, the P. O. S. S. L.'s, and the company owned service stations, leased; the tank wagon consumer; and the other methods.

Now, the allocation of our costs of the different items are either, first, a direct charge; or, second, they may be allocated upon a time basis; or, third, particular items of expense may be allocated only between the channels, tank wagon reseller and tank wagon consumer; or, fourth, particular items of expense may be allocated on the basis of all gallonage, excluding direct shipment, between the channels, tank wagon reseller, tank wagon consumer, and other methods, because we do not recognize direct shipments as a channel. We do not have any separate allocation of costs on that. Any small costs that may be incurred incident to a direct shipment will be found scattered among the other channels wherever the employees have had to provide a breakdown of their time upon which we made the allocation. Likewise, if you have an item such as your salaries—supervision, which is allocated upon an all-gallonage basis, excluding direct shipments, you may whatsoever small cost incurred by the supervisory function truly distribute among the three channels. You see, the cost of direct shipments in practically all of our fields is very small. We have very few fields where direct shipments amount to the magnitude that they do in Detroit because of the large quantities shipped to the General Motors Company, the
4324 Ford Motor Company, and the Chrysler Corporation.

These large customers frequently buy in trainload lots and that figure for direct shipment mounts very rapidly, and yet the actual negotiation of a sale of a large quantity of that type involves very little either bookkeeping or supervision on behalf of the company. It is primarily a price proposition.

Does that clarify your understanding?

Q. Yes, the first part of your answer is directly responsive.

Are any direct shipments made to tank wagon resellers or the consumers?

A. I don't think there would be any direct shipments to this class of buyers. I would say this, that if there are any, it would be less than a fraction of one-half of one per cent.

Q. So far as you know, is any gasoline shipped directly to tank wagon resellers or consumers?

A. I don't think—well, to consumers, yes.

Q. Tank wagon consumers?

A. Well, there may be some tank wagon consumer who buys a predominant proportion of his requirement from tank wagon and yet during a certain season of the year might have an adequate demand for a short time period to receive a direct shipment, but again we are talking of a very small part of the total.

Q. Even if there were such shipments, they wouldn't be entered in the tank wagon reseller or consumer
4325 column; would they?

A. They would not. Your direct shipment is always treated separately.

Q. Does that not explain the fact that no entry is made in lines 1 and 2 in the tank wagon reseller and consumer columns at the bottom of form 189?

A. Yes, there are no direct shipments to be deducted there. Any direct shipments will be found in the figure 46,471,000 plus gallons.

Q. Referring again to form 189, Respondent's Exhibit 32, will you please explain the purpose or use of the last line on the form headed "Average Per Unit on (3) above"?

A. Yes, the purpose of the last line, which for the purpose of the court, if I may explain, is a per gallon cost, is so that we may watch our expense of distribution on an unit basis and control our expenses and look into any unusual deviation of expenses.

Q. Will you please state what figures are entered on this line on each of these four petroleum product channel columns on the Detroit form 189 for 1940?

A. Do you wish the comparison of the average cost per unit last year and this year as well?

Q. I don't think so. I just asked for the figures in each of these four petroleum products channels. In other words, tank wagon reseller, tank wagon consumer, leased
4326 service station, and other methods.

A. Certainly.

The gallonage cost tank wagon reseller channel, 1.65 cents per gallon; tank wagon consumer, 2.62 cents; leased service stations, .09; other methods, 11.55 cents.

Q. In the second line from the bottom on form 189, Detroit, 1940, what figure is entered on the Other Methods column?

A. The second line from the bottom, the average per unit on (1) above?

Q. Yes.

A. 1.7 cents per gallon.

Q. What does that figure represent?

A. That figure represents the unit cost of distribution, where the cost of the Other Methods channel, being $568,226.56 is divided by the grand total units, including direct shipments of 51,391,592.6 gallons.

Q. By "grand total units" you mean only grand total units in the Other Methods channel; do you not?

A. Yes, sir. Yes, sir.

Q. And does the word "unit" as you here use it include both gasoline and greases and, in the case of greases, it means greases converted to gallonage?

A. Yes, units in this sense refers to gallonage whether it originally be shipped and sold as pounds or whether it
originally be sold and shipped as gallons. All pounds
4327 are converted to gallons, in deriving the total units
figure as entered.

Mr. Austin: I suggest we have a five-minute recess, your Honor.

Trial Examiner Ballinger: We will stand in recess for five minutes.

(A short recess was taken.)

Trial Examiner Ballinger: Come to order.

By Mr. Austin:

Q. Respondent's Exhibit 33-B refers to "direct leased service station expense." One of the columns on form 189, Respondent's Exhibit 32, is entitled "Income and Expense—Leased Service Stations."

Does this column contain expenses which the company charges directly to service station properties and buildings which are leased to tank wagon resellers?

A. Yes.

Q. Would it be correct to state that those expenses entered in that column are expenses which the company charges direct to the sale and delivery of gasoline to tank wagon resellers who lease their service station properties and buildings from the company as distinguished from tank wagon reseller business generally?

A: Well, in the first place, you are clear in the fact that
it is both gasoline and refined oil? You stated only
4328 gasoline. There will be a small quantity of refined
oil there. Secondly, this net amount, being $48,506.44,
is really a property account under class of service stations.

It is the expenses incident to the properties offset by the rental income of those properties.

Q. Is the rent revenue from leased service station properties deducted by the company from the expenses listed under this column on form 189, for the purpose of determining the net expense or profit from the service station leasing operations of the company?

A. The rent revenue is deducted from the expense for purposes of determination of the net expense of this class of reseller items.

Q. I suppose if the rent revenue is in excess of the expense, then there would be a resulting profit? In other words, you referred only to expense and, as I understand it, there is a net expense shown on form 189 for 1940, but that might be different for other years; might it not?

A. Let us merely state that the income from the properties under the assumed conditions that you have mentioned would be greater than the expenses of maintaining those properties, and if that were true, there would be a profit resulting to the company from the landlord functions; that is, not profit on the merchandise sold. That is profit from the landlord function. In that sense, yes, 4329 it would be an indication of profit.

Q. Is the net expense figure of $48,506.44, shown at the foot of the leased service station column, on Detroit form 189 for 1940, exclusive of any cost or revenue from the sale and delivery of gasoline?

A. The figure of $48,506.44 is an expense item giving no recognition to the expense of the merchandise sold through that class of outlets in terms of manufacturing cost. Now, I am not certain that that answers your question, but that is the way I interpreted your question.

Q. There is no revenue from gasoline included as a setoff in that column, either?

A. There is not.

Q. Is any portion of the expenses classified by the account numbers having entries in the leased service station column charged to tank wagon reseller business generally? Now, I would like to perhaps clarify that question a little bit by stating that what I mean is where an item of expense is entered in the leased service station column, is there any item of expense entered for the same account in the tank wagon reseller column?

A. There is not.

Q. In your opinion, is this a correct method of accounting for leased service station income and expense, and by

"leased service station income and expense" I mean
4330 the income and expenses which you have just described as going into this column.

A. Well, in my opinion, this is strictly a proper form of accounting, for maintaining a record on our properties separately and distinct from the other reseller business.

Q. Turning again to form 189 and referring to accounts 065-A, 065-B, and 065-C, do the figures entered opposite these accounts in the leased service station column include the so called gallonage rental collection by the company, which is usually one-half cent per gallon, according to previous testimony, on gasoline sold and delivered to service station lessees of the Standard Oil Company?

A. The figures entered opposite those account numbers do include the gallonage rental as well as any flat cash rental. That is the rent income from the properties.

Q. They do include both, then, and not merely flat rentals?

A. They include both.

Q. What is included in the expenses charged on form 189 to accounts 061-B and 061-C?

A. 061-B is a rental expense where we lease the site from an individual and build thereon our own buildings. It is a rental paid for the site only. The building is a property of the company.

061-C is a rental expense that the company pays when
they lease a service station from some private indi-
4331 vidual who owns the property outright.

Both of those are rental payments.

Q. By rental expense, do you mean rents which the company pays as lessee of the property to the lessor?

A. Yes, sir.

Q. Do you consider this rental expense a cost of sale or delivery of gasoline where as here the service station properties are not operated or used by the company?

A. Why, I certainly do when we show just below the rent income as an offset. Any net there is either an income or an expense and that net is a cost of the sale and delivery of gasoline.

Q. What expenses are entered in account 066-A?

A. 066-A are miscellaneous operating expenses incurred at service station owned properties where we own both the building and the land.

Q. Are these expenses, expenses of the same character as those which you described for account 066 listed in Respondent's Exhibit 31-H? And before answering that question, I will recall to your attention, Mr. Boatwright, that there is an exhibit, Commission's Exhibit 81, which contains a breakdown of account 1066 as listed on Respondent's Exhibit 31-H.

A. The class of expense items which is now shown under account 066, 066-A, 066-B, and 066-C are the same type of expenditures that were previously shown together 4332 under the account 066. It seemed advisable following the year 1937 that we break the expense item 066 down to a greater degree for purposes of expense control.

Q. Then for 1937, is it true that all of those miscellaneous operating expenses, including those in connection with leased service stations, were included in account 1066?

A. Yes, sir.

Q. What expenses are entered in account 088-A, and again in this connection I might ask whether these expenses are of the same character which you described for account 088, when we were discussing Respondent's Exhibit 31-J.

A. Again the same explanation applies. Subsequent to 1937, account 088-A, 088-B, and 088-C merely represents a further breakdown of the same class of expenditures which in 1937 was included in account 088.

Q. Would any expense be included in account 088 or 088-A, B or C for tools and equipment supplied to non-lessee service stations, or would tools and equipment supplied to those stations be included under account 070 E.L.A. expense?

A. No, we classify separately our tools and equipment from our E.L.A. expenditure. Thus 088, station operating tools and equipment, as shown on the 189 for the year 1940 would be the tools and equipment made available to the 461 type of outlet.

Q. I believe you did state in discussing that ac- 4333 count, however, Mr. Boatwright, that that is chiefly an expense of tools and equipment used as bulk plants? I think your testimony was to that effect, if I recall correct.

A. Well, I see I should enlarge upon the answer just given. I stated that 088 is a station operating tools and equipment to the 461 accounts plus an allocation of the tools and equipment at bulk plants between the channels, tank wagon reseller and tank wagon consumer.

Q. Will you describe what expenses are entered into account 112-A? That account, I might state for the record, is entitled "Depreciation Expense—Real Estate Improvements (Service Station Owned Properties Complete)."

Trial Examiner Ballinger: And appearing on—

Mr. Austin: Appearing on Respondent's Exhibit 32.

A. Well, do I understand your account number correctly? Was it 112 or 112-A?

Q. 112-A.

A. 112-A?

Well, that is the depreciation expense on the service station—real estate improvement of buildings, and so forth, which is charged direct to that channel.

Q. Does that mean real estate improvements constructed by the company on service station properties which it owns and leases out?

A. Yes.

4334 Q. I would like to go back to another subject which we have discussed at some length before, but I would like to ask a few questions at this time so that the matter may appear in a little different context. That is the matter of commissions.

Referring specifically to account 021 on Respondent's Exhibit 32, which is form 189, what commissions are included in that account, Mr. Boatwright?

A. Commissions to commissioned employees.

Q. Does that mean principally commissions paid so called commission agents who are in charge of bulk plant operation and delivery?

A. Yes, sir.

Q. Does each one of those commissioned agents have a separate territory?

A. Yes.

Q. Are the services performed by them those which you previously described as performed by commission agents?

A. Yes. They haven't changed since the other day. I may not have been all-inclusive in the answer but I recall naming several of them.

Q. I simply wanted it to appear on the record here that the services have been described elsewhere in the record.

A. Yes.

Q. On what products are commissions paid to commission agents?

4335 A. Well, again I think that is clear in the record.

As you will recall, I testified that we pay commissions on all products sold by commission agents with the exception of the automobile supplies.

Q. Well, do commission agents sell gasoline, motor oils, refined oils, and greases?

A. Yes, they do.

Q. And lubricating oils?

A. Yes, sir. And commissions are paid on all of those products wheresoever the agent makes a sale and delivery of the merchandise.

Q. Are their selling activities restricted to their respective territories?

A. Well, their selling activities upon which they receive compensation are restricted to given territories. Now, frequently an agent may do something or attempt while he is on his own time and his own effort to help a colleague in an adjacent territory, but the selling effort for which he receives the compensation is within a restricted territory.

Q. Now, turning to form 189, I would like to have you go through the list of accounts listed on that form, which is Respondent's Exhibit 32, and state what items of expense listed on forms 189 are not incurred in the tank wagon reseller channel in connection with the distribution of gasoline to resellers served by commission agents.

4336 Mr. Hanley: Read that question, please.

(Question read.)

Mr. Hanley: I don't understand it. Do you, Mr. Boatwright?

Mr. Austin: I could give an example by which I may clarify it.

The Witness: I wish you would. It would help.

By Mr. Austin:

Q. For instance, would not the expense entered in account 006, "salaries—drivers" be an expense which is not incurred in the tank wagon reseller channel in connection with distribution of gasoline by commission agents?

A. I see. I will answer your last question. You are correct, in that no part of account 006 "salaries—drivers" would be included on that volume delivered to resellers by commission agents.

Now, do you wish me to take each of these expense item classifications and state whether any part thereof would be incurred on tank wagon reseller business served by commission agents?

Q. Yes.

A. The first item would be 006 "salaries—drivers."

Mr. Hanley: You are referring now to what is not incurred?

Mr. Austin: That is right.

4337 The Witness: What is not incurred on reseller business served by commission agents.

A. (Continuing.) Account 008 "salaries—warehouse labor" would not be involved on gasoline and refined oil but would be involved in the motor oil sales in the Other Methods channel. The only case where warehouse labor, as shown under account 008 would be influenced at all by deliveries by commission agents to reseller accounts would be, first, small reseller outlets that may be served out of a salaried bulk plant by a commission peddler. A very small proportion.

Second, in case a commission agent at some adjacent station for some reason or other ran out of the needed merchandise to supply his reseller outlets, he might make a trip to an adjacent salaried station to secure supplies out of that station until the tank car reached his plant and could be unloaded.

Q. Would that refer to gasoline, possibly?

A. It could refer to gasoline, yes. There is some of that. But account 008 is largely incurred on volume done through salaried areas.

Trial Examiner Ballinger: You used the word "largely." Could you break that down?

The Witness: Well, it involves making an estimate, your Honor, which I could probably make all right on a general basis, but to make an estimate for a given 4338 plant would be extremely difficult. I would say that salaries to warehouse labor under the Other Methods channel would be difficult to differentiate between deliveries made to commission served reseller outlets from a salaried served reseller outlet, but under the gasoline and refined oils which are shown under the tank wagon reseller column, I would think that largely would apply to as high as 95 per cent.

By Mr. Austin:

Q. Mr. Boatwright, the question is restricted to the tank wagon reseller channel, so that you don't need to concern yourself as to whether or not there would be any elimination of expense in the Other Methods channel.

A. Thank you.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

A. Accounts 053, being the operation and maintenance of vehicles—trucks, motor and horse drawn; excluding advertising, is the expense incurred by the company in operating and maintaining the fleet of trucks which is handled by the salaried drivers whose expenses or salary are shown under account 006.

The only other item meeting the question as posed is account 106, "depreciation expense—vehicles, trucks, motor and horse drawn (including vehicle tanks and
4339 excluding advertising trucks):" This item is a depreciation expense on the trucks used out of salary points driven by salaried drivers.

Q. Are those the only accounts where the expense entered therein is not incurred in commission agent distribution?

A. Yes, sir. By "commission agent distribution" you are limiting it to the reseller channel?

Q. Yes, that is right.

A. Yes, the answer stands: Yes, sir.

Q. Is it not true, Mr. Boatwright, that there are certain other expense accounts listed on form 189, the expense of which in the tank wagon reseller channel may be different on a per gallon basis as to gasoline and refined oil sold through commission agents than as to gasoline and refined oil sold through salaried stations?

A. Yes.

Q. Referring now to account 094 "salaries—salesmen," I believe you previously were asked about that, and will you state again whether the same sales contact and sales supervision is maintained by the company in commission agent territory as in territory served from salaried stations?

A. Yes, it is. I couldn't differentiate between a commission gallon and a gallon served originally by a salaried driver with respect to the item 004, being "salaries—salesmen."

4340 Q. Would the same answer apply to account 032 "traveling expense—salesmen"?

A. It would.

Q. How about account 047 "operation and maintenance of vehicles—salesmen"?

A. I think it would apply there equally as well. The Detroit field, as you know, is a concentrated market and salesmen's territories even out of the city of Detroit are relatively almost as concentrated as they are in Detroit. I have attempted at times in other studies to differentiate between salesmen's salaries, expenses, and operation, and maintenance, between the salaried stations and the areas served normally by commission agents, and you can not do it unless you are in some area such as North and South Dakota, where you may have one salesman and one salaried station, and the rest of them are all commission, with the distances traveled very long, but in an area like Detroit, you couldn't possibly differentiate.

Q. Might not the salesman's traveling expense and the operation and maintenance expense of his vehicle be considerably higher in rural territory served by commission agents in the Detroit field than the similar expense would be in the salary station territory in the city of Detroit?

A. No, I don't think so. That is the reason for my answer as given. If you take an area—if you take a
4341 field such as North Dakota area where the distance traveled is very great, then there is a difference, but in Detroit, no. That is a concentrated market and the area traveled by a salesman in the commission station area is still quite small and actually the expense on their cars for operation and maintenance are almost identical with cars operated by salesmen in the metropolitan area of Detroit.

Q. What is the nature of the expense going into account 204 "office expense—exchange"?

A. Well, that was explained while I was on direct testimony as being all of the costs incident to performance of the banking function resulting from the sale of merchandise, transfer of funds from one station to the other, the fees charged for clearing checks, and other costs of a similar nature.

Q. Would that expense be involved insofar as it applies to the handling of checks, and so forth, in territory or as to customers served by commission agents?

A. It may, but more likely it will be involved in the clearance of funds from a commission station to the main office and the central deposit bank. There is a charge incurred and a cost incurred which may not be incurred because of a customer, although it may very well be, but it could be incurred both in terms of clearing customers'
checks or in making effective the exchange or transfer
4342 of funds from one station to a central station.

Q. Is there any distinction to be made in connection with the per gallon costs of marketing gasoline as between these two types of distribution in connection with the account 060 "plant maintenance"?

A. I don't know how that would figure out. You see, we have a plant maintenance at the "B" station points. The plant is smaller, the through-put is smaller. The maintenance charge at one of our big salaried stations is larger but the through-put is so much larger. I just couldn't testify whether that would figure out the same in the commission area as it would in the salary area or not.

Q. You gave some testimony, and I am frank to say I don't recall now the exact nature of it, regarding the maintenance of the bulk plants operated by commission agents. Does the company maintain those plants?

A. Yes, that is company property, and the expense of maintenance of that plant is a company expense. The agent does not maintain it, although your best agent keeps the weeds mowed, and things like that, but the actual maintenance of your property in terms of painting, minor repairs, and things of that type—that is really done by the company.

Q. Mr. Wormack suggests that perhaps the driveways are cleaned by the commission agent. That is a pertinent
question because you will recall that there was an
4343 expense of cleaning driveways at bulk plants that
we discussed in connection with one of the other accounts.

A. Well, that was a subdivision of an expense classification.

Q. Yes.

A. But the driveways of the reseller outlets are not cleaned by the commission agent, and at the commission bulk plant usually the driveway is merely a gravel driveway into which the agent can pull his truck into the station for loading or for storing it in the garage provided for him and I am quite sure if he wanted to get his truck out after a snow storm, he would clear the drive, yes, but we are talking about infinitesimal items.

Q. Account 062 entitled "water, light, fuel (other than main office)"—what expenses go into that account?

A. I think that is on the record in the previous testimony. However, the name itself clarifies the type of expense items which are referred to at each of these bulk plants. We have connections with the water system, certain requirements of water; we have public utility connections and certain expenses incurred thereon; and we have fuel expenses, and that is for heating purposes, and that would be incurred at different bulk plants.

Q. Are those expenses incurred equally at bulk plants operated by commission agents as they are at salaried stations? By "equally" I have no reference to dollar
4344 amounts, but rather to the performance of the service.

A. Per unit cost?

Q. Yes.

A. Well, I think so, but again that would involve quite a detailed analysis of the individual payments of different plants, the expenses—

Q. I didn't even mean the per gallon cost, Mr. Boatwright. I simply meant whether the company pays for all the water, light, fuel, and so forth, that is used at the commission agent plants just as they do at the other plants, or does the commission agent pay for the expense?

A. No. That question is easy to answer. The company stands the water, light, and fuel cost at both type of station.

Q. Does the company have F.L.A. expense in commission agent territory?

A. Oh, yes.

Q. What personal injury expense for company employees could there be in commission agent territory?

A. Well, the commission agent himself might receive some personal injury.

Q. Wouldn't he be the only man in that territory that could be classified as a company employee?

A. Well, the salesman that supervises these "B" agents might be so classified. I am not sure if an injury occurred to a "B" agent, obviously, that would be
4345 the cost of a personal injury resulting from commission delivery. Now, if a salesman supervising the function of "B" agents received a personal injury, I would personally classify that as a personal injury cost incident to commission delivery. You see, we don't make that classification in our regular procedure of maintaining records, so my answer is purely a personal one.

Q. Isn't personal injury expense incurred by the company chiefly—well, ordinarily or in large part relating to such expense in connection with truck drivers of the company? Or can you answer that question? I don't know.

A. Well, the answer would have to be "no". Individuals are injured handling barrels, ruptures occur, a barrel slips and a foot is mashed, or something of that type. It isn't only truck drivers. It is other individuals working in the bulk plants or even driving company cars. It may be an office manager has an automobile wreck, or something happens, suffering a personal injury.

Q. Is the expense of station operating tools and equipment, account 088, incurred to the same extent in commission agent territory as it is in salaried station territory?

A. It is incurred at both types of outlets. I would anticipate that station operating tools and equipment incurred at bulk plants would be slightly higher on a per unit basis than it would be at salaried stations. It is incurred, however, at both types of outlets.

4346 Q. Referring to account 055 "vehicle tank expense—other than mounted on company chassis," will you explain the type of expense there referred to?

A. Yes, the expense of maintaining the tanks which the company owns and are mounted upon the chassis of trucks which are owned by the commission drivers. It may involve repairing, calibrating, painting, and so forth.

Q. Is not that an expense which is incurred only in connection agent distribution of gasoline?

A. Well, I broadened that a little bit. I said commission drivers, because, as I have stated in the previous testimony, you will recall I said that frequently out of a salaried station there would be a commission driver serving peddler routes. Now, it would be limited to the commission class of employees. It would be largely the commission agent, but it would be also a small part incurred by commission drivers operating out of salaried stations.

Q. Referring to account 025 "truck rental expense," will you explain what type of expense is entered in that account?

A. Yes, the commission driver owns the truck chassis and the company pays a rental on that truck for its use in the distribution of all products.

Q. Then is that also an expense which is incurred only in connection with the commission agent or commission driver type of distribution?

4347 A. Yes, sir.

Q. Are there any other accounts on form 189, the expense of which is incurred only in connection with the distribution of gasoline and refined oils through commission agents or commission drivers, referring only to the tank wagon reseller channel?

A. That will again require a review of each of those items before I can answer that.

Mr. Austin: I move we adjourn, your Honor, to 1:30.

Trial Examiner Ballinger: The motion is granted and now, at 12:20 p. m., the hearing stands in recess until 1:30 p. m.

(Whereupon, at 12:20 p. m. a recess was taken to 1:30 p. m.)

4348 Afternoon Session.

1:30 p. m.

Trial Examiner Ballinger: Come to order.

JOHN W. BOATWRIGHT resumed the stand and testified further as follows:

Cross-Examination (Continued).

The Witness: Just prior to the court adjournment the question was raised as to what expense classifications shown on form 189 for the Detroit field for the year 1940 were incurred only on the tank wagon commissioned type of delivery to the reseller channel.

By Mr. Austin:

Q. Yes.

A. In answer to your question, account 021, commissions; 025, truck rental expense; 055, vehicle tank expense—other than mounted on company chassis. That is the answer to the question as posed.

I should like at this time to make a modification of an answer given this morning in response to your question as to what expense classifications are incurred only on tank wagon deliveries to the reseller channel by salaried drivers.

The modification I wish to make is that this morning I pointed out that account 106, being depreciation expense, vehicles, trucks, motor and horse drawn, was indicated as applying only to salaried deliveries.

I now note that the depreciation expense on vehicle

4349 tanks that may be mounted on chassis owned by commissioned agents is likewise included in that account. Therefore, account 106 would be incurred in part on commissioned deliveries to tank wagon reseller customers.

Q. Referring now to account 004, which is entitled, "salaries—salesmen" on Detroit form 189 "comparative statement of expense" for 1940.

Is a portion of the total expense for that account assigned to the tank wagon reseller channel?

A. Yes.

Q. Is a portion of the total expense for that account assigned to the tank wagon consumer channel?

A. Yes.

Q. Is a portion of the total expense for that account assigned to the column entitled "other methods"?

A. Yes.

Q. Which of the expense figures entered in this account reflects or includes any expenses of sale to the four tank car reseller-customers?

A. The expenses of sale to the four jobber accounts may be included in part in any one of the three, inasmuch as the total is allocated to the respective channels on a basis of an estimate of time devoted by channels submitted by the salesman.

Q. Would not any time devoted by the salesman
4350 to a jobber account be assigned by him to the Other Methods channel?

A. I think in most cases that probably would be the case.

Q. What do you mean by "in most cases"?

A. Well, I think it is merely—it might be a natural tendency on the part of the salesman preparing his estimates of time, if he spends any time with the jobber account, to include that in the Other Methods channel. I can not state in each case that that has accurately been followed.

Q. Has the salesman received any instructions in that regard as to the making out of his time report?

A. Not to my knowledge.

Q. Do you know what is the amount of salesman's salary expense for those four jobber customers for 1940?

A. No, I do not.

Q. Do you know for any of the accounts listed on form 189, Respondent's Exhibit 32, the amount of expense in 1940 in the Detroit field which is chargeable to the sale or delivery of gasoline to the four jobber customers or to any one of them?

A. We make no charge in the allocation of cost. That is understood, is it not?

Q. Yes.

A. I do not know the exact amount of time devoted by any salesman to any one of these four jobber accounts.

Q. Now, the question I just asked was a little broader.

Mr. Boatwright, applying to all accounts, not merely
4351 to time accounts.

A. In other words, do I know the exact amount of time that a salesman may have spent with any given reseller account?

Q. No, I did not mean that.

Perhaps if the reporter will re-read the question—

(Question read.)

A. I see. You mean all of these expense classifications.

By Mr. Austin:

Q. All or any of them.

A. No, I do not.

Q. Would your answer be the same if the same question were asked you as to the year 1939?

A. It would.

Q. Has any such allocation of the expense in the Detroit field been made by the Standard Oil Company for any year since 1936?

A. No.

Mr. Hanley: You mean no, you do not know, or no, it has not?

The Witness: It has not.

By Mr. Austin:

Q. On your direct examination at page 2402 of the record you testified as follows:

> "I stated that one of the six principal classifications
> of my duties had to do with the preparing of an
> 4352 analysis of profits and expenses by products, by
> sales divisions, and by individual channels of distribution. These studies covered the principal products distributed by the Standard Oil Company."

In making such studies as you referred to there, particularly with reference to "analysis of profits and expenses by products," do you mean separate products such as gasoline, lubricating oil, greases, and so forth?

A. Yes.

Q. Will you please describe the methods employed by you in assigning costs to each product?

A. It would be a physical impossibility for me to describe every account classification on the form 189 from memory.

Q. Well, I did not intend to direct you to separate accounts, Mr. Boatwright, but the question is one which

I would like to have a general answer to as to the methods used, if that can be done.

A. Yes. I think I could give you a general answer by stating that we by sampling process attempt to determine various allocations to products within a channel. These are special studies. Frequently we must resort to estimates as furnished by the management and other individuals acquainted with the particular function that we are attempting to analyze. They are studies made in an effort to determine whether the expenditure of our effort is directed to the best end. They are not a 4353 part of our official books, nor do they constitute an allocation which is sufficiently accurate in all of the details to represent the official expenses of our company.

Q. Were any time studies involved in making those analyses?

A. We do not ourselves make time studies in connection with those particular studies. We do secure estimates, however, of the supervisory function.

Mr. Austin: Off the record, please.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

By Mr. Austin:

Q. Have you ever made such an analysis of profits and expenses by products for the products sold in the Detroit area?

A. Yes.

Q. Perhaps that question is not very accurately stated. I meant whether you had ever made such a study for the Detroit area. Of course, the products sold in the Detroit area I assume will be the same as the products sold in other areas.

A. They are the same; and Detroit is always one of the fields included in our studies.

Q. Well, what is the result of the studies of which you are now speaking, including the Detroit area? Do you have reports covering those studies in your files, or what happens when you make such studies?

4354 A. Well, these analyses are made. The results are presented to the board of directors for their consideration, and any change of policy that may result from the study constitutes a recommendation for their consideration. It reveals differences among fields. It leads to inquiry as to why certain costs are out of line in one field as compared with another. It may reveal weaknesses in methods in one field as distinct from another.

Q. When was an analysis of profits and expenses by products last made for the Detroit area?

A. For the year ending June 30, 1940.

Q. Is such a study made annually?

A. Yes.

Q. Would the cost studies to which you have just referred be made by fields, or are you referring to one study covering the entire company's territory?

A. One study covering the entire territory.

Q. Do those studies result in the determination or estimate, if you wish, of a cost per gallon marketing each of the various products sold by the company?

A. Yes, they result in estimates of the cost per gallon of different products.

Q. By fields or by total?

A. By fields.

Q. Well, in such a cost study, would gasoline, for
4355 instance, be separated from refined oils?

A. To the best of our ability.

Q. And motor oils would be treated separately also?

A. Yes, sir.

Q. You further stated, Mr. Boatwright, in the quotation which I have read into the record a moment ago that you make analyses of profits and expenses by individual channels of distribution. Are sales through jobbers regarded as a channel of distribution?

A. No. No. We have not made a study of the profits of sales through jobbers, except the one referred to in our analysis, and that is the expense of distribution to the Oklahoma jobbers.

Trial Examiner Ballinger: To the what?

The Witness: The Oklahoma jobbers.

By Mr. Austin:

Q. These analyses of profits and expenses by products you just stated result in the separation of products, including separation of gasoline from other products. I am referring now to your statement a moment ago that gasoline would be shown separately from refined oils, or at least that you had made some estimate of the cost of marketing gasoline separately; that is correct, isn't it?

A. Yes, sir.

Q. Do you recall whether your estimate for the
4356 Detroit field of the cost of marketing gasoline was
higher or lower on a gallon basis than the marketing
of refined oil?

A. Through the tank wagon reseller channel?

Q. Yes.

A. It is practically the same. One year it may vary a hundredth of a cent above or below, but the differentiation between them is negligible.

Q. Is there more difference between the respective costs of marketing gasolines and motor oils and lubricating oils and greases?

A. To be sure I understand your question, may I restate it?

Q. Yes.

A. Is there a wider difference in marketing cost between gasolines and refined oils, on the one hand, as compared with motor oils and greases, on the other?

Q. No. I mean is there a wider difference comparing gasoline with motor oil, gasoline with lubricating oil, gasoline with greases, or taking each of those four products and considering them separately.

To further clarify, you stated that there was very little difference between the cost of marketing gasoline and the cost of marketing refined oil. Now, instead of those two products I am taking four products, gasoline, lubricating oils, motor oils, and greases.

A. We never make any effort to analyze the ex-
4357 penses and profits in the distribution of greases. We
do, however, on motor oils, and your marketing cost
and your other cost incident to your distribution of motor oils is higher than the cost incident to a gallon of gasoline or refined oil.

Q. How about lubricating oil? Have you covered that?

A. Industrial lubricating oils?

Q. Well, whatever is meant by "lubricating oils."

A. No, on industrial lubricating oils we do not make a periodic study. We have made only one study on that in the period of time that I have been with the company.

Q. What are the products that are included in these periodic studies?

A. Gasolines, refined oils, and motor oils.

Q. Those three only?

A. Yes.

Q. Did your study of jobber operation in Oklahoma for 1939 include an analysis of all costs of distribution to those jobbers?

A. Yes.

Q. Respondent's Exhibit 33-C states that your department made the time and cost analysis to determine the profitability of the jobber operation in the state of Oklahoma in 1939. Was the purpose of that study to determine the amount of the company's entire distribution cost allocable to that jobber business, or was it to determine
4358 the amount of the costs of handling that business
which would be eliminated if that business was discontinued?

A. No. The object of that study was broader than just the determination of marketing cost. The objective of the study was to start with total realization received for the sale of the merchandise with the jobbers and deduct from that realization the cost imputed to those outlets in terms of sales effort, or marketing cost, transportation cost, manufacturing cost, to ascertain whether it was profitable for us to continue to market in that specific area.

Q. Well, would not the determination of the question whether it was profitable to continue marketing in that area involve a determination merely of the expenses that will be eliminated by discontinuing the market operations in that area as contrasted with the realization received from sales effort?

A. Well, our approach to a problem of that nature is not predicated on apparently what you have in mind as an increment. Our approach is, first, does it carry it full cost, overhead, and so forth, as a part of those costs. Then, secondly, having answered that question, does it carry incremental cost; and, thirdly, does it contribute to the overhead. Now, if a particular operation contributes to overhead, the company is better off with that volume than they would be to discontinue it entirely as it makes a
4359 contribution to your fixed cost. Our analysis, there-
fore, on that particular study had to do, first, with whether or not that business carried its full cost.

The question you raised was secondary or third in our mind. It was answered, but we answered the first one first.

Q. Do the jobber marketing costs shown on Respondent's Exhibit 33-C, D and E include all of the costs of distribution of gasoline to the Oklahoma jobbers in 1939?

A. It does cover the marketing costs.

Q. How did you happen to select the Oklahoma area for this jobber study?

A. There were two reasons:

First, because realization in the southwest on petroleum products was low. We had been operating in that area for quite a period of time. I think it is a natural question for any alert executive when realization declines to attempt the ascertainment of the value of continued operation in that territory. That is number one.

Number two, it is the only area in our territory where we market only through jobbers. Jobber operation throughout the main part of our territory is a comparatively small part of our sales. In Oklahoma it is only jobber operation. We have no direct tank wagon distribution.

Q. And you used the word "increment" and re- 4360 ferred to incremental costs, I believe, in the answer you gave to my previous question.

A. Yes.

Q. Will you explain what you meant by "increment"?

A. Well, I think of incremental costs as being those costs which are directly associated with the unit sold that would be discontinued if that unit—if that business was no longer secured. Many accountants refer to an out-of-pocket cost in a similar manner.

Q. Did you have any commission agent distribution in this territory in which these Oklahoma jobbers were located?

A. No.

Q. The only gasoline sold in that territory during the time of this study was sold through these jobbers?

A. Yes, sir.

Q. And does the territory cover the entire state of Oklahoma so far as you market gasoline within that state?

A. As far as we market gasoline in that state, yes.

Q. In other words, there is no portion of Oklahoma where you sell both to jobbers and to other types of customers?

A. No, there is no such territory.

Q. But, as I recall it, this Oklahoma territory was served in part from the Kansas City field and in part from the Wichita field.

A. It was at the time this study was made. Since 4361 that date it has been consolidated.

Q. Is the method of sale and delivery to jobbers the same in the Detroit field as it is in Oklahoma?

A. Yes, except that there are more tank car deliveries to an Oklahoma jobber than there are in Detroit. It is merely a case of using truck transports in one area to a greater extent than in another.

Q. Well, I believe we are going to establish in the record when the tank car deliveries were discontinued in Detroit and the tank truck deliveries commenced.

A. Yes.

Q. I believe that is one thing Judge Hanley said he would ~~find out~~ for us.

A. There is one differentiation that I think should be mentioned. Our selling cost in Oklahoma is far higher than our selling cost to jobbers in Detroit. In other words, the selling cost that I have in Respondent's Exhibit 33 is high for a jobber selling cost.

Q. Well, you stated a moment ago, Mr. Boatwright, that you did not know what the amount of selling cost was in Detroit.

A. I do know that, although I do not have an exact per gallon cost. The reason I know it, our selling cost was high in Oklahoma; therefore, if our costs were high, we have consolidated them in that field. And whereas we were at that time using two salesmen, we are cover-
4362 ing the same ground with one salesman.

4363 Q. That statement that the selling costs to jobbers were higher in Oklahoma than in Detroit is not based on any cost study of selling costs in Detroit?

A. That is correct. It is merely a common sense answer.

Q. I think you have already answered the next question I have here, which was if salesmen were employed for the purpose of selling to jobbers in Oklahoma.

A. Yes, they were. At that time there were two salesmen, and now we are doing the same thing with one.

Q. How are the orders for gasoline given by the jobbers in Oklahoma?

A. Do you mean—

Q. Just a moment. I think I must have missed something here. I am sorry.

Mr. Austin: May we go off the record, please?

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

By Mr. Austin:

Q. Will you please describe how motor oils and greases are sold to jobber accounts by the Standard Oil Company?

A. I don't know by all accounts how they are sold, nor do I know that motor oil is sold in exactly the same way to jobber accounts in different fields.

Q. Do you know how it is sold in Oklahoma?

4364 A. Yes, I do. In Oklahoma we have a warehousing-arrangement with a distributor there, and this distributor—

Q. What distributor?

A. A distributor in Oklahoma, who distributes motor oil to jobbers, and he distributes out of this warehouse.

Q. Do you know how motor oils are sold to jobbers in Detroit?

A. No.

Q. How are motor oils shipped to jobbers in Oklahoma? You say the distributor delivers them out of the warehouse?

A. Yes.

Q. Well, how are they shipped?

A. In carloads of barrels or carloads of crated cans of motor oil.

Q. Does the jobber buy motor oil only in carload lots?

A. No, no; he may buy in smaller quantities but then it would go at an L.C.L. rate.

Q. What do you mean by L.C.L.?

A. Less than carload.

Mr. Hanley: It isn't clear, your Honor, what the materiality of this is. It does appear, I think, that transportation cost of gasoline is paid by the respondent company in Detroit. It appeared both on direct and cross examination as to what sales effort is expended. This is a gasoline case, and I don't know how this is material on the 4365 question of costs or anything else. May we know what the purpose of this examination is?

Mr. Austin: I think that will become apparent, your Honor. I would like to proceed with this line of questioning and I believe that its relevancy will be apparent before I finish this line of questioning.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Proceed.

By Mr. Austin:

Q. Do the four jobbers in Detroit purchase motor oils and greases from the Standard Oil Company?

A. Some of them purchase some of their motor oils from the Standard Oil Company; I do not know that they purchase their motor oils exclusively from our company.

Q. Do they all purchase some motor oils from the Standard Oil Company?

A. I couldn't even testify that they all do purchase some motor oils.

Q. Do you know whether all of them purchase lubricating oils and greases from the Standard Oil Company?

A. No, I do not.

Q. Did I ask you, Mr. Boatwright, how motor oils and greases are sold to the four jobbers in Detroit?

A. No, you did not.

4366 Q. Well, I will put that question, then. I wasn't sure whether I had.

A. Well, if motor oils and greases are sold to the jobbers in Detroit, I would assume that they are either sold by the sales manager or by the salesmen calling on those accounts.

Q. Are motor oils sold in carload lots to the Detroit jobbers or might they also be sold in less than carload lots?

Trial Examiner Ballinger: You are speaking about sales now by the respondent company?

Mr. Austin: That is right.

A. Well, I don't know. The reason I can't answer your question is that I do not know whether all four of these jobbers buy motor oils, and if they do buy motor oils, whether they buy only one grade or all grades, and if they buy all grades whether they buy in a sufficient quantity to take carload lots.

Q. From what point is direct shipments of motor oils and greases made to customers in the Detroit area?

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Where is the distributor located who makes deliveries of motor oils to the Oklahoma jobbers?

A. In Oklahoma.

4367 Q. Does that distributor act as an agent of the Standard Oil Company in making those deliveries?

A. Well, he is not an agent in the sense that he is a commission agent.

Q. Well, is the title to the motor oil delivered in the distributor or is it in the Standard Oil Company?

A. The title to the property would be in the distributor.

Q. In other words, do you mean that the distributor purchases motor oil from the Standard Oil Company and resells it to other jobbers?

A. [illegible] think that is correct.

Q. Then does it follow that none of the Oklahoma jobbers purchase motor oils or greases from the Standard Oil Company?

A. I think I should—

Q. I mean, other than this distributor.

A. Well, this distributor was in that part of the Oklahoma field that was in Wichita, and I think that our arrangement with that distributor was that he received a warehousing fee. I do know that sales made to these jobbers are on our books, but there is a warehousing fee to the distributor for warehousing in making the deliveries to the jobbers. So the product would remain the product of the company, which is a modification of the previous answer.

Q. But there would be a warehousing fee in connection
with the deliveries resulting from the fact that the
4368 distributor is used, you might say, as a bulk plant.

A. Yes.

Q. The question I intended to ask you a while ago, when I said that your answer was directed to the question which I didn't intend to ask, is: The method of sale and delivery of motor oils and greases is the same in the Detroit field as it is in Oklahoma? Perhaps your answers have already indicated that you are not sure about that.

A. Well, if there is motor oils and greases sold to all jobbers in the Detroit field, then it is the same with the exception of the warehousing function which I previously explained in connection with the jobbers in the western part of Oklahoma, a field which was at that time in the Wichita fields.

Q. Do I understand you that the jobbers in the Kansas City field were not served by this distributor?

A. No, they were not.

Q. How did they receive their shipments of motor oils?

A. From the company, either in truck transport or in carloads of barrels or in quantities less than carload at L.C.L. rates.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

15 Trial Examiner Ballinger: Proceed.

4369 By Mr. Austin:

Q. From what point was gasoline shipped to the jobbers in Oklahoma?

A. The Neodsha Refinery.

Q. Where is that?

A. At Neodsha, Kansas.

Q. Was the gasoline shipped from that refinery to the Kansas City and Witchita field jobbers?

A. Yes, sir.

Q. Are motor oils and greases delivered in the steel barrels and containers owned by the company?

Mr. Hanley: To whom, under what circumstances, and when?

Mr. Austin: I will limit it to jobbers. I assume that the same would be true of all customers.

Mr. Hanley: If your Honor please, the respondent now moves to strike all of the testimony of the witness on the question beginning at the point where counsel for respondent first requested that the materiality of this line of questioning be indicated, for the reason that it now appears that counsel has gone back into the question of gasoline and has made no tie-up between motor oil and any issue in this case. The attempted cost comparison which has been made here was a cost comparison in relation to gasoline. It has nothing to do with motor oils or greases. There was no obligation or reason upon the re-
4370 spondent why there should be any attempt to distinguish between its cost of selling motor oils and greases, and none was attempted, and there just is not any materiality in this line of questioning, and it doesn't make any difference whether the Detroit jobbers handled motor oils and greases or not. As a matter of fact, some of them did handle some, and the record so shows, but we are not charged with discriminating on motor oils and greases,

and the cost comparisons are purely on gasoline. That has been repeatedly explained.

Trial Examiner Ballinger: Counsel for the Commission has stated that he intends to couple this up, and at this time the motion to strike is overruled, subject to renewal at a later date.

Mr. Hanley: May we not have it coupled up, then, Judge? I don't like to have to go back over these four or five thousand pages of record and try to find this. If counsel is going to couple it up, let him do so.

Trial Examiner Ballinger: I don't know how he is going to couple it up or when he is going to couple it up, but he is at liberty to do so at any time before the case is closed.

Mr. Austin: I do intend to couple it up, your Honor.

Mr. Hanley: May we have it understood whether
4371 or not counsel is going to couple it up on the question of the costs and the cost figures that the respondent has provided here?

Mr. Austin: Yes; in my opinion, I shall certainly do so.

Mr. Hanley: Are you proposing to attack these figures in some way in this coupling up that you refer to?

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Take a five-minute recess.

(A short recess was taken.)

Trial Examiner Ballinger: Come to order.

You may proceed.

Mr. Austin: Will you read the question?

The Reporter (reading): "Are motor oils and greases delivered in steel barrels and containers owned by the company? I will limit it to jobbers."

By Mr. Austin:

Q. In the Oklahoma field.

A. Yes.

Q. Does the company pay for the transportation?

A. Yes.

Q. Is the company's cost of sale of motor oils and greases to jobbers in Oklahoma per unit greater or
4372 less than the cost per gallon on the sale of gasoline to jobbers?

A. It would be greater.

Q. Is the company's cost of delivery of motor oils and greases to jobbers in Oklahoma per unit greater or less than the cost per gallon of delivery of gasoline to jobbers?

A. Well, we don't have a delivery cost on gasoline to jobbers in our marketing costs. You see, that is a separate freight classification.

Trial Examiner Ballinger: What is that question?

(Question and answer read.)

By Mr. Austin:

Q. Well, you nevertheless do have a cost of delivery, do you not, Mr. Boatwright, both of oils and gasolines?

A. We have a freight charge on both products but we do not include a freight charge as a marketing cost.

Q. I would still like to have you answer the question, if you can answer it, regardless of whether you consider the marketing cost or not.

A. Well, I can't answer it.

Q. You don't know?

A. I do not.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

Does the cost of delivery depend upon the distance
4373 of the products to be transported?

The Witness: It depends both upon distance and upon method of product movement. Where motor oil is shipped in carloads of barrels, the per unit cost is higher than the per unit cost for a tank car of gasoline because of the different gallonage content.

Trial Examiner Ballinger: That depends upon both the distance and the quantity.

The Witness: Yes.

Trial Examiner Ballinger: And mode of delivery.

The Witness: Yes.

By Mr. Austin:

Q. I would like to point out that the distance would be the same for the purpose of my question as intended because I was referring, naturally, to comparison of costs of delivery of motor oil, on the one hand, and gasoline, on the other hand, to the same customer.

A. Yes, but your products may be supplied from different points of origin.

Q. Oh, I see.

A. Therefore, the distance need not be the same.

Q. As a matter of fact, these products are supplied from different points of origin in the Oklahoma territory, are they not?

A. Well, your motor oils are supplied from different
4374 points of origin than your gasoline.

Q. That is what I mean.

A. You see, our Isovis is made at Wood River and it would be shipped from Wood River to the field storage point, where it would be barreled and then supplied out of the fields to the point where the barreling takes place, to the Oklahoma jobbers.

Q. Where is the gasoline shipped from?

A. The gasoline would be shipped from Neodsha.

Trial Examiner Ballinger: From where?

The Witness: Neodsha, Kansas.

By Mr. Austin:

Q. You stated that the company's costs of sale in motor oils and greases to jobbers in Oklahoma per unit would be greater than the cost per gallon of sale of gasoline to jobbers. Assuming that the Detroit jobbers purchase motor oils and greases from the company, would your answer to the question be the same if asked for the Detroit field?

Mr. Hanley: Just a moment.

That is objected to, your Honor, for the reason that it is totally immaterial, incompetent, irrelevant, does not point to any of the issues in this case, being entirely irrelevant what the cost of selling to jobbers or other resellers may be in connection with motor oils. Assume the correctness of the witness' answer and that the
4375 cost of selling a unit, that is, a gallon of motor oil, were many, many times as great as the cost of selling a gallon of gasoline, it would still be totally immaterial, for the reason that the cost comparisons deal solely with differences in the cost of sale of gasoline and are not tied to and are not related to cost of selling motor oils, either in Oklahoma or in Detroit.

There is no issue in this case in connection with motor oil, and its only applicability could be on the question of costs, and then only if the attempted justification of the differentials in cost as submitted by respondent were affected by or influenced by costs of sale of motor oils and greases, which they are not, and which abundantly appears in the record and in the exhibits.

Further, that if the thing points to freights charges, again it appears from the record and from the exhibits that freight charges, while they may be a cost to the company just as a crude oil cost is a cost to the company or a pipeline cost of getting the crude oil to the refinery is a cost, none the less, these costs start with f.o.b. delivery setup: First, at a reseller service station and, secondly, and on the other hand, at the bulk plant of the jobber. Hence, the question of freight has no applicability to gasoline. The motor oil freight as has been indicated by the witness is arrived at by an inclusion of price no matter how sold or to whom and would be, therefore, on the same basis as 4376 gasoline freight, assuming that motor oil had any applicability to the question of costs, which it has not, as heretofore pointed out.

Mr. Austin: If your Honor please, while I do not concur in the objection and would also like to point out that the question is restricted to costs of sale and not costs of delivery, I would nevertheless like to withdraw the question at this time with the right to possibly ask a similar question later after the situation in the Detroit field has been more fully developed.

Trial Examiner Ballinger: The question is withdrawn.

By Mr. Austin:

Q. In your opinion, Mr. Boatwright, does the cost per gallon of sale and delivery of gasoline to a single jobber account increase or decrease with an increase or decrease of the gallonage purchased by that customer in a given period of time?

A. Now, when you use the term "selling" are you doing as I am, referring to the marketing costs, or are you referring to salesmen's salaries?

Q. In this question I refer to cost per gallon of sale and delivery, which I believe means the same thing as the term "marketing costs" or "distribution costs" as 4377 you mention it.

A. Well, I would anticipate that with increased volume, your unit cost of marketing would decline.

Q. And with the decrease in volume, would the marketing cost increase?

A. That would be the natural expectancy.

Q. Would the same be true as to an increase or decrease in the amount of oils and greases purchased, referring now to the marketing cost of oils and greases?

A. Yes.

Q. And in referring to an increase or decrease in marketing costs, that would include, would it not, selling costs, advertising costs, and accounting costs?

A. It would include all of those expense classifications and others.

Q. Will you now turn, please, to Respondent's Exhibit 33-D? The heading is "supervision and selling costs." Are these costs as shown on Respondent's Exhibit 33-D computed for Oklahoma jobbers only?

A. Yes, sir.

4378 Q. Reference is made to "actual time expended by management, expenses as shown on form 028, Respondent's Exhibit 35, plus salesman's salaries," and so forth. And the next sentence commences "This total expense."

What total expense is referred to there? In other words, is that total expense for jobbers only, or the total expense for the Kansas City and Wichita fields?

A. Total expense for jobbers only.

Q. Will you explain in detail what expenses are included when you refer to "actual time expended by management, expenses, as shown on form 028, plus salesmen's salaries, car and traveling expenses"?

A. Yes; from the form 028, which is an expense account statement by days, you can get the time of your supervisional group in a given area. Thus the form 028 for the managers and the assistant managers and other supervisors would be analyzed to determine what actual time they had spent in conducting the business through the Oklahoma jobbers; that is, particularly with reference to trips down to Oklahoma.

In addition to that, the assistant manager, the sales promotor, the special reseller, the special—any other special salesman that may have been down there would be included from that analysis. That would include the salary or the payroll cost allocated to this portion of the time of the men who worked on these accounts. It would include

4379 the sum total of their traveling expense, and it would include the depreciation on the salesman's car that was used in that territory.

Q. Mr. Boatwright, you have stated that sales to jobbers are not considered a separate channel for distribution for the purpose of computing marketing cost. Will you explain how the selling expenses or the time expended on sales to jobbers in the Oklahoma area could be determined from form 028?

A. Yes. That is comparatively easy.

Respondent's Exhibit 35, form 028, is a daily record of expenditures on the part of any individual traveling being out in the field. Each line is numbered from 1 through 31. If the field manager's report indicated that he had spent a certain day in Tulsa, Oklahoma, his expenses incurred that day in Tulsa, Oklahoma, would be indicated on the line indicating the date of the month. His expenditures would be broken down according to his meals, his lodging, his telephone and telegraph, his other miscellaneous expenses which are detailed in transportation, or the automobile expense incident to that particular day. Therefore, by taking these forms and going through we could find the time of the supervisional group, the special salesmen, and others who had moved out of our field offices to handle the business of the Oklahoma jobbers. The salesmen that were covering the territory covered only jobbers. Therefore, it was
4380 a simple thing to throw their expense against this class of business.

Q. These jobbers were served by salesmen who had no other duties?

A. Yes.

Q. Would it not be true that the time expended by the management, and so forth in Kansas, including operation of vehicles, and so forth, on the way to Oklahoma should have been included? If I understood you correctly, you said that it was only time in Oklahoma that was included. I assume they had to get down from Wichita to the Oklahoma border.

A. Well, we would isolate the trips by the use of the form 028. Then we would take the automobile expense and the time expense for making that trip. Thus, if it was necessary for the manager to furnish gasoline at Pittsburg, Kansas, on the way down to Oklahoma, it was charged to that trip in which his business was dealing with Oklahoma jobbers.

Q. Didn't the manager sometimes make trips in which he transacted various kinds of business? For instance, calling on other customers in addition to the Oklahoma jobbers in the course of his trip through the field.

A. Well, any manager when he drives out of a main office will, of course, observe and comment and discuss any problems incident to the route that he is following through the field.

You are acquainted with the proximity of Wichita to Oklahoma, are you not?

4381 Q. I am not.

A. It is very close. That distance is a negligible function. And the chances are when the Wichita manager went to Oklahoma he went on some special business, and he went to Oklahoma and conducted that business. Now, that likewise is pretty generally true of both the Wichita manager and the Kansas City manager.

Q. Do the salesmen who call on the jobbers in the Detroit area call on jobbers only, or do they have other points of call?

A. They would have other points of call.

Mr. Hanley: Isn't your recollection of the record, Mr. Austin, that no gasoline salesmen did call on Detroit jobbers?

Mr. Austin: I am not sure. I think the testimony is—

Trial Examiner Ballinger: Do you want this on the record?

Mr. Austin: Yes, if the question is on the record. My recollection of the testimony is that the witness said that there probably are some selling expenses in connection with the Detroit jobbers, although he did not attempt to say how much; but certainly this schedule for Oklahoma as offered is indicative of the expenses in Detroit. That is the purpose for which it is offered.

4382 Mr. Hanley: Well, I merely call it to your attention, because I have a clear recollection of the testimony by Mr. Boatwright, more likely by the jobbers themselves, that a gasoline salesman does not call on either them or their reseller customers, and the sales expense by salesmen incident to selling Detroit jobbers was this managerial expense the witness has now been discussing—luncheon engagements with Mr. Raupagh, and such things. I think your Honor will recall the testimony.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Do you know, Mr. Boatwright, whether gasoline salesmen in the Detroit area call on Ned's Auto Supply Company outlets, or any of them, in the course of their duties?

A. I know that they do not call on the individual outlets. The only contact that a salesman has, if any, under the present operating conditions is with the home office of the Ned's Auto Supply Company.

Q. Do you know whether there is some salesman's salary expense in connection with calls on Ned's Auto Supply?

Trial Examiner Ballinger: In connection with gasoline?

Mr. Austin: Yes.

4383 A. I do not know that there is any gasoline selling cost in connection with salesman's salary in serving the Ned's Auto Supply.

By Mr. Austin:

Q. Do you know that there is not?

A. I do not know that there is not. That constitutes no part of my testimony.

Q. Does form 028, Respondent's Exhibit 35, as filled out by the company employee, cover expenses in connection with the marketing of both gasoline and motor oils?

A. Yes.

Q. For the purpose of the computation on Respondent's Exhibit 33-D, and referring to the first sentence under "supervision and selling cost," are the expenses there referred to assigned directly to Oklahoma jobbers only?

A. They were in this study. They are not assigned separately as a part of our regular accounting procedure.

Q. But they were so assigned just for the purposes of this study?

A. Yes, sir.

Q. Referring to Respondent's Exhibit 32, form 189, can you state the accounts opposite which the supervision and selling costs shown on Respondent's Exhibit 33-D were entered on form 189 for the Kansas City and Wichita fields for 1939?

A. You will again limit the question to gasoline 4384 and refined oil, will you not?

Q. Yes—well, just a minute on that. No, I don't think so, Mr. Boatwright, because the expenses are on 028, which you just stated covered motor oils as well as gasoline, and the larger gallonage figure was used on Respondent's Exhibit 33-D.

Mr. Austin: Off the record, please.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Mr. Hanley: If counsel refuses to limit the question, I object to it, for the reason that Respondent's Exhibit 33-D on its face shows that it has to do solely with gasoline and refined oil.

Mr. Austin: May we postpone the answer to the question and the ruling on the objection, your Honor?

(Further discussion off the record.)

Mr. Austin: I will withdraw the question.

Trial Examiner Ballinger: All right; the question is withdrawn.

By Mr. Austin:

Q. It is stated on Respondent's Exhibit 33-D that "this total expense was allocated according to the field estimates of time devoted to each product."

Between what products was this allocation made?

A. Between gasolines and refined oils and other merchandise sold.

4385 Q. You mean gasolines and refined oils, on the one hand, and other merchandise, on the other?

A. Yes.

Q. Has any such allocation been made for the Detroit field in connection with the jobber business there?

A. No, we have no separate time study of jobber operation in Detroit. As you will recall, on direct testimony, the time period of the conduct of this study was stretched out to approximately three months, counting tickets, going back through the records, and getting all time devoted to this class of business, it would have required a similar function for operation in Detroit. I think I should add to that the statement that even had we attempted it, because the expense accounts in Detroit would not have revealed the location as being outside of the city or outside of the main portion of the field, I could not have gone as far in determining the actual jobber cost in Detroit even had an attempt been made as we could in this particular case, where we are faced with jobber operation only.

Q. You said that the study took three months. Were you referring to the Oklahoma study?

A. Yes.

Q. On Respondent's Exhibit 33-D, in the computation,
you figure a 15 per cent figure for the Kansas City field
and a figure of 32 per cent for the Wichita field. What
4386 do those percentage figures mean?

A. That means that 15 per cent of the selling time of the sales efforts in the Kansas City field were devoted to the sale of gasoline and refined oil. The 32 per cent following the Wichita field cost indicates that that portion of time and effort was devoted to gasoline and refined oil products.

Trial Examiner Ballinger: What percentage of time was that?

The Witness: In one case, it was 15 per cent of the time; in the other case, it was 32 per cent of the time.

By Mr. Austin:

Q. At page 2666 of the record, Mr. Boatwright, I asked you about the difference between the gallonage figure used on Respondent's Exhibit 33-D under "supervision and selling cost," which is 4,206,686 gallons, and the smaller figure of 2,166,168 gallons used on Respondent's Exhibit 33-C and at the top of Respondent's Exhibit 33-D, and you stated that the difference was "refined oils, tractor fuels, fuel oils, motor oils, greases, and so forth."

Your answer to that question indicates that the gallonage figure used on Respondent's Exhibit 33-D under "selling cost" included fuel oils, motor oils, and greases.

A. My answer was in error. The smaller figure of
2,166,168 gallons is gasoline and refined oil only. The 4,206,668 gallons is, likewise, gasoline and refined oils only.
4387 The difference being due to the fact that two of the
accounts upon which there have been indicated bad credit losses were not included in the calculation of doing accounting and credit because both accountants and credit men spent an unusual amount of time with these two accounts attempting to salvage what appeared to be a certain bad debt loss.

Q. That does not appear upon Respondent's Exhibit 33-C and D, does it?

A. It does not, and my testimony was in error. I am sorry.

Q. Are not the exhibits themselves in error?

A. No.

Q. Isn't it true that the exhibit on its face purports to apply to all Oklahoma jobbers as to the computation under the heading "accounting cost" and also the computation under the heading "credit cost"?

A. It does purport to be the accounting cost of doing business through jobbers. It is just exactly what it purports to be. There were two accounts which during 1939 our accounting and credit men attempted to salvage what appeared to be an obvious credit loss. Those are not regarded as normal accounting or credit charges in any sense of the word.

Q. On Respondent's Exhibit 33-C, you refer to "total accounting cost in Kansas City and Wichita fields for the year 1939."

As a matter of fact, that is not the total accounting cost even for all of the jobbers, is it? 4388

A. It is a total accounting cost figured out for each jobber separately and then it is consolidated for all jobbers except these two.

Q. And that does not appear on Respondent's Exhibit 33-C, does it?

A. No, that does not appear. It should have appeared when I first gave my answer as to the difference in the gallonage divisor.

Q. When did you make that segregation of the accounting costs and credit costs by eliminating the costs incident to the business of these two jobbers?

A. When the exhibit was prepared.

Q. Did you make that segregation when you prepared the cost study for the company?

A. Yes, sir, both separately, and we even went to the individual jobbers as we analyzed the profitability and the expenses incident to the individual jobber operation.

Q. Then it was necessary to do that in order to find out there was excessive cost through the jobbers, was it not?

A. Well, it was necessary to do that to find out that question. An anticipated credit loss or a bad debt loss of the magnitude that was incurred certainly could not be a means of evaluating the profitability of all jobber accounts. These two were obviously unprofitable; the others were found to be profitable. 4389

Q. These two jobbers which you eliminated were two of the largest jobbers in the Oklahoma field?

A. They were two large jobbers.

Q. As a matter of fact, the gallonage of those two jobbers was approximately half of the total gasoline and refined oil gallonage in the Oklahoma field in 1939, was it not?

A. Yes, sir.

Q. Then is it your testimony now that the accounting cost computation and the credit cost computation on Respondent's Exhibits 33-C and D were made for 10 jobbers out of the 12 in the Oklahoma field?

A. Yes, sir.

Q. And those 10 jobbers purchased during 1929 only 2,166,168 gallons of gasoline and refined oil?

A. Yes, sir.

Q. What was the average per unit of the accounting cost per gallon for the entire 12 Oklahoma jobbers?

A. I don't know.

Q. You did compute that, did you not?

A. It was computed in the study.

Q. It was in excess of 10/100 of a cent per gallon, was it not?

A. I don't know.

Q. Didn't you state that the costs for the two
4390 jobbers eliminated was greater than the average for
the others?

A. Yes, I think they were.

Q. Isn't that the reason they were eliminated?

A. No, ~~sir.~~ They were eliminated because they were non-representative of the accounting costs incident to jobber distribution.

Q. They were non-representative because they were higher, weren't they?

A. Certainly.

Q. You have on Respondent's Exhibit 33-D a figure of 15 per cent for the Kansas City field for time expended by management and salesmen in connection with gasoline and refined oils; is that correct?

A. Yes, sir.

Q. And for the Wichita field, the figure is 32 per cent?

A. Yes, sir.

Q. To what products were the remaining percentages assigned?

A. To other products distributed by these respective jobbers, be they motor oils, tractor fuels, gas oils, and distillates, and other products.

Q. Were those estimates based upon any time reports or other records of the company or are they entirely estimates of the field manager?

A. They were the estimates of the field manager made in discussion and in conjunction with specialized
4391 salesmen or promoters who had gone down into Oklahoma and given their time to this class of business. You see, a time record is not maintained by the field manager or assistant field manager.

Q. The time record is maintained by the salesman, isn't it?

A. The time record is maintained by the salesman, which was reviewed in making these estimates.

Q. Do the same salesmen sell gasoline, motor oils, lubricating oils, and automobile supplies?

A. The Oklahoma jobbers?

Q. Yes.

A. Yes, sir.

Q. Do you know whether these percentages are the same for the Detroit field or were the same in 1939?

A. I do not know that they were the same for the Detroit field for the year 1939. I think they would be high.

Q. Has any study been made in the Detroit field of the time allocated to respective products by salesmen calling on jobber accounts?

A. Not to my knowledge.

Q. Commission's Exhibit 82-B contains a memorandum entitled "Distribution of time by products not reflected on comparative statement of expense, form 189."

The percentage of time there shown as devoted to the sale of gasolines and refined oils covering all chan-
4392 nels is 42.6 per cent, is that correct?

A. Yes, sir.

Q. Respondent's Exhibit 33-D shows a variation in time spent in connection with supervision and selling of gasolines and refined oils between the Kansas City and Wichita fields of more than 100 per cent. In other words, the percentage for Kansas City is 15 per cent, Wichita, 32 per cent, which is more than twice 15 per cent. Have you any knowledge which would permit you to state that the variation between either of these fields and the Detroit field may not be equally as great?

A. Would you mind reading that question?

(Question read.)

A. Well, the question is not one that is easy of interpretation because of its compound nature. I think it would be advisable, first, to point out why there is a difference between the field of Kansas City and Wichita. I explained to you that our motor oil in the Wichita field was served through a warehousing agreement. The man in charge of that warehouse was a previous salesman for the Standard Oil Company. The Wichita field did not have the problem and the worries incident to the distribution of motor oil as did Kansas City. Accordingly, their salesman was free to spend the greater proportion of his time on gasolines and did so spend a greater proportion of his time on gasoline. Now, the Kansas City field 4393 did not have this same kind of assistance. Accordingly, a greater amount of their salesmen's time had of necessity to be devoted to motor oil. Therefore, his proportion of time devoted to gasoline and refined oils was reduced.

I have stated in the record previously that knowing the different types of operation, both in Oklahoma and in Detroit, the actual proportion of the time devoted for the sale of gasoline and refined oil in Detroit would be less than the proportion indicated for the Oklahoma jobbers. I know this because I know that the Oklahoma salesmen first called on the jobber and then helped in the merchandising procedure. That is different from our operations in Detroit where our salesmen had no responsibility to call on the reseller outlets. Accordingly, their time was devoted to the sale of gasoline and refined oils and, hence, our marketing costs for any selling time assignable to the Detroit jobbers would be less than the marketing cost we have assigned to selling and supervision as indicated on Respondent's Exhibit 33-A through E.

Q. Is that opinion based upon any study made in the Detroit area?

A. It is based on the knowledge of customers and types of operation. It is not based on an analysis which is an accurate allocation of time in Detroit, for the simple reason that it couldn't be done.

4394 Q. In any event, it has not been done, has it?

A. Well, it hasn't been done and I am afraid you will just have to take my word as to the difficulties.

Q. Do you know the total gallonage of petroleum products other than gasoline and refined oils sold to the Oklahoma jobbers in 1939?

A. Yes. The total gallonage is 4,502,263 gallons, which includes refined oil, naphtha, and gasoline, lubricating oil and other miscellaneous petroleum products.

Q. That is the total, including gasoline?

A. That is the grand total of petroleum products distributed through the Oklahoma jobbers.

Q. Then could you answer my question by making a subtraction?

A. The total gallonage of lubricating oil—petroleum products other than gasolines and refined oils amounted to 295,577 gallons.

Mr. Austin: I would like to have this paper marked, for identification.

Trial Examiner Ballinger: The reporter will mark the paper Commission's Exhibit 87, for identification.

(The document was thereupon marked "Commission's Exhibit No. 87," for identification.)

By Mr. Austin:

Q. Commission Exhibit 87, for identification, is a
statement which was supplied to me by counsel for
4395 the respondent by mail in response to a request
made in Detroit and contains a statement of certain
gallonage both as to gasolines and as to motor oils and
greases in the Detroit field for 1940, including 1940 sales
of motor oils and greases to four named jobbers.

Mr. Austin: I offer Commission's Exhibit 87, for identification, in evidence.

Trial Examiner Ballinger: Any objection?

Mr. Hanley: I object to it for the reason, your Honor, that it is entirely immaterial. Quite true, we furnished it and we haven't any question about its accuracy and we don't raise any objection in that respect, but it deals with deliveries of sales of motor oils and greases to the four named jobbers. It also deals with an item of motor oil reseller sales; none of which is material and all of which is immaterial.

Furthermore, after the information was furnished, the Commission couldn't figure it out and they asked us for an explanation of it, and we gave the explanation and the exhibit is probably unintelligible without the explanation.

Trial Examiner Ballinger: I will hear from counsel for the Commission.

Mr. Hanley: I want to add to my objection this statement, your Honor: That this material was furnished at

the request of the Commission, and at the time with
4396 the statement that it was not regarded as material
and would not be countenanced without objection by respondent of any attempted use to be made of it, but in line with the offer of respondent to furnish anything that the Commission wanted, it was furnished, notwithstanding its immateriality.

Mr. Austin: I might say, in the first place, your Honor, that it answers the question which there was raised a while ago as to whether or not any motor oils and greases were purchased by the Detroit jobbers in 1940. It appears there that there were, and it gives the amounts.

Furthermore, it gives certain other useful information which perhaps is contained in part on other exhibits. I didn't offer the explanation which Judge Hanley refers to because that explanation was a reconciliation with certain figures on Detroit form 189 which I was going to say are not in evidence. I believe they now are in evidence.

If counsel for the respondent desires to have his letter also introduced containing his explanation, I have no objection.

Mr. Hanley: I am just making the objection, your Honor.

I think one of our difficulties here is that we have given the Commission so much stuff, they don't know what to do with it. I made the objection that it is not intelligible
in its present form, and it was furnished in this form
4397 because the Commission asked for it in that way.

Trial Examiner Ballinger: The exhibit plainly establishes the fact that the four jobbers in the Detroit field purchased motor oil and grease from the respondent. Is it offered for that purpose only?

Mr. Austin: Chiefly for that purpose and for the additional purpose that it shows the amounts that I have already introduced into the record through testimony of the witness, the amount of motor oils and greases purchased by the Oklahoma jobbers and the amounts of gasoline purchased both in Oklahoma and in Detroit, also being in evidence, and by means of this exhibit it may be shown that the proportions of gasoline and motor oils in Oklahoma and in Detroit were different, and since there has been an allocation of costs in Oklahoma based upon percentage of time spent on products, I think that the gallonage of the different products is material.

Mr. Hanley: Your Honor, that is a misstatement. There was no consideration given in Detroit or in Oklahoma to motor oils and greases except to eliminate them. Now, do we have to go on trial for something different every time we have a hearing, Judge?

Trial Examiner Ballinger: This runs to the question of your elimination.

Mr. Austin: Exactly.

4398 Trial Examiner Ballinger: The objection is overruled. The document is admitted in evidence as Commission's Exhibit 87.

(The document heretofore marked "COMMISSION'S EXHIBIT No. 87," for identification, was received in evidence.)

Mr. Austin: Your Honor please, I am making a motion to adjourn because, in the first place, it is 4:30, and, in the second place, I think I may have to do a little rearranging of material in order to proceed expeditiously.

Trial Examiner Ballinger: The motion of counsel for the Commission is granted and now, at 4:30 p. m., the hearing stands adjourned to be reconvened June 24, 1941, in Room 332, Federal Trade Commission Building, Washington, D. C.

(Whereupon, at 4:30 p. m. the hearing was adjourned to Tuesday, June 24, 1941, at 10 a. m.)

4399 Room 332, Federal Trade
Commission Building,
Washington, D. C.,
Tuesday, June 24, 1941.

Met, pursuant to adjournment, at 10 a. m.

Before:

Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., appearing on behalf of the Federal Trade Commission.

Harold R. Hanley, Esq. (910 South Michigan Avenue, Chicago, Ill.), appearing on behalf of the Respondent.

4400 PROCEEDINGS.

Trial Examiner Ballinger: Come to order.

This is a reconvening pursuant to notice of Docket 4389, in the matter of Standard Oil Company, at 10 a. m., Eastern Standard Time, June 24, 1941, in Room 332, Federal Trade Commission Building, Washington, D. C.

The last hearing was held in Washington, D. C., on June 23, 1941.

The reporter will note counsel for the Commission and respondent present.

You may proceed.

Mr. Hanley: Off the record.

(Discussion off the record.)

JOHN W. BOATWRIGHT resumed the stand and testified further as follows:

Cross-Examination (Continued) by Mr. Austin.

Q. We were discussing supervision and selling cost in connection with Respondent's Exhibit 33-D. Reference is made on that exhibit to "actual time expended by management." You may have stated this yesterday, I am not sure, Mr. Boatwright, but what is meant by the word "management"?

A. The entire supervision function, including the manager, the assistant manager, the special salesmen, the sales manager, or any of the supervisory force operating out of these fields.

4401 Q. When you say the manager and the assistant manager, do you mean the division manager?

A. Yes.

Q. And the assistant division manager?

A. Yes, sir.

Q. Where is the expense involved in their services shown on form 189?

A. It is shown in account 1000.

Q. If it was proper to include the salary value of this time here as a selling expense, would it not have been equally proper to have included the value of the time Mr. Raupaugh and Mr. Blau spent with Ned's Auto Supply Company in 1937 as a selling expense chargeable to Ned's business in that year?

A. It would have been entirely proper if it had been possible to segregate.

You will recall, however, that the account 1000 in the year 1937 was listed on Respondent's Exhibit 31-Q—

Q. That is right.

A. —as a charge against neither, or as a charge against both, whichever way you wish to interpret it.

Q. That is so. But is it not true that the services of Mr. Raupaugh and Mr. Blau differed in no respect as a selling service from the services rendered by the managers and assistant managers of the Kansas City and Wichita fields in dealing with the Oklahoma jobbers?

4402 A. I would say that the functions performed by the respective field managers were the same.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Let us proceed.

What is the last on the record?

(Question and answer read.)

By Mr. Austin:

Q. Do the supervision and selling costs shown on Respondent's Exhibit 33-D include any federal insurance contributions or any unemployment insurance?

A. Yes, sir.

Q. Do they include any advertising expense?

A. Not in terms of supervision. Advertising expense is shown as a separate item in the calculation.

Q. Well, I was referring only to the supervision and selling cost figures on Respondent's Exhibit 33-D.

A. They do not include any advertising, advertising being included as a separate classification of expense.

Q. Can you state as a fact that the supervision and selling cost for the jobbers in the Detroit area in 1939 was 6/100 of a cent per gallon?

A. I can state for a fact that the supervision and selling cost for the jobbers in the Detroit area would be less than 6/100 of a cent, if anything.

4403 Q. I would like to have a yes or no answer to the question.

Mr. Hanley: That is objected to as not a proper request on the part of counsel. The witness has answered the question. No witness has to answer a question yes or no.

Trial Examiner Ballinger: Read the question.

(Question and answer read.)

Trial Examiner Ballinger: The Examiner considers the answer full and complete.

Mr. Austin: I would like to know, your Honor, whether or not the witness knows whether the selling and supervision costs in connection with jobber business in Detroit was not the sum of 6/100 of a cent per gallon. He said it was less. He still has not answered whether or not it is or is not 6/100 of a cent.

Mr. Hanley: The yes or no answer is apparent in the answer the witness gave.

Trial Examiner Ballinger: The witness may answer the question.

The Witness: Your Honor, I could not answer the question in any other than the manner in which it was answered. I know, because of my knowledge of contracting and dealing with accounts throughout our various territory, that a problem of contacting four jobbers, on one hand, doing 13,000,000 gallons, as contrasted with contacting twelve, on the other, doing 4,000,000 gallons, that 4404 the per gallon cost of the supervision and selling cost in the first case must of necessity, if anything, be less than the calculation as indicated in our exhibit, as showing 6/100 of a cent.

Trial Examiner Ballinger: As the Examiner understands, counsel wants to know whether or not the computation—what is it, 6/10 of a cent?

The Witness: 6/100.

Trial Examiner Ballinger: ~~—6/100 of a cent is absolutely accurate.~~

The Witness: Judge, there is nothing absolutely accurate about accounting when there is an allocation involved.

By Mr. Austin:

Q. Your answer, Mr. Boatwright, is that, in your opinion, the figure for Detroit would be less than 6/100 of a cent?

A. My answer is that it would be 6/100 or less.

Q. Have you made any similar study to determine the actual cost per gallon of selling supervision costs in connection with jobber business in Detroit in either 1939 or 1940?

A. No, that was explained completely earlier in the testimony as being almost a physical impossibility inasmuch as the expense accounts of the supervision in Detroit would not show the time period when they had worked on the specific accounts involved as would the expense accounts of the Wichita and Kansas City managers show their time spent in Oklahoma.

Q. Will you turn to Respondent's Exhibit 33-C, 4405 "accounting costs"?

This exhibit refers to "total accounting cost in the Kansas City and Wichita fields for the year 1939." Does this mean the total accounting cost for 1939 for these fields or the total accounting cost for jobbers only?

A. That is the total accounting cost for the jobbers only.

Q. Was this cost assigned directly to the marketing of gasoline to the jobbers or was an apportionment and allocation made of the total accounting cost?

Mr. Hanley: That is objected to as repetitious, having been gone into fully and answered a dozen times yesterday.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

The objection is overruled.

The Witness: Read the question, please.

(Question read.)

A. The accounting cost was a total accounting cost for all products. The divisor of 2,166,168 is a divisor which is made up of the total of refined oils, naphtha, and gasoline, lubricating oil and other products. It excludes the Gibson Oil Company and the Kramer Oil Company.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

4406 Trial Examiner Ballinger: On the record.

Mr. Austin: Will you read the answer, please?

(Answer read.)

Mr. Hanley: Let me understand it. I will ask this question. Does that include products other than refined oil and gasoline?

The Witness: Both the cost and the divisor does include products other than gasoline.

Mr. Hanley: I see.

The Witness: The accounting cost is on an all-gallonage basis through specific accounts.

By Mr. Austin:

Q. You mean it includes motor oils?

A. Yes, sir.

Mr. Austin: Now, I am completely confused.

Will you read the previous answer?

The Reporter (reading): "The accounting cost was a total accounting cost for all products. The divisor of 2,166,168 is a divisor which is made up of the total of refined oils, naphtha, and gasoline, lubricating oil and other products. It excludes the Gibson Oil Company and the Kramer Oil Company."

By Mr. Austin:

Q. I certainly understood your testimony yesterday to be, Mr. Boatwright, that the 2,166,168 gallon figure

4407 was only gasolines and refined oils.

A. I don't think so. I think that my explanation of the difference between the 2,166,168 gallons, on the one hand, and the 4,205,668 was brought about by excluding two jobbers in both the accounting and credit costs, while their total volume of gasolines and refined oils was included in the second item of 4,206,000, when we applied the ratio of time devoted to those particular products.

If there is any question in anyone's mind, I should like to restate so that could be clearly understood.

Q. Well, will you state, first, whether the figure of

4,206,686 gallons, which appears on Respondent's Exhibit 33-D and again on 33-E is gasoline and refined oils only or does that include other products?

A. The 4,206,686 is gasolines and refined oils only. You will recall in the testimony of yesterday I pointed out that the total of all products was 4,502,263.

Q. Yes.

A. Then you asked me to perform the arithmetic of deducting so that you could get the volume of the other products.

Q. Yes.

A. Now, after applying the time ratio devoted to gasolines and refined oils, obviously our divisor must be limited to those two products. I think you will agree on that.

Q. Yes, that is right, the 4,000,000 figure. I under-
4408 stand that.

A. Yes. Now, when we are dealing with accounting and credit costs, we took the accounting and credit costs incident to particular accounts and we divided the accounting and credit costs on those particular accounts by the volume moving through those costs to get an accounting and credit cost for handling jobber business.

Q. And that is for volume of all products moving through those accounts?

A. Yes, sir. Yes, sir.

Q. Do you know the amounts of the 1939 gallonage of the ten jobbers referred to under the accounting and credit cost headings in Respondent's Exhibit 31-C?

A. Yes, I have that. The refined oil gallonage was 22,000—it is either a 5 or a 3; I can't tell from the carbon —I think it is 22,521 gallons. The naphtha and gasoline is 1,922,015.

Q. That is refined oil and gasoline? Is the balance of the 2,166,000 figure motor oils?

A. Well, it is made up of motor oils or other products. Motor oil represents 195,513; other products, 26,119. These other products, in most cases were either Diesel or tractor fuels.

Q. I don't believe you stated in answer to my last question, Mr. Boatwright, how these accounting costs
4409 in the Kansas City and Wichita fields were divided
or apportioned as between jobber business and the other business in the field.

A. I don't think that question has been asked.

Q. Well, I do ask it now.

A. Well, what was done was in each field a study was made of the sales tickets, the various reports received or compiled on this business through jobbers, correspondence files were reviewed, and all other expense items such as credit information reports were analyzed for each of the departments. Estimates of the total time of the accounting department in handling these tickets, reports, correspondence, and so forth, were made by the department heads. These estimates were then checked with the office manager in each field to make certain that they were a fair and reasonable estimate of time involved for this class of customer. From these estimates of time a cost per gallon was determined and applied to the sale of the respective products.

Q. I believe you have already stated that you had no business in Oklahoma, the company had no business in Oklahoma except jobbers insofar as the sale of gasoline was concerned.

A. Yes, sir.

Q. Did it have any business in Oklahoma in regard to any other products?

A. No. All of our Oklahoma business is done through jobbers.

4410 Q. I see. So that the other accounting costs would be costs in connection with business in Kansas, probably?

A. You mean all other accounting costs incurred by the Wichita and Kansas City fields?

Q. Yes. You have to make an allocation or an apportionment there.

A. Yes.

Q. And I assumed, naturally, that was at the head office and involved the entire costs of the field and it was necessary to segregate or apportion in some way the accounting cost allocable to Oklahoma business.

A. All other accounting costs incurred in these two fields were incurred in handling the business in the state of Kansas or in the state of Missouri, where part of the Kansas City field lies.

Q. Does the figure of $2,226.36 represent the total accounting cost of distribution to jobbers in the Kansas City or Wichita fields or the total for Oklahoma jobbers only? In other words, were there other jobbers in the Kansas

City and Wichita fields besides those included in this survey?

A. Yes, there were. The $2,226.32 representing the total accounting cost is applicable only to jobbers in the state of Oklahoma and excludes the Gibson Oil Company, at Tulsa, and the Kramer Oil Company, at Oklahoma City. It is the cost directly applicable to the residual
4411 number of jobbers in the state of Oklahoma.

Q. Did you make any study or has the company made any study of marketing costs as to all of the jobbers as a whole in the Kansas City or Wichita fields or any cost study including the jobbers other than the Oklahoma jobbers?

A. It has not. Again we are confronted with the identical difficulty that I have enumerated in the Detroit field, the impossibility of breaking down the costs that may be represented by going to lunch with a jobber, or something of that type. Now, when the expense account reveals the location of the expenditure and the manager and his assistants are in Oklahoma, it is an easy task to isolate time and cost. It would be very difficult to isolate time and cost of the Kansas City manager in handling the jobbing business of a jobber located in Kansas City proper.

Q. I can understand that as to selling costs, Mr. Boatwright, but isn't the matter of sales accounting, keeping track of shipments and payments and routings, and all that sort of thing, very much the same whether the jobber be located in Oklahoma or whether he be located in Kansas City or Wichita?

A. Well, in terms of accounting or credit cost, the study would be possible. It has not been made. The difficulty, as you state, is incident to the supervision and selling cost, but we have had no study or have made
4412 no study of the accounting costs separately for the jobbers located in Kansas City proper.

Mr. Hanley: Is it contended that we should, your Honor?

Trial Examiner Ballinger: The Examiner is unable to answer the question.

Mr. Hanley: I am trying to propound it through your Honor, and I am hopeful of getting an answer out of the Commission.

Trial Examiner Ballinger: You may possibly inquire of counsel for the Commission and thus elicit the information you desire.

Mr. Austin: Counsel for the Commission is of the opinion that it will be very necessary for the respondent to make such a study in the Detroit field if it is to sustain its burden of proof in any attempted cost justification in this case.

Mr. Hanley: Of course, that is the opinion of counsel again. I was just wondering whether he thought we ought to have done it in Kansas City. We haven't computed the distance from here to the moon, either, but I didn't understand that just because counsel thought we ought to, that we had to.

By Mr. Austin:

4413 Q. You referred to "a separate analysis of sales tickets and time estimates." Does this mean sales tickets and time estimates expended only for the jobber business or does it mean sales tickets and time expended for the entire business of the field?

A. It means sales tickets and time expended on the jobber business only.

Q. You see, my question, Mr. Boatwright, refers to a separate analysis of sales tickets and time estimates. Now, I don't know whether that meant analysis of all the accounting costs or whether there was a previous separation before that was made.

A. No, this had to do with the jobber business, pure and simple.

Q. I believe you already stated that the figure of $2,226.32 represents the total accounting cost for the jobbers for all products and not merely for gasoline and refined oils.

A. I have so stated and I have eliminated in that answer again the Gibson Oil Company and the Kramer Oil Company.

Q. You will pardon me if I have not referred to that elimination each time because these questions were prepared upon the assumption that all of the jobbers were included.

A. Yes.

Q. Why did you make this study of accounting and credit costs for all products instead of eliminating or segregating it to gasoline and refined oils?

4414 A. The difficulty there is that the sales ticket comes in and it includes many products. Therefore, the accounting is for a transaction, and to segregate the time among products on the part of the accountant would be quite difficult. Likewise, when an investigation is made into the credit rating of a particular customer, that credit rating is evaluated not in terms of the sale of one product but in the sale of all products. Therefore, the allocation had to be predicated upon an all-gallonage basis.

Q. Might not the accounting cost per gallon differ as between gasoline and refined oils, on the one hand, and motor oils and greases, on the other? Or have you any opinion on that?

A. It isn't likely to differ.

Q. I assume that the cost of handling a ticket in the office would be the same whether it included one product or several products, or regardless of the quantities of each product; or is that true?

A. Well, it depends upon the number of entries that must be made from that ticket. Pretty generally, however, a ticket—the handling of a thousand tickets tends to uniformity. Any one ticket may take a little longer than any other one, but then when you deal with a number beyond a thousand you begin to strike a stability level.

Q. Still an entry of 5,000 or 10,000 gallons of gaso-
4415 line could be handled with as much facility as an
entry for a few pounds of grease or a few barrels
of motor oil, could it not?

A. Yes, sir.

Q. And that being true, might it not well be that the accounting costs per unit on motor oil and greases might be substantially higher than on gasoline?

A. Well, it might be higher. Just what is meant by "substantially" I don't know.

Q. Well, I don't, either.

A. Yes. But it was impossible to segregate the time among the products when the first credit cost, the credit investigation is an all-gallonage investigation. I think you will concede that, because we are attempting to determine the credit of the customer who buys many products. The credit risk on gasoline may be just as great as the credit risk on motor oil, but to differentiate that credit risk among products can't be done.

Now, it so happens that the accounting department were unable to segregate their accounting costs among products, but it cost them so much to handle this group of so many thousand tickets. It cost them that much to handle that many thousand tickets. Therefore, the divisor must be the products represented on those tickets.

Q. I only asked that question, Mr. Boatwright, because
I believe you stated that at the time you had pre-
4416 pared this—well, you answered at least yesterday
that you were not sure whether the Detroit jobbers
purchased motor oils from the company, and yet when you prepared this statement, you grouped them all together, so that I felt that in order to justify that you ought to be fairly confident in your opinion that the accounting cost does not vary much as between motor oils, on the one hand, and gasoline, on the other.

Mr. Hanley: Well, is that a question or an argument, your Honor? What is the witness supposed to do?

Trial Examiner Ballinger: Read the—

Mr. Austin: If there is a motion to strike, I won't oppose it.

Mr. Hanley: There is a motion to strike, if you invite it.

Trial Examiner Ballinger: The motion is granted.

Mr. Austin: It is simply explaining to the witness what I meant, as I do frequently, in case he desires to make any further explanation, which he may do or not, as he chooses.

By Mr. Austin:

Q. Has any analysis or computation been made by the Standard Oil Company of the amount of the total accounting costs in the Detroit field for 1939 which is allocable to the business of the four jobber accounts in the Detroit area?

A. No such calculation has been made.

Q. Has any such analysis or computation been made
for the year 1940?
4417 A. No.

Q. Do you know whether the amount of such accounting cost was $2,226?

A. In Detroit?

Q. Yes.

A. No, I do not. There is an entirely different volume involved. I do know this: I know our accounting constructions are identical in both Kansas City and Detroit. They both work on the same code of accounts. The time for handling a group of tickets is the same among the different fields. Therefore, the accounting cost in Detroit should be accurately represented by accounting costs incurred on jobber business in any other field.

Q. Is it not a fact that the amount of gasoline purchased in 1939 and also in 1940 by Ned's Auto Supply Company alone was 4,230,000, whereas the total gasoline and refined oil gallonage of the 10 jobbers used in computing the accounting costs in Oklahoma was less than 2,000,000 gallons?

A. I do not have the exact figure of Ned's Auto Supply sales before me. However, the figure you mentioned is in the neighborhood, as I recall it. It is quite true that sales to jobbers in Detroit have been considerably in excess of sales to jobbers in Oklahoma. That is why throughout my direct testimony and throughout this testimony I have taken the position that similar costs, if calculated
4418 on Detroit, would either be equal to or less than the calculations we have attributed to jobbers business in our cost comparison. The Oklahoma jobber costs of accounting and of credit I know to be higher than would be similar costs incurred in doing the business with jobbers in Detroit.

Q. Can you state as a fact that the accounting costs of handling the four Detroit jobbers accounts in 1939 per gallon of gasoline moving through those accounts was 10/100 of a cent?

A. It could be 10/100 of a cent or less.

Mr. Austin: May we have a five minute recess, your Honor?

Trial Examiner Ballinger: The hearing will stand in recess for 4 or 5 minutes.

(A recess was had.)

Trial Examiner Ballinger: Come to order. You may proceed.

By Mr. Austin:

Q. Turning to Respondent's Exhibit 33-E, there is a title "general office expense" under which there is a computation resulting in an estimated cost of 1/100 of a cent per gallon for general office expenses charged to the marketing costs of marketing or selling and delivering gasoline to the Oklahoma jobbers; is that correct, Mr. Boatwright?

4419 A. Yes, sir.

Q. What is meant by "sales promotion—tank car sales—refined oil and gasoline department of the general office"?

A. Well, we maintained a tank car sales department whose duties were the sale of refined oils and gasolines. That department is classified as a part of the general manager's office and is in the classification of sales promotion. Its duties are the sale of tank cars of gasoline.

Q. Did the costs of that department as reflected on this exhibit include any general office accounting department expense?

A. No.

Q. Any advertising expense?

A. No. I should state this relative to the accounting: That department did make out the bills of lading and information of that kind and recapitulated its sales for the report on tank car sales.

Q. Is the cost of that function included here?

A. It is.

Q. The next question I was going to ask was whether these costs shown under this heading on Respondent's Exhibit 33-E are sales promotion costs only. Now, I assume that to the extent that you have just referred to the accounting department, that would not be a sales promotion cost, but would you give an answer to the question?

4420— A. Well, this is the cost of operating the bulk sales department in the general office and performing all of the functions incident to that department. As I say, it is classified in our company as a division of the sales promotion department. It would mean contact with the vice-president in charge of sales by the department heads to secure approval or lack of approval, which may happen once a year on some accounts, or once in five years on others, and it would include the making of the forms, reporting the sales accomplishments of the department; it would include the making of the bills of lading; it would cover telephone calls and telegraph expense and information of that type in contacting customers.

Q. Is this phrase here "sales promotion—tank car sales—refined oil and gasoline department of the general office"—does that refer to one thing or three things? In other words, is that all one department, all of the title, or does that mean more than one department?

A. Well, the tank car sales department handling refined oil and gasoline are a part of the sales promotion. All of that is one department.

Q. And is that department concerned solely with tank car sales?

A. It was at the time this study was made.

Q. What does the figure 190,845,750 represent?

4421 A. It represents the gross sales of refined oils and gasolines by that department during the year 1939.

Q. Then does that figure represent the total tank car sales of the company only? In other words, does that include only tank car gallonage?

A. Yes.

Q. And if there were any transport truck operations—of course, I am including that under the term "tank car" for this purpose, and I assume that you are.

A. Yes, I understand this totally excludes any tank wagon delivery. This is a tank car business of the company, in 1939.

Q. Does it include other products than gasoline and refined oils?

A. No. Other products such as lubricants are handled through our lubricating department.

Q. That figure o[illegible]0,000,000 is the total for the entire territory of the company, is it not?

A. It is.

Q. Why were not figures for sales promotion tank car sales available from the refined oil, tractor fuel and gasoline price department for the last six months of 1939?

A. In the first six months we maintained two departments. One department was the tank car sales department and the other one was the price department. Effective July 1st, these two departments were consolidated

4422 under one head and it seemed better for us to extend the cost for the six months to a year basis than it would be to attempt to allocate among the time of a consolidated unit.

Q. Then similar figures were not kept separately by the consolidated department?

A. No. After the departments were consolidated, which was purely an economy move, our records then maintained the cost on this consolidated department.

Q. The consolidated department still apparently was concerned only with refined oil, tractor fuel, and gasoline, is that right?

A. But prices as well, tank wagon prices.

Q. The next heading on Respondent's Exhibit 33-E is "point of sale advertising." Do the expenses here shown include the cost of advertising signs, jewel globes, and maps supplied to all of the Oklahoma jobbers in 1939?

A. They do.

Q. Is that the only advertising expenses charged to the jobbers in this exhibit?

A. Yes, sir. I might add, that is all the advertising expense we had.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

4423 By Mr. Austin:

Q. Was this advertising cost assigned directly to each account?

A. By individual account?

Q. Yes, by the individual jobber?

A. Well, what we did was this: We got from the advertising department a record of all of the signs and the jewel globes and any other properties that we had installed at the outlets of these various jobbers. The very process of computation led to a computation by outlets. You see, it had to be done on that basis because our properties are listed according to the outlet.

Q. What do you mean by "your properties"?

A. Signs.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

Will you explain what you mean by the term "signs"?

The Witness: Certainly. Although all of these signs may not be in existence at every individual outlet, we normally expect to find a Standard Service sign, which is the hanging sign or the sign which is in the frame. It is a large enamel sign identifying the outlet as a dispensor of Standard Oil products. Usually we find an Isovis
4424 sign. That is an enameled sign which is fastened, as
a rule, on the side of the station at some point. Then we may find a credit card sign indicating to the passing tourist that the credit card is honored at that outlet. Then there is at some outlets a sign which reads "Standard Oil Products" which is an enamel sign fastened across the front of the station.

Those are the signs which we normally expect to find at an outlet. Now, if that distributor also handles Atlas tires, there may be an Atlas tire sign at that outlet, which would be included in the cost of merchandising of automobile supplies.

Trial Examiner Ballinger: Proceed.

By Mr. Austin:

Q. Would not the amount of the advertising material supplied differ as to each account?

A. Well, there would be a difference especially in the unit cost, if the through-put varied. Now, as I have enumerated these signs, I would expect to find that each of these outlets had the Standard Service sign. Well, now, the Standard Service sign will last an average of about 7 years. If the through-put at one outlet was 10 times the through-put of another outlet, the cost on a per gallon basis for signs would be greater at one that at another. The same thing would apply to jewel globes. As a rule, you will find three pumps at most outlets calling for three jewel globes.

4425 Naturally, if the output at any one station was double the output of any other station, the write-off of the jewel globe advertising cost on a per unit basis would be just double in the one case compared with the other.

Q. It is true, is it not, that there was a great variation in the through-put for the gasoline sold through these various jobber accounts?

A. There was a variation. That is always the case.

Q. My recollection is that the two accounts that you have specified as not being included under the estimate of accounting and credit costs or the computation and accounting of credit costs had a total gallonage of practically as much as the other 10 jobbers combined?

A. They may have.

Q. Is that correct?

A. They have had more outlets. You see, we sell to a jobber and the jobber may have 1 or may have 2 or 25 outlets, so I can't speak on the through-put for each point of installation of a point of sale advertising.

Q. There is not—

A. There is bound to be a difference in the through-put at different stations. That is just conceded.

Q. You stated that you had to, in making this computation on Respondent's Exhibit 33-E, first determine the amount of such advertising material supplied to each outlet?

4426 A. Yes, but when I refer to an outlet, I refer to a reseller outlet, not the jobber, because, you see, we wouldn't have on our records that so many signs were installed at the outlets controlled by the Gibson Oil Company, but we would have on our records a given sign at a given outlet served by the Gibson Oil Company. In other words, our signs are identified according to the actual physical location of the installation.

Q. And the number of outlets operated by each of these jobbers and the number of signs and jewel globes supplied to each outlet is not shown in Exhibits 33-C, D and E, is it, Mr. Boatwright?

Trial Examiner Ballinger: Do the jobbers operate the outlets?

The Witness: The jobbers serve the outlets, your Honor.

By Mr. Austin:

Q. I will accept the correction. I wasn't clear on that point as to whether these signs were supplied to outlets operated by the jobbers or merely served by them.

A. The jobbers bought the merchandise from the Standard Oil Company and, in turn, effected delivery to reseller outlets for which they served even as Wayne Oil Company does in Detroit.

Now, I am not certain I have your question clear.

4427 I wonder if it might be re-read.

Trial Examiner Ballinger: Read the question.

The Reporter (reading): "And the number of outlets operated by each of these jobbers and the number of signs and jewel globes furnished to each outlet is not shown in Exhibits 33-C, D and E, is it, Mr. Boatwright?"

A. No, it is not.

By Mr. Austin:

Q. Is it the practice of the company in Detroit to furnish signs and jewel globes which are installed at the retail service stations who purchase their gasoline from Citrin-Kolb Oil Company, Wayne Oil Company and Stikeman Oil Company?

A. Yes.

Q. You have just referred to the variation in unit cost of point of sale advertising which might exist as between different outlets. Would it not follow that the cost per gallon of point of sale advertising would differ for each jobber?

A. That is entirely possible.

Q. And would not the same probably be true as to each of the four Detroit jobber accounts?

A. Yes, sir.

Q. Do you know how much point of sale advertising was supplied in 1939 or in 1940 to any one of the Detroit jobbers, and by "Detroit jobbers" I mean to include outlets supplied by the particular jobber?

4428 A. No, sir, I do not.

Q. Do you know whether the total cost of such materials supplied to the four Detroit jobbers in 1939 was $2,010.92?

A. No, I would not expect that it would be. I would expect it to be greater than $2,010.92. You have got an entirely different number of outlets and you have got an entirely different through-put of your outlets. I would expect to be able to testify on the per unit cost, however.

Q. But you do not know the exact amount?

A. I do not know the exact dollar value.

Q. Has an computation been made?

A. No.

Q. Of the amount of point of sale advertising supplied to the Detroit jobbers in 1939 or in 1940?

A. No, sir.

Q. Have you a record of the number of gallons of gasoline purchased by each of the Oklahoma jobbers in 1939, and if you wish, you may include refined oils, if you have those figures.

A. I do have such records.

Q. Have you it with you?

A. Yes.

Q. Will you read that into the record, please?

A. I have two columns, one showing refined oil and the adjacent column showing naphtha and gasoline. I
4429 shall read the refined oil first, the naphtha and gasoline figure secondly.

Atlas Oil Company, 424 gallons, refined oil; 216,849 gallons, naphthas and gasoline.

J. G. Brown, no refined oil; 85,405 gallons naphtha and gasoline.

Harry T. David, no refined oil; 372,960, naphtha and gasoline.

W. H. Elliot, 106 gallons refined oil; 12,740, gasoline.

Hugo Oil Company, no refined oil; 222,428, gasoline.

C. R. Peck, no refined oil; 124,917 gallons, naphtha and gasoline.

Petroleum Products Company, 15,419 or refined oil, 165,175 gallons, gasoline.

Ark Filling Station, no refined oil; 6,549 gallons, gasoline.

Davis Oil Company, no refined oil; 18,393 gallons, gasoline.

W. H. Elliot, in the Wichita field—you recall I mentioned the W. H. Elliot above—5 gallons, refined oil; 54,843 gallons, naphthas and gasolines.

Faulkner Petroleum Company, 704 gallons, refined oil; no gasoline.

Field Brothers, no refined oil; 105,197 gallons,
4430 gasoline.

J. H. Jimmerson, no refined oil, 26,646 gallons of gasoline.

Love Petroleum Company, 5,863 gallons, refined oil; 143,872 gallons, gasoline.

H. R. Potter, no refined oil; 109,469 gallons of gasoline.

Schroeder Babcock, no refined oil; 25,939 gallons, gasoline.

Swart Oil Company, no refined oil; 225,533 gallons, gasoline.

Whaley Oil Company, no refined oil; 5,108 gallons of gasoline.

Gibson Oil Company, 18,489 gallons refined oil; 1,285,631 gallons, gasoline.

Kramer Oil Company, 9,115, refined oil; 948,915, gasoline.

Mr. Hanley: Will you please read the question to which this was an answer?

(Record read.)

Mr. Hanley: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Mr. Boatwright, is it not a fact that there are
4431 many tank wagon reseller customers of the Standard
Oil Company in Detroit who buy more gasoline per
year than a number of the individual jobbers you have
referred to, and also more than the average of all of them?

A. There are many tank wagon customers in Detroit who buy more than some of these individual jobbers.

Q. Do you know that the amounts of gasoline purchased from the Standard Oil Company by the respective Detroit jobbers in any one year differs substantially?

A. From the gallonage that I have just read?

Q. No, as between each other in the amounts purchased by the Detroit jobbers.

A. In other words, do the purchases of Ned's Auto Supply differ substantially from the purchases of Wayne Oil Company?

Q. Yes.

A. There is a difference in the volume of each of these accounts. Whether you would regard it as substantial or not would depend upon your use of the word.

Q. Is it a fact that the four Detroit jobbers purchased in 1940 more than three times as much gasoline as was purchased by the twelve Oklahoma jobbers in 1939?

A. May I see the exhibit that was introduced yesterday? You are asking me to say three times and I don't know whether it is three times.

Q. Which exhibit is it?

4432 A. The one you introduced yesterday.

Q. Yes. The witness refers to Commission's Exhibit 87.

A. It is a fact that the gasoline sales of the four Detroit jobbers was in excess of three times the sales of gasoline to the Oklahoma jobbers.

Q. It is also a fact, is it not, Mr. Boatwright, that you have included in making your computations on Respondent's Exhibits 33-C, D and E the marketing expenses of the Standard Oil Company in connection with its business with the jobber who purchased no gasoline in 1939?

A. That is not quite an accurate statement.

Q. Will you correct it?

A. Certainly. The Faulkner Petroleum Company, which is the one you are referring to as having purchased no gasoline, was the account that I mentioned existing in the Wichita field performing a warehousing function for our company. ~~Now, in~~ investigating the credit of the Faulker Petroleum Company and in doing the bookkeeping of the jobber in Oklahoma, the credit investigation and the bookkeeping cost of that company was included as was his gallonage included in figuring both accounting and credit costs. When we come to supervision and selling, we apply our ratio of time distribution to get to a gasoline and refined oil cost. The application of this ratio excludes that account in the calculation of that unit cost of 6/100 of a cent a gallon.

4433 On Respondent's Exhibit No. 33-E, the subject "general office expense, Faulker Petroleum Company" would be automatically excluded because, as I have previously testified, the motor oil sales are handled by another department.

Now, in Respondent's Exhibit 33-E, we would have no Standard Service sign; we wouldn't have the signs available at the warehouse. They are at the point of sale. Therefore, the only place where a jobber has been included, which does not handle gasoline, is in the case of the accounting and credit cost and in determining the unit costs, volume was included as a part of the volume to secure those restricted unit costs.

Q. Do you know that the per gallon cost of point of sale advertising supplied to any one of the Detroit jobbers in 1939 was 5/100 of a cent?

A. I know it was 5/100 of a cent or less.

Q. Have you made any cost study for the Detroit area to determine the unit cost of point of sale advertising in 1939 or 1940 to any jobber customer?

A. We have not. I think there is a difficulty there that should be explained. We could determine our investment cost at an individual reseller outlet served by a jobber. We could not determine the per gallon cost of this point of sale advertising at that outlet because the jobber maintains all records of the distribution of his product among the different outlets, you see. So

4434 whereas we would have a record of the actual installations at the point of sale, we would not have the through-put of those outlets except in the aggregate of our sales to jobbers. Then if the jobber does both a business through reseller outlets and through a consumer, it would be an unfair thing to do to divide it by his total gallonage. That would require that we have a distribution of his sales by channels, which would correspond with our sales by channels. Do you see the difficulty incident to the question?

Q. Well, I don't quite understand it to this extent: that is, doesn't everything that you have just said apply equally to the Oklahoma jobbers? In other words, couldn't you have made this computation on the Detroit jobbers in the same manner that you made one for the Oklahoma field?

A. We could have in total by each jobbers in Detroit.

Q. Yes.

A. As we did. But we could not have made it by individual outlets served by the jobber unless that jobber would have supplied us with the through-put.

Q. Well, I was only asking you as to the jobbers, not as to their individual outlets.

A. I am sorry. I thought you said of any individual outlet supplied by any jobber.

Q. No.

A. I am sorry, my misinterpretation of the question.

4435 Q. What salaries are paid salesmen who are employed by the Standard Oil Company in the Kansas City and Wichita fields?

A. Oh, approximately $200 a month.

Q. Do you know what was paid the two salesmen who served the Oklahoma jobbers in 1939?

A. I have the salesmen's salary, including payroll cost, which would include the tax which I mentioned yesterday, plus the traveling expense, plus depreciation of salesman's car. I can give you the cost of a unit of operation.

Q. Well, do you know what the actual salesman's salary was? What he received?

A. No, I do not.

Q. Per month?

A. I do not have that record with me, the exact salary that the salesman received.

Q. Do you know whether the salaries paid those salesmen were lower than salaries paid salesmen in the Detroit field?

A. No, I would say that they were approximately the same. A reseller normally makes between two hundred and two hundred and—oh, probably $35. Salary scales in Kansas City and salary scales in Detroit are on just about the same basis.

Q. And was that true in 1939?

A. Yes, sir. The difference in a salary scale will come
when you are in a territory such as the Dakotas, but
4436 where you have two fields, both of which have a large
metropolitan area, there is a great similarity of salary scales.

Q. Well, these salesmen working through Oklahoma were not working in a metropolitan area, were they?

A. No, they were not working in a metropolitan area the size of Kansas City. But there are some pretty good sized cities covered by these salesmen. Oklahoma City and Tulsa, and so forth, are quite different than living up in some small town in North Dakota.

Q. You have no figures there that show what the salesmen were paid?

A. I do not. I have as I say, I have it in total but that would include depreciation on his car and his traveling expense, and so forth.

Q. Yes. Well, those items I assume would be approximately the same in the different fields.

A. They would be.

Q. So I don't think that figure would help.

A. Your assumption, in all fairness, may be applied also to salaries.

Q. How do salaries of accountants and other employees in Kansas City, in the Kansas City and Wichita offices, compare with salaries paid employees doing similar work in the Detroit office?

A. Very similar.

4437 Q. Will you turn to Respondent's Exhibit 32, form 189, Mr. Boatwright? Account 075 is entitled "advertising—other costs (including E.L.A.)." What is meant by "other costs"?

A. Other advertising costs.

Q. Does the whole item refer to advertising?

A. Yes, it does. I think that must have been adopted originally to differentiate between expenditures in newspapers and other advertising costs.

Q. Newspaper advertising expense is now included in that account, is it not?

A. It is.

Q. What E.L.A. expenses are included in that account which are not included under account 070?

A. Well, 070 is for dispensing equipment loaned, which I have explained previously, while the account which has borrowed and is utilizing this equipment incurs certain advertising costs, because of furnishing certain advertising signs, and so forth. Therefore, including E.L.A. would mean including the signs and the advertising expenditures on the part of the company made at outlets on an E.L.A. basis.

Q. Does that mean that signs which are supplied to a service station under an equipment loan agreement are included in advertising costs rather than in account 070, E.L.A. cost?

A. Yes.

Q. Commission's Exhibit 84-A contains a figure

4438 of $76,000 for newspaper advertising in the Detroit field in 1937. Did the company incur expenses for newspaper advertising in the Detroit field in 1939 and in 1940?

A. Yes.

Q. And were such expenses incurred in Wichita and Kansas City fields in 1939 and in 1940?

A. They were incurred in the Wichita and Kansas City fields. No newspaper advertising is done in Oklahoma.

Q. Does the company incur expense for outdoor posters in Oklahoma?

A. No.

Q. Does it have any expenses which are incurred in connection with the distribution of petroleum products in Oklahoma of—that is, expenses of printed matter and direct mail advertising?

A. No, we do not furnish that to jobbers.

Q. How about motion pictures?

A. No. You see, the motion pictures—as you will recall, I explained that that is used primarily in connection with the dealer meetings. We do not hold dealer meetings in Oklahoma for the Oklahoma jobbers.

Q. Then it is true, is it not, Mr. Boatwright, that there are many substantial advertising expenses which the company incurs in the Detroit area which it does not incur in the Oklahoma area?

4439 Mr. Hanley: What does counsel mean by "substantial"?

Mr. Austin: I mean, specifically, the expenses listed on Commission's Exhibit 34-A; but since the figures there are different from 1937, naturally, they would not be the same for other years. Nevertheless, I am referring to expenses of that nature and in approximately those amounts.

Trial Examiner Ballinger: Are the amounts large or small?

Mr. Austin: $76,000 for newspaper advertising, $18,000 for printed matter and direct mail, $12,000 for motion pictures, $11,000 for outdoor posters. Those are the four largest items.

Now, what is the question?

(Question read.)

Mr. Austin: I would like to say "some" instead of "many": some advertising expenses.

Mr. Hanley: That is objected to unless counsel indicates chargeable to what operation.

Mr. Austin: That would be a matter of expert opinion. I am asking a question of fact as to expenses incurred by the company in Detroit which are not incurred in Oklahoma.

Trial Examiner Ballinger: In connection with the sale of gasoline?

Mr. Austin: Yes.

4440 Trial Examiner Ballinger: The objection is overruled.

A. There are expense items incurred in Detroit or in any other field in advertising that are not incurred in Oklahoma. These expenses are incurred on the tank wagon channel of distribution.

Mr. Hanley: Which does not exist in Oklahoma?

The Witness: Which does not exist in Oklahoma.

By Mr. Austin:

Q. By that you mean, do you not, Mr. Boatwright, that you have allocated these advertising expenses to the tank wagon channel of distribution as a company accounting practice?

A. Well, it is more than a company accounting practice. What you say is true, that we have allocated them to that, but actually they are tank wagon channel costs.

You will recall that I explained that our advertising allocation to given areas, we attempt to balance our expenditures by giving consideration to potential and to our sales. Now, the balancing effort results in an appropriation of funds for a given district. The objective of that advertising is to secure customers affiliated with the regular use of our brand of merchandise. The customer affiliation is a tank wagon affiliation.

Q. Will you explain why that is any more true of customers who buy at tank wagon reseller stations than
4441 those who buy at Ned's Auto Supply Company stations?

A. The customer association is an association with the brand.

Q. Well, the Standard Oil brand appears at Ned's as well as at the reseller stations, does it not?

A. Yes, sir, it does. I think I explained in connection with Ned's a typical benefit which we received from that advertising.

Q. Turning to page 2616 of the record, in your direct examination you testified:

"If, on the other hand, we run an advertisement in one of the Detroit metropolitan papers, in our judgment, and I think rightly, that is primarily an advertisement to consumers buying from resellers, and is, therefore, a reseller advertisement cost."

Is that still your opinion?

A. Yes.

Q. Do you consider Ned's Auto Supply Company a reseller?

A. Not in terms of our property transactions. Ned's Auto Supply Company are a wholesaler.

Q. Ned's resells gasoline at retail, does it not?

A. They do.

Q. Commission's Exhibit 84-A lists six separate types of advertising expense incurred in the Detroit field in 1937,
plus an additional item of business expenses which
4442 are stated to be too small to show as separate classi-
fications. Was advertising expense of all the types shown on the upper half of Commission's Exhibit 84-A, including the types of expense included under "miscellaneous" incurred by the Standard Oil Company in the Detroit field in 1939 and 1940?

A. Yes.

Q. Turning to Respondent's Exhibit 32 again, Mr. Boatwright, form 189, I wish to direct your attention to account 060 entitled "plant maintenance" and account 110 entitled "depreciation expense—plant (building, machinery, equipment, furniture, and fixtures)."

Do the total amounts of the expenses for these two accounts as entered in the Detroit form 189 include any cost of sale or delivery to jobbers?

A. I don't think so. If there is any there at all, it would be in connection with plant maintenance and perhaps of the garage unit which might be used for maintaining the cars of the individuals who called on the jobbers. It would be an indirect—

Q. How about maintenance and depreciation of buildings such as the company's office building?

A. Is any of that chargeable to a jobber?

Q. Well, first, is it included in these accounts?

A. Well, maintenance of an office building—

Q. Is that included in plant maintenance and
4443 would depreciation of the office building be included

in plant depreciation in the two accounts we are referring to?

A. Just a minute. I will have to check that. Depreciation expense on the building of the main office is included in account 110.

Q. And maintenance is included in account 060?

A. I think that is correct. I do not have in my notes so indicated, but I think that is correct.

Q. Does the company have similar expenses in the Kansas City and Wichita fields?

A. Yes.

Q. Maintenance and depreciation in those accounts would also include maintenance and depreciation of office building, furniture and fixtures, and equipment, would it not?

A. Yes.

Q. Have you made any charge of such expenses to the marketing expense of doing business with the jobbers in Oklahoma on Respondent's Exhibits 33-C, D and E?

A. No, for one simple reason: Our entire company, our field layout and our office buildings are predicated upon the tank wagon business. You couldn't find that cost on a unit basis. We are fundamentally a tank wagon distributor of merchandise.

Q. Nevertheless, you do serve the jobber accounts through these same office facilities, do you not?

4444 A. We do.

Q. Account 206 entitled "office expense—all other—water, light, fuel, rent, and so forth"—does any portion of the expense entered in that account represent a cost of distribution in the Detroit field to the Detroit jobber accounts?

A. Well, there is obviously a small part because the Detroit office does maintain whatsoever accounting records are maintained on these jobbers.

Q. Is any such expense charged to the Oklahoma jobber business, on Respondent's Exhibit 33-C, D, and E?

A. It is not.

Q. Turning to account 070, 111—perhaps I should read the titles—070 is the E.L.A. expense; 111 is the depreciation expense, plant, E.L.A.; and 513 is also an E.L.A. account referring to losses by dismantling—out of pocket expense.

Trial Examiner Ballinger: E.L.A. refers to what?

Mr. Austin: Equipment loan agreement.

By Mr. Austin:

Q. And that, in turn, refers to dispensing equipment loaned; is that correct, Mr. Boatwright?

A. Yes, sir.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

4445 Q. Does the expense entered opposite the account numbers on Detroit form 189 for 1940 under the tank wagon reseller channel include any expense of sale or delivery of gasoline to leased service stations?

A. Company owned leased service stations?

Q. Service stations which are lessee service stations.

A. No, it does not.

Q. Is this expense incurred in connection with the sale of gasoline to any service station not having equipment installed under equipment loan agreement?

A. May the question be re-read?

Trial Examiner Ballinger: Read the question.

(Question read.)

A. Well, a separate expense classification is not incurred, naturally, on any account not having the equipment loan agreement. You will recall that on my direct testimony I brought out that similar expenses are incurred at company owned leased service stations, as an illustration, but there we lease the unit as a whole ball of wax.

By Mr. Austin:

Q. I am only referring now to the expenses included in these three accounts and, as I understand it, any similar expense at a leased service station is not included in those three accounts.

A. It is not included in those three accounts.

4446 Q. On Respondent's Exhibit 31-N, these expenses for 1937 were divided only by the gallonage of the 461 contract stations, whereas, if I read Respondent's Exhibit 33-B correctly, the expenses, the similar expenses in the Detroit field for 1940 are divided by the total reseller gallonage to obtain unit cost per gallon.

Are not Respondent's Exhibit 31-N and Respondent's Exhibit 33-B inconsistent in that respect?

A. Not at all. 31-N brings out a particular classification of expenses and divides that particular classification of expense by the volume moving through those outlets. In the calculation of Respondent's Exhibit 31, you will recall we were taking certain items. I stated that similar costs were incurred by the company at other outlets, but that because we had a rental income on that as a part of the property outlayed at the outlet. The division by the gallonage moving through the 461 type outlet was necessary. Now, when I got to 33-B, Respondent's Exhibit 33-B, I just take the sum total of all of the costs in that channel and divide it by the sum total of all of the gallons in that channel. There is no need for a segregation of individual items. All of the costs are in 33-B, and all of the gallonage is the natural divisor.

Q. Doesn't the method used on 33-B result in spreading this E.L.A. expense among all of the tank wagon reseller customers instead of just among those in connection
4447 with which it is incurred?

A. Why, naturally, but, you see, the costs incurred not classified as E.L.A. costs on the form 189 are also in there and what you are assuming is that there is a difference of E.L.A. actual costs through one channel as distinct from similar costs incurred by the company through another class of outlets. Actually, that may not be true at all. You see, I have got the actual cost on 33-B. My divisor must be my total gallonage.

Q. It would be quite easy in the Detroit form—I don't like the word "easy"—but it would be quite practicable from the Detroit form 1940, Mr. Boatwright, would it not, to determine the E.L.A. expense per gallon upon the gallonage sold to the 461 contract stations in the same manner that you did it on Respondent's Exhibit 31-N and then also to determine the leased service station expense which upon a gallon is sold to leased service—

A. There you are getting into trouble.

Mr. Hanley: Just a moment.

Mr. Austin: I would like to withdraw the question because it is obviously getting too complicated.

Trial Examiner Ballinger: Question withdrawn.

Mr. Austin: I suggest we adjourn for lunch, your Honor, until 2 o'clock.

Trial Examiner Ballinger: The motion is granted
4448 and now, at 12:35 p. m., the hearing stands in recess until 2 p. m.

(Whereupon, at 12:35 p. m. a recess was taken until 2 p. m.)

UNITED STATES COURT OF APPEALS

For the Seventh Circuit.

I, Kenneth J. Carrick, Clerk of the United States Court of Appeals for the Seventh Circuit, do hereby certify that the foregoing printed pages contain a true copy of Volume III of the printed transcript of the record, filed in this office on July 12, 1948, in:

Cause No. 9215.

Standard Oil Company,
Petitioner,
vs.
Federal Trade Commission,
Respondent,

as the same remains upon the files and records of the United States Court of Appeals for the Seventh Circuit.

In Testimony Whereof I hereunto subscribe my name and affix the seal of said United States Court of Appeals for the Seventh Circuit, at the City of Chicago, this 25th day of May, A. D. 1949.

Kenneth J. Carrick,
(Seal) *Clerk of the United States Court of Appeals for the Seventh Circuit.*

No. 29-C—Similar chart for City of Chicago. 4833

No. 30—Table showing gasoline volume (from Michigan Tax Inspection Report) for the years 1935 to 1940 for Sunny Service, Puritan and Charles E. Austin companies 4835

No. 31-A—Table showing difference in marketing costs between distribution through regular reseller outlet versus distributing through Ned's Auto Supply Co., for 1937 4835

No. 31-B to Q—Being a table of 16 pages, each page marked as a separate alphabetical 31 exhibit, all dated 4-30-41, with further explanations and breakdowns of respondent's cost justification on the ½¢ differential allowed Ned's from September 1936 to March 1938 on tank wagon deliveries off the tank wagon price 4836

No. 33-A—Cost justification of the 1½¢ differential between jobbers and tank wagon dealer price in Detroit per gallon for the years 1939 and 1940 4852

No. 33-B—Explains the method used in arriving at a tank wagon reseller marketing cost in Detroit for the year 1940 4853

No. 33-C to E—Three separate sheets, each marked as an exhibit, explaining the procedure in reaching the jobber marketing costs on the basis of the 1939 Oklahoma survey 4854

No. 36-B-C-D—Pages from printed booklet containing the Wayne County list of registered wholesale gasoline distributors 4857

No. 37-A to D—List of Wayne County wholesale distributors as of Feb. 1, 1941, showing for each the date of his registration record, each page being a separate alphabetical exhibit of Series 37 4860

No. 38-A to E—Typewritten list, each page having an alphabetical exhibit number of the 38 series, listing information as to 42 Wayne County gasoline wholesale distributors, compiled from the records of the Gasoline Tax Department for the year 1941 as to retail stations and bulk plants and for the month of March, 1941, as to gasoline suppliers.......... 4864

No. 45—Letter Aug. 27, 1936, Ned's to Standard Oil Co., at Detroit regarding intention to accept a competitive offer carrying a larger margin.......... 4868

No. 46—Letter Feb. 19, 1938, Ned's to Standard at Detroit advising of offer from Red Indian Oil Company and from Shell Petroleum Co., requesting tank car price or threatening to acceptive competitive offers 4868

No. 47—Letter Apr. 30, 1941, Red Indian Oil Co., to Ned's, confirming proposed price on Fleet Wing gasoline of discount off tank wagon price and additional advertising and hauling allowances.......... 4869

No. 48—Letter Dec. 23, 1940, from Ned's to Standard at Detroit, confirming quotation from Gulf Refining Co., on their brand name gas delivered at Ned's bulk plant 4870

No. 49-A—Letter Mar. 23, 1940, from Ned's to Standard Oil at Detroit requesting opportunity to discuss situation at earliest convenience.............. 4871

No. 49-B—Promotional letter from Langer's Auto Supply enclosing two pennies and offering saving of 2¢ a gallon 4871

No. 52-B—Statement of dealer tank wagon prices—jobber retail prices—retail wagon margins, on Standard Red Crown gasoline from 1-1-37 to Mar. 6, 1941 4872

No. 53—Chart showing total gasoline sales volume in gallons and ratio of retail and wholesale sales to total sales of each of the four Standard Oil jobbers for the years 1936 to 1940, inc. 4873

No. 54—Chart showing volume of gasoline in gallons of the four Standard Oil jobbers for the years 1936 to 1940 with number of retail outlets supplied by each 4874

No. 55-A & B—Gasoline sales in the Detroit area of wholesale licensed jobbers and distributors of branded gasoline, being a 2 page statement for the years 1936 to 1940, inc., showing the name of the jobber, when he received his wholesale distributor license, his supplier and his gallonage for each of said years 4875

No. 57-A & B—Two page statement showing the gasoline sales in gallons in the Detroit area of licensed wholesale jobbers and distributors handling non-brand gas for the years 1936 to 1940. This is substantially the same type as Ex. 55-A & B, except it covers non-brand instead of branded gas and does not show the source of supply nor the year when the distributor became a licensed distributor....... 4877

No. 58—Chart showing for the years 1936 to 1940, inc., the total sales in the Detroit area, the total Standard Oil in said area and its percentage of total sales, Standard Oil sales exclusive of jobbers and percentage, Standard Oil jobber sales and percentage, sales of licensed jobbers other than Standard Oil handling branded gas and percentage, sales of licensed jobbers handling non-branded and percentage, sales of all licensed jobbers and percentage and sales of all other companies and percentage 4879

No. 59—Table showing yearly increase or decrease in gasoline sales for the years 1937 to 1940, inc., for the State of Michigan and the Detroit area, showing total Standard Oil sales, Standard Oil jobbers, branded jobbers, non-branded jobbers, all jobbers, and all others 4881

No. 60-A to D—Four page statement, each page marked alphabetically in the 60 series, showing continuous record from June, 1936 to November, 1940, of the retail gasoline price situation in Detroit as reflected by Standard Oil Co., surveys in the dates indicated on each of premium, house brand and third grade gasolines, showing for each the prevailing retail service station price, the dealer tank wagon price, the margin, the number of service stations selling below prevailing retail price and the average amount below the prevailing retail market price.... 4883

No. 63-A, B & C—Three page list, each page alphabetically marked as an exhibit in the 63 series, showing the brand names for gasoline marketed in the Detroit area for premium, house brand and third grade by the various companies........ 4885

No. 96-A—Modification of Ex. 31-A to exclude newspaper and billboard advertising........ 4886

No. 96-B, C & D—A three page explanation of this modification 4887

No. 99—Supplement to distribution cost analysis, tank wagon reseller channel versus jobber gasoline sales, explaining regular costing procedure in the Detroit field for 1940. This exhibit contains 33 typed pages explaining and giving examples of the company's regular accounting procedure and method of allocating costs between channels under the following

12 schedules giving account numbers and explanations as to each:

1. Salesmen and Sales Promotion Expense.
2. Advertising Costs.
3. Delivery and Warehouse Cost.
4. Income and Expense Incurred at Leased Retail Outlets Served by Tank Wagon.
5. Marketing Expense Items Incurred at Privately Owned Stations Not Leased But Engaged in the Distribution of Our Products.
6. Credit Information—Bad Debts and Recovery.
7. Field Office and Accounting Cost.
8. Supervision Cost Incurred in Sales Field.
9. Losses—Taxes—Insurance and Additional Salary Considerations.
10. Miscellaneous Marketing Expense Items.
11. Marketing Expense Items on Lubricating Oils.
12. General Office Marketing Costs. 4889

No. 100—Distribution cost analysis, tank wagon reseller channel versus gasoline sales, Detroit field, 1940. This exhibit contains 133 pages showing the actual allocations and figures in carrying out the work explained in Ex. 99 under each of the 12 schedules referred to therein, with numerous sub-schedules under each and explaining exactly what was done in each case 4914

No. 101—Standard Oil Company Form G. O. 189 Long, being the Sales Department Comparative Statement of Expense, Detroit field, year 1940, completely filled out and reflecting the results and processes set forth in Ex. 99 and 100. 5043

Designation of Record 5285
Respondent's Designation of Record 5287

4449 Afternoon Session.

2 P. M.

Trial Examiner Ballinger: Come to order. You may proceed.

JOHN W. BOATWRIGHT resumed the stand and testified further as follows:

Cross-Examination (Continued) by Mr. Austin.

Q. Account No. 208 on Respondent's Exhibit 32, form 189, is entitled "credit for expense." Will you explain the nature of that expense in connection with tank wagon reseller business?

A. Why, certainly. That is the information that is obtained by the credit department on reseller accounts.

Q. What credits are extended to tank wagon reseller customers in connection with the purchase of gasoline?

A. Well, that has been explained in the record, that primarily gasoline is sold for cash. There are times when the owner of the station is out and it is necessary for the driver to leave one dump. If some collection is made on the subsequent stop, the credit expense of gasoline is of short time duration when actually involved.

Q. Does that credit or expense represent the expenses of any particular department or any particular employees of the company?

4450 A. Well, it represents to a large extent, reports that are necessary on individuals prior to the extension of credit.

To illustrate: If you made an application for a credit card with our company, there would be an investigation of your credit. Probably our credit man would appeal to some financial reporting organization such as Dun & Bradstreet for a report on your credit standing. For that report there would be a charge. There would be certain time of the credit men; there would be certain postage, correspondence, and other expenses incurred in securing the credit information.

Q. Is credit information also obtained regarding prospective lessees and present lessees of the company?

A. Yes, it is. Pretty generally, however, when a prospective lessee is brought into the office by the salesman in charge of a territory, he brings in an individual who, in most cases, is capable of buying the original inventory necessary for the operation of the outlet. Now, the credit man is charged with the responsibility of following the credit risk of that lessee, once on the job. So that from time to time if it becomes necessary to extend credit to that individual, he has an evaluation of his credit standing, his payment habits, and so forth.

Q. Is the majority of the expense going into that account expense of obtaining credit information upon applicants for credit cards?

4451 A. I don't know that the majority of it would be. I just couldn't break down. It is the cost of obtaining credit information of our entire operations in that area.

Q. Does the expense entered in that account on Detroit form 189 for 1940 include credit information expense incurred as a result of the business of the four Detroit jobbers?

A. Well, if there is any credit information expense incident to those four jobbers, that would be the account that the expense would be in. You are cognizant of the fact that these four jobbers have been our jobbers over an extended period of years, have a credit rating which does not require the close follow up and supervision that would be necessary in the case of a small independent distributor.

Q. I understand from your testimony that any credit on gasoline is the exception to the rule, anyway, and occurs, you might say, on the spur of the moment where the owner is out and the driver can't collect cash. So is it not true that so far as credit information in connection with the sale of gasoline is concerned, it is practically non-existant because the company could not obtain credit information in advance in connection with the allowance of one day's credit by a driver, where there was no advance notice that the credit would be asked for?

Mr. Hanley: If your Honor please, that is an argumentative question and is objectionable, but respondent will not object to it, but will request the indulgence 4452 of the court to permit the witness to make a full and complete answer as to this whole question on gasoline sales.

Just go into it fully, Mr. Boatwright, as to all of the functions that have to be performed.

A. Well, I enumerated different operations of the credit man and the credit department which result in this charge on our marketing expense statement. Credit information expense is not obtained on a business, it is obtained on a customer. Credit information expense is necessary even if we are doing business practically on a cash basis on gasoline because if said customer becomes financially involved, it becomes a lost customer and lost gasoline sales. It is to our interest at all times to do anything in our power to see that our retail customers do not become involved and become poor credit risks, whether they become poor credit risks on gasoline, motor oils, tires, other merchandise that they sell through their outlets which are not purchased from the company or for any other reason.

In addition, credit information expense may be incurred upon credit card accounts. Credit card accounts buy gasoline, motor oil, and other merchandise that the Standard Oil Company has to offer for sale. It is a composite of objectives which simmer down to the soundness of doing business with an individual customer, not on one
4453 product but on all products.

Trial Examiner Ballinger: Isn't it necessary to have a rating of practically all retail operators with whom you are doing business?

The Witness: It is, your Honor, and that retail rating is secured at regular periods so that we can at all times test the soundness of the financial responsibility of the customer.

Trial Examiner Ballinger: Payments for gasoline are not always made in cash, are they?

The Witness: Not always. It is the design and the intention of the company—

Trial Examiner Ballinger: What I mean is, in currency? Payments are frequently made by check, are they not?

The Witness: Oh, yes.

Trial Examiner Ballinger: Isn't it necessary to know the financial responsibility of those who are giving you checks?

The Witness: It is, your Honor. We must know that.

Trial Examiner Ballinger: That is all.

By Mr. Austin:

Q. Is that the fact, Mr. Boatwright? Are the drivers permitted to accept checks from tank wagon reseller
4454 customers in payment for deliveries of gasoline?

A. Oh, yes.

Q. And they do so customarily?

A. And they do so.

Mr. Hanley: May I ask one question in clarification, your Honor?

Trial Examiner Ballinger: You may.

Mr. Hanley: You do not mean by that, I take it, Mr. Boatwright, that the driver of the truck has any responsibility, discretion, or judgment that he may exercise in connection with extending credit? He just acts as a medium through which the payment is made; is that right?

The Witness: The driver exercises no discretion in that respect. However, if the customer desires to make payment to the driver by the personal check of the customer, the driver accepts that check or frequently what is the case, the customer serves in a small manner as a banker for much of his clientele. He cashes checks for his customers and, in turn, endorses those checks for payment of gasoline when delivery is made, and the driver is authorized and can accept an endorsed check as a partial payment or as complete payment for a load of merchandise.

By Mr. Austin:

Q. In Respondent's Exhibit 33-B was the total tank wagon reseller expense entered opposite the account
4455 208 on Detroit form 189 for 1940 included in the figure of $1,145,399.13?

A. The total for account 208, which is limited to the reseller channel was included in the total cost for the tank wagon reseller channel for the Detroit division, 1940.

Q. But when credit costs were computed for the jobber business as represented in the Oklahoma field, the credit cost in connection with only 10 of the 12 Oklahoma jobbers was included on Respondent's Exhibits 33-C and D; is that correct?

A. That is correct, for the reasons that I explained yesterday. It would not have been a fair representation of credit cost had I included the other two jobbers in which we anticipated bad debt losses in the subsequent year, and the credit man made extended trips and went down and worked with the accounts to see if there was anything that we could do to place the business affairs of the organization in such a state that we would not encounter a bad debt loss.

Q. Did you investigate the credit man in the Detroit field to determine whether he spent any unusual amount of time with any of the tank wagon reseller accounts on credit risks?

A. Tank wagon reseller accounts?

Q. Yes.

A. No, I did not. I inquired as to the time of the credit man and the credit department working on the credit ratings of the jobbers, but not of each individual reseller account?

Q. Then you do not know whether or not there
4456 may be some credit expense included in the figure on
Respondent's Exhibit 33-B which represents an unusual expenditure of time in connection with the credit risks of a single customer?

Mr. Hanley: That is objected to, your Honor, because the witness has distinctly and clearly explained that he analyzed the 12 jobbers and did exclude 2 because he found an unusual situation which was not representative.

Trial Examiner Ballinger: Read the question.

(Question read.)

Mr. Austin: That refers, of course, to tank wagon customers in Detroit, 33-B. The figure there is the total figure for tank wagon expense in Detroit. My question is directed at this, in connection with the credit costs for the Oklahoma jobbers, two jobber accounts were eliminated because there was a high credit cost which the witness states was not representative, yet when that is compared with the tank wagon reseller expense in Detroit, there has been no effort to find out whether there was not some unusual expense also in that account.

Mr. Hanley: If your Honor please, if that is the sense of the question, then the same objective is made that was discussed some days ago as to propriety of examination on the part of the Commission relative to the respondent having made a separate analysis of each of the units of the reseller channel group, and your Honor will recall, I am
4457 sure, an informal conference which your Honor called
at the bench with counsel in connection with that subject. If that type of examination is to be continuously persisted in, as it has been up until the present time, it seems most important that your Honor's suggestion is certainly pertinent; that both parties to this litigation should have the benefit of a ruling of the Commission on that question. That is a fundamental question, Judge, as to whether or not the respondent is right in having treated the reseller group, on the one hand, as a group or whether as counsel insists we should have done what we say is an impossibility, namely, ascertain individual costs on each one of some three or four hundred stations in the same channel served identically the same way. Now, if that is the law, and, of course, we insist that it can not be the law, but if it is going to be determined to be the law, then it is important that we all know it at an early time.

Mr. Austin: I think counsel for Respondent does not quite grasp the point of my question. The point is this: That the respondent has treated all of the tank wagon reseller customers as a class, on the one hand, where he has not treated all of the Oklahoma jobbers as a class, on the other, but has eliminated two of them where the costs were high. My questioning was directed to bring that fact out,
and the fact that no similar effort was made to find
4458 out whether there was not equal reason for elimi-
nating certain tank wagon customers from the class.

Trial Examiner Ballinger: The objection now interposed is included in the original objection reserved to counsel. The Examiner is in serious doubt as to whether or not a ruling on this question would enable you to obtain a decision from the Commission on the precise point you desire. The objection is overruled, with the right of renewal.

Mr. Austin: Will you read the question, please?

Mr. Hanley: The ruling is accepted, your Honor, but for the advice of court and counsel at this time, I would like to say this: I assume that your Honor proposes to take this class of testimony subject to the general objection and to permit its introduction into the testimony hereafter as heretofore, but while it may not be in line with any known procedure, and I am not at all sure of that because, as you know, I am rather unfamiliar with the Commission's precedure, I do wish at the close of this examination on costs, if the procedure is at all permissible, to in whatever manner may be appropriate promptly submit an interrogatory or a statement of the question to the Commission for a ruling on this proposition. We can not go on intelligently trying this lawsuit, Judge, on the two different theories, that is all.

Trial Examiner Ballinger: The Examiner would
4459 suggest that probably the most appropriate way to present the matter to the Commission and the way in which it would appear in all of its different aspects would be for counsel to move at an appropriate time to strike the testimony, such testimony as he believes should be excluded from the record, designating with particularity the pages on which the testimony appears. The Examiner can then make a ruling, and from that ruling either side can prosecute an appeal and you can then—

Mr. Hanley: Can that be done in an interlocutory fashion, your Honor?

Trial Examiner Ballinger: It can be done at any stage of the case.

Mr. Hanley: And from that ruling alone?

Trial Examiner Ballinger: And that would be in the nature of a special appeal.

Mr. Hanley: I see.

Trial Examiner Ballinger: Which would not require allowance by the Commission.

Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Hanley: If your Honor please, the respondents would like to add to the last foregoing objection by respondent a request that that objection may be regarded as standard to all future questions of this character
4460 which go to the theory of Commission counsel, that the grouping of channels is an improper method of cost accounting, and that the general objection heretofore made to the same class of questions may, in addition to

this objection, stand to all future questions, and that this objection may retroactively apply to all questions of a similar character heretofore asked.

I make this request in view of your Honor's suggestion that perhaps the only feasible way of presenting this matter to the Commission as a special question would be on the basis of a motion to strike, in which event unless the general objection may be understood to stand throughout, it would be incumbent upon respondent to object individually to each separate question which would greatly encumber the record and be an obvious waste of time.

Trial Examiner Ballinger: The request is granted.

Off the record.

(Discussion off the record.)

Mr. Austin: May the witness now answer the question?

Trial Examiner Ballinger: Read the question.

The Reporter. (Reading.) "Then you do not know whether or not there may be some credit expense included in the figure on Respondent's Exhibit 33-B which represents an unusual expenditure of time, in connection with the credit risks of a single customer?"

4461 A. Yes, I know whether there were any unusual time in connection with tank wagon reseller customers in the Detroit area because the credit man tells the reseller salesman he had better get out to a certain account and straighten it up. The credit man in the tank wagon reseller channel does not go out and work on the books, the reseller salesman does. You see, it just isn't necessary to inquire whether the credit man spent an unusual amount of time on any given tank wagon reseller account. The credit man, any time an account becomes in danger, will notify the sales promoter who, in turn, will notify the salesman. The salesman goes to that reseller outlet and does all within his power to straighten up the books.

By Mr. Austin:

Q. And that time is charged to salesmen's salaries?

A. Yes. You see, our salesmen are supposed to work along the primary objective of making the reseller distributors better business men. That is their ace object: Better business men in terms of keeping books, in terms of moving the merchandise off the shelves, in terms of extending credit information, and information of that type.

Q. Account 240 is entitled "donations". What is included under this heading?

A. Just exactly what it says.

Q. To whom are these donations made?

4462 A. Oh, Red Cross seals, money gifts to organizations, Community Chest drives, and organizations of that nature.

Q. Is any part of that amount chargeable to the business of the four Detroit jobber accounts?

A. No.

Q. Why is such an expense not chargeable to jobber business equally as much as to the tank wagon reseller business?

A. Well, I just don't think you could find it, in the first place. In the second place, whether we had a single jobber or whether we have a single jobber in some other field, that still makes donations. It is just an inescapable—it is almost as inevitable as taxes.

Q. Isn't that a good reason why it should be charged equally to every gallon of gas sold?

A. I certainly don't think so. You recall that that expense item is classified on an all-gallonage basis excluding direct shipments, don't you?

Q. I was just going to come to that, and ask you how donation expense is allocated between tank wagon reseller, tank wagon consumer, and Other Methods channels.

A. They are allocated among the three channels on the basis of all gallons excluding direct shipments.

Q. And direct shipments includes the shipments to the jobbers, does it not?

A. Yes, it does.

4463 Q. Are these donations included here donations made by the Detroit field office directly, or is this an allocation of expense from the general office?

A. No, those are made directly in Detroit.

Q. Is any part of such donations allocated to production?

A. No part made by the field. There are donations made by the company which may be allocated to production. In other words, it is entirely possible, although it is completely beyond the pale of any marketing cost statement—you may have a producing unit with headquarters in Tulsa, Oklahoma, and I imagine that they do not escape the solicitation that the field forces escape. Therefore, there would be charges against production, because there are certain worthy causes that any company must make contribution to ~~and~~ should and desire to.

Q. Does the field office--

Mr. Hanley: Do you mean crude oil production in your question, Mr. Austin?

Mr. Austin: I meant gasoline production but as distinguished from distribution. In other words, production, as I use it, might include crude oil, it might include the refining of gasoline in any of those expenses. I just wondered whether any of this donation expense was so assigned, but since these are donations made by the field office, I really don't intend to pursue the matter at all further.

4464 Mr. Hanley: Just to clarify the thing, because the witness has clearly answered on the theory that we are talking about crude oil production, and that is what production means in the oil business, crude oil production, and what you apparently referred to as gasoline production is manufacturing.

Mr. Austin: Refining.

Mr. Hanley: Or manufacturing in the oil industry. And we will concede if there be necessity for it, that there is a whole list of costs applicable to each of those activities or functions, including donations that are not referred to here, that are not included here and have nothing to do with marketing costs.

Mr. Austin: I was only interested in whether any of the total donation expense incurred in the Detroit field was allocated to refining and, if so, it would have been interesting to find out why refining would have borne part of that while jobbers did not, but since the witness has said that none of it is allocated to production, the second question doesn't follow.

By Mr. Austin:

Q. Account No. 525 is entitled "death benefit." That is the account at the bottom of form 189, Respondent's Exhibit 32.

What is meant by "death benefits"?

4465 A. Well, that item is an item of declining cost significance. Over a period of years the company has been a self insurer of its employees. A short time back a plan of handling the insurance of the employees was transferred, was placed upon an actuarial basis and contracted with, with an insurance company. There are, however, still cases where an individual's death may merit, in the opinion of the board of directors, a benefit payment to the family of the deceased. Those benefits are voted individually by the board of directors whensoever incurred.

Q. In your opinion are expenditures of that nature a cost of sale and delivery of gasoline?

A. Oh, definitely. My goodness, there is nothing in the world that creates as much good will as to have a company take care of the dependents of some individual who has been on the payroll. Why, that spreads like fire. It is one of the best forms of word of mouth advertising you can get. It sells merchandise, and even if it didn't, it should be paid.

Q. All right, Mr. Boatwright. Then if it is a cost in the sale and delivery of gasoline, are such expenses, in your opinion properly a basis of differentiation between the cost of marketing gasoline to tank wagon resellers, on the one hand, and to jobbers, on the other?

A. I most certainly think so.

Q. Why so?

4466 A: As representing a component part of our tank wagon reseller marketing cost in any field. Those items of cost should be included as an expense.

Q. Weren't those death benefits available to employees at the main field office?

A. Oh, no. They may have been.

Q. Wherever available?

A. No.

Mr. Hanley: What do you mean by "mail field office"?

Mr. Austin: I mean your head office of the field.

The Witness: Oh, they are available to the Detroit employees. No, it isn't limited to the main office, death benefits.

By Mr. Austin:

Q. Main field office, I said.

A. No, it isn't limited to the main field office. It may be a commission agent; it may be a tank wagon driver; it may be any employee of the company.

Q. Those benefits were available, where they were available at all, to all employees of the company?

A. Were they not available to all employees?

Q. Yes, or was it only within certain salary brackets? How were they available?

A. Well, each case is handled individually by the 4467 board of directors. I can't tell you the motivating decisions which prevail in the minds of each member of the board of directors deciding whether this or that individual's death merits a contribution on the part of the company for the welfare of his dependents.

Q. How is the death benefit expense ascertained which goes into the form 189 for the Detroit field? Is that an allocation of expense from the general office or is the death benefit actually paid on account of the death of employees in the Detroit field?

A. Well, the death benefits are allocated upon an all-gallonage basis among the channels.

Q. Yes, but how is the total for the Detroit field arrived at? Where does that come from?

A. I don't have the instructions on that particular account with me. I will tell you what I think it is done upon, and then we can confirm that, but I think that the death benefit assignment to any given field is predicated upon the ratio of the salaries or commissions as distributed among the total sales.

Q. Then this expense of death benefits does not represent payments made upon the death of employees in the Detroit field only?

A. I shall have to clarify that. I can't answer beyond what I have.

4468 Q. I would like to ask you a question regarding account No. 112 on form 189. The account is entitled "depreciation expense—real estate improvements." Will you please differentiate that expense from the expense included in account No. 110, which is "plant depreciation"?

A. Well, it is merely a classification of your depreciation expense on different types of buildings.

Q. What class of expense goes into the account 112?

A. The depreciation expense on real estate improvements. Now, do you mean what particular type of improvements?

Q. What are real estate improvements, yes, as distinguished from plant improvements?

A. Well, a real estate improvement would be the drives of the service station or the installation of a sewerage system or any type of improvement of a piece of real estate.

Q. Of course, real estate includes buildings as well as land, and I assume since this is depreciation expense, that it refers to buildings.

A. Well, depreciation doesn't apply to land.

Q. No.

A. But it can apply to the improvements made on that land.

Q. Well, it would apply to buildings, and I assume that this was buildings. If it is not buildings, I would like to know what it is.

A. It may well be buildings, but I can't tell you
4469 just what type of a building is in this classification
and which is in this. Is that your request?

Q. Yes. Your item for plants includes buildings, machinery, equipment, furniture and fixtures. Now you have a separate account for real estate improvements, and since that can not apply to the land, because it is a depreciation expense, I wanted to know what the difference is between 112, on the one hand, and 110, on the other.

A. Well, your 110 applies primarily to your bulk plant and your main office building. It is a classification of the types of real estate utilization and the depreciation on the improvements made on those types of real estate improvements. Now, the other is merely a different classification of types of real estate improvements.

Q. Yes. It would appear that certain particular type— that the depreciation on certain particular types of real estate improvements is put in a separate account No. 112, and I am simply trying to find out what it is that it depreciated in that account.

A. Well, I will just have to defer answer until I can contact the office or a code of accounts to get a delineation.

Q. You don't have it on your—

A. No, I do not have it in either my notes or in my mind. In fact, it didn't occur to me that it would be necessary.

Mr. Hanley: May I ask a question on voir dire,
4470 your Honor?

Trial Examiner Ballinger: You may.

Examination on Voir Dire by Mr. Hanley.

Q. Is 110, on the one hand, and 112, on the other, merely a breakdown of a depreciation account as between two accounts that might have been included in one account; if you know, Mr. Boatwright?

A. Yes, it is a breakdown merely for the purpose of controlling and watching our expense.

Q. All right. One other question, if you know. If a depreciation account or a property depreciated is included in account 110, is it ever included again in 112, and vice versa?

A. Oh, no. Those are absolutely separate classifications because this becomes a basis in which our costs and our profits are reported to the Internal Revenue Department. There is absolutely no overlapping.

Q. So, as a matter of fact, you haven't rigged this 189 statement to charge up depreciation twice to the reseller channel or differentiate it between selling to a jobber account?

A. Absolutely not, these are the books of the company upon which our income reports are predicated. There is no overlapping.

4471 Mr. Hanley: That is all.

Cross-Examination by Mr. Austin (Resumed).

Q. Well, the question, of course, is not as to overlapping; it is a question of finding out what goes into some of these accounts. The question would even be more evident as between 110-A, B, and C, and 112-A, because 110 A, B, and C cover buildings and machinery, and equipment, furniture and fixtures, on all three types of the lessee stations, and yet there is a separate account 112-A for depreciation on real estate improvements on lessee stations. So that there is evidently a distinction between the four accounts under 110, on one hand, and two accounts, under 112, on the other, and, apparently, you have not got that information with you, so we will pass it up and go on to something else.

A. Well, now, is there a request that I get that information?

Q. I don't want to make a formal request for it, but you might. I don't know that I will ever want to refer to it again. I may want to ask the same question at some future time, if we ever get back on this same subject. I don't know that we ever will.

Mr. Hanley: Your Honor, this is a very good place to again make a statement on behalf of the respondent,

that if there is anything the government wants that
4472 we can furnish, we will furnish it. The statement just now made by counsel places the respondent at an obvious disadvantage. We do not know whether the government attaches any importance at all to this trivial amount that is reflected against any one of these referred to accounts or all of them in total, and counsel has just said he may never refer to it again. That very statement infers the implication that he may not only refer to it but argue it assiduously before the Commission. Now, we don't know whether he wants the information or not. We can get it, if the Commission wants it, and we will get it if the Commission wants it, but if they think it is as unimportant as counsel may have suggested and as we think it is, it is not worth our while to clutter up this record with a lot of technical instructions as to how the accountants are to break down these accounts when they make up this form. We will get it if they want it, or anything else they want, and we are entitled to know and have the opportunity to furnish it, Judge, if they do regard it as important.

Mr. Austin: Of course, the respondent may put that information in the record if it wishes. At present I don't see that there is anything in the record to—well, there is just no information there on that question and if I want it again I will certainly ask for it. I will ask for it from one of the respondent witnesses where it can be produced, in other words, in Detroit.

4473 Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Take a recess for five minutes.

(A short recess was had.)

Trial Examiner Ballinger: Come to order.

You may proceed.

By Mr. Austin:

Q. Referring again to form 189, Mr. Boatwright, account No. 086, taxes, real estate and personal property, is any part of the total amount listed in the total petroleum products channel on Detroit form 189 for 1940 allocable to the marketing of gasoline to jobber customers?

A. Well, that account includes all of the property except service stations and P.O.S.S.L.'s. Now, to the extent that there are some records maintained in the general office having to do with jobbers, to that limited extent there may be some part of that expense item which would be associated with the jobber business. It is so infinitesimal in its nature that I could not isolate it.

Q. Does that account include the amount of taxes paid on the main office building in Detroit?

A. That account covers all property except service stations and P.O.S.S.L.'s.

Q. Does it include personal property taxes on
4474 property at the main office building?

A. It does.

Q. Is any such expense charged to the jobber business on Respondent's Exhibit 33-C, D and E?

A. No, it is not.

Q. Account No. 245 is also a tax account and that is entitled "taxes—all other."

What taxes are included in that account?

A. Chain store, gross income tax, franchises, capital stock tax.

Q. What do you mean by gross income tax? Do you mean the tax of the Standard Oil Company, federal income tax of the Standard Oil Company?

A. No, there are some states which have a gross income tax calculated against sales.

Q. That is a Michigan tax?

A. No, that is not. In the state of Michigan I am not acquainted with any gross income tax. The state of Indiana would have, but I was just reading to you the types of taxes that would be classified under that heading.

Q. Can you restrict the answer to the Detroit field, since we are now referring to form 189 for the Detroit field?

A. Yes, that would be largely franchises and capital stock.

Q. Is there another classification which you mentioned?

A. Well, I mentioned chain store, but the state of
4475 Michigan does not have a chain store tax law, to my knowledge.

Mr. Hanley: That is right.

The Witness: Is that not correct?

Mr. Hanley: Not now. It has not had for several years.

By Mr. Austin:

Q. And it also has no gross income tax?

A. No.

Q. What is meant by franchise and capital stock taxes? Can you describe those a little more fully?

A. Well, the capital stock tax, which is a tax incident upon capital structure of the company—

Q. Is that a state tax?

A. There are state taxes on capital stock of an organization.

Q. Well, I want to know what the expenses are that are entered on the Detroit field in that account. I don't know, I am sure, what—

A. Well, I have mentioned the classes. Now, whether or not that tax in the state of Michigan would be as a result of a state law, I couldn't testify this afternoon.

Mr. Hanley: I am sure that it is. There is a tax of that nature in the state; in order to domesticate or get the right of operation in a state, we have to pay a state tax which is based either on the entire capital or on some 4476 pro rata basis or on the business done in the state. There are different laws in different states. I wouldn't be able to give you the detail of the Michigan law, but that is the nature of the tax.

Mr. Austin: Yes, Judge Hanley. I, however, thought that that was probably what the witness was referring to when he said "franchise."

The Witness: No. The principal costs entering into franchises would be for installation of tanks. Many areas have a fee of a certain amount for each thousand gallon or each five-hundred gallon tank entered below the surface, and if a tank be installed at a leased service station or a P.O.S.S.L., there frequently is a fee of varying sizes, varying by municipalities and varying among different states. The average would be quite different—

Trial Examiner Ballinger: It is necessary to obtain a permit, isn't it?

The Witness: That is correct. It is necessary to obtain a permit.

Trial Examiner Ballinger: For which there is a charge?

The Witness: Yes, sir. And even after the obtaining of the permit, Judge, in many municipalities it is necessary to pay an annual fee.

Trial Examiner Ballinger: Well, that is customary.

4477 The Witness: Yes.

By Mr. Austin:

Q. Does this account include the fee for the Michigan distributors' license?

A. Yes, I think it would.

Trial Examiner Ballinger: Those permits have to be renewed annually, don't they?

The Witness: Oh, yes. In most cases they do, your Honor.

By Mr. Austin:

Q. Has any tax expense been charged to the jobber business in the computations shown on Respondent's Exhibits 33-C, D or E?

A. No. They would have been had we been paying the tax. The jobber paid the tax, if any taxes were incident to their operation.

Q. You mean that if there were any taxes in Oklahoma, the jobbers paid them?

A. If there were any tax incident to the operation of retail outlets or operating jobber outlets.

Q. How about capital stock tax? Shouldn't you have to pay that sort of a tax in Oklahoma?

A. I can't state that we did or that we didn't. I don't know.

Q. In any event, it was paid in Michigan.

4478 A. It was.

Q. In your opinion, is a capital stock an expense which is chargeable equally to each gallon of gas sold by the company in the state where the tax is paid?

A. No, I don't think so.

Would you contend that your capital stock tax should be assessed equally upon a gallon sold for direct shipment, when you sell a trainload on a price basis on pure bid and asked proposition, as you would if you sold that trainload equally among a tremendous number of individual customers and at a different price basis entirely?

Q. Well, I don't know, Mr. Boatwright. I am asking you and I will ask you now what you think the proper method of allocation is.

A. Well, I have answered. I said I didn't think it was allocable equally on an all gallonage basis.

Q. Do you think any part of the capital stock tax expense is properly chargeable to the jobber business?

A. A small part of it would be, but it would be small.

Q. If you state that possibly a small part of that expense is allocable to the jobber business, can you state any method by which the expense might be pro rated?

A. I hadn't give it any thought.

Q. Will you turn, please, to account numbers 290 and 295 on form 189? 290 is entitled "general office 4479 expense—pro rata general administrative."

Account 295 is entitled "general office expense—law expense."

Has any of the expense for these accounts charged on form 189 to the Detroit field been allocated to jobber business?

A. No, sir.

Q. What is the method of allocation which is used in the Detroit field for pro rating this expense between the three petroleum product channels?

A. Both account No. 290 and account 295 is allocated on an all-gallonage basis excluding direct shipments.

Q. Why was not direct shipment gallonage included in making this allocation for those two accounts?

A. Direct shipment gallonage is not used in the allocation of expense among channels in any of these varying expense accounts allocated upon that basis, for this reason: The amount of time involved in signing a contract with the jobber is so infinitesimal relative to the amount of time involved in dealing constantly and continuously with problems incident to tank wagon reseller distribution, that it is just not regarded by our accountants, experienced in this field, as being possible of a segregation with any degree of accuracy. Certainly, it could not be included on a gallon for gallon basis.

4480 Q. You say it could not?

A: Well, it could, but it would be illogical.

Q. What is meant by "law expense"?

A. That is the expense allocated to the Detroit field of maintaining a law department and attempting to supply answers to the government on the various problems incident to continued business operation.

Mr. Hanley: It will be a high figure in 1941.

The Witness: It will be higher than it was in 1940.

By Mr. Austin:

Q. Are the expenses going into accounts 290 and 295 expenses which are incurred in their entirety at the general office in Chicago? I perhaps ought to qualify that by saying that I refer to expenses either incurred there or payments to employees or officers who are employed there. I realize that Judge Hanley is not in Chicago now.

A. Expenses under these two accounts are incurred almost entirely by the main office and are allocated among the various fields on an all-gallonage basis.

Q. What expenses go into the account 290 "pro rata—general administrative"? Is that salaries, or what is it?

A. Largely salaries. In the administration of any company of the magnitude of ours, you have certain central administrative officers, including the expenses of your
board of directors, and your top supervisory per-
4481 sonnel in the main office. The top supervisory per-
sonnel is pro rated between the manufacturing department and the sales department on approximately a fifty-fifty basis. That portion which is allocated to the sales department is then pro rated to the fields, and then it is pro rated among the channels within a field upon an all-gallonage basis in that field.

Q. Is tank car gallonage included in the gallonage used for allocation on an all-gallonage basis between fields?

A. No. No allocation of costs recognize direct shipments.

Q. That is true as to the allocation between channels in a field?

A. Yes.

Q. This next subject may have been covered partly but I don't think it was covered completely Mr. Boatwright.

By what method or methods was gasoline delivered to jobbers in Oklahoma in 1939 and in 1940?

A. Tank car or truck transport.

Q. Was any part of the gasoline sold to any of these jobbers delivered by tank wagon?

A. No. No we have no tank wagon operation in that area at all.

~~Q. Were any company operated vehicles used for the delivery of that gasoline?~~

A. No sir. No sir. The jobbers made their own
4482 delivery with their own equipment.

Q. I am talking about delivery to the jobber.

A. Well I have stated that no company equipment was used for delivery to jobbers. The products moved from our refinery either by tank car which it did in most cases or there may have been one or two in the near proximity which were served by truck transport. In case it is served by truck transport it—was not served by a company truck.

Q. Do you know the size of deliveries made to the jobbers in Oklahoma?

A. Well, pretty generally I know that any gasoline and refined oil was delivered in tank car quantities, which would run either a 6,000 gallon tank, eight or a ten. Most deliveries are in 8,000 or 10,000 gallon units.

Q. You mentioned one jobber this morning who bought only 5,000 odd gallons of gasoline during 1939.

A. He went out of business.

Q. When did he go out of business?

A. Just a minute. I think you have reference to the Ark Filling Station, doing 6,549 gallons.

Q. Don't you have one there with five thousand and some?

A. Yes, I have. I have one for 5,108.

Q. Which one is that?

A. The Whaley Oil Company.

The Ark Filling Station went out of business in
4483 February, in 1939. The Whaley Oil Company, I do not have the duration of the time period that that particular company made purchases from us.

Q. Do you know how many tank cars of gasoline the Whaley Oil Company bought during 1939?

A. Well, quite obviously, inasmuch as they only have 5,108 gallons, they bought less than one full carload.

Q. Then, does it follow that gasoline was at times shipped to these jobbers in Oklahoma in less than full carload lots?

A. No. A delivery of that type would probably be made truck transport.

Q. What is the minimum delivery by truck transport?

A. Depending upon the capacity of your truck transport.

Q. Well, do you know what the minimum is?

A. No, no, they vary. Each state has a different law on the size of the tanks that can be operated in those states.

Q. You don't know what it is in Oklahoma?

A. No, I do not. I do know this: I know that any transport as a pure economy function will move a truck having a capacity as large as he can and conform to the law. That is just common sense.

Q. Do you know whether deliveries were not sometimes made to these jobbers in less than full transport truck or carload lots?

A. I know that some deliveries were not made by 4484 the Standard Oil Company to their jobbers in less than unit capacity.

Mr. Hanley: If your Honor please, all of these questions in connection with mode of delivery or quantity of delivery per delivery to Oklahoma jobbers it is moved be stricken on the ground and for the reason that the method of delivery is not in question in this case, either in Oklahoma or in Detroit, either as to reseller purchases or as to jobber purchases, and it becomes entirely immaterial how the deliveries were made in Oklahoma or in what quantities. Your Honor will recall that there is no question of cost involved in this action.

Trial Examiner Ballinger: Isn't this objection embraced in your general objection?

Mr. Hanley: I don't know that it is. Questions like this have been asked on motor oil, which we thought was not material in the case, and I did make an objection to similar questions involving motor oil, and referred to the fact that these costs of delivery on gasoline were not a part of the case, but I don't recall any question of the particular type as this.

Trial Examiner Ballinger: The Examiner will continue as part of your objection reserved all of this testimony, and at this time the motion is denied, with the right reserved to counsel to renew it at a later time.

4485 Mr. Austin: I would like to say that I consider cost of delivery very much a part of this case. I think it is as material as any other single expense.

Trial Examiner Ballinger: As the appropriate—

Mr. Austin: That has been brought in.

Trial Examiner Ballinger: At the appropriate time, when the motion comes up, you will be heard fully, both of you.

Mr. Austin: All right.

Mr. Hanley: At this time respondent states to the record that if the Commission considers cost of delivery from refineries or terminals a proper consideration in a cost determination such as is being conducted here, that the respondent stands ready to supply schedules or figures portraying such cost of delivery of gasoline to the city of Detroit as between the reseller channel and to the jobbers from the River Rouge Terminal. Heretofore and up until this examination there has never been any suggestion on the part of the government that they wanted to go behind the arrival of the gasoline in Detroit. If we are to go behind that, then we might logically go to the refinery, and through the refinery, and back through the pipe line, and down into the well to the crude oil.

Trial Examiner Ballinger: Judge, that description will be very appropriate at a later date.

4486 Mr. Hanley: Then, Judge, why isn't it appropriate now? Why should we take all this time?

Trial Examiner Ballinger: Your motion has been ruled upon with the right reserved to you to renew it.

Mr. Hanley: Counsel has made the statement that he regards this as very appropriate. Now, your Honor, if he does he should demand those figures from us. We say it isn't. Now, if he says it is, he should ask us what our figures are. I don't know how far he wants to go. I don't know whether he wants a refining cost or not. We furnished certain costs. Now he says we should have furnished certain other costs. If we furnish them, then he says we should furnish refining costs. Then he says we should furnish production costs. How do we know what the Commission wants. We say we are ready to give you the figures if you will just once tell us what you really want.

Trial Examiner Ballinger: Proceed.

By Mr. Austin:

Q. I don't know whether I can quote the name of that oil company correctly or that jobber. Was it the Whaley Oil Company you were talking about?

A. Yes.

Q. How do you spell it?

A. W-h-a-l-e-y.

Q. Is it your opinion, based upon the fact that 4487 that jobber purchased only 5,100 gallons of gasoline from the Standard Oil Company in 1939, that it received only one delivery of gasoline during the year?

Mr. Hanley: Answer, if you know.

A. I don't know. I do know this: I know the Standard Oil Company does not ship out carloads of gasoline only partially filled. It is a public danger and we just don't do it.

By Mr. Austin:

Q. You mentioned another jobber named the Ark—

A. Ark Filling Station.

Q. —Ark Filling Station which purchased something over 6,000 gallons of gasoline during 1939 and went out of business I believe you said in February; is that correct?

A. Yes, sir.

Trial Examiner Ballinger: February of what year?

The Witness: 1939.

By Mr. Austin:

Q. Is that Ark Filling Station one of the 12 jobbers used for the computation of costs on Respondent's Exhibit 31-C, D and E?

A. Yes, sir.

Q. Was there another jobber who purchased 12,740 gallons of gasoline during 1939?

A. Yes, sir.

Q. Do you know the number of deliveries that 4488 were made to that jobber in any year?

A. No.

Q. If that jobber purchased in tank car lots, there were at most two carloads delivered, is that correct?

A. Yes, sir.

Q. Was there another jobber who purchased something over 18,000 gallons of gasoline during 1939?

A. Yes, the Davis Oil Company. He was in business only part of the year. He was bought out by the W. H. Elliot Company.

Q. Are there any other of those jobbers besides the two you have mentioned who were not customers of the Standard Oil Company for the full year?

A. No, no, the rest of them are full year business.

Q. Was the cost of delivery of gasoline from the refinery to each of these jobber accounts in Oklahoma paid by the company regardless of whether the delivery was made by transfer truck or by tank car?

Trial Examiner Ballinger: Read the question.

(Question read.)

A. Yes.

Mr. Austin: Your Honor, I would like to read into the record at this point, so that it may be easily connected

with the preceding testimony, a statement of the volume of gasoline in gallons of Standard Oil Company job-
4489 bers in Detroit.

Trial Examiner Ballinger: Shown by what?

Mr. Austin: For 1939 and 1940, as shown by Respondent's Exhibit No. 54.

Mr. Hanley: That is objected to as encumbering the record. It is in the exhibit and it is in the evidence and the record a dozen times by four or five witnesses.

Mr. Austin: If your Honor please, I recall that I made strenuous objection to the inclusion in the record of certain notations which were made upon photographs offered by the respondent, because all of those notations were taken from other exhibits in the record, but those were admitted in evidence. Now, I think that under the ruling I am entitled to make a statement which is also taken from the exhibit.

Mr. Hanley: The ruling hasn't a thing in the world to do with it, but I will withdraw the objection, your Honor. Read the whole exhibit if you want.

Trial Examiner Ballinger: Proceed.

Mr. Austin: It will be just eight figures.

Stikeman Oil Company. 1939, 1,822,960 gallons; 1940, 1,772,911 gallons.

Wayne Oil Company. 1939, 2,226,177 gallons; 1940, 2,341,394 gallons.

Citrin-Kolb Oil Company. 1939, 5,144,675 gallons; 1940, 5,226,130.

4490 Ned's Auto Supply Company. 1939, 4,336,308; 1940, 4,320,672.

I now move that we adjourn.

Trial Examiner Ballinger: That is designed to show what, Mr. Austin?

Mr. Austin: It is designed to show the contrast and dissimilarity of the jobber business in the Oklahoma territory with the jobber business in the Detroit territory, a survey for Oklahoma having been introduced into this case in an effort to prove cost of selling to jobbers in Detroit.

Mr. Hanley: If your Honor please, that being the announced purpose of the insertion of the exhibit in the record, for the same reason and because it is opposite in relation to the preceding record and the statement of counsel just made, I would like to have the record at this point show again the repeated evidence of the witness to the effect that the lesser deliveries and the smaller volumes incident to the jobber operation in Oklahoma would involve higher costs than the larger volume and fewer jobbers operations in Detroit.

Trial Examiner Ballinger: Is there a motion pending?

Mr. Austin: I move we adjourn, your Honor, until tomorrow morning. I think that I have finished my questioning of the witness but I may desire to make certain motions or statements on the record before resting.

4491 Trial Examiner Ballinger: The motion of counsel is granted and now, at 4:25 p. m., the hearing is adjourned to be reconvened June 25, 1941, at the hour of 11 o'clock, in Room 332, Federal Trade Commission Building, Washington, D. C.

(Whereupon, at 4:25 p. m., the hearing was adjourned to Wednesday, June 25, 1941, at 11 a. m., in Room 332, Federal Trade Commission Building, Washington, D. C.)

4492

Room 332, Federal Trade
Commission Building,
Washington, D. C.,
Wednesday, June 25, 1941.

Met, pursuant to adjournment, at 11 a. m.

Before:

Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., appearing on behalf of the Federal Trade Commission.

Harold R. Hanley, Esq. (910 South Michigan Avenue, Chicago, Ill.), appearing on behalf of the Respondent.

4493 PROCEEDINGS.

Trial Examiner Ballinger: Come to order.

This is a reconvening pursuant to notice of Docket 4389, in the matter of Standard Oil Company, at 11 a. m., Eastern Standard Time, June 25, 1941, in Room 332, Federal Trade Commission Building, Washington, D. C.

The last hearing was held in Washington, D. C., on June 24, 1941.

The reporter will note counsel for the Commission and respondent present.

You may proceed.

Mr. Austin: It was my intention to submit certain motions this morning, but I realize that they would probably be premature, and should be made at the conclusion of the redirect examination; therefore, I am not prepared to proceed further at this time, the cross-examination having been fully completed.

Mr. Hanley: In view of the announcement of counsel for the Commission, I move an adjournment until ten o'clock, Thursday, June 26, 1941.

Trial Examiner Ballinger: The motion of counsel for the respondent is granted, and the hearing is adjourned to be reconvened at 10 o'clock a. m., June 26, 1941, in Room 332, Federal Trade Commission Building, Washington, D. C.

(Whereupon, at 11:10 a. m. the hearing was adjourned to Thursday, June 26, 1941, at 10 a. m., in Room 332, Federal Trade Commission Building, Washington, D. C.) 4494

4495

Room 532, Federal Trade
Commission Building,
Washington, D. C.,
Thursday, June 26, 1941.

Met, pursuant to adjournment, at 10 a. m.

Before:

Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., appearing on behalf of the Federal Trade Commission.

Harold R. Hanley, Esq. (910 South Michigan Avenue, Chicago, Ill.), appearing on behalf of the Respondent.

4496

PROCEEDINGS.

Trial Examiner Ballinger: Come to order.

This is a reconvening of Docket No. 4389, in the matter of Standard Oil Company, at 10 a. m., June 26, 1941, in Room 532, Federal Trade Commission Building, Washington, D. C. The last hearing was held in Washington, D. C., June 25, 1941.

The reporter will note counsel for the Commission and Respondent present.

You may proceed.

Mr. Hanley: Your Honor, before opening the questioning of this witness, and the government having concluded its examination of this witness, the respondent desires to renew its motion to strike certain testimony which respondent moved to strike on page 4369 of the record having to do with questions and answers concerning motor oils and greases in Oklahoma and in Detroit. At the time the motion was made—indeed, several motions were made, and this is a renewal of any and all of them—but at the time the evidence was first started and at the time that the motions were made, it was announced by counsel for the Commission that he would tie it up, and your Honor admitted the testimony subject to that understanding that it would be tied up.

Trial Examiner Ballinger: I didn't understand that counsel for the Commission was going to tie it up
4497 on cross-examination but was to tie it up by later testimony. Am I correct in my conclusion?

Mr. Austin: I would rather take the position that it has already been tied up, your Honor, and I really did mean on cross-examination of this witness, and it appears that costs of marketing oils and greases have been used in more than one place in arriving at the figures in Respondent's Exhibit 33-C, D and E, in connection with the Oklahoma cost study. The cost figure and the gallonage figure used on Respondent's Exhibit 33-C, accounting costs and also 33-C and D, credit costs, include both the costs and gallonage for motor oils and greases, and in Respondent's Exhibit 33-D, supervision and selling costs, there was an allocation made which had to be gone into as to the method of allocation of costs between the products. Motor oils and greases were involved there.

Those are the reasons why I believe that the testimony was relevant.

Mr. Hanley: That under the testimony of the witness, if your Honor please, does not, as clearly shown tie into the costs in Detroit other than to demonstrate, if it demonstrates anything, that the calculation of the Oklahoma jobber study as applied to Detroit is over conservative as to Detroit, and we take the position that there has been no tie-up with the Detroit costs of such a nature as entitles that very complicated and at times ununderstandable examination in the record.

4498 Trial Examiner Ballinger: The motion to strike is denied.

JOHN W. BOATWRIGHT resumed the stand and testified further as follows:

Redirect Examination by Mr. Hanley.

Q. Mr. Boatwright, I believe that at some point in your testimony on cross-examination you were asked concerning the method of converting greases into gallons, and you answered that a ratio factor of 8 pounds to the gallon was used generally. Have you verified that and do you wish to make any modification of that answer?

A. Yes. I found that the conversion factor on greases alone was 7.5 pounds per gallon. It varies on other products but on greases alone it is 7.5.

Mr. Hanley: I don't know that that is important, your Honor.

By Mr. Hanley:

Q. Mr. Boatwright, in your examination on June 3rd, in Washington, and beginning about page 3690 of the transcript, you were asked by Commission's counsel to give the names, if you could, of examples of the same type of operation elsewhere in the United States; that is, the same type as Ned's, and you did make answer as to a number which you at the time recalled. Do you at this time recall that testimony?

4499 A. I do.

Mr. Hanley: I ask to have this document marked.

(The document was thereupon marked "Respondent's Exhibit 94-A to S," inclusive, for identification.)

By Mr. Hanley:

Q. Mr. Boatwright, I hand you a file of documents consisting of a number of pages, which group of documents have been marked Respondent's Exhibit 94-A to S, both inclusive, entitled "Organizations buying branded gasoline on tank car basis and selling under the supplier's brand name through their own directly operated retail outlets only."

I will ask you to look at it and state whether or not it was prepared under your direction and supervision and state what it represents.

A. It was prepared under my direction and supervision. This represents a partial list of all of the tank car buyers in the states enumerated at the top of the various pages which buy gasoline on a tank car basis and sell that gasoline under the supplier's brand name to their own directly operated retail outlets only.

Q. Are those organizations which are named on the exhibit conducting a business operation comparable to Ned's?

A. Yes.

Q. And is that list a further and more complete answer to the questions which Mr. Austin propounded to you

4500 and to which I have called your attention?

A. It is.

Mr. Hanley: We offer the exhibit in evidence.

Examination on Voir Dire by Mr. Austin.

Q. When was this prepared, Mr. Boatwright?

A. Within the past month.

Q. Prior to the time you came to Washington on this trip?

A. Yes.

Q. Didn't you have this with you when you were being cross-examined?

A. I did not.

Mr. Hanley: You mean on June 3rd?

Mr. Austin: Yes. Whenever it was that I asked him that question.

Mr. Hanley: That was on June 3rd.

The Witness: June 3rd.

By Mr. Austin:

Q. Had this been prepared prior to that time?

A. It had not.

Q. Can you state from what records it was prepared and how it came to be prepared?

A. Surely. Upon return to the Chicago office, I contacted each of the field managers and secured a list from each of the field managers throughout our 27 sales
4501 divisions of accounts which, within their knowledge, met the specifications as enumerated at the top of each of the pages.

Mr. Austin: It appears, your Honor, that this is, therefore, only a compilation of information received from some 27 sales managers about which the witness has no personal knowledge, and inasmuch as this is offered to show the large number of organizations allegedly doing business in the same method as Ned's, and since that is a matter which might involve considerable difference of opinion and there might be greatly varying facts as to the numerous concerns listed here, I submit that this exhibit, Respondent's Exhibit 94-A to S, for identification, should be excluded as hearsay, and on the ground that no proper foundation was laid for them, and on the ground that it would not be fair nor truly representative of the facts alleged therein, to permit this evidence without any opportunity to determine the actual method of operation of the hundreds of stations listed here.

Mr. Hanley: Just a moment. May I ask a question?

Trial Examiner Ballinger: You may.

Redirect Examination (Resumed) by Mr. Hanley.

Q. Mr. Boatwright, when you received these several lists from the several fields, did you of your own recollection remember certain of these organizations that were listed that you had not recalled when you were asked on June 3rd?

4502 A. Yes, sir.

Q. A considerable number of them?

A. Quite a number.

Q. Some you did have personal knowledge of as to operations when their names were called to your attention?

A. Yes, sir.

Q. You prepared this or had it prepared in good faith and as a further and more complete answer to the question which Mr. Austin addressed to you; did you not?

A. I did.

Q. With the intention of giving him as full information as you could?

A. Yes, sir.

Mr. Hanley: If your Honor please, in response to the objection made by counsel, we say that this is an effort consistent with the efforts that we have been making throughout this proceeding to furnish information when we could and when we had it, and this is information that was elicited by the Government, not by us. We are not seeking to put this in as affirmative evidence, in the first instance. The Government has opened the door by the questions it asked. This is no more hearsay than practically everything in this lawsuit on both sides. I am just without power to understand the theory of the objections that are made by the Government on the ground of hearsay in this lawsuit. In any event, it is not a valid objec-
4503 tion in this instance because the Government itself opened the door and asked the question. It is no more hearsay than was the recollection of Mr. Boatwright in the first instance. He learned about those instances in the same way, of course, that he learned about these instances, and I just submit, Judge, that an objection now on the part of the Government after they have opened the door is just an obstructionist tactic.

Trial Examiner Ballinger: The Examiner has no doubt but that the exhibit was prepared in the utmost good faith and to supply information inquired for by counsel for the

Commission, but the document is plainly inadmissible and the objection is sustained.

Mr. Hanley: I just submit, your Honor, that in fairness, the Government ought to withdraw that objection, and I wish that to appear emphatically upon the record.

Mr. Austin: If your Honor please, when the witness states that certainly on his direct examination that there are certain customers, or, rather, he stated on direct examination that it was a usual method of doing business which was encountered in many places, a method which is employed by Ned's, in order to test the witness' knowledge, I asked him to give many specific examples for the purpose of testing whether he did or did not know what he had stated on direct examination. That is not opening 4504 the door, as counsel for the respondent says, to the introduction of a list of hundreds of stations. It is purely testing the knowledge of the witness to see upon what basis he made the general statement that that method of doing business was common, and that is as far as the cross-examination went.

I hope that explains my—

Mr. Hanley: It may be explained to your satsifaction. Of course, it doesn't explain it to the Respondent's satisfaction. We are trying to present the facts to the Commission.

Trial Examiner Ballinger: If the contents of this document is material as evidence in the case, it can be proven probably at very heavy expense to the respondent.

Mr. Hanley: We can't prove it except by calling a hundred or two hundred people, of course.

Mr. Austin: I don't think it is material, anyway, but I have no objection, Judge Hanley, to Mr. Boatwright on the witness stand stating the names of the stations which he has just said he recalls personally or has personal knowledge of, if you desire to have him do it. I am not suggesting that you do that or not. If he wants to add to the answer he made before, I say, of course, that is perfectly proper redirect.

Mr. Hanley: That is all we are doing, whether he reads it or whether he puts it in in written form.

4505 I shall adopt the suggestion of counsel for the Commission, because I am forced to, your Honor, in view of the court's ruling, but without in any wise waiving respondent's position on the right to introduce the exhibit.

By Mr. Hanley:

Q. Mr. Boatwright, will you look at Exhibit 94-A to S, inclusive, and state the names of each of the organizations which you recognize as operating a business comparable to Ned's?

Mr. Austin: I assume now that the witness will be testifying from his own knowledge of the operation of the companies which he names.

Mr. Hanley: I assume he will.

A. The Interstate Petroleum Company (Gale & Sloan), Chicago, supplied by Socony Vacuum.

Piper's Service Station, in Chicago, Socony Vacuum.

The Goodrich Tire Company, Chicago, Socony Vacuum.

Porter Brothers, Chicago, Standard Oil Company.

Firestone Tire & Rubber Company, Chicago, the Texas Company.

Mr. Austin: May I interrupt, please? I wonder if the witness would be kind enough to check the ones on that list that he reads since I haven't got a copy of it and I may want to cross-examine upon this testimony, so I would like to know which ones he is reading and which ones he is not reading.

4506 Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Proceed.

A. (Continuing.) Hayer & Springborn, Napersville, Mid-Continent.

Goodrich Tire Company, at Gary, Indiana, Texas Company.

A. & P. Filling Station, Indiana Harbor, Indiana, Standard Oil Company.

Indianapolis Motor Inn, at Indianapolis, Pure Oil Company.

Firestone Tire & Rubber Company, Indianapolis, Texas Company and Mid-Continent.

Goodrich Tire & Rubber Company, Indianapolis, Texas Company and Gulf.

Firestone Tire & Rubber Company at Bloomington, Indiana, Texas Company, Mid-Continent.

Gafill Oil Company, South Bend, Indiana, Mid-Continent.

Beattie Garage, Des Moines, Iowa, Phillips Petroleum Company.

B. F. Goodrich, at Sioux City. I do not have the supplying company.

Weiderman Oil Company, at Lawrence, Kansas, Socony Vacuum.

4507 Carter Oil Company, Lawrence, Kansas, Socony Vacuum.

Firestone Tire Company, at Wichita, Kansas.

National Garages, Incorporated, Detroit, Michigan, Mid-Continent.

B. F. Goodrich, Detroit, Michigan, Gulf & Texas Company.

Firestone Tire & Rubber Company, at Detroit, Michigan, Gulf & Texas Company.

U. S. Government Post Exchange, Mount Clemens, Michigan, Socony Vacuum, Socony Vacuum.

Miller Auto Supply Company, Detroit, Michigan, Cities Service.

And Ned's Auto Supply Company, Detroit, Michigan, Standard Oil.

Firestone Tire & Rubber Company, at Austin and Rochester, Minnesota, Tidewater.

Firestone Tire & Rubber Company, Minneapolis, Texaco and Mid-Continent.

U-Smile Camp, Kansas City, Missouri, Socony Vacuum.

Roy Gustanson, at Wausauke, Wisconsin, Standard Oil Company.

Those are the companies which I personally am acquainted with. There was an additional check made 4508 upon receipt of the advice from the various field managers. The personnel in my department is made up of individuals transferred from the various field offices. Each of these individuals was asked to go over the list and from their personal knowledge of the companies check the field report, which was done.

Trial Examiner Ballinger: Mr. Boatwright, how many companies are listed in the exhibit?

The Witness: There must be a magnitude of 400, sir.

By Mr. Hanley:

Q. Mr. Boatwright, I direct your attention to form 189 which has been given Exhibit No. 32, which has been discussed so much in this case. I think that the forms that have been filled out are for the years 1939 and 1940, which have been discussed in this case. That is true, isn't it?

A. Yes, sir.

Q. Is the form 189 a regular company bookkeeping record?

A. It is.

Q. How long, to your knowledge, has it been such?

A. To my personal knowledge, it has been in existence since 1932, when I started working for the company..

Q. Have you had occasion to see the record even prior to that time?

A. I have.

4509 Q. I wish you would please explain briefly but explicitly exactly what this record is designed to reflect.

A. This record is designed to reflect the marketing expense of the Standard Oil Company in each of its sales divisions. It represents a total expense and represents a breakdown of those marketing expense items to the best of our ability among the different channels of distribution.

Q. You have referred to channels of distribution. As I state this—you correct me if I am wrong; I am trying to save time—the channels of distribution are the reseller channel, the consumer channel, both of which are tank wagon delivery channels, as I understand it; that is true?

A. Yes, sir.

Q. The income and expense of leased service station channel?

A. Yes, sir.

Q. That, as I understand it, is purely a property record on rental of leased properties?

A. That is correct, and a special channel is given to it for the purposes of evaluating the landlord function of our operation.

Q. There is a fourth channel denominated as Other Methods?

A. Yes, sir.

Q. I am not sure, but there is still confusion as to what Other Methods means. Will you briefly but completely explain what is the purpose of Other Methods channel?

4510 A. Well, the Other Methods channel includes a cost of marketing for products delivered other than through the faucets of our tank wagon.

Q. For instance?

A. Motor oils is the outstanding illustration of the type of a commodity which would be found in the Other Methods channel, candles, waxes, petralatums, lubricating oils, industrial lubricating oils, and other products sold in barrel containers. The expenses for that type of marketing will be found in the Other Methods channel.

Q. But those products are, as a rule, delivered by tank wagon, are they not?

A. Yes, they are delivered by tank wagon, either by side rack delivery or by stake truck delivery. A side rack delivery is merely a smaller delivery that is made on the side rack of a tank wagon carrying a load of lighter products. A stake truck delivery is just what the name implies.

Q. Well, generically, they are all tank wagons, aren't they?

A. Yes.

Q. Mr. Boatwright?

A. Yes.

Q. There isn't any such thing any more physically as a tank wagon in use, is there?

A. That is correct.

4511 Q. On form 189, do any gallonage figures appear at all except in the calculation on the last five lines of the form?

A. Those are the only gallonage figures which appear on the form.

Q. They refer to certain direct shipments which I think you have defined as being shipments of the nature made to the four jobbers in this action, to large tank wagon buyers who may be resellers or large tank cars consumers; that is, shipments which do not go through the bulk plant facilities of the company; is that true?

A. Yes, sir.

Q. Isn't it also true that there is no separate channel assigned to the so called direct shipments on form 189?

A. There is no separate channel.

Q. Mr. Boatwright, what is the fact as to whether or not the Standard Oil Company is set up primarily and fundamentally on a tank wagon distribution basis?

A. Well, the company is set up primarily to market through the tank wagon method of distribution. The location of our field offices, our personnel, our facilities, are largely gauged on that basis entirely.

Q. Is it not a fact that form 189 accurately and effectively reflects for the accountants and management of the company the operation of a business set up on that fundamental basis?

A. It does.

4512 Q. With respect to the so called direct shipments, what is the fact within your knowledge as to whether or not that is a class of business which has grown up in more recent years?

A. Well, it is a type of business which has come into existence with the tremendous expansion that has taken place in the market for petroleum products in recent years.

Trial Examiner Ballinger: Read the last question, please.

(Question read.)

By Mr. Hanley:

Q. Will you explain, please, if you know, Mr. Boatwright, why there is not assigned to the so called direct shipments a separate channel on the form 189?

A. Yes. Direct shipments originate with a sales contract, as a rule, with some major buyer. Most of these sales contracts are made by the general office on a bid basis. A price is submitted and we either get the business or we don't get the business. That applies to the greatest proportion of our direct shipments, to figure a marketing cost on a direct shipment of several trainloads of gasoline per year to a given customer where all you do is submit a bid in a sealed envelope, would be an impossibility within the realm of which you could carry your decimal points and costs. The cost is so small that it has not appeared either advisable or desirable to incur the additional cost of
4513 attempting to isolate the costs of that particular channel.

Q. Do you regard it as impossible or, at least, highly impracticable to attempt time allocations and cost allocations to the direct type of business after the fashion that you make such allocations in the other channels reflected on form 189?

A. I regard it as a highly impracticable matter.

Q. I would like to have you give some attention to this channel shown as the leased service station channel, Mr. Boatwright. You were asked many questions about that. You have stated that that is primarily a property account.

A. Yes, sir.

Q. That means, does it not, that it shows rentals and would show a profit or loss arising out of rentals due the company?

A. It does.

Q. Supposing that in a year's business that column showed a loss on the so called landlord function; that is, in receipt of rentals. What would be the effect of that loss on the unit cost of selling a gallon of gasoline as reflected in the reseller channel?

A. Well, it becomes an increase of our cost of doing business in the total reseller channel.

Q. Suppose that the converse were true and that the properties as such showed a profit arising out of the rentals. What would be the effect in the reseller channel?

4514 A. It shows a decrease of marketing cost in the reseller channel. That condition exists in some of our fields.

Q. That may vary from place to place?

A. It does.

Q. All of the results of the factors that enter into the leased channel find their way into the reseller channel, do they not, ultimately, Mr. Boatwright?

A. They do.

Q. Do forms 189 for 1939 and 1940 for Detroit accurately portray the cost of the Standard Oil Company of its marketing operations of petroleum products in that field for those respective years?

A. They certainly do.

Q. And, particularly, does the reseller channel column accurately portray the cost to the company of marketing its gasoline and refined oils in Detroit for the respective years?

A. It does.

Q. Does the form 189 give any consideration to freight or barge rates or tanker rates or transportation costs other than the transportation costs that may be incurred out of bulk plants?

A. No, it does not.

Q. Of course, it does give consideration to the delivery cost out of bulk plants?

4515 A. Yes, but it does not reflect that leg of the product movement from the terminal or refinery supply point to the bulk plant.

Q. That is to say, it is simply a reflection of the marketing cost of gasoline once the gasoline has arrived at the location under consideration; is that true?

Mr. Austin: I object to that question, your Honor, on the ground that it is leading. It is putting opinion evidence in the mouth of the witness.

Trial Examiner Ballinger: Read the question.

(Question read.)

Trial Examiner Ballinger: The objection is overruled. It has been testified to a half a dozen times during the progress of this case.

Mr. Austin: If it has been testified to a half a dozen times, it is repetitious, isn't it?

Trial Examiner Ballinger: If the objection is on the ground of repetition, that is overruled.

A. Yes, sir.

By Mr. Hanley:

Q. Mr. Boatwright, you have been examined at great length on pretty nearly every one of these numerous accounts designated on 189. I will ask you if there is any duplication of an entry of a charge of cost as between any two or more of any of these accounts.

4516 A. There is no such duplication of any cost.

Q. There has been considerable questioning of you relative to the possibility, and sometimes it has been remarked relative to the ease with which you could allocate cost to any one or each of the individual 430 or thereabouts service stations in the Detroit metropolitan area. What have you to say as to your ability to do that or as to the possibility or practicability of doing it?

A. Well, I think, in the first place, it just isn't practical within the realm of common sense to attempt such a problem as that because you would incur such a cost that you wouldn't any longer have to worry about business problems because your competitor would be able to take your business away from you very easily as his costs would be much lower, firstly. Therefore, it is not practical. Secondly, it would be an extremely difficult allocation to make, which would involve much of a purely arbitrary nature. Thirdly, it could only be done by our company by a complete change of all of our system of bookkeeping and controlling costs.

Q. Now, at that point, let me ask you another question, Mr. Boatwright. You may not have fully completed your answer, but this will help you.

There are a number of different types of reseller stations served by the Standard Oil Company, are there not?

A. There are.

4517 Q. Please name them.

A. Reseller stations served by the Standard Oil Company fall into certain broad classifications. First, 461 accounts.

Would you like a description of each of the types?

Q. I think it is pretty well understood on the record what that is. Briefly describe it. We will get this story in some form once.

Mr. Austin: Have the question read, please.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

A. The 461 accounts, the outlet is owned by an individual and we have only a sales contract with the individual operating that outlet.

The second broad classification is what we regard as a P. O. S. S. L., which is a privately owned service station which is leased to the Standard Oil Company and is sublet by the Standard Oil Company to an operator.

A third but much smaller classification of reseller outlets is the P. O. S. S. L., which is where the land only is leased and the company, having leased this location site for a period of years has constructed thereon its own building. That represents a comparatively small part of the retail outlets.

The fourth general grouping would be stations
4518 which are owned entirely by the company and are
leased to individuals for operation.

Those are the four broad classes.

By Mr. Hanley:

Q. Now, adverting to the other question I asked you as to the possibility of allocating to each individual station of the 430 odd, what have you to say as to the practicability or possibility of allocating to each of these four groups that you have named, and if your answer should be the same, continue with your reasons.

A. Well, the answer to that question must be of necessity a continuation of the difficulties enumerated in attempting to establish a system of cost accounting, recognizing the individual outlets. That continuation is based upon the difficulties incident to the method of selling and supervision. A salesman will be given a territory which will encompass, in many cases, some of each of these four classes of outlets. The acquisition of the original contract with the 461 account is a sale which requires the effort of the salesman to convince the operator of that outlet that his profits could be increased by selling our merchandise instead of some others. With the 461 account, the salesman's obligations include, among other things, the convincing of the owner of that station that it would be to his advantage to lease to the company. Then he must find a lessee for subletting the outlet. With 4519 the company owned station, the salesman must find a desirable lessee, train him, supervise his operation, and it would require a further detailed breakdown of the salesman's time over any records that we now maintain to even approximate the cost, and such a breakdown would be extremely difficult to maintain.

Q. Mr. Boatwright, is it or is it not a fact that the supervising personnel and the sales personnel, and to a very considerable extent, the accounting personnel of the field and of the company generally is set up on the basis of handling all of these reseller outlets as of a kind, that is, as of one kind, I mean?

A. That is true.

Q. For example, to be sure that we understand this, suppose that a salesman and a reseller salesman undertaking to sell gasoline for this company starts out in the morning. What is that salesman apt to do during the day in relation, of course, now, I am asking you, as to members of these four groups of resellers?

A. Well, his responsibility is to secure sales of our products through all of these classes of outlets. His responsibility is just as keenly assigned on any one class as on any other. As he starts out in the morning, he may decide that an operator of a 461 account needs some training in driveway operation. He may work on that 4520 driveway all day, with either a 461, a P. O. S. S. L., or a lessee of a company owned station indiscriminately as to the class of the outlet. There is no differentiation.

Q. May he call on members of each of the four groups in the course of a day?

A. Yes.

Q. Is it or is it not true that he might perform the various functions that a salesman has to perform and different functions with members of each of those groups in the same day?

A. That is correct.

Q. Is there any attempt at all made to allocate his time as between the groups or as between the individual stations?

A. There is none.

Q. Is that all allocated to reseller channel so far as the accounting and records of the company is concerned?

A. It is.

Q. Mr. Boatwright, assuming that it was necessary or possible to ascertain the reseller outlet in the city of Detroit supplied by this company to which the company was supplying at the lowest marketing cost, what would be necessary in order to ascertain that fact in respect of analyzing the business of all of the stations?

A. Well, I would have to answer your question by an illustration, which I will take from a question pre-
4521 viously put to me on cross-examination.

Let us use just the expense item of delivery cost, to illustrate what would be necessary. It would be necessary to trace the individual sales tickets made to a given station, time the operation, and then attempt to make an allocation of the cost provided that station be one which was served on a route among the different stations served on that route, and then assuming that the station route remained constant all of the time, set up a standard to a proper portion of the delivery, salary expense involved for that station. Then having traced it through on one station, for me to know whether that was the lowest cost station, I would have to perform an identical function on all other stations. Then I would have to classify all other stations in array to determine which was the lowest cost. Such an operation would literally be attempting to unscramble an egg and would require a staff working for months and months to approximate it, and then there would be much of an arbitrary nature in the allocation.

Trial Examiner Ballinger: Would there be any portion of it that could be determined with exactitude?

The Witness: I don't think so, your Honor.

Mr. Hanley: Another general question on this form 189, Mr. Boatwright. You have been interrogated for days on the methods of depreciation and on the E. L. A. items of account, and on whether a truck driver is paid a sal-
4522 ary or whether he works on a commission.

What is the fact as to whether or not all of the expense which is allocable to the reseller channel of gasoline and refined oil, whatever be its nature, ultimately finds its way into and is reflected once in the reseller channel?

A. Well, all actual expense items are reflect only once on our statement, form 189. Whatever it is possible, the objective of the company is to charge direct to the channel those costs which are of a direct nature. Where the cost is not incurred directly on a single channel, it is allocated to the channel. Therefore, we regard our reseller costs as shown on our form 189 as our cost of doing business in that channel in a given field.

By Mr. Hanley:

Q. You were asked at great length yesterday or all through this hearing questions about commission drivers or "B" station agents, more accurately. Just briefly explain what is a "B" station agent.

A. Well, a "B" station agent is an employee of the company in charge of the direct distribution of our petroleum products in a definitely designated geographical area. His compensation is made up of a commission on the products actually delivered. He owns the chassis of the truck; the company owns the tank on the truck.
4523 The company pays him a rental for the use of that chassis in the delivery of our products.

Q. In the case of the salaried driver, the company owns the truck, doesn't it?

A. Oh, yes.

Q. And the company stands the maintenance and the depreciation cost on that truck?

A. Yes.

Q. In the case of the commission driver, the company simply rents a chassis?

A. Yes, sir.

Q. Instead of owning one and maintaining it and taking the depreciation off of it; isn't that the fact?

A. Yes. The only depreciation we take on a truck operated by a "B" station agent is the depreciation on the tank which remains there.

Q. Well, we own that, don't we?

A. That remains the property of the company. The maintenance of the chassis, the goods used, and depreciation, is a cost to the "B" agent.

Q. In respect, first, of the property involved, namely, the truck, is not the only difference between salaried drivers and a commission agent the difference between renting property and owning and maintaining it?

Mr. Austin: I object to that question, your
4524 Honor. It is leading. He can ask him what the difference is.

Trial Examiner Ballinger: The objection is overruled.

A. Well, that is the only difference.

Mr. Austin: Your Honor, I would like to ask, if I may, on the record, the extent to which counsel for respondent is entitled to ask the respondent's officer leading questions on direct examination.

Trial Examiner Ballinger: Well, if it elicits the facts quicker than going around and coming in the back way, the Examiner will permit it.

Mr. Austin: I accept the ruling, your Honor.

Trial Examiner Ballinger: What we are after are the facts.

Mr. Austin: I just want to urge that I think it is going in the back way too much.

By Mr. Hanley:

Q. I will try and correct this particular question as a corollary to the other.

As between getting deliveries of gasoline made by a salaried driver who is paid a wage or a salary and getting deliveries of gasoline made by a commission agent or driver employee who is paid on the basis of how much he delivers, what difference, if any, so far as the econo-
4525 mics of the situation is concerned?

A. Well the company is eager to make the delivery by either of these two forms of delivery. As far as the cost is concerned, the tendency is for your commission delivery to a reseller outlet to be slightly higher than your salaried delivery, because your "B" agent performs additional functions which are classified separately at both plants out of which salaried operators are employed.

Q. I understand that but, Mr. Boatwright, what I want to know is if there is any essential difference from the standpoint of the company as to whether it pays for a service on the basis of a salary or whether it pays for a service on the basis of a commission.

A. No difference at all. No difference at all. We pay for the service performed irrespective.

Q. Then we have to pay for it, do we not, irrespective of how it is performed?

A. Certainly.

Q. There seems to be some mystery about the fact, Mr. Boatwright, that there was a larger figure in the reseller channel on form 189 applicable to commissions than there was to salaried drivers. I think you gave some testimony, which I do not recall in detail, as to the ratio between commissioned drivers and salaried drivers in Detroit. Is there any relation between the number of the one class and
4526 the other class that explains to your mind the difference in the figures in the reseller channel?

A. There isn't a relationship between the number of salaried salesmen and the number of commissioned drivers. The difficulty with the comparison of the actual amount paid salaried drivers with commissions, is that the commission item is a concentration on an all-gallonage basis for the performance of a broader function than would be performed by the salaried drivers. To illustrate: The salaried driver's expense 006 is limited entirely to the time that he is driving the truck making deliveries. If he comes into the yard and performs one function other than truck driving—let us say he moves some inventory in a warehouse, then that part of his time is charged to warehouse labor. Likewise, at the salary stations there is an accounting cost incurred in filling out the forms and making a report to the company. That is a separate classification. There is an unloading of tank cars or other trucks by warehouse labor. That is, all of these functions are performed by your "B" agent at his plant for which he receives a compensation in the form of a commission on his actual deliveries. He performs a broader function, that is, merely a broader classification of expense items than is the item of salaried drivers.

Q. Mr. Boatwright, you have explained that there
4527 are the four channels reflected on 189 and that there is no channel for direct shipments on form 189. You have testified concerning Exhibit 33-A to E, inclusive, and have indicated that there would be a cost of doing the jobber business in Detroit of approximately 25/100 of a cent. I think you have testified that whatever cost there is, which you have indicated as being too small to be advisable to set up separately, applied to the marketing operation in selling the jobber, would be scattered through the four, or

maybe only three of the channels that do appear on 189; namely, the reseller, the consumer, and other methods.

I am not sure whether any would appear in leased stations or not.

A. There would be none in that channel.

Q. And as to those three channels only, Mr. Boatwright?

A. Those three channels only.

Q. Assuming that it does cost a quarter of a cent a gallon to market gasoline to the jobbers in Detroit, have you made any computation to determine what portion of that has been allocated or has found its way into the reseller channel?

A. I have.

Q. And what is it?

A. Well, if we assume the complete jobber cost in the Detroit area of 25/100 of a cent a gallon, and I should like to remind you that my testimony was in each case

4528 repeatedly, it was 25/100 or less with the emphasis repeatedly on the fact that it was less.

Q. Well, for the purposes of this question we are assuming arguendo that it amounts to 25/100 of a cent, Mr. Boatwright.

A. All right.

On that basis the 13,661,407 gallons which has been shown in one of these exhibits as being the volume of these four jobbers would have resulted in a total marketing cost of $34,152.77. Now, if that cost be spread among the channels on the ratio of gallonage indicated in the tank wagon reseller to the Other Methods products channels, that would mean that this would be a total cost, maximum in the tank wagon reseller channel of $22,540.83, which we divide by the gallonage of 69,301,000, would give a cost of .032 cents per gallon, or 32/1000 of a cent.

Trial Examiner Ballinger: The hearing will stand in recess for five minutes.

(A short recess was taken.)

4529 Trial Examiner Ballinger: Come to order.

You may proceed.

By Mr. Hanley:

Q. Mr. Boatwright, you gave a figure in your last answer. I will ask you if you arrived at that figure by a distribution of gallonage through the several channels on form 189 in the same manner as you have stated that the cost such as they are incident to direct shipments are distributed through the form 189.

A. Yes. I do not know where the sum total of the cost is to be found, so I took the gallonage in the tank wagon reseller channel, being 69,301,586, as a proportion of the total gallonage used in allocating the cost of 106,487,212 gallons.

Q. Mr. Boatwright, beginning on page 4461 of the record, you were asked a series of questions relative to five different acounts. I will call your attention to them: No. 240, dealing with donations; 525, dealing with death benefits; 086, dealing with taxes; 290, dealing with general office expense-administrative, I think; and 295, dealing with office expense-law. The substance of the questions was: Was any of the expense indicated in those accounts allocated to the jobber business in Detroit? And substantially, your answer was that they were not.

4530 And I refer you to an answer to one of those questions, which you gave on page 4479 of the record, in which you stated the following:

"Direct shipment gallonage is not used in the allocation of expenses among channels in any of these varying expense accounts allocated upon that basis, for this reason: The amount of time involved in signing a contract with the jobber is so infinitesimal relative to the amount of time involved in dealing constantly and continuously with problems incident to tank wagon reseller distribution, that it is just not regarded by our accountants, experienced in this field, as being possible of a segregation with any degree of accuracy. Certainly, it could not be included on a gallon for gallon basis."

I wish to—well, first, do you recall that answer?

A. I do.

Q. I wish to direct your attention particularly to the last sentence, as follows: "Certainly, it could not be included on a gallon for gallon basis." That I take it is your view.

A. It is.

Q. Yet and has been continuously, Mr. Boatwright?

A. It is.

Q. Now, you have made another answer from time to time in answering similar questions in which you have

4531 said the cost was so low that you could not find it, in refering to these cost allocations to jobber gallons.

What did you mean by the term "could not find it"?

A. Well, I could not find or isolate a cost for the various expense classifications being discussed as assignable or attributable to direct shipments.

Q. Now, will you please look at 189, and the account 240, donations.

A. Yes, sir.

Q. I am speaking of 1940.

A. Yes, I have it.

Q. In the first two numbered columns, entitled "average per unit," there appears no figure following that item. What does that mean?

A. Well, that merely indicates that the cost for that classification of expense when divided by the petroleum gallonage, including direct shipments, would result in a figure of less than .005, or 5/1000 of a cent. It is not found to a calculation of 1/100,000 of a cent.

Q. Now, that means, does it not, Mr. Boatwright, that taking all of the gallons of the reseller channel and any additional expense that might have been allocated—or, not allocated, but just found its way into that channel from direct sales, none of that gallonage was burdened with any cost on donations, so far as that analysis is concerned?

4532 The Witness: Would you read the latter part of that?

Mr. Hanley: Well, I will withdraw the question. It is badly stated.

By Mr. Hanley:

Q. Does that or does it not mean that from an accounting standpoint that item is so trivial, as it was in that year, that taking into consideration all of the gallons in the reseller channel plus the handling of any jobber business or direct sales you did not regard it as worth while from an accounting standpoint to make the insertion of any figure in column "average per unit"?

A. Yes. It merely means that we would have to extend our system of cost comparison among different years to a point beyond two decimal points to find it. You see, those first two columns give a comparison of this year and last year, and in neither of the two years did donations amount to an item large enough to reduce the gallonage cost to one hundred thousandth of a cent per gallon.

Q. Now, at my request, Mr. Boatwright, did you make any computation as to what difference it would make in the cost of sales to jobbers, Detroit jobbers, if those five accounts were allocated on a gallon for gallon basis?

A. Well, I have a longhand calculation here. May I check the figures to be sure that there is—

4533 Q. Surely.

A. I have a transposition of the figures here. If I may, I will make a correction on that before continuing with this.

(After figuring.) I have the result of that calculation, which I would like to give you subject to check.

Q. Will you please indicate what your conclusion is and how you arrived at it, Mr. Boatwright?

A. Well, if we take the total for petroleum products of account 240, being donations, of $2,252.51; 086, taxes—real estate and personal property, being $54,722.28; account 290, being general office expense—pro rated general administration, $74,288.83; 295, general office expense—law expense, $35,164.66; 525, death benefits, $6,950.00, it would give you the sum total of these expense classifications, which, when divided by the gallonage figure of 106,487,212, which excludes direct shipments, would result in a cost per gallon of .162 cents per gallon.

Now, if you will take the figure used as the divisor of 106,487,000 plus gallons and add the gallonage of 13,661,000, which is the sales of gasolines to jobbers, you get a resultant figure of .144 or a difference between the two means of calculation of 18/1000 of a cent.

Q. Now, is it not true, Mr. Boatwright, that that calculation is based on a ballon for gallon basis?

A. Yes, it is based on a gallon for gallon basis.

4534 Q. And the answer which I read you from your testimony at page 4479 indicates that it can not be properly done on a gallon for gallon basis?

A. Well, I do not think that it can be.

Q. And, in your opinion, this is not a proper allocation?

A. It is not.

Q. And why do you think so?

A. Well, for the reasons previously and many times enumerated, that the time involved and the effort involved in selling a gallon of gasoline or any other product through a jobber in terms of these expense items is simply not comparable with the time and the effort involved in selling gallons of gasoline and other products through other marketing outlets.

Q. Now, adverting to the calculation which you previously put in as to the allocation to the jobbers or the distribution of jobbers of expense that might be scattered through the form 189, do you regard that as a proper allocation to the jobber operation?

A. Well, I don't.

Q. Or a proper elimination?

A. I do not.

Q. And for the same reason?

A. Yes. It is—I just don't know where you could find it—the true cost.

Q. Is it or is it not a similar type of calculation, 4535 the attempt to determine?

A. Yes, it is merely an attempt to show the magnitude of the item under discussion. I do not feel that it is a proper elimination on a strictly accounting—good accounting basis.

Q. Is it not true, Mr. Boatwright, that if those costs were added to the jobber operation, which is largely on a gallon for gallon basis, that, in your judgment, it would be an improper and overburdening charge against the jobber operation?

A. Yes, sir.

Q. We will get into a different subject, Mr. Boatwright. I direct your attention to Exhibit 31-A and following sheets.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Mr. Hanley: I move that we adjourn to 1:30.

Trial Examiner Ballinger: Motion is granted. The hearing stands in recess until 1:30 p. m.

(Whereupon, at 12:30 p. m. a recess was taken until 1:30 p. m.)

4536 Afternoon Session.

1:30 P. M.

Trial Examiner Ballinger: Come to order. Proceed.

JOHN W. BOATWRIGHT resumed the stand and testified further as follows:

Redirect Examination (Continued) by Mr. Hanley.

Q. At the recess we were about to enter into a discussion of Exhibit 31-A and the following pages, Mr. Boatwright.

Mr. Hanley: I will ask the reporter to mark this document, for identification.

(The document was thereupon marked "Respondent's Exhibit No. 95," for identification.)

By Mr. Hanley:

Q. Mr. Boatwright, I show you what has now been marked Respondent's Exhibit 95, and I will ask you what it is?

A. This is a blank form 474 of the Standard Oil Company which sets up an analysis of tank truck deliveries by salary drivers. It shows the dates of the month and the various types of deliveries broken down between transfers among bulk plants, sales of heating, Diesel, tractor fuels, naphthas, and gasoline, bucket deliveries, total sales, number of forms 018 covering the delivery of these products, side rack deliveries, miles traveled, time driving truck, and time other than driving truck.

4537 Mr. Hanley: I will say, your Honor, that this is one of the documents which at times has been referred to as a truck efficiency report which was requested by counsel for the Commission that the respondent produce, and we are now producing it and offer it in evidence.

Trial Examiner Ballinger: Any objection?

Mr. Austin: This is what is called the tank truck efficiency report?

The Witness: Yes, that and the recapitulation of that form.

Mr. Austin: I have no objection. I was wondering if you would mind asking him, Judge Hanley, how long this form was made out.

Mr. Hanley: I will ask him that. I am going into a full explanation of that, Mr. Austin.

Trial Examiner Ballinger: Without objection, the document is introduced in evidence as Respondent's Exhibit 95.

(The document heretofore marked "RESPONDENT'S EXHIBIT NO. 95," for identification, was received in evidence.)

By Mr. Hanley:

Q. Mr. Boatwright, there has been a considerable discussion during your cross examination of what has been
referred to as the truck efficiency report, the method
4538 of deriving truck hour time from the report, and the
extension of a labor charge item of 95.2 cents which
appears from time to time in the exhibits and calculations which have been made. I wish you would from that report and from any information that you may have in mind or in memo form just discuss the method, explain the method that you used in deriving the truck time that you employed in the preparation of Exhibit 31-A and following pages.

A. Yes. Respondent's Exhibit 95 is a form which is posted daily by the driver of the truck. You will recall referring me to Mr. Raupaugh's testimony wherein he stated that where possible we tried to have the same truck serve a given route. I agreed with that testimony. Now, where it is possible, the same driver will operate a given truck on a given route making, let us say, gasoline deliveries. If the driver operates two trucks part of the time on gasoline, deliveries to resellers, let us say, and part of the time on other products; he makes out a separate form 474 for his time.

Now, the driver at the end of the day from his 018, which you will recall has been introduced as an exhibit, enters on this form the types of deliveries made, the number of 018 tickets, and from the 018 tickets his actual driving time. What we did was that we took these forms for the three stations of Scotten Avenue, Lycaste and North Detroit,
and we recapitulated the gallonage of gasoline trucks
4539 only operating out of those three stations and the
driving time incident to making those deliveries. The gasoline so secured was entered on Respondent's 31-C and the driving time is entered on that same exhibit. Now,

I should explain that the driving time only constitutes accounts 1006 or 2006. Therefore, the actual hours used in making deliveries of gasoline are the actual hours chargeable against that product in our accounts 1006 and 2006.

Q. You were asked many questions about what happened to a possible lunch hour of these drivers, Mr. Boatwright. Can you clarify that?

A. Well, any possible lunch hour would be excluded by the driver in making up his report of the actual driving time in making the delivery.

Q. Are accounts 1006 and 2006 to which you have referred regular company accounting records?

A. They are, and refer respectively to salaries, drivers, tank wagon reseller and tank wagon consumer channels.

Q. Are records of the exact time of the trucks available for the year 1937?

A. I don't think so.

Q. I mean, time of deliveries used in making deliveries to Ned's and other dealers?

A. No.

Q. As I understand it, in making up Exhibit 31-A 4540 and following pages, do you use the 1940 records?

A. Well, the months are indicated right in the exhibit as being December, '39, March, June and September of 1940.

Q. If I correctly understand your testimony heretofore given, you did that because they were the available records and the only available records to give you—

A. Yes, and then for a second reason: These are the respective months which these forms are recapitulated, just the one month not accumulated, but for these respective months, and then we compare the accomplishments of the different trucks with standards or anticipated performance to evaluate the comparative efficiency among plants.

Q. Are the records for 1940 which you did use comparable, to your knowledge, with the operations of 1937 which were unavailable records?

A. Well, they were comparable with the exception that I pointed out in my direct testimony, the closer follow through that we have introduced on our trucks has increased the efficiency of operation and reduced the unit cost.

Q. On your cross examination you were asked in-connection with this subject whether you gave consideration to distances traveled by these trucks. I will ask you now if distance traveled irrespective of whether it be short or long comparatively would not necessarily be inherent in the calculations which you did make?

4541 A. Yes, because we took the total gasoline deliveries throughout the station territory for all deliveries of gasoline only, so that the location of the plant is in the average time that is used in the calculations. Distances are reflected in the calculations on the Respondent's Exhibits 31 and following.

Q. Will you please refer to Exhibit 31-Q? As I understand it, Mr. Boatwright, 31-Q is a list of expense items that were not added to either the cost of doing business through the regular reseller business channel or with Ned's Auto Supply Company as reflected on 31-A.

A. That is correct.

Q. I understand that you have testified that your reason for not including the costs reflected in 31-Q on either side of that computation lies in the fact that it was impossible, in your view, to allocate it fairly as between gallons sold to Ned's and gallons sold to the balance of the reseller channel.

A. Yes, my reason and my belief based on my knowledge of the functions for which these expenses are incurred is that it would be an unfair charge to allocate these items on a straight gallon basis both to Ned's and to the regular reseller gallonage.

Q. Directing your attention to account No. 1000, "salaries—supervision," amount $33,760.06 on Exhibit 31-Q—

A. Yes.

4542 Q. Would that item include any portions of Mr. Raupaugh's salary and Mr. Blau's salary that was allocated to the reseller channel on form 189?

A. It would.

Q. You were interrogated at great length about the allocation of a portion of the salary of both of those gentlemen to the cost of gasoline to Ned's. Do you recall many questions along that line?

A. I do.

Q. Are you familiar personally with the testimony of Mr. Raupaugh as to the time that he expended and the nature of his contacts with Ned's Auto Supply Company?

A. I am not familiar with all of Mr. Raupaugh's testimony in that respect.

Q. It is my understanding that Mr. Raupaugh testified that he would have lunch with Ned's, one of them, oh, maybe once a month; he would have a visit in his office every few weeks or from month to month; I think he said that he would have either lunch or a visit with them at least once a month; from time to time a telephone call; from time to time a letter, and that was the extent of his efforts and expenditure of time. Further Mr. Raupaugh testified that in his efforts in connection with Ned's it was not a matter of selling gasoline but a matter of attempting to hold the customer against competitive offers or 4543 restrain him from being too belligerent about a failure to get a reduction in price.

Assuming—

Trial Examiner Ballinger: Judge, before you assume, as the Examiner recalls, Mr. Raupagh testified that he made a trip to Chicago.

By Mr. Hanley:

Q. Mr. Raupaugh testified that in the fall of 1946, some time in September, I believe, he made a trip to Chicago on an occasion when two of the Gershenson brothers were in Chicago and spent about a day, as I recall the testimony, in Chicago, and we must assume that it was in connection with that business, whether it all was or not.

Assuming all of those facts to be true, is there any way that you can think of that you could make any fair and reasonable allocation or that Mr. Raupaugh could make any fair and reasonable allocation of time actually spent on Ned's account; and, if so, what, in your jurgment, would it amount to on a unit basis of sales, assuming sales to be, as I believe the evidence shows them to be, somewhere in the neighborhood of 4,000,000 gallons a year?

A. Well, I don't see how we could make from that description a comparative estimate of the time of Mr. Raupaugh in dealing with that account. Would a lunch hour in which Mr. Raupaugh had as company a member of Ned's Auto Supply be a charge? He would eat lunch 4544 anyhow. Is that one time, or what is it? Or—

Q. Well, I just assume Mr. Raupaugh paid the check.

A. Well, I would assume so, too. Or when he comes to Chicago—you say we assume that it was on account of Ned's Auto Supply business. Knowing the responsibilities of field managers, they never come into the office but what they have many other problems to deal with. Or how much time did it take to write a few letters or to talk on the telephone? I don't see how we could estimate that accurately.

Trial Examiner Ballinger: Would there be any approximation?

The witness: I don't see how it could be a very accurate approximation at this date, your Honor.

Trial Examiner Ballinger: Couldn't there even be a rough approximation?

The Witness: I wouldn't think so.

By Mr. Hanley:

Q. Suppose, Mr. Boatwright, that you arbitrarily assumed that he had lunch twice a month and spent as much as two hours on each occasion, and throw in another conference each month of an hour. That would be 5 hours a month spent with Ned's, and bearing in mind that you are dealing with a devisor of 4,000,000 gallons of gasoline or thereabouts, what, in your judgment, would the allocation amount to, assuming that you are arbitrarily deter-
4545 mining that there was that much time used.

Trial Examiner Ballinger: During what period of time?

Mr. Hanley: Each of the years since 1936.

A. Judge, you would have to have the value of the lunch tickets if Mr. Raupaugh paid the tickets to add to that.

By Mr. Hanley:

Q. All right. You assume a good lunch.

A. And when we get through, even with those assumptions, it wouldn't amount to over $125 a year, I don't think. I don't know. I don't know what the lunch would be. I don't know what Mr. Raupaugh's hourly cost would be. It might be considerably higher than that. I just couldn't answer.

Trial Examiner Ballinger: Do you know what his salary is?

The Witness: No, I do not.

By Mr. Hanley:

Q. Would that be in thousands or the tens of thousands, or where would it be in relation to 4,000,000 gallons of gasoline a year?

A. Well, at a thousandth of a cent per gallon on 4,000,000 plus gallons it would be a little over $400.

Q. Do you think from your knowledge of the business that $400 a year time allocation would pay for 12 lunches or thereabouts and the time of an hour or two con-
4546 ference, we will say 12 times a year?

A. I think it would.

Q. As I understand, you left 31-Q out of the calculation because in your judgment, to add it on the gallon for gallon basis, it would unfairly overburden Ned's gallons as compared to the other reseller channel stations; is that right?

A. Yes, sir.

Q. Let me direct your attention to the largest item on the list which appears to be "office expense—salaries." That is account No. 1200.

What have you to say as to the relative cost, gallon for gallon, of going into that account as between Ned's, on the one hand, and the balance of the reseller channel?

A. Well, it doesn't take a clerk much longer to write down the volume of a full truck load than it does to write down the volume of a partial truck load. Therefore, if the entries, Ned's Auto Supply, were primarily for truck loads, and they were, then the time factor in making the book entries incident to those deliveries would be almost identical with the time factors used in making a similar number of book entries with a tank wagon reseller account, which may be one of our company owned stations operated by a lessee. The difference would come from your divisor because when you take your time for making the entries, extend that by your salary factor, in one case you
4547 have a divisor which is perhaps double the other and,
as a consequence, it just automatically follows that your cost per gallon for the record maintenance of an account of the type of Ned's Auto Supply was less than our cost per gallon for accounting in our regular tank wagon reseller business.

Q. Let me direct your attention to Account No. 1208, "credit information expense." In your judgment, how much credit information expense is attached to the handling of Ned's account?

A. Well, I would assume that the credit man probably got a credit rating on Ned's once a year. He may have gotten a credit rating on a six-month basis, but a report on the financial status of an organization of that size could be obtained for a dollar or two, so that actually there may be a total charge for credit information expense of around $5 as a maximum for the Ned's business.

Trial Examiner Ballinger: Where you have an established customer in good standing, do you obtain annually, or semi-annually, credit ratings?

The Witness: Not always, your Honor. In an account of that size and with that credit standing in the community, probably all that was actually needed would be a telephone call by our credit man to a credit exchange organization as the Chamber of Commerce, or something like that, but I assumed even the most extreme source of credit cost, and it would probably still be under $5 a year.

4548 By Mr. Hanley:

Q. You have explained your reason, Mr. Boatwright, why you think it would be unfair to charge the .42 of a cent per gallon which this account amounts to, including Ned's gallonage; that is, to charge it on a gallon for gallon basis as between Ned's and the balance of the reseller channels. If, however, you were to add .42 of a cent per gallon to column 1, regular reseller business, on 31-A, and .42 of a cent per gallon to column 2, Ned's Auto Supply Company, that would have the effect, would it not, of not only allocating any share of Mr. Raupaugh's salary as well as any share of these other accounts appearing on 31-Q on any allocated basis to Ned's gallonage, but it would have the effect, would it not, of allocating on an overall gallonage basis to Ned's gallons equally with all the other gallons in the reseller channel?

A. Well, it would have that effect. If you add the .42 of a cent per gallon to both columns, it is the equivalent of using gallonage for an allocation factor. It could be done. It would be a very unfair thing to do.

Q. You think it would be unfair but—

A. It could be done.

Q. —it could be done?

A. Yes, it would have been an unfair thing to do.

Mr. Hanley: I call attention, your Honor, to the fact that in discussing this matter of allocation of Mr. 4549 Raupaugh's salary, considerable heat was demonstrated by counsel for the Commission on the theory that we had failed to attempt any allocation of the time involved. It now appears from the testimony of the witness that while he thinks it unfair to Ned's gallonage, that it would be a gallon for gallon allocation of all of the items on 31-Q, including Raupaugh's salary and Mr. Blau's salary, if the item .42 of a cent per gallon were added to the cost of Ned's business as well as to the regular reseller channel business. The effect of that calculation would in no wise modify in any particular the difference in the marketing cost, of course; it would simply be a wash-out transaction, but it would completely and does completely answer the contentions of counsel for the Commission, and while we think it an unfair thing to do and an improper thing to do, of course, we haven't any objection to the Commission taking that view of it, if they think that a proper thing to do. It in no wise changes the differential. We just think it isn't fair to do as a matter of proper accounting.

I made an offer of proof of this kind on the record some days ago, and I am now trying to qualify on that and simply offering that calculation may be done without objection on our part, but without waiving our position that we think it improper and unfair, and still maintaining our contention that we were conservative and fair in excluding
4550 31-Q from the calculation.

By Mr. Hanley:

Q. Mr. Boatwright, there has been a great deal of evidence elicited from you in connection with the question of advertising and the cost thereof in relation to the Exhibit 31-A and following pages, with particular reference to the matter of newspaper and billboard and general advertising; that is, advertising other than point of sale advertising.

I will ask you if you have made a computation which excludes from consideration that type of advertising?

A. I have.

Mr. Hanley: I will ask to have this document, which consists of four sheets, marked for identification.

Trial Examiner Ballinger: The reporter will mark the document Respondent's Exhibit 96-A, B, C and D, for identification.

(The document was thereupon marked "Respondent's Exhibit 96-A, B, C and D," for identification.)

By Mr. Hanley:

Q. I hand you what has now been marked Respondent's Exhibit 96-A, B, C and D, and I will ask you what it is, Mr. Boatwright?

A. Respondent's Exhibit 96-A is the same as Respondent's Exhibit 31-A with the exception that the marketing expense items of newspaper advertising and billboard 4551 advertising have been excluded from the calculation in figuring the differential and marketing cost between regular reseller business and Ned's Auto Supply Company. During that year in question there was an expenditure of $87,377.33 spent on newspapers and posters. There was no radio expenditure in the year 1937. Taking that out of the marketing cost incident to advertising for the tank wagon reseller channel, the differential for advertising cost between the regular reseller business and Ned's Auto Supply business is reduced from .213 cents per gallon as shown on Respondent's Exhibit 31-A to .081 for this same item, as is now shown on Respondent's Exhibit 96-A. The sum total of a differential in marketing cost, between the regular reseller business and Ned's Auto Supply, as is shown on Schedule A, Respondent's Exhibit 31-A, is .529 cents per gallon, excluding the newspaper and bill board advertising as is shown on Respondent's Exhibit 96-A; the total differential in marketing costs between the regular reseller business and Ned's Auto Supply Company amounts to .397 cents per gallon.

You will recall my testimony when I was on cross examination as to the reasons why such an elimination does not seem fair to me; do you not?

Q. Yes. Have you set that up, Mr. Boatwright, in this Exhibit 96-A, B, C and D?

A. Yes. The reasons why such a procedure does 4552 not seem fair is set forward in Respondent's Exhibit 96-B and 96-C, for identification. These are a condensation of the testimony offered in reply to a question on cross-examination, plus one reason which has occured to me that did not occur to me when I was on the witness stand the other day.

Q. I will ask you specifically now, Mr. Boatwright, if you think it proper or a fair calculation to exclude the advertising cost in the manner in which you have done on 96-A, B, C and E.

A. Well, I don't think that is fair.

Q. Have you stated your reasons therefor in your explanation of the computation?

A. I have.

Trial Examiner Ballinger: When you use the word "fair" what do you mean? Proper?

The Witness: Proper is a good synonym.

Mr. Hanley: The Respondent offers Exhibit 96-A, B, C and D, for identification, in evidence.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: The hearing stands in recess for five minutes.

(A short recess was taken.)

Trial Examiner Ballinger: Come to order.

Any objection?

4553 Mr. Austin: May I ask a question, your Honor?

Trial Examiner Ballinger: You may.

Examination on Voir Dire by Mr. Austin.

Q. On Respondent's Exhibit 96-B, for identification, that exhibit is entitled Respondent's Exhibit 31-A, modified to exclude the influence of newspaper and billboard advertising. I would like to ask why only newspaper and billboard advertising were excluded among the various items making up the total of $154,635 on Commission's Exhibit 84-A for the purposes of Respondent's Exhibit 96-B?

A. Yes. I feel that motion pictures, the use of which I explained in direct testimony, as you will recall, and printed matter and direct mail and dealers' trade papers and magazines, signs at the outlets, the miscellaneous items of expense, are more closely associated and incident to the point of sale advertising than is your newspaper advertising and your outdoor posters. You see, these two types of advertising expenditures which have been eliminated are those two which are primarily directed to the public in general, not associated in any way with particular outlets. It is merely in keeping with the questioning—the line of questioning that was put to me on cross-examination.

Frankly, I feel that the original treatment was a proper treatment to give; because of the extended series of
4554 questions on these, I thought I would show the significance of the amount under discussion, and that is exactly what that modified schedule A now indicated as Respondent's Exhibit 96-A does.

Q. Are not there some items in the miscellaneous group totaling $46,558 which are of a similar character to the newspaper and outdoor posters?

A. I couldn't testify that there was or that there was not. As you will recall, I stated that in compiling that breakdown, we took all of the leading items and did classify them. That was a special breakdown that was made at your request.

Mr. Austin: Your Honor, I have no objection to this going in subject to check as to the accuracy of the figures, which I have not made, and, furthermore, I assume that this would go in as a written statement of testimony that the witness would make if he were asked the question. I believe he has so testified.

Mr. Hanley: He has.

The Witness: Yes.

Mr. Hanley: And if you object on that ground, I would just ask him over again.

Mr. Austin: I don't object on that ground. I am just bringing it out, that it is simply a preparation in writing that might otherwise be given as oral testimony. 4555 Subject to check as to its accuracy, I have no objection.

Trial Examiner Ballinger: The Examiner does not understand that this would be offered as a modification of your prior exhibit.

Mr. Hanley: I had a statement to make on that, but I would like to ask the witness one other question, Judge.

Trial Examiner Ballinger: Do you have a statement to make?

Mr. Hanley: I do, as to the introduction of the exhibit, which will clarify that matter in your Honor's mind, but I wanted to ask the witness one other question suggested by the Voir Dire.

Trial Examiner Ballinger: Proceed.

Redirect Examination (Resumed) by Mr. Hanley.

Q. The type of advertising to which Mr. Austin's questions have alluded as being on 84-A, Exhibit 84-A, were left in this calculation and given consideration on both Ned's figures and on the reseller channel figures; were they not?

A. Well, not in terms of the motion picture, in terms of signs, you will recall, and in jewel globes and maps, they were left in and appear on both sides of the ledger. In terms of the motion picture, you will recall the explanation

of the justification and reasoning for motion pictures
4556 used primarily at our dealer conferences and our
sales meetings, which is purely a tank wagon reseller function, until it has disseminated out to the point where the dealers are borrowing the film from our library and perhaps showing it to their friends or their little social groups. That charge is primarily—well, it is incurred solely for purposes of training and proper merchandising procedure and then after it has served that purpose, we are glad to loan it to any dealer or Rotary Club or what will you for the free publicity that we get from it, that is all.

Mr. Hanley: If your Honor please, this offer is made for the reason that the question of the inclusion of this advertising item has been developed very extensively on cross-examination. We do not offer it as a modification of the Exhibit 31-A. We stand on 31-A as being the proper and fair and reasonable and most accurate computation of differential and cost that it is possible to devise. However, since the question was raised and since we had the figures which would indicate what the effect would be if the criticized items of advertising were eliminated, just consistently with our attempted position here to supply all that we can when we know what is desired, we are offering this exhibit merely for the information of the court and the Commission without in any wise waiving our position that 31-A as originally received and offered is the correct and proper computation.

4557 Trial Examiner Ballinger: Respondent's Exhibit
96-A, B, C and D, for identification, is admitted in evidence, subject, however, to check by counsel for the Commission as to the accuracy of the figures.

(The documents heretofore marked "RESPONDENT'S EXHIBIT 96-A, B, C and D," for identification, were received in evidence.)

By Mr. Hanley:

Q. Mr. Boatwright, in the compilation of Exhibit 31-A and following sheets, as well as in the compilation of Exhibit 96-A, B, C and D, all of the figures used in those computations were drawn from the regular and usual records and accounts of the Standard Oil Company?

A. Yes, they were drawn from the usual books of the company.

Q. Mr. Boatwright, we are about to advert to the Exhibit 33 series, and before doing so I want to ask you to distinguish between the type of computation attempted in the 31 series of exhibits and the 33 series of exhibits.

That may be a broad question and not very easy to understand. I will try to explain. If I correctly understand, in 31-A, and so forth, you undertook to segregate out of the reseller group a purchaser or reseller of gasoline and distinguish the operation of sales to him from the sales to all of the balance of the reseller groups; is that correct?

A. Yes, sir. It was an effort to determine the
4558 marketing cost incident to a unit within a channel.

Q. Now, with reference to the 33 series of exhibits, am I correct in the understanding that in that instance there was no effort to segregate a unit out of any group, but an effort was made to distinguish the cost of marketing as between one group and another group; mainly, as between the whole reseller channel group, on the one hand, and the jobber group, consisting of these four jobbers, on the other hand?

A. That is a correct statement.

Q. Advertising to the 33 series of exhibits, Mr. Boatwright, which is the Oklahoma jobber cost survey, I will ask you first if that was made without any reference at all to this particular suit?

A. It was. That was made based upon actual operations in the year 1939 and was submitted in the early part of the year 1940.

Q. Suppose that you were to undertake a similar survey of the cost of sales to jobbers in the city of Detroit. Can you give us any idea at all about the length of time that would be necessary and the amount of work that would be involved?

A. Well, the study that was actually used encompassed about three months' time on the part of one of my analysts, several clerks in the Chicago office, and a substantial amount of time on the part of the clerical staff in the fields. Now, as you will
4559 recall, in my discussion of that study, I pointed out the comparative simplicity of studying jobber operation costs at Kansas City and Wichita fields because the expense accounts of the manager would indicate the location of the expenditures, so that we could break down the supervision time devoted to Oklahoma jobber operations.

Thus, when the manager of our Kansas City field submitted an expense account incurred at Tulsa, Oklahoma, there was just one reason for him being down there, that was jobber business.

Now, if Mr. Rampaugh or Mr. Blan submitted expense accounts on luncheon in Detroit, I don't know who that luncheon was for or what it was about. So that it becomes practically a physical impossibility to look back in Detroit and get as dependable a breakdown as it was possible to do it in the Kansas City and Wichita fields, in the first place. And in the second place, the contacts are more frequent because of the proximity: the telephone contacts, and things of that type, and barring those, even if we could find a way to isolate such expense items, it would take a staff in the neighborhood of four months to count tickets, measure time, go through correspondence files, go through the different expense accounts to see if we could find expense that was incident to this type of operation, and so on, as we did in making the jobber study in Oklahoma.

4569 Trial Examiner Ballinger: Judge, when a differential is granted, isn't the question of justification then present and then considered?

Mr. Hanley: It certainly is, Judge, very definitely.

Trial Examiner Ballinger: And doesn't the company granting the differential assume responsibility to take the chance of whatever costs and effort may be incurred in establishing the justification?

Mr. Hanley: If your Honor please, in answer to that question, I think I can make a very practical answer. If the question arose, to make it concrete, as to whether or not a differential of one and a half cents, for instance, would be granted a jobber, in Detroit, in the first place, there might not be the experience upon which to base a study of the kind that Mr. Boatwright is talking about; and, in the second place, if there were, the cost of making it, in order to establish whether or not it could be proved with the certainty that you can prove that two and two equal four, would be so prohibitive that it would just involve turning down the business. The fact of the business is, from a practical standpoint, that these differentials, as has appeared in this case, both as respects the respondent and as respects customers throughout the country, turn on more or less round numbers.

We just know that we save approximately a cent and

4561 a half by doing this kind of business. Now, we just know that, know it by the experience of doing the business, that we would ever have to prove it as meticulously as we have undertaken to prove it here—I will say, frankly, I never dreamed, but I knew, as far as my individual opinion, for whatever it is worth, may be concerned, that any time any differential might have to be sustained, if it were complained against, but our marketing people know that in a general way what these things cost and what they can save by volume selling and by handling business in a certain way as distinguished from another way. So that question is considered, considered along with even the competition that it is necessary to meet, and oftentimes we don't meet competition fully. We lose business before we meet it fully, although I don't think costs have any relation to competition at all under this statute, or at all, but the clear answer to your question is that, of course, it is considered, but it can't be considered in the detail of thousandths of a cent. That would be utterly prohibitive, to do the things that the government says we ought to have done here and it would put us out of business. It would put anybody out of business.

By Mr. Hanley:

Q. Mr. Boatwright, do you think from your knowledge of all of the operations of this company and, particularly, with refence to the operations in selling jobbers in

4562 Oklahoma and in selling jobbers in Detroit, that the Oklahoma study, Exhibit 33 and following pages is entirely comparable with the costs in the Detroit area, in the sense that the Oklahoma costs as portrayed in that exhibit are as great or greater than in the Detroit vicinity?

A. My testimony has repeatedly brought out that because our accounting practices are the same, the identical code of accounts used is the same, the only difference being that in our jobber operations in Oklahoma we have one man or two men at the time this study was made devoting their time entirely to selling, but they sell in the same manner that our other salesmen sell. They have the same general instructions that I know without any question that .25 cents per gallon is high for jobber operation costs in the Detroit area.

4563 Q. As a matter of fact, don't you know that many jobbers operate on a margin of petroleum brokers?

A. Petroleum brokers as a rule try to get a quarter of a cent, and with that quarter of a cent they defray their various and sundry expenses. Many a petroleum transaction is handled by petroleum brokers on an eighth of a cent, and I have heard of cases where they have even shaved that.

Mr. Austin: Your Honor, I ask to strike out all this matter relating to petroleum brokers on the grounds of irrelevancy and immateriality. We do not know what the expenses of petroleum brokers are. We do not know what their duties are, and how they function, whether their functions are in any way comparable to the functions of the Standard Oil Company. I think we have introduced an extraneous issue.

Trial Examiner Ballinger: I will hear from you, Judge.

Mr. Hanley: I think it is entirely competent, Your Honor, for this reason, that the Standard Oil Company in selling these jobbers and using the facilities of the office in Detroit to handle that business is really brokering carload lots to these jobbers. That is really all it amounts to. It is loaded at the refinery and then brokered right through to the—ultimately to the jobber. Of course, it stops in the terminal, but from there on, as it is picked up by the Detroit office, it is really a brokerage operation. Mr. Leadbetter picks up his phone and calls Raupaugh, "I want
4564 a carload or two carloads of gasoline." Raupaugh relays the call to the terminal, and ultimately there is a billing and a check comes in. And that is just all there is to it. That is all a broker does. We have brokers in Chicago who haven't anything but a telephone, Judge, and that is the only operation we have up there, really.

Trial Examiner Ballinger: Read the question.

(Question and answer read.)

Trial Examiner Ballinger: The objection is overruled.

Mr. Austin: Your Honor, that is going to necessitate my going into examination and possibly calling petroleum brokers and going at great length possibly to find out what these are. I won't say at great length, because I don't know, but I think it is quite obvious that a broker who takes an order and passes it along to a seller and collects a commission has no advertising expenses, has no delivery expenses. He does nothing more than what brokers generally do. He takes an order, passes it along, and brings the customer and seller together. That is the broker's business.

Now, that is certainly not the function of the Standard

Oil Company. The attempt here is to compare the Standard Oil Company's expenses, the marketing expenses of a seller, with the expenses of a broker bringing customers and sellers together, and it seems to me that those func-
4565 tions are entirely different, and unless the similarity of a broker to the Standard Oil Company is shown, why, the testimony has no bearing. Certainly from what I know about brokers, a broker and the Standard Oil Company are entirely two different sorts of people. One is a seller, the other is merely a middle man, and I can't see how the expenses of a broker can in any way be material, or how his functions can in any way be similar.

Trial Examiner Ballinger: The Examiner does not understand or appreciate the materiality of the question or the answer.

Mr. Hanley: Well, I do not want to complicate the thing. I just want to demonstrate fairly what this company really does.

Trial Examiner Ballinger: Well, they do more than act as a broker.

Mr. Hanley: Yes. They make the gasoline. Ultimately they make the gasoline, I appreciate that, Judge, but we are dealing here with a marketing cost and a marketing operation.

Trial Examiner Ballinger: Well, they do more than a brokerage business. A broker ordinarily receives and transmits an order.

Mr. Hanley: Well, I do not want any controversy about the thing. I am willing to concede Counsel's motion as to the brokerage feature.

4566 Trial Examiner Ballinger: Well, that portion of the question and answer pertaining to brokerage is stricken.

By Mr. Hanley:

Q: Now, Mr. Boatwright, from your knowledge of the situation relative to the marketing to the jobbers in Detroit and your knowledge of the petroleum business generally, would you personally be willing to assume all of the marketing obligations and expense assumed by the Standard Oil Company for a quarter of a cent a gallon in sales for Detroit jobbers?

Mr. Austin: I object to that question, Your Honor. It is irrelevant and immaterial, and I think it is also probably incompetent.

Trial Examiner Ballinger: Read the question, please.

(Question read.)

Trial Examiner Ballinger: The objection is sustained.

By Mr. Hanley:

Q. I will add to that question, Mr. Boatwright, if you would be willing to do what I had suggested in the former question, and meaning by that that you assume the credit risk, pay all of the bills, perform all of the marketing functions, keep the books, do the accounting, run your own office, just do everything and pay all of the expenses that are now assumed and paid by the Standard Oil Company for a quarter of a cent a gallon.

4567 A. I certainly would.

Mr. Austin: The same objection, Your Honor.

Trial Examiner Ballinger: Is that question subject to the same objection?

Mr. Austin: Well, he is asking the witness if he would be willing to do certain things for a certain amount of money.

The Witness: My answer is certainly "Yes."

Trial Examiner Ballinger: The objection is overruled.

By Mr. Hanley:

Q. Do you think, Mr. Boatwright, candidly and honestly, based on your knowledge and experience, that it costs the Standard Oil Company a quarter of a cent a gallon to market gasoline to these jobbers in Detroit?

A. I do not.

Q. Now, you have said that there is a considerably higher volume sold these jobbers in Detroit yearly than was sold the Oklahoma jobbers, the volume being approximately three times as high in Detroit.

A. Yes, sir.

Q. Is there any question at all in your mind, having in mind your knowledge and basing your answer on your knowledge of the operations in both instances, that that higher volume in Detroit, your jobbers in Detroit,

4568 would reduce the cost incident to the greater number of jobbers and the lower volume in Oklahoma?

A. There is no question in my mind but what the unit cost of operation in Detroit would be substantially lower than the unit cost of complete operation in Oklahoma, where a greater number of jobbers existed doing a lesser volume.

Q. Now, give consideration, please, to another element of difference.

In Detroit the jobbers are all within the city or immediate metropolitan area, as is the office of the Standard Oil Company.

A. That is correct.

Q. In Oklahoma you have testified that the jobbers were in Oklahoma and the supervising officers were in Wichita and in Kansas City.

A. Yes, sir.

Q. Furthermore, there was some distance between the jobbers, themselves, in Oklahoma, as I understand it.

A. Yes. The jobbers in Oklahoma are scattered fairly well throughout the central part of the State, extending not quite down to the southern border of the State of Oklahoma.

Q. Now, giving consideration to that fact, what effect, if any, would it have in raising the cost of marketing to jobbers in Oklahoma as contrasted with the marketing to the jobbers in Detroit?

4569 A. Well, giving consideration to the question of distance, alone, in terms of time, the cost of the supervisory staff incurred by traveling in Oklahoma would be higher than would a similar cost of contacting your accounts be in Detroit, where your accounts are all concentrated in the Detroit metropolitan area.

Q. Mr. Boatwright, will you please refer to your copy of Exhibit 33-A.

A. Yes, sir.

Q. Directing your attention first to Item (a) under Item 2, entitled "Accounting Cost," a tenth of a cent.

A. Yes, sir.

Q. With respect to that specific item, what is your judgment as to whether that cost is higher than the same item of cost would be in Detroit?

A. I am convinced that it is higher than a similar accounting cost would be in Detroit, primarily because of the differences in the unit of sale to the jobbers in Oklahoma and jobbers in the Detroit area.

Q. What have you to say as to the same question directed to Item (b), credit cost, three-hundredths of a cent?

A. The same answer would apply.

Q. During your testimony it was developed, Mr. Boatwright, that you had excluded from your computation of

4570 accounting and credit cost two of the bad debt jobbers because of the fact that they required special attention, going bad financially, something of that sort. Do you recall that?

A. I do.

Q. Do you think it was proper and reasonable and sound accounting to exclude them?

A. I do, definitely.

Q. Have you made a computation to determine what influence it would have had on the items (a) and (b), respectively, accounting cost and credit cost, had you not excluded them?

A. Yes.

Q. Will you tell us what that was?

A. Yes. The two companies excluded from the computation were the Gibson Oil Company and the Kramer Oil Company. Had the accounting cost incident to those two accounts and their volume been included in the computation, the cost of accounting would have been reduced from .10 to .078.

On the other hand, credit cost would have been changed upward from .03 to .058.

Adding the accounting and the credit cost as reported in Respondent's Exhibit 33-A, it would amount, as calculated, to thirteen-hundredths of a cent. The accounting and credit cost including these two accounts which were eliminated would amount to .136, or a difference of six-thousands of a cent.

4571 Mr. Hanley: Again, if Your Honor please, this evidence is offered, not because we think there should be any modification of the Exhibit 33-A; we feel that 33-A is sound as it was calculated, and we stand on it. We offer the testimony and this calculation for the reason that there has been criticism of the method employed in excluding the two bad debt jobbers, and this evidence is merely offered for the information of the Commission, to show that the influence of the method employed or suggested by the Government would have the trivial effect of six-thousands of a cent.

By Mr. Hanley:

Q. Directing your attention, Mr. Boatwright, to item (e) on 33-A, "Supervision and Selling Cost of six-hundredths of a cent," going into that item, as I understood your testimony, were the expenses of two salesmen who were exclusively employed in servicing the jobbers in Oklahoma; is that correct?

A. Yes. Under the item of six-hundredths of a cent is limited to that portion of their time devoted to refined oils and gasoline.

Q. Yes, I understand.

A. Yes.

Q. Since that time has there been any change in the method of selling in Oklahoma?

A. Well, the object of the study as originally assigned was to ascertain whether economies of operation were available. One of the results of the study was that all of
4572 the jobbers in Oklahoma were placed under one field
manager, first, to reduce our supervision cost; secondly, we have since the study was made handled this entire group of jobbers with equally good success in terms of sales volume with one salesman, which approximately reduces that under current-day conditions, provided a second study could be made, to something slightly in excess of one-half of the six-hundredths. That action has been completed. We are now operating with one salesman.

Q. Are your personally familiar with the fact of whether or not gasoline salesmen call on the jobbers in Detroit?

A. Well, I understand that they do certain work in connection with the agreements.

Q. Now, I am not sure whether it is in Mr. Raupaugh's testimony or that of the jobbers, or both, but assuming that there is testimony to the effect that gasoline salesmen do not call on these jobbers for the purposes of selling gasoline and perform no services in that direction, assuming that to be a fact what have you to say as to whether or not that would tend to make the cost of selling lower or higher in Detroit than in Oklahoma, either at the time you made this study or since the staff was reduced to one salesman in Oklahoma?

A. Well, it should tend to reduce your selling cost to the Detroit jobbers below that currently incurred in Oklahoma, because your selling function would then be
4573 limited largely to the proportion of the costs I have
referred to as supervisory costs in the Oklahoma analysis. It would be lower than even current operations in Oklahoma.

Q. Now, assuming again, Mr. Boatwright, that even if a salesman, or salesmen, called on the Detroit jobbers in connection with gasoline matters, and giving consideration to the differences in distance from the headquarters of the respective salesmen in Detroit and in Oklahoma, what would be your judgment as to whether the cost in Detroit would be greater or less than the cost in Oklahoma?

A. Well, distances mean greater operating and maintenance cost on your vehicle which a salesman drives. It means more expense accounts for the salesman's meals and his lodgings. Therefore, the very existence of greater distances in Oklahoma would tend to increase the company's cost of doing business over what our costs are when they are incurred in a condensed metropolitan market.

Q. Now, with reference to items (b) and (c), which you have already discussed, and (d), general office expense, appearing on 33-A, what have you to say as to your judgment as to whether each of those items of cost is as great or greater in Oklahoma than it would be and is in Detroit?

A. Well, as each of these items have been discussed previous days, I have pointed out that I was convinced that each of these per-gallon cost figures were high for the 4574 application in the metropolitan market of Detroit. I do not think that there would be any difference as far as item (d), general office expense. I think that would probably apply just about as well to Detroit as it would in the case of Oklahoma jobbers, with the exception that you have a larger divisor, and you are already down to a hundredth of a cent, and in each case it would involve the getting clearance of price, perhaps telephone calls or telegraph, expenses of that nature, which, when divided by the larger volume, would naturally reduce your per-unit cost. But we are down to a very low cost now. The larger volume would likewise be an important factor in reducing the unit cost as far as credit, supervision, and selling expense is concerned.

Q. Referring you to item (e), advertising (point of sale) on 33-A, do you recall having been examined at length on that item, Mr. Boatwright, as to displays and signs of various service stations?

A. I do recall.

Q. From your experience and knowledge, do you know approximately what the average service station in the vicinity served by the Oklahoma jobbers does in the matter of oil gallonage?

A. It would be in the neighborhood of 50,000 gallons per year.

Q. And there was handling somewhere in the neighborhood of 4 million gallons, plus, a year by the jobbers, was there not?

4575 A. Yes.

Q. Well, assuming that they served average stations, that would involve serving how many stations?

A. Well, it would be approximately 80 stations.

Q. Now, assuming that it is just half that number, Mr. Boatwright:

A. Forty?

Q. Just assuming for the purposes of this question that it is just half that number, forty, the evidence shows in this case that the Detroit jobbers are serving approximately 105 or 106 service stations, and doing 14 million gallons of business, approximately.

Now, as to cost of point of sale advertising, what have you to say as to whether it would be less in Detroit per unit of cost, that is, per unit of gallon, than it would be in Oklahoma, giving consideration to the 4 million gallons in Oklahoma, and the 14 million gallons in Detroit.

A. And assuming 40 units in Oklahoma and 106 in Detroit?

Q. Just arbitrarily assume 40 units, just half of what you may reasonably assume, I take it.

A. That on the basis of your assumptions, your point of sale advertising cost in Detroit would be lower than it is in Oklahoma, because your through-put of each unit of operation would be greater in increasing your divisor for the point of sale cost incurred at that outlet.

4576 Q. Are you satisfied that item (e), advertising (point of sale), on Exhibit 33, indicates as great or greater a cost than the same item in Detroit?

A. Well, I am satisfied that the five-hundredths of a cent reported under item (e) is as great or greater than any advertising costs incurred incident to the jobber operations in Detroit.

Mr. Hanley: May we have this document marked for identification?

Trial Examiner Ballinger: The Reporter will mark the document Respondent's Exhibit 97, for identification.

(The document was marked for identification "Respondent's Exhibit 97," for identification.)

By Mr. Hanley:

Q. Mr. Boatwright, I hand you what has been marked Respondent's Exhibit 97, for identification, and ask you what it is.

A. Respondent's Exhibit 97, for identification, is a statement of the sales of the Standard Oil Company according to the classification of leased service stations. It shows the refined oils, tractor fuel, naphthas, and gasoline, motor oils, motor greases, total all products sold through this channel of distribution, on a current month and on a to-date basis. In addition, at the lower part of the exhibit there is a space indicating the transporation of leased station,
4577 segregated among company-owned, company-owned
on leased ground, the consolidation of those two, the P.O.S.S.L.'s formerly operated by the company and the P.O.S.S.L.'s acquired since company-operated outlets, and a total for the P.O.S.S.L. type outlets.

Mr. Austin: For what period is that, Mr. Boatwright?

The Witness: This is a blank form.

Mr. Austin: Oh, a blank form?

The Witness: Yes.

By Mr. Hanley:

Q. Is that such a form, Mr. Boatwright, as was used in preparing the calculation appearing in Item No. 1 on Exhibit 33-B?

A. That is the form which was used in preparing the calculation following the caption "Leased Service Station, Tank Wagon Gallons, Excluding Motor Oil and Grease Gallonage, Form 439."

Mr. Hanley: If Your Honor please, this is one of the documents which was requested by the Government some days ago, and we now produce it and offer it in evidence.

Trial Examiner Ballinger: It is merely a form, is it?

Mr. Hanley: Yes, sir.

The Witness: That is right.

Trial Examiner Ballinger: Any objection?

4578 Mr. Austin: I would just like to ask who fills
out this form and for what period is it filled out?

The Witness: In the explanation of the form I stated it was filled out both monthly and to date. It is filled out and prepared entirely by the accounting department.

Mr. Austin: What do you mean by "monthly and to date"? I understand "monthly" but I do not understand the "to date."

The Witness: Well, you will notice the segregation in the form. Here is your current month (indicating). Here is the current year (indicating). As we move through the year, we add and carry the accumulative to date accomplishment through this channel. So when the report is received we have the year in total on the lower half of the sheet.

Mr. Austin: It is a monthly and annual form?

The Witness: Monthly and annual form, but as we move through the year we carry it on a to date basis for each of the months.

Mr. Austin: No objection.

Trial Examiner Ballinger: Without objection, Respondent's Exhibit 97, for identification, is admitted in evidence.

(The document heretofore marked for identification
4579 "RESPONDENT'S EXHIBIT NO. 97," was received in evidence.

By Mr. Hanley:

Q. Will you look at your copy of Exhibit 33-D, Mr. Boatwright.

A. Yes, sir.

Q. You observe that the bottom of the page, the calculation showing percentages of time having to do with the Kansas City and Wichita offices, supervision and selling cost of gasoline and refined oils?

A. I do.

Q. Do you recall having been asked a number of questions on cross-examination as to why there should be a variation in time as between motor oils and gasoline sales effort on the part of salesmen who are dealing with both?

A. I do recall that series of questions.

Q. State the fact as to whether or not there is a great variation in various places and at various times as between the effort expended by a salesman and different salesmen between motor oils and greases, on the one hand, and refined oils and gasoline, on the other hand, and explain the reason for it if such be the fact.

A. Well, let me say first that there is a wide difference of the proportion of time that different salesmen devote to given products. I think you will recall my testimony a few days ago when I pointed out that certain sales-
4580 men like to sell certain products, and do sell them, and devote an unusual amount of time to that product. It is not what we wish them to do, but it is a human tendency. Therefore, there is a difference in that respect. There is likewise a difference in the ratio of time devoted to selling a product at different periods of the year. As

a rule, a salesman will devote his time to a heavier grade of motor oil in the forepart of the year than subsequently.

Then there is the difference in the proportion of time devoted by salesmen to motor oil among our various sales fields. A salesman's efforts may in part reflect the management's emphasis, and again may in part reflect the management's emphasis as that manager reflects the general office emphasis; so we have variations among fields.

And then we have variations within a field at the same time among a group of men.

Further, you will recall that in connection with the Wichita estimate I pointed out the condition which existed in motor oil distribution in that area, where it is handled through a warehousing arrangement, the warehouse being run by a former salesman of the Standard Oil Company. The Wichita management just doesn't have to worry as much about servicing jobbers with motor oil as does the Kansas City management.

Q. Just to give us an example, what usually happens in our company if the reports from some given field
4581 show motor oil sales falling off badly, for instance?

A. There is an immediate follow-up to see what has happened to our motor oil sales in that community.

Q. And usually what reflection, if any, is there in the ratio of time the salesmen use in connection with motor oil as compared with gasoline?

A. Salesmen spend their time selling motor oil.

Q. Now, that sort of thing is going on all the time, isn't it, Mr. Boatwright?

A. Yes, it is. Yes.

Mr. Hanley: May I have this document, one sheet, Your Honor, marked for identification?

Trial Examiner Ballinger: The Reporter will mark the document "Respondent's Exhibit 98," for identification.

(The document was marked for identification "Respondent's Exhibit 98.")

By Mr. Hanley:

Q. Mr. Boatwright, in your preparation of Exhibit 33 A, you have indicated under item (e) tank wagon reseller marketing cost, for the year 1940, 1.72 cents, and for the year 1939 1.81 cents. Do you find that?

A. I do.

Q. Is there included in that item of cost newspaper advertising and billboard advertising and possibly radio advertising?

4582 A. Yes, those three forms of advertising are included to the extent that they are allocated to the tank wagon reseller sales for the respective years as a cost of doing business through the tank wagon reseller channel.

Q. Now, have you prepared a calculation which excludes for each of the years 1939 and 1940 the items of newspaper, billboard, and radio advertising as a part of the cost of tank wagon reseller channel?

A. I did.

Q. I show you Exhibit 98, for identification, and will ask you if that is the calculation which you referred to.

A. It is.

Q. Do you regard the deduction of the items of advertising referred to from the tank wagon reseller marketing cost, as appears on Exhibit 33-A, as a proper and sound accounting practice to determine the differential between selling tank wagon reseller channel and through the jobber outlet in Detroit?

A. I regard the procedure followed in preparing 33-A as being the proper procedure.

Q. Are your reasons for that the same as the reasons which you have assigned in Exhibits 96-A, B, C, and D?

A. They are.

Mr. Hanley: We offer the exhibit in evidence, Your Honor.

4583 Trial Examiner Ballinger: Mr. Boatwright, you personally made these computations?

The Witness: I did, sir.

Trial Examiner Ballinger: Any objection?

Mr. Austin: I have no objection, Your Honor, subject to check as to the accuracy of the figures, which I have not had an opportunity to do.

Trial Examiner Ballinger: Subject to check by Counsel for the Commission, Respondent's Exhibit 98, for identification, is admitted in evidence.

(The document heretofore marked for identification "RESPONDENT'S EXHIBIT NO. 98," was received in evidence.)

Mr. Hanley: If Your Honor please, I wish that there may apply to the offer of this exhibit the statement similar to that which Respondent made in connection with the offer of Exhibit 96-A, namely, that we do not offer this exhibit as a modification of 33-A, but we stand upon Exhibit 33-A and assert that to be the proper and the accurate computation of the cost differential. We offer this exhibit merely for the purpose of informing the Commission as to what the defect would be if the advertising which has been criticized by counsel in the cross-examination were eliminated from the calculation.

By Mr. Hanley:

4584 Q. Mr. Boatwright, during your cross-examination you were requested to obtain certain information in connection with what is known as E.L.A. expense, or equipment loan agreement cost expense, and it was agreed on your behalf that you would be prepared to give some explanation, at least amplify the one you did give, at this time. Would you please tell us what that is, and what is done with it?

A. Well, upon cross-examination I was asked relative to the depreciation account of E.L.A. expense entered into the tank wagon reseller channel. I requested the privilege of ascertaining how that was determined before testifying in final form on that matter.

Let me say first that the amount of the capital investment represented by this class of dispensing equipment is not carried on our books by channel or by the kind of equipment. It is a classification of equipment for all channels. Now, because no differentiation is made between channels, or type of equipment, the account of depreciation is figured first on this general class of investment. After the depreciation costs have been determined it is then allocated among the channels on an all-gallonage basis, excluding direct shipments. For this reason the four thousand plus dollars, which was the depreciation amount shown in the tank wagon reseller channel for the Detroit field, was not a direct charge to the reseller channel, but 4585 was rather an allocated amount.

Our purpose in expanding the depreciation figure was to arrive at a total E.L.A. investment cost for the reseller channel only, so that an application of the tax rate in Detroit to this amount would determine the proportion of the taxes incident to the ownership of this class of property.

Mr. Austin: Judge Hanley, do you mind if I ask a question on that point?

Mr. Hanley: Go ahead.

Trial Examiner Ballinger: Proceed.

Mr. Austin: Was not the tank wagon reseller channel expense of dispensing equipment loan opposite account 070 on Form 189 very much larger for 1940 than for 1937 for the Detroit field?

The Witness: The yearly expense as shown opposite account 070 was smaller in 1940 than in 1937.

Mr. Austin: The figure of $4,305 on Respondent's Exhibit 31-N I believe is the depreciation figure and not the E.L.A. expense figure.

The Witness: Then you are referring to the account 111, are you not?

Mr. Austin: In other words, is the figure $4,305.66 on Respondent's Exhibit 31-N taken from account 111 or from account 070?

The Witness: That is taken from account 111.

4586 Mr. Austin: That is all.

The Witness: And, again, the depreciation amount in 1940 is less than the depreciation amount in 1937.

By Mr. Hanley:

Q. A few more general questions on purely accounting features here, Mr. Boatwright. I would like now to advert to an instance appearing on page 3855 and 3856 of the record, where Counsellor Austin seems to have taken off his hat and turned Accountant Austin and testified to some extent.

Have you read this record which has to do with the extension of time for making truck deliveries?

A. I have, yes.

Q. Let me call—

Mr. Austin: What is that in connection with, Judge?

Mr. Hanley: A calculation which you made and put in the record in connection with the extension of truck-hours by an hourly labor rate, I think.

Mr. Austin: Well, I simply asked the witness what would happen if certain figures were multiplied and divided and whether that would give a certain result. I do not believe I gave or attempted to give any opinion evidence of any kind.

Mr. Hanley: Well, assuming that your addition and multiplication and division is correct, I want now to demonstrate that it does not make any sense, anyhow.

4587 By Mr. Hanley:

Q. If you will look at 31-C, please, Mr. Boatwright, and your attention is invited to the calculation at the bottom of that page, which indicates a unit item of salaries to drivers of .114 cents. Do you find that?

A. Yes, sir.

Q. And also to Exhibit 31-E, and particularly the last line thereof, total hours, and then a series of figures following that. Do you find that?

A. I do.

Q. So this may be understood on the record, I will read the statement made by Mr. Austin:

"During the recess, Your Honor, I have made the computation which has been referred to in the previous questions and answers, for the purpose of determining the driver's salary cost per gallon for gasoline deliveries by truck 34270 and 29525 for 1940, and computed in the method which has been stated the average driver's salary cost per gallon for those two trucks as .096 cents. Referring to Respondent's Exhibit 31-C, the driver's salary cost per gallon, which is used there for the average for the Detroit area, is given as .114 cents. There is a difference, therefore, of .018 cents, the resulting difference as between the two methods of computation."

Then it was determined that there should be a tax added, which Mr. Austin conceded, and that raised the computation that he made to .099 cents, with the resulting 4588 difference of .015 cents between the two different methods of computation.

Trial Examiner Ballinger: Did you mean that Mr. Austin conceded or that Mr. Boatwright conceded?

Mr. Hanley: No. I am reading the record. Mr. Boatwright asked if the tax of 3 percent had been included by Mr. Austin, and Mr. Austin said, "No, I did not. Thank you, Mr. Boatwright."

And I inquired, "May I inquire of counsel as to how to figure the tax?"

Mr. Austin said, "Yes. It is the same as on Respondent's Exhibit 31. The tax there is given as .003 cents, and I will use the same figure in the computation I have just made. In other words, that is the nearest thousandth of a cent in both cases, so that the total will be instead of .096, Your Honor, .099, and the resulting difference would be .015 cents between the two different methods of computation."

By Mr. Hanley:

Q. Now, Mr. Boatwright, you have that in mind?

A. I do.

Q. If you have it in mind, I wish you would please tell us why you think your computation of .114 cents per gallon is correct as contrasted with Mr. Austin's calculation of .099 cents per gallon.

A. Well, our calculation is, as I have explained, 4589 merely a recapitulation of the time of gasoline trucks used out of te Scotten Avenue, Lycaste, and North Detroit plants for delivering gasoline only against the time for which those trucks were used for gasoline only. It represents the sum total of the trucks that were used for gasoline only during the time analyzed.

Now, we have some 600-gallon trucks, we have some 900-gallon capacity trucks, some in the neghborhood of ten or eleven, and some in the neighborhood of fifteen and slightly over fifteen, 1,523, or something like that neighborhood. Therefore, with some of the smaller retail outlets served by smaller trucks to cut down our heavy equipment cost in moving a large unit to take care of those accounts, we will have a slightly higher per-gallon labor cost of delivery. That is one reason.

The second reason is that these two trucks, as you will notice, operated a total of 4,254 hours during the year. That is an average of better than 40 hours per week per truck or practically constant operating efficiency. That just is not maintained on an entire fleet of trucks. But we will find instead where trucks must be in the warehouse for emergency calls, and when the emergency calls come in they must be utilized to make those deliveries.

Therefore, I feel that the calculation of the actual experience of the company, which is purely a recapitu- 4590 lation of the actual gallons and the actual time for all of the trucks delivering gasoline out of these three plants, represents the best and in fact the only real standard that we can compare that.

Q. Is it not a fact, Mr. Boatwright, that the time calculation on 31-C is a picture of the general truck delivery situation?

A. Oh, it is definitely a picture of our general operation because it recapitulates the gasoline deliveries and the time for gasoline deliveries of all the trucks when they were used exclusively for gasoline.

Q. Whereas, is it not true that on 31-E you were dealing with two particular trucks which you have described in your explanation of the entire Exhibit 31?

A. Yes, Exhibit 31-E, we were dealing with two trucks which were representative of the type of trucks used in serving such an account as Ned's Auto Supply.

Q. So if Mr. Austin's calculation were adopted, would it not have the effect of applying to the entire reseller channel delivery expense, the result of the calculation based upon non-representative truck units?

A. Well, it would be non-representative for delivery to the rank and file of all outlets. These two truck units are simply representative of cost incident to the delivery to an account of the size of Ned's Auto Supply or other 4591 large reseller accounts.

Q. I understand that, Mr. Boatwright, but you are endeavoring to contrast Ned's operation with the rank and file?

A. That is correct.

Q. That is exactly what you were trying to do?

A. And for that purpose the over-all actual cost of the company for serving our tank wagon reseller accounts out of these three plants is a truly representative figure.

Q. And Mr. Austin's calculation, as I understand you, would then fail in that objective?

A. I think it does.

Q. While I am on that subject, Mr. Boatwright, and referring now to page 3855 of the record—

Mr. Austin: If Your Honor please, I would just like to make at this point a brief statement in response to the statements made by counsel, that I was attempting to be an accountant and that I had offered some statement. I offered no statement as being any better or more accurate than M. Boatwright's statement. I think there should appear in connection with the testimony that has just been given.

The question I asked Mr. Boatwright was one regarding inconsistencies in his method of computation of two different exhibits wherein he used one method in one case and another method in another case, and I merely asked him whether the method of computation I suggested, 4592 if used on Exhibit 31-C, would not have been equally as accurate and would have been, in fact, exactly similar to the method which Mr. Boatwright, himself, used on Exhibit No. 31-F, and his answer was in the affirmative, and I was not proposing a more accurate method but merely showing an inconsistency between two different methods in this same group of computations.

Mr. Hanley: I am just going to go into that affirmative answer now, Mr. Austin:

I may say there isn't anything ill-natured about your being an accountant, if you want to be.

By Mr. Hanley:

Q. Referring to page 3855, I will have to read you a couple of questions. You were asked this question:

"Suppose we multiply the total hour figure, which is 4,254, by 95.2 cents, and divide the product by 4,228,839. Would the resulting figure be the average driver's salary cost per gallon for these two trucks for 1940?

"A. Yes, on an over-all basis, it would be.

"Q. Wouldn't that method of computation of average driver's salary cost per gallon for delivery of gasoline to Detroit tank wagon resellers be just as accurate as the method of computation used for the equipment cost at the bottom of Exhibit 31-F?

"A. Yes, it would."

Do you care to make any modification or correction 4593 in that last answer "Yes, it would"?

A. Yes, I feel that that should be modified. I see now that my interpretation of the question was too narrow in response to the first question. The question was limited to the two trucks. The answer to that first question was correct. In answer to the second question, apparently I carried over the interpretation still to the two trucks, whereas actually I see an intent now which was broader than my answer should be, and the answer should be that it is not as representative of the labor cost for delivery to the rank and file of reseller outlets in the Detroit area.

Trial Examiner Ballinger: Do you care to offer any explanation?

The Witness: Well, the explanation appears in the record, Your Honor, just preceding the reading of the questions on the part of Judge Hanley.

By Mr. Hanley:

Q. You mean by that that the explanation you gave as to the fallacy that you think exists in Mr. Austin's computation is your reason for desiring to amplify your present answer?

A. That is correct.

Trial Examiner Ballinger: Where does that appear in the record?

Mr. Hanley: Just immediately preceding.

Trial Examiner Ballinger: Have you put the
4594 record page in?

Mr. Hanley: No. It is in this record, just a discussion about the computation.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Hanley:

Q. Mr. Boatwright, directing your attention to Exhibit 31-F and asking you to have in mind the answer to which you have modified on page 3855 of the record, will you please tell us, first, if you used the two trucks with which you were dealing in the Exhibit 31 series to determine an over-all equipment cost for the reseller channel?

A. I did.

Q. Will you explain what reason you may have for using those two trucks as an over-all equipment cost figure or to arrive at an over-all equipment cost figure, whereas you think it an improper procedure to use the two trucks to arrive at a driver cost per gallon over-all or relative to the entire reseller channel?

A. Yes. In preparing the calculations in Respondent's Exhibits 31-E and 31-F, it was necessary that we use trucks which were used for the delivery of gasoline only throughout the entire year. The difficulty we were confronted with was that most of our trucks are used
4595 for delivery of gasolines during the summer period,
and as we come into the fall and winter period they are diverted gradually, one after another, to the servicing of fuel oil accounts. To transfer a gasoline truck to a fuel oil truck requires cleaning and expense to the company. Likewise, the equipment cost of delivery of fuel oil differs from the equipment cost of delivery to the tank wagon reseller account. Therefore, it became necessary in our very processes of calculation of the equipment cost of serving tank wagon reseller, that we limit ourselves to the trucks that were used only for that purpose the year around, which is what we have done in the adoption of these two trucks for the equipment cost comparison.

Trial Examiner Ballinger: Take a recess for three or four minutes.

(There was a short recess taken.)

Trial Examiner Ballinger: Come to order.

By Mr. Hanley:

Q. Mr. Boatwright, I don't think I asked you this:—I may have—as to what would have been the effect had you included Dearborn commission delivery costs along with the drivers' salaries, which you did use in computing the costs set up in Exhibit 31-A and the following pages.

A. Well, it would have tended to increase the cost of serving our regular reseller outlets above the costs actually used. The Dearborn commission costs above
4596 the tank wagon salary driver costs, and if we had included that in the average it would have tended to increase the differential that we show on Respondent's Exhibit 31-A.

Mr. Hanley: For the convenience of counsel, I might say that this clarification question is asked in connection with a statement by Mr. Austin on page 3779 of the record.

While we are correcting some of these items on the record, I would like to refer to page 3776 of the record in connection with a statement by myself which I know could be very easily misunderstood and misconstrued to mean that there was a channel of distribution set-up known as the jobber channel or the direct sales channel, which might be interpreted to mean a channel on the Form 189. I think the record is now entirely clear that there is no such independent channel on the 189.

By Mr. Hanley:

Q. Mr. Boatwright, I want to ask you a general question or two.

With the exception of the breaking out of Ned's Auto Supply Company from the reseller channel as was done in Exhibit 31-A and following pages, has there been any build-up or arbitrary computation employed at all in connection with the figures that have been supplied in this lawsuit on the part of the Respondent?

4597 A. No. In every case we have supplied our record as per books.

Q. And in connection with 31-A, that is, the segregation of Ned's from the balance of the reseller channel, I believe you have already said that that is tied directly to the books and records of the company as they existed?

A. Yes. The exception there was a build-up where it was necessary for us to use delivery tickets for 1940 because delivery tickets for the year 1937 no longer exist. With that exception I think that we went through item after item. We checked them and I pointed out every exception to the rule that they were taken direct from the books.

Q. Mr. Boatwright, have any figures at all been prepared or designed for use in this lawsuit except this analysis in 31-A and following pages?

A. No, except as representatives of the Commission have asked for breakdowns of the figures as per our books, to get the underlying expenses entering into particular classifications. Those are the only exceptions to your statement.

Q. Has there been any arbitrary set-up of figures in an effort to establish a cost differential which departed in any wise from the records and current accounts of the company?

A. No, sir.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

4598 Mr. Hanley: A request was made, Your Honor, by counsel for the Commission that we supply him with copies of transportation contracts had with contract haulers from River Rouge to points in Detroit for 1939 and 1940. The office, in response to our request, has supplied us with certain original contracts and riders, applying to 1939, being a contract entered into May 20, 1939, between the Standard Oil Company and the L. A. Smith Company, which is a common carrier, which contract is an original contract and executed on behalf of the Standard Oil Company by Allen Jackson, its vice-president, and by the L. A. Smith Company, by Geo. R. Wheeler, president, and a contract dated November 22, 1939, between the Standard Oil Company and the L. A. Smith Company, executed on behalf of the Standard Oil Company by Allen Jackson, its vice-president, and on behalf of the L. A. Smith Company by Geo. R. Wheeler, its president, to which contract is attached a rider entitled "Rider No. 2," executed by the two companies by their same respective officers, which is dated January 16, 1940, and covers shipments to Dearborn and points in Detroit indicated at Lantz Avenue, 7-Mile Road, Lycaste Avenue, Scotten Avenue, Stansbury-Intervale.

We produce these contracts and hand them to counsel in response to his request, but they being original contracts, Your Honor, and containing much matter that is not pertinent to the inquiry here, and just being originals
anyway, we would like the privilege of substituting
4599 copies after they have been examined by counsel.

Trial Examiner Ballinger: If counsel desires to use them, he may have them offered and the copies may be offered in evidence in lieu of the originals, subject to check.

Mr. Hanley: If Your Honor please, in connection with this proffer, in response to the request of counsel, and having for the first time had an opportunity to examine the contracts in question, I think that in fairness to the court, Commission, and to counsel, that I, at least, should make a statement, for the reason that I have constantly had it in mind from our people, no doubt, some of them, that the transportation rates as between River Rouge and all of the distribution points of the Standard Oil Company in Detroit and between River Rouge and the bulk storage of the four jobbers was identical: that is, that there was absolutely no difference in cost of transportation from River Rouge to any point in Detroit, and it is possible—I don't know that it is true—but having had it in mind that way, it is possible that some are in the record, in the discussions I may have made a statement to that effect. I know that we have on occasions debated the question of the propriety of giving any considerations to those rates at all, and just in the last few days that has come to the
forefront and, as far as I know, for the first time it
4600 came to the forefront, the first time I thought it
had any possibility of being an issue, I found as a matter of fact that that is not true.

As to two of our bulk stations in Detroit, the rate is, according to the contract, .123 cents per gallon. In respect to all other points of delivery of the companies in Detroit, and in respect to all of the four jobbers, bulk storage, in Detroit, the rate is identically the same, namely, .155 cents per gallon.

I think it is perhaps important to call this to the attention of the court for the reason that I have given; namely, that we have led the court to believe in some statements that we were asserting these to be equal rates throughout.

Trial Examiner Ballinger: Uniform?

Mr. Hanley: Uniform. And I just felt in necessary fairness to court and counsel that I should clarify that.

I understand from the comments of counsel for the Commission that he views it as material, that a difference in rate might have some relevancy on the question of cost in this litigation. We have taken the position that that is not true. We have not given consideration to any of these freight costs at all. Our Form 189 from which the chief figures in these cost exhibits were drawn, does not give any consideration to freight rates at all. Our position here has been that we rely entirely upon a cost 4601 justification as between what the cost is to us as a company to supply the reseller channel after gasoline arrives at our Boston plant as contrasted with what it costs to service the account of the jobber without reference to our cost in getting the gasoline to it. In other words, he gets his delivery f.o.b. Detroit and we get our delivery f.o.b. Detroit, and it is from there on out that we are contrasting the costs as between serving the jobbers and the reseller channel, and we are not relying on anything behind that. In other words, we are not seeking to justify on the basis of any difference in manufacturing costs or anything behind the market costs which is cut off in Detroit. We take the position, Your Honor, that there must be a cut-off some place, that is, there must be a base line, a starting point. We could go back to River Rouge and from there through the barges and to the refinery at Whiting, or elsewhere, and then go through the manufacturing process and back through the pipe line and clear down to the actual production of the crude oil out of the wells. All of that has an influence, but, of course, a thing of that kind gets so cumbersome as to be unwieldy and impossible of determination, and in our view this thing has to be kept sane. There has to be some starting point where everybody can start from scratch and work from there on out. We have chosen in this instance to start with the situation where the gasoline is in Detroit,

irrespective of what it cost up as gasoline in Detroit,
4602 but we are viewing this thing simply as a matter
of how much does it cost us to market that gasoline,
whether we are making a profit on it, whether we are
taking a loss on it, whether it costs a lot or a little, to
just own the gasoline in Detroit.

Trial Examiner Ballinger: Judge, I understand you pursue the same policy with reference to every other field.

Mr. Hanley: We are doing that, Judge, and we are doing it for the reason I have given, that we have to have this cut-off point and we are willing to rely and are relying on the marketing cost justification, not freight or transportation or manufacturing or any other cost justification. Certainly, it has a bearing and everybody knows that it is a general economic principle that volume aids in reducing cost, and it certainly has an influence on the economies that we are able to effect at River Rouge in the terminal that we have this additional volume. It makes a difference in the economies that we are able to effect in the use of tankers on the lakes. It at times make a difference in the operation of the refinery to our economical advantage.

But those are things that we have chosen not to go into at all, so we are going to take the position, if it be asserted by the Government, that we are entitled to rely on just such justification.

Trial Examiner Ballinger: The policy that you
4603 have outlined is a uniform policy of the company,
is it not?

Mr. Hanley: It is. It is. But in view—

Trial Examiner Ballinger: It does not apply merely to the Detroit field?

Mr. Hanley: Sir?

Trial Examiner Ballinger: It does not apply merely to the Detroit field?

4604 Mr. Hanley: Sir?

Trial Examiner Ballinger: It does not apply merely to the Detroit field?

Mr. Hanley: Oh, in this 189, for instance, it is developed in every field we have, every year, Judge, every one of them, right along, currently. We just took that as the basis of our starting point and figured the cost of distributing this gasoline through these different media from that point out, and we say that if we rely on that cost justification, that then everything behind that and the cost of the gasoline to us is out of the picture and immaterial. However, in view of the announcement of counsel and in view of what I thought may have been my own error on the record, it was certainly an error in my mind, because I firmly believed that these rates were uniform, I thought that it was proper that I should make this statement and that I should go even further, your Honor, and, at least, advise the court and counsel what the effect of this difference would be, on the theory advanced by counsel for the Commission with which we thoroughly disagree, as I have indicated, but we have the figures, and if he wants them he is entitled to have them, and we will be glad to give them to him and we can thrash out the question of the materiality.

We have got them right here, and I will just take about
three minutes to put them in, by Mr. Boatwright,
4605 subject, of course, to this statement which I have
made. I don't wish to be bound by these as offering
them on our case beyond the purpose indicated.

By Mr. Hanley:

Q. Mr. Boatwright, when you and I yesterday discovered that there were two of these bulk plants that were served in Detroit by truck hauler at a cost of .123 cents as opposed to the uniform rate for all other points, including the jobbers in Detroit, which was done in an effort to determine what effect, if any, that would have on the cost as indicated on 33-A by us at that time?

A. Well, we immediately wired Detroit and asked them to wire back the tank wagon reseller gallonage delivered out of each of the seven bulk plants in the Detroit metropolitan area. So that that gallonage could be associated with the cost per gallon according to the contract, so that a weighted average freight cost for serving the Detroit metropolitan area by truck transport could be calculated. Would you like me to read—

Q. Did you get the reseller gallonage from each of the plants?

A. I did.

Q. Will you please just read that into the record and the rate on each of the plants?

A. Clay Avenue, 9,911,056, cost per gallon .123
4606 cents. Bellview, 4,539,990; cost per gallon, .123.

Scotten, 11,258,274; cost per gallon, .155. North Detroit, 3,621,654; cost per gallon, .155. Lycaste, 5,211,822; cost per gallon, .155. Dearborn, 1,319,589; cost per gallon .155. Strathmoor, 3,671,813; cost per gallon, .155.

Q. And what is the rate to the plants of each of the four jobbers involved in this action?

A. All jobber accounts are served by truck transport at a flat rate of .155 cents per gallon.

Q. Mr. Boatwright, did you undertake to make the weighted average cost per gallon of supplying all of the bulk plants of the companies named above?

A. Yes, I did. The weighted average cost per gallon to the Standard Oil Company of serving the seven named bulk plants in the Detroit metropolitan area was .147.

Q. Assuming, Mr. Boatwright, that the difference in cost of .155 to the jobber accounts and .147 weighted average cost to all of the bulk plants of the respondent were to be regarded as a cost, what would be the effect on the tank wagon reseller marketing cost as indicated on 33-A? How much, if any, would it reduce it or increase it?

A. Do you mean the tank wagon reseller marketing cost or do you mean the comparison of the tank wagon versus the jobber marketing cost?

4607 Q. Well, I think I stand corrected, because the
figure here on 33-A is necessarily from form 189, which does not give consideration to freight.

A. Yes.

Q. So it would be, I take it, Mr. Boatwright, a difference in cost of doing business on the part of the Standard Oil, on the one hand, with resellers, and the costs of the jobbers, on the other?

A. Well, will this answer the question you have in mind? If transportation to our bulk plants and transportation costs to jobber bulk plants had been included in our calculations, preparing Respondent's Exhibit 33-A and subsequent pages, the differential as shown on Respondent's Exhibit 33-A would have been reduced by .008 of a cent.

Is that a complete answer?

Q. I think that is clear. Now, to fully clarify it, the figure following differential cost for the year 1940 on 33-A is presently 1.47?

A. Yes.

Q. If this freight differential had been given the consideration to which you have referred, that figure would be reduced to 1.462?

A. Yes, sir.

Q. And the same in relation to 1939?

A. Yes, sir.

4608 Mr. Hanley: At this time, your Honor, and in response to a request made some days ago by counsel for the Commission, I herewith hand him a statement of types of reseller service station accounts, setting forth the company owned service stations leased out, 229, and service stations leased by Standard Oil Company and re-leased to individuals, 9; form 461 accounts, 192. Total: 430.

There was also made a request, your Honor, that we submit to the Commission the agreement between the company and truck drivers. Your Honor may recall that there was some discussion of that which brought about this .952. We are advised that since early in 1937 until recent date, wages paid to tank wagon drivers have been on the basis of $165 per month or 1,980 per year. Their work schedule calls for 40 hours per week or 2,080 hours per year. The hourly rate on this basis is $.952 per hour.

The Commission also requested that we supply data as to when each of the four jobbers began to be served by truck transport out of River Rouge. I now hand counsel a statement indicating that information as to each of the four jobbers.

Counsel also made a request that we supply information as to when each of the bulk plants of the company began receiving shipments by truck transport. I hand counsel a statement furnishing that information but with the 4609 qualification that I do not know whether any substantial part of the shipments received by said bulk plants were received by that method as early as the time they first began to receive some shipments.

Oh, I am informed now that that service station record is for the year 1937, your Honor. We have just found correspondence, so that may be indicated.

Mr. Austin: That is for 1937?

Mr. Hanley: For 1937.

Trial Examiner Ballinger: The several documents produced by counsel for respondent and tendered to counsel for the Commission, the substance of some of which has been read into the record, are not to be considered as evidence in the case until formally admitted.

Mr. Hanley: So far as I know, just one other request was made by counsel for the Commission; namely, for distribution of time as salesmen—method—class of products for the month of June, September and December, 1940, which statements are now supplied to counsel.

Mr. Austin: Your Honor, I offer in evidence Commission's Exhibit 83, for identification, which is a sheet marked "Schedule No. 4, distribution of time—salesmen for Detroit field, March, 1941."

Trial Examiner Ballinger: Commission's Exhibit 83, for identification, is admitted in evidence.

4610 Mr. Hanley: There is no objection to the offer or admission of the exhibit except that of materiality, it not appearing that the same has any bearing on any issue in the case.

(The document heretofore marked "COMMISSION'S EXHIBIT NO. 83," for identification, was received in evidence.)

Mr. Austin: I would like to have these papers marked, for identification.

Trial Examiner Ballinger: The reporter will mark them, for identification.

(The documents were thereupon marked "Commission's Exhibits 88, 89 and 90," for identification.)

Mr. Austin: I also offer in evidence Commission's Exhibits 88, 89, and 90, for identification, which are sheets similar to Commission's Exhibit 83, but being for the months of June, 1940, September, 1940, and December, 1940, respectively.

Mr. Hanley: The same objection.

Trial Examiner Ballinger: The objection is overruled and Commission's Exhibits 88, 89, and 90, for identification, are admitted in evidence.

(The documents heretofore marked "COMMISSION'S EXHIBITS 88, 89 and 90," for identification, were received in evidence.)

4611 Mr. Hanley: You may take the witness.

Mr. Austin: I move we adjourn, your Honor, until 10 o'clock tomorrow morning.

Trial Examiner Ballinger: Motion of counsel for the Commission granted, and now, at 5:15 p. m., the hearing is adjourned to be reconvened June 27, 1941, at the hour of 10 a. m. in a hearing room, Federal Trade Commission Building, Washington, D. C.

(Whereupon, at 5:15 p. m. the hearing was adjourned to Friday, June 27, 1941, at 10 a. m.)

4612

Room 332, Federal Trade
Commission Building,
Washington, D. C.,
Friday, June 27, 1941.

Met, pursuant to adjournment, at 10 a. m.

Before:

Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., appearing on behalf of the Federal Trade Commission.

Harold R. Hanley, Esq., (910 South Michigan Avenue, Chicago, Ill.) appearing on behalf of the Respondent.

4613

PROCEEDINGS.

Trial Examiner Ballinger: Come to order.

This is a reconvening in Docket 4389, in the matter of Standard Oil Company, at 10 o'clock a. m., June 27, 1941, in Room 332, Federal Trade Commission Building, Washington, D. C.

The last hearing was held in Washington, D. C., June 26, 1941.

The reporter will note counsel for the Commission and the respondent present.

You may proceed.

JOHN W. BOATWRIGHT resumed the stand and testified further as follows:

Mr. Hanley: If your Honor please, there is one correction question I would like to ask the witness, and there is one other question on cross examination I would like to ask before the witness is excused.

Trial Examiner Ballinger: You may do so.

Redirect Examination (Continued) by Mr. Hanley.

Q. Mr. Boatwright, on page 4580 of the transcript in the second paragraph, this sentence appears: "As a rule a salesman will devote his time to a heavier grade of motor oil in the forepart of the year than subsequently."

Is that as you wish to have the statement appear?

4614 A. No. The statement should be that in the forepart of the year the salesman will spend a greater proportion of his time on motor oil than in the subsequent part of the year.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Hanley:

Q. Now, Mr. Boatwright, you have testified at various times during the course of your examination that any costs incidental to the handling of direct shipments and to the jobber business in Detroit would be distributed through channels appearing on the form 189, Exhibit 32. You also testified in connection with certain accounts appearing on form 189, which testimony was given yesterday and which was originally given on your cross-examination beginning at page 4461 of the record, which items of expense were not allocated to the jobber business.

You have also testified that in your opinion and judgment and in instances within your knowledge that the costs for handling the jobber business in Detroit of a quarter of a cent a gallon were in your judgment high.

Mr. Boatwright, basing your answer on your knowledge of the business of the respondent company, the actual conditions in Oklahoma and in Detroit, and your knowledge of the records and accounts of the respondent company,
4615 please state whether or not in your judgment and opinion the overstatement of costs attributable to the jobber business in Detroit as set up in Exhibit 33-A, and following pages, completely offsets any of the distribution of costs incidental to the jobber business distributed through form 189, and in addition to any items of cost appearing in the reseller channel on 189 that were not directly allocated to the jobber business.

Mr. Austin: I object to that question, your Honor. In the first place, it is asking the witness his opinion on a point on which his opinion is immaterial and upon which it is admitted it has nothing to be based on, because as I understand, it is admitted that there has been no cost study made in Detroit.

Now, the witness has testified that he considers the costs in Oklahoma, if any, an overstatement of the costs in Detroit.

Now, he is asked to say whether or not the amount of that overstatement is more than the amount of something else which he also has not computed, and I think it is quite obvious that any such testimony is worthless, to the Commission, in tracing costs differences; and especially now since whether one overstatement is greater than something else which has not been computed, that is the statement upon which an opinion has no value whatever. It is 4616 simply a comparison of figures, and the figures are not in evidence.

Mr. Hanley: It is a summary question, your Honor. The witness has in effect answered throughout the record but I would like to sew it up in a summary question.

Trial Examiner Ballinger: It is the opinion of the Examiner that the question has been asked in its various forms and aspects by this witness.

The objection is overruled, and the witness may answer.

Mr. Austin: I would like to say on the record not in regard to your Honor's ruling, but I am distinctly of the opinion that no such question has been asked either in its component parts, one component part of the question has been asked, that is, the witness has been asked whether or not he considers the costs an overstatement of the costs in Detroit. I do not think there has ever been any objection to his answering that. I do not believe he has ever been asked to compare the am~~ount of an unk~~nown overstatement with any of the figures which he brought out yesterday because the computation, if such it can be called, which was made upon an assumption of certain figures in Detroit, first appeared in the record yesterday, and that I am sure has not been compared with this.

By Mr. Hanley:

Q. The court says you may answer, Mr. Boatwright.

4617 A. Well, in my judgment the overstatement of the unit cost of distribution through jobbers would be adequate to offset any influence of the jobber's cost in

Detroit that may be allocated to the tank wagon reseller channel on our form 189.

Mr. Hanley: You may take the witness.

Mr. Austin: I would like to have two or three minutes to try and find something in this record.

Trial Examiner Ballinger: Do you desire a recess for a few minutes?

Mr. Austin: I would like to have a short recess.

Trial Examiner Ballinger: A short recess will be taken.

(A short recess was taken.)

Trial Examiner Ballinger: Come to order.

You may proceed, Mr. Austin.

Mr. Austin: I would like to have the reporter mark a document for identification as Commission's Exhibit.

Trial Examiner Ballinger: The reporter will mark the document Commission's Exhibit No. 91 for identification.

(The document was thereupon marked "Commission's Exhibit No. 91," for identification.)

Recross Examination by Mr. Austin.

Q. Will you state whether you are familiar with that document, Mr. Boatwright, and state what it is.

4618 A. I am familiar with it.

This is a classification of types of reseller outlets served by the Standard Oil Company in the Detroit area in the year 1937, and by "Detroit area" here I am referring to the metropolitan market.

Q. Including what?

A. Detroit, Hamtramck, Highland Park and Dearborn.

Mr. Austin: I offer Commission's Exhibit No. 91 for identification in evidence.

Mr. Hanley: No objection.

Trial Examiner Ballinger: Commission's Exhibit No. 91 for identification is admitted in evidence.

(The document heretofore marked "COMMISSION'S EXHIBIT NO. 91," for identification, was received in evidence.)

Mr. Hanley: I would like to reserve the objection of materiality. I do not think it is immaterial.

By Mr. Austin:

Q. Mr. Boatwright, what changes, if any, have been incorporated in the Standard Oil Company's accounting form 189 since 1936?

A. Oh, that would be an extremely difficult question to answer from memory.

We have made comparatively few changes except as we have changed to provide a greater breakdown on some 4619 of the expense items.

Q. Have there been any new channel columns added or removed since 1936 when the Iowa plan went into effect?

A. Well, prior to the Iowa plan we maintained a column on company operated service stations. I think we maintained a separate column on that.

Q. I mean, since that was eliminated has there been any other change in channel, of channel distribution as shown on the form?

A. Yes, I think so. May I compare the 1937 and 1940 copies which I have, which will really indicate the difference.

Mr. Austin: I may say that the witness has already stated on the record that there were certain changes in breakdown regarding some of the items going into the leased service station column so that I do not believe it is necessary to repeat that.

Trial Examiner Ballinger: If you could have a comprehensive statement of all of it at one point in the record instead of scattered through the record it would be helpful.

The Witness: No. The channel distribution as indicated by the form 189 for the year 1937 is exactly the same as the channel distribution on the 1940 form 189.

By Mr. Austin:

Q. But do I understand that there have been cer-4620 tain changes in the breakdown of certain accounts?

A. There have been.

Trial Examiner Ballinger: Can you briefly state the changes?

The Witness: Yes. I think I can state most of the changes, your Honor, just by a comparison of the forms.

In the year 1937 account 060, plant maintenance, covered all classes of reseller outlets, while in the year 1940 this same account is broken down between four different types of reseller outlets which have been described in the testimony.

Account 066—I am sorry. May I have that answer read?

(Answer read.)

The Witness: That last account number should be changed, 088.

Account 088 being station operating tools and equipment in 1937 was carried on our form 189 for all classes of reseller outlets, while in the 1940 form this account is broken down according to the four classifications of outlets. Those are the two accounts which have been broken down to provide greater detail, and that account 530 entitled "Employee stock purchasing plan company 50 per cent deposited," has been eliminated from subsequent marketing expense statements with the discontinuation of the stock purchasing plan.

4621 Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

Proceed, Mr. Austin.

By Mr. Austin:

Q. Mr. Boatwright, did you state that the Standard Oil Company's marketing business was set up primarily to deal with tank wagon deliveries and the accounting end of the company was also set up on that basis primarily?

A. Yes.

Q. What was the total gallonage of petroleum products marketed by the Standard Oil Company in the Detroit area in 1940?

A. 152,958,667.9 gallons.

Q. And out of that total what proportion represented direct shipments?

A. Direct shipments represented 46,471,455.6 gallons which would be approximately 30 per cent.

Q. There are no tank wagon shipments or deliveries included in direct shipments, is there?

A. There is not.

Q. And yet do I understand that there is no separate column for accounting for direct shipments on form 189?

A. There is no separate column for direct shipment.

Q. And is form 189 designed to show the market-

4622 ing costs in connection with direct shipments as compared to costs of any other channels or other methods of delivery?

A. It ~~is not~~ so designed.

Q. Did you not state that no computation had been made of the costs of distribution of petroleum products to jobbers or other direct shipment customers in the Detroit area because those costs were infinitesimal or because you "could not find them"?

A. I did.

Q. It is true, is it not, that the company in 1939 had a total volume of tank car sales of 190,845,750 gallons?

A. Yes, sir.

Q. Now, on form 189, Respondent's Exhibit 32, I will direct your attention to certain accounts numbered from 250 to 295. I may say that that does not mean that all of the intervening numbers are included, but there are eight accounts containing numbers within that range on form 189.

Trial Examiner Ballinger: Would it not be well to state the numbers if you have them?

Mr. Austin: Well, they run consecutively on the form, your Honor, from 250 to 295. I would be glad to state the individual numbers and the titles of them, if you wish, but I was going to ask the witness a general question.

Trial Examiner Ballinger: Well, if it is directed to those eight numbers, would it not be well to advise
4623 the witness so he may take a look at them?
You are familiar with them?

The Witness: Yes. I have them right here, sir.

Trial Examiner Ballinger: Then proceed.

Mr. Hanley: Where do you start?

Mr. Austin: The account numbers are 250, 255, 260, 265, 270, 280, 290 and 295.

By Mr. Austin:

Q. What is the nature of the expenses going into those accounts in a general way, Mr. Boatwright?

A. Those are all general office expenses.

Q. Are those expenses what might be termed expenses of a general or overhead nature?

A. Yes.

Q. Was part of the total expense of the nature indicated by those accounts charged by the company to production and manufacturing?

A. Well, not of the amounts shown on form 189. On the original total it is allocated between the manufacturing department and the marketing department. These quantities shown on form 189 being that portion assigned to the marketing department.

Q. Now, do you know approximately only what portion of those total expenses were, total general office expenses, are assigned to production and manufacturing as dis-
4624 tinguished from marketing?

A. Yes, that is in the testimony as being approximately 50 per cent.

Q. And would you say that the portion of those general office expenses allocated to the manufacture and production of the 190,000,000 gallons of gasoline sold through direct shipment would be infinitesimal?

Mr. Hanley: Before you answer—Mr. Reporter, will you read that question, please?

(Question read.)

Mr. Hanley: That is objected to, if your Honor please, as immaterial and as having no bearing at all on the issues in this case, there being no issue raised as to the cost of manufacturing and no issue raised in fact as to the cost of anything other than a marketing cost.

Trial Examiner Ballinger: Would you read the question, please?

(Question read.)

Mr. Hanley: How could that be material, your Honor? We are not in manufacturing costs at all. If the government keeps insisting on it we may get into it.

Trial Examiner Ballinger: I will hear from counsel for the Commission.

Mr. Austin: If your Honor please, I just brought out that the witness has stated that he could not find the
4625 direct shipment costs in the Detroit area, and that they were infinitesimal although the direct shipment gallonage constituted about 30 per cent of the total gallonage in that area.

Now, I think that if the costs of a large portion of gasoline represented by those shipments could be determined for production and manufacture, it could also be determined for marketing, and I am just trying to find out whether or not the same treatment was made of that business, or that portion of the business as to manufacturing production that was made here in connection with marketing costs.

Mr. Hanley: Judge, that statement contains a fallacy of fact. The statement of counsel assumes that there could have been and was an allocation of manufacturing expense to the particular gasoline that went into direct shipment, and there wasn't anything of the kind. There has been no testimony of that kind, and it does not follow at all that there would be any relationship in manufacturing costs as between a gallon of gasoline that went into the reseller channel and a gallon of gasoline that went into the direct shipment channel from the standpoint of marketing. We are talking about marketing costs.

Trial Examiner Ballinger: Well, there was an allocation, was there not, of the overhead costs between manufacturing and marketing?

Mr. Hanley: Yes, sir, that is true. But it does 4626 not follow, your Honor, that the gasoline as manufactured and the cost of manufacturing is segregated between that gasoline which goes into a reseller channel and that gasoline which may be sold by direct shipment. It costs a certain amount of money to run a refinery and to make gasoline.

Then you have got your gasoline, then it becomes the problem of the refinery to dispose of it, and from there on out he has got a transportation cost and a marketing cost. Now, we say that it costs much less to market the gasoline through this direct shipment method of distribution than it does through the tank wagon or reseller channel method of distribution, and there is absolutely no relation between the method of distribution and marketing and the cost of manufacturing, absolutely none.

Trial Examiner Ballinger: But there is a segregation here of the overhead costs between manufacture and sale.

Mr. Hanley: Well, there has to be, to be a segregation of overhead cost between the marketing department and its functions and the manufacturing department and its functions because the supervising force, the executive force and the general office force operate both for manufacturing and marketing.

Trial Examiner Ballinger: Isn't that the information that is elicited by this question?

Mr. Hanley: No, sir, it is not.

4627 Mr. Austin: I do not intend to—

Mr. Hanley: What counsel here has stated is a question to the witness, if you say it is an infinitesimal marketing that it is an infinitesimal cost to manufacture the gasoline cost to market through direct shipments, can you also say that you sold through a direct marketing distribution, and I say, your Honor, it is just so plain on its face it is its own answer, that there is not any relation between the two at all.

Mr. Austin: I do not intend to go into the amount of every production or manufacturing cost, your Honor.

Trial Examiner Ballinger: The objection is overruled, subject to renewal at a later date.

The Witness: Now, may I have the question, please?

(Question read.)

A. Well, I must state first, that my knowledge of the practices of the accounting function of the manufacturing department is that of only a general nature. I do not know how they allocate their costs.

I would state this, however, that irrespective of the manner in which they treat their allocation of costs I have testified as to the differences of work in the general office, in the sales promotional aspect of doing our tank wagon reseller as designated from the sales promotional
aspect incident to any direct shipment because direct
4628 shipment on bids, and we get the business or we do
not get the business. It may be a bid to the government, it may be a bid to the city of Detroit; it may be a bid to some other large purchaser. There is no sales promotional department that exercises any great amount of true sales promotion. They do not buy on sales promotion. They buy on price.

By Mr. Austin:

Q. That is all a little aside from the question, isn't it, Mr. Boatwright?

A. I do not think so, because you have asked me a question which I have first testified that I could not answer, to the manufacturing department's method of allocating cost; secondly, irrespective of the manner in which they do allocate it, it would not be a guiding or ruling function as far as the marketing department is concerned.

Q. Well, my question was directed only to general office expenses.

A. I understand; but the general office expenses incident to tank wagon operation in the marketing department are far greater and far different than general administrative costs incident to direct shipment in the marketing department.

Q. Do you know whether your company or the departments thereof concerned with manufacturing and the production costs compute each year the cost per gallon of manufacturing or the cost per gallon of production on gasoline sold by the company?

4629 Mr. Hanley: Now, if your Honor please, that is objected to as immaterial and outside the issues of this case, and outside the bounds of any testimony that this witness has given on direct examination.

We are now not only manufacturing but we are into production. Are we going to try to market these direct shipments while they are still crude oil?

Mr. Austin: Well, I will eliminate the production part; manufacturing is entirely, manufacturing is enough if that is what you mean by refining.

Mr. Hanley: Well, will you reframe your question so we will know what the question is now?

Mr. Austin: I do not know whether those are both sold separately or handled as one thing, production and manufacturing, in your accounting system.

Trial Examiner Ballinger: Read the question.

(Question read.)

Trial Examiner Ballinger: Is there an objection to that question?

Mr. Hanley: In the first place, it assumes a fact not a fact, your Honor, the respondent company does not produce a pint of oil.

Trial Examiner Ballinger: The objection is sustained.

Mr. Austin: Will you read that question again? 4630 I would like to rephrase it. I did not know that it had anything in it about oil.

(Question read.)

Mr. Austin: There is nothing in there about oil.

Mr. Hanley: What do you mean by "production?" It was explained here the other day "production" referred to crude oil; manufacturing or refining referred to gasoline. Whenever you say "production," Mr. Austin, it just means to me crude oil, that is all. We may be misunderstanding.

Trial Examiner Ballinger: The objection is sustained. Do you desire to reframe your question?

Mr. Austin: Yes.

By Mr. Austin:

Q. Mr. Boatwright, do you know whether the company computes its annual cost per gallon or refining the gasoline which it sells in its entire territory?

Mr. Hanley: Now, will you read that question, please?
(Question read.)

Mr. Hanley: Well, that is objected to as immaterial. It goes to the cost of gasoline, not to a marketing cost in any particular.

Mr. Austin: That is the first of three questions 4631 I intended to ask, your Honor. I think the motion should be directed to all of them, because this is merely leading up to the next question. I think if there is to be a motion or the objection, or motion to strike—

Mr. Hanley: I do not know what the other two questions are, but I insist on the objection to this as being immaterial.

Trial Examiner Ballinger: Mr. Austin, first, is the cross-examination?

Mr. Austin: Yes, your Honor, it certainly is, because it is directed to the statement of the witness that he could not determine jobber costs, and they did not make any separate computation of them for Detroit, and they have made no channel for direct shipments on their form 189, because they could not segregate them because they were too infinitesimal or too small to find.

Trial Examiner Ballinger: Well, now, that related to that portion of the costs that had been segregated and allocated to sales, marketing, did it not?

Mr. Austin: Well, I admit that the direct shipment gallonage of the company is just as big proportion of sales as it is manufacturing, if 30 per cent of the gallonage of the company is direct shipment in sales, then it is 30 per cent of what is manufactured, it is the same gasoline.

Mr. Hanley: If your Honor please, the fallacy will 4632 appear immediately by an illustration.

Suppose that a gallon of gasoline costs the respondent company a dollar, and it is, the gasoline in a bulk plant in Detroit. Now, that is an absurd cost. We will just assume that it costs us a dollar on Monday, and assume that on Tuesday we have got a gallon of gasoline there at a cost to us of 6 cents.

Now, we sell those two gallons of gasoline. We get the best price we can through whatever channel we can sell it. It costs us a certain amount to effect the sale. The fact that one of those gallon costs us one dollar to make and get to Detroit, and the other one costs us only 6 cents has absolutely nothing to do with the cost to us of effecting the sale of those two gallons of gasoline.

We may sell them for identically the same price, or we may sell them through different media at different prices and at different costs of sale, but that has no relation and nothing whatever to do with what the gasoline costs us. We may be inefficient or efficient refiners. That hasn't anything to do with what our marketing costs are.

Trial Examiner Ballinger: What is bothering the Examiner is this: There must be a point at which you commence to compute marketing costs. There must be a point at which manufacturing costs stop.

Now, the company has set up its account. It has 4633 delineated the line of demarcation between the two.

Now, are you at liberty to go back into the manufacturing costs?

Mr. Austin: I do not intend to, your Honor. I have no desire to do that. These questions are directed to a comparison of accounting methods. This is a question of accounting practice, not a question of any amounts of cost.

Trial Examiner Ballinger: Do you think that would entitle you to go back and inquire into the accounting methods with reference to manufacturing costs of manufacturing?

Mr. Austin: Only briefly here for the purpose of comparison.

Mr. Hanley: No matter how brief it is, your Honor, it is a question of its competency and materiality.

You might ask Mr. Boatwright questions about the propriety of accounting in a millinery store, it is comparable, just as comparable as giving accounting costs.

Mr. Austin: Well, your Honor, these general office expenses which are included right here as cost of marketing have been divided, they are general overhead costs. There has been an allocation of those costs as between marketing and manufacturing and production, and as to those costs, I think it would be entirely relevant if we wanted to do it, to go into the method of allocation of those costs between manufacturing and production on the one hand and 4634 marketing on the other, because we are certainly not bound to accept the statement of the company as to the amount of those expenses that may be charged as marketing.

Mr. Hanley: May we clarify this, Judge, with this statement?

Mr. Boatwright says he has testified it is approximately

50 per cent of the overhead in the general office that was allocated to the marketing department for its expense, and 50 per cent to manufacturing. Now, suppose he had 75 per cent to manufacturing and 25 per cent to marketing, or suppose it was the reverse of that. Suppose it was in allocation, that the general office accountants make. What difference does it make? What we are interested in here is whatever the allocation was that was made to the marketing department, whether it be 10 per cent or 90 per cent, we are concerned here with the breakdown of that allocation as between sales through the reseller channel and direct shipments sales. Now, what difference does it make other than that?

Trial Examiner Ballinger: The Examiner will overrule the objection, reserving to you a motion to strike at the conclusion of this line of examination, so that the record may portray the true situation.

Mr. Hanley: I wish to add to the objection that this is improper cross examination, not having been touched upon in direct examination in any of its phases.

4635 Trial Examiner Ballinger: At the conclusion of this line of examination the Examiner will entertain a motion to strike.

Mr. Austin: Will you read the question?

(Question read, as follows:

"Q. Mr. Boatwright, do you know whether the company computes its annual cost per gallon on refining the gasoline which it sells in its entire territory?"

A. Your honor, I am not the individual in our company that should testify on manufacturing costs.

Trial Examiner Ballinger: Have you sufficient information to enable you to testify?

The Witness: No, I do not think that I have.

I do know that they have certain standards, and that they make certain checks, but I do not know just the detail they go through in their cost calculations. See, my department is sales research department. I am concerned with marketing and I can not answer your question with a feeling of assurance.

By Mr. Austin:

Q. Well, don't you know, Mr. Boatwright, whether the company does or does not compute its cost of production or its cost of refining—we will restrict it to refining in deference to Judge Hanley and—on a per gallon basis.

4636 A. My difficulty—

Q. I am not asking you to give the amount. I want to know whether they do.

A. Well, my difficulty in answering your question is as to the calculation of cost for all individual products made by the company. I do not know whether they do it or not.

Q. Well, this was restricted to gasoline.

A. I know, but it all comes out of one barrel, you see, and I just can not answer your question fully and intelligently.

Q. Well, I was going to ask you whether the direct shipment gallonage was included in the gallonage used for the computation of per gallon costs of refining.

Mr. Hanley: That is objected for all the reasons heretofore given.

Trial Examiner Ballinger: The same reservation.

The Witness: Well, I should think so, but I do not know.

By Mr. Austin:

Q. Do you know of any way in which it could be segregated for such a computation?

A. Well, I do not think that the manufacturing department would be able to segregate, as they do not know where the gallon of gasoline they make today is going to ultimately be sold.

4637 Q. If that gallonage were included in the computation of per gallon refining costs, then some cost would be assigned to each gallon of that 190,000,000 gallons, would it not?

A. If, yes.

Q. As I understand it, you assign no cost to that gallonage in your method of accounting for marketing expenses?

A. That is correct. We allocate the costs on direct shipments among the three channels we have discussed here repeatedly.

Mr. Austin: That is all I have on that line.

Mr. Hanley: Now, if your Honor please, the respondent moves to strike all of the testimony on this line of examination which counsel has announced he has just closed, for all of the reasons stated in the respondent's objection.

Trial Examiner Ballinger: The motion is granted.

Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record. Proceed, Mr. Austin.

By Mr. Austin:

Q. Mr. Boatwright, did you say that if you were required to determine the cost of marketing gasoline to individual tank wagon reseller customers that it would involve a revamping or changing of the company's accounting system?

A. Why, certainly.

Trial Examiner Ballinger: What was your answer?

4638 (Answer read.)

By Mr. Austin:

Q. Is it not true that a special study of costs of marketing to a number of identified individual service stations could be made without in any way affecting the company's general accounting procedure.

A. Oh, a specialized study could be made, but I thought your question implied as a regular accounting procedure, should we step up our books to keep a P. and L. on individual outlets.

Q. No, I would assume that the special study for the purpose of a proceeding such as this would not involve any change in the company's accounting system, even though the special study were directed to the cost of certain individual stations; is that correct?

A. Well, that question has been answered in the testimony wherein I stated that there were some costs which a person might be able to allocate directly, but that it would become an extremely difficult problem to allocate costs which are incurred jointly and I used as an illustration of that the very problem of delivery where a truck will operate on a route, pointing out the difficulties of first establishing a time factor, then what part of the distance to the first dump would be allocated to each of the respective stations, and so forth.

Q. It would be less difficult to make a special study 4639 of costs to individual groups of stations, would it not, such as lessee and non-lessee, or stations served from commission station served from salaried stations, and so forth?

A. Well, you are asking me comparatively the difficulties on two assumed studies that I have not looked into, and I do not know which would be the more difficult until I got into it. Your question really can't be answered.

Q. You have stated several times, Mr. Boatwright, that you are quite sure that the costs of marketing gasoline to jobbers in Oklahoma as shown by Respondent's Exhibit 33-A to E are at least as high, and in your opinion are probably higher than the costs of marketing to jobbers in Detroit; is that correct?

A. That is correct.

Q. Is it not true, Mr. Boatwright, that that opinion as stated by you in numerous places in the record has wherever given applied only to the marketing costs of the type referred to under jobber marketing costs in respondent's exhibit 33-C, D and E?

A. Reference is made specifically to those classification of costs, yes, sir.

Q. And those classifications of costs are (a) accounting costs, (b) credit costs; (c) supervision and selling cost; (d) general office expense; and (e) advertising (point of sale).

Is it correct, Mr. Boatwright, that those are the
4640 five headings of cost which are discussed and computed on Respondent's Exhibit 33-C to E?

A. Yes, sir.

Q. And do I understand that you have made no cost study of marketing cost allocable to the sale and delivery of gasoline to jobbers in Detroit?

A. I have not.

Q. Beginning at page 4527 of the record you gave some testimony regarding a computation which was made upon the assumption purely for the purpose of the computation that the marketing expense of the Detroit jobber business was .25 of a cent per gallon, and spreading that cost among the different channels on Respondent's Exhibit 189 for Detroit for 1940, you reached the result that there would be a jobber cost entering into the tank wagon reseller channel of .032 cents per gallon, is that correct?

A. That is correct; yes, sir.

Q. And was the purpose of your computation to indicate that the result of such computation would be to reduce the average cost per unit in the tank wagon reseller channel in Detroit for 1940 by .032?

A. No, I think the purpose of that computation was explained when the testimony was given. I do not yield from the accounting that has been followed in preparing the exhibits, but I think it was pointed out clearly that the only object of making that calculation was to
4641 show the magnitude of the item when reduced to a unit basis.

Q. Yes, I understand that, Mr. Boatwright, but if there is a jobber cost of .032 of a cent in the total costs in the tank wagon reseller channel solely upon the assumption, which I understand you do not agree with, that that jobber cost in Detroit was .25 of a cent a gallon, then that would mean, would it not, that the tank wagon reseller cost as shown on form 189 for 1940 would be reduced by .032 of a cent?

A. Yes, that is what it would mean provided that the assumption of spreading that cost among the channels is accurate.

Q. I am just trying to get a statement of facts for the purpose of further questions, that is all.

A. Yes, but I just want you to recall that in my testimony of yesterday I said I do not know where this jobber cost is.

Q. Yes, I have your testimony.

A. I just don't know where it is. I merely said now, that if it be spread on the basis of gallonage—

Q. Now, in making that computation, what figure did you use for jobber gallonage in Detroit?

A. I used the gasoline gallonage.

Q. That was 13,661,107 gallons, was it not?

A. As I recall.

Q. I will be sure that I am right on it. That is on an exhibit here somewhere.

4642 Mr. Hanley: It is in the record, page 4528.

By Mr. Austin:

Q. Referring to Commission's Exhibit 87.

A. That is correct.

4643 Q. And that gallonage did not include refined oils, did it?

A. I do not know whether we sell these jobbers refined oils.

Q. But you do know, do you not, that refined oils are included in the gallonage entering the tank wagon reseller channel on Form 189?

A. Yes, I do.

Q. Did you make any similar computation assigning any costs to the remainder of the direct shipment gallonage for the Detroit field for 1940?

A. No.

Q. What was the total direct shipment gallonage for the Detroit field in 1940?

A. 46,471,455.6 gallons.

Q. Then, referring again to the figure for gasoline gallonage for Detroit jobbers in 1940, is it not correct that there is a balance of some 32,800,000 gallons of direct shipments of petroleum products over and above the amount sold to the jobbers?

A. It is in that magnitude; yes, sir.

Q. And have you made any computation assigning any cost to that volume of 32,800,000 gallons?

A. No, I have not. A large part of the costs of the direct shipment gallonage, especially a cross-country account, is handled in Chicago.

Q. You mean the accounting? Is that what you
4644 call it?

A. On a cross-country account, yes.

Q. Delivery is made from Detroit?

A. Delivery is made from Detroit. But I have made no separate calculation of the cost on that class of business.

Q. Assuming, Mr. Boatwright, that there is some cost of marketing of the 32,800,000 gallons gasoline represented by direct shipments in the Detroit area other than shipments to jobbers, is it not true that a portion of such marketing expense is included in the expense shown in that tank wagon reseller column on Form 189?

A. That is entirely possible, on your assumptions.

Q. At page 4532 of the record a further computation was introduced by you on your direct examination in relation to accounts Nos. 240, 525, 086, 290, and 295, the numbers referring to Form 189, Respondent's Exhibit 32. Do you recall that computation?

A. I do.

Q. Now, I would like to state what I understand the computation to have been, and then if I am not correct you may make any correction.

As I understand it, you totaled the expenses under total petroleum products on Form 189 for these five accounts and divided that total expense by the total gallonage in the Detroit area, less direct shipments, to which you added the gallonage sold to the Detroit jobbers. Am I correct that far?

4645 A. I made two divisions, and you have only indicated one. You are correct in that I totaled the marketing expense items. Then my first division was by the total petroleum gallonage excluding direct shipment; then the identical marketing cost total was divided by total petroleum gallonage excluding direct shipments plus sales to jobbers.

Q. And your computation resulted in a difference of .018 cents in the result?

A. As I recall, that is correct. It is in the testimony.

Q. That I can read from page 4533 of the record. The division, using gallonage excluding direct shipments, resulted in a quotient of .162 cents per gallon; when the jobber shipments were included the resulting figure was .144 cents per gallon, making a difference of .018 cents.

Now, when an all-gallonage allocation is made, is it not true that no cost differential is afforded as between the gallons included in making the allocation?

Mr. Hanley: May I hear the question?

(Question read.)

Mr. Hanley: I do not understand that, Mr. Austin. Is it that on a gallonage basis every gallon has an equal weight in the computation?

Mr. Austin: That is right.

A. You are correct in your statement.

By Mr. Austin:

4646 Q. So that using the second method of computation, or division, which you stated in your direct testimony just referred to, Mr. Boatwright, would it not result in a cost for those five accounts of .144 cents per gallon to the tank wagon reseller gallonage in Detroit in 1940 and also the same cost per gallon for the jobber gallonage?

A. .144?

Q. That is right.

A. It would. The very fact that we have thrown the two gallonages together.

Q. Then, assuming that that method of treating those expenses in those five accounts were correct, would that not result in eliminating from the per-gallon expense now shown in the tank gallon reseller column on Form 189 for 1940 the sum of .162 cents per gallon?

Mr. Austin: I will strike that question, please. That would not be correct, because it would be only one-half of it.

Off the record.

(Discussion off the record.)

Mr. Austin: I would like to have two documents marked for identification, if Your Honor please.

Trial Examiner Ballinger: The Reporter will mark the first document Commissioner's Exhibit No. 92A, B, C, and D, for identification; the second document Commission's Exhibit 93-A, B, C, D, and E, for identi-
4647 fication.

(The documents were marked for identification "Commission's Exhibits 92-A, 92-B, 92-C, 92-D, and 93-A, 93-B, 93-C, 93-D, and 93-E.")

By Mr. Austin:

Q. I show you Commission's Exhibit 92-A, B, C, and D, for identification, and ask you if you can identify that document.

A. I can, it being a contract or agreement between the Standard Oil Company, on the one hand, and L. A. Smith Company, on the other; L. A. Smith Company being the carrier making deliveries to the plants enumerated in the contract.

Q. Deliveries of what?

A. Deliveries of gasoline, refined oils, tractor fuels, and other distillates.

Q. Where are those deliveries made from?

A. The River Rouge bulk plant.

Q. Can you also describe the contents of Commission's Exhibit 93-A, B, C, D, and E, for identification?

A. Commission's Exhibit 93-B, C, D, and E represent a contract between the Standard Oil Company of Indiana and the L. A. Smith Company, common carrier, on the 22d day of November, 1939, for the purpose of an agreement relative to the transport of our petroleum products from River Rouge to the individual bulk plants desig-
4648 nated in the contract, these petroleum products again being gasolines, refined oils, standard tractor fuels, and distillates.

Commission's Exhibit 93-A is a rider, designated as Rider No. 2, between the same parties modifying the rates as provided for in the original contract, 93-B and following, for certain designated destination points, being Dearborn—

Q. Just say "as shown."

A. —as shown in the rider.

Q. Do you know, Mr. Boatwright, whether these two contracts that you have just described and the rider to the second one constitute the entire agreement between the Standard Oil Company and the L. A. Smith Company covering transportation of Standard Oil products in existence during 1940 and after May 20, 1939?

A. That is correct, to the best of my knowledge; yes, sir.

Q. Well, have you made any investigation to determine whether there was any other agreement made subsequent to these agreements, or whether these agreements set forth the entire agreement between the parties?

Mr. Hanley: I do not think the witness ought to be requested to answer that question, if Your Honor please. The facts are that Counsel for the Commission asked us since we have been in Washington to get contracts for transportation between the company and any haulers.
What we did was transmit that request to our peo-
4649 ple in Chicago and in Detroit and told them what we
want, and this is what we got. We are producing it.
It looks as though that is all there is, but neither Mr. Boatwright nor I know with any positiveness or testimonial knowledge that there may not be something else. We are producing what we got on the request of counsel, and we faithfully transmitted that request to Chicago and to Detroit.

Mr. Austin: Thank you, Judge Hanley. That is just what I wanted to bring out, because I rather assumed that neither you nor Mr. Boatwright had the opportunity. You simply asked for certain documents and submitted them here, and, of course, I appreciate your doing so.

Trial Examiner Ballinger: Mr. Boatwright, you heard the statement of Judge Hanley?

The Witness: I did.

Trial Examiner Ballinger: And that is correct?

The Witness: His statement is correct of the conditions.

By Mr. Austin:

Q. Do you know, Mr. Boatwright, whether there was a rider No. 1, since Commission's Exhibit 93-A is entitled "Rider No. 2 to the contract of November 22, 1939"?

A. I can only assume that there was a rider No. 1.

Mr. Hanley: If Your Honor please, I can enlighten the court and counsel on that. I think there was not only a
rider No. 1, but there were six or seven, or eight,
4650 maybe, and I took them off for the reason that they
referred to plants entirely outside of Detroit and did not comply with your request. Rider No. 2 did, and I gave you everything that applied to points in Detroit and rates in Detroit.

Mr. Austin: I offer these documents, marked Commission's Exhibits 92-A to D and 93-A to E, in evidence.

Mr. Hanley: The offers are objected to, for the reason that the exhibits are immaterial, do not have any bearing on any issue in this case; that they do not go to the issue of marketing cost as set up in pleadings as a justification on the part of the Respondent; that the burden of justifying against the charge of violation of the Robinson-Patman Act on the basis of a cost differential making only due allowance for saving is upon the accused, and the accused has the right to determine whether or not, first, he will undertake a justification at all; and, second, upon what kind of a differential of cost he will base his justification; that the effort on the part of the accused to undertake an investigation does not owe an examination into costs that are unrelated to the proceeding and concerning which the Respondent accused has undertaken no explanation and no justification; that the Commission is without jurisdiction to, first, either compel a justification on the part of the accused; and, second, if the accused undertakes an investigation, the Commission is without jur-
isdiction to enlarge the scope of its inquiry and force
4651 further justification in a different field upon the Re-
spondent; that any use that might be made of the contracts in question now offered in evidence would have the effect of entering into an inquiry into the costs of the Respondent relating to matters other than marketing, and opens a limitless field into which the Commission has in this action no jurisdiction to go, and which the Respondent has not chosen to open, and that field might extend not only back to the refinery, but through the

manufacturing process, and through further back to the crude lines and the wells where the crude oil was produced, and all the ramifications of the entire integrated oil production, transportation, manufacturing, and marketing business.

For these reasons, and the general reasons of immateriality, irrelevancy, and incompetency, these exhibits are objected to.

Trial Examiner Ballinger: The Examiner has not been fully advised as to exactly what transportation these contracts relate to.

Mr. Austin: They relate to transportation from the marine terminal at River Rouge to the company's bulk plants, which is a step in the delivery of gasoline by the company to the reseller stations.

Trial Examiner Ballinger: The cost accounting of the company commences at the—

4652 Mr. Hanley: Bulk plants.

Trial Examiner Ballinger: —bulk plants—

Mr. Hanley: In Detroit.

Trial Examiner Ballinger: —in Detroit, and not at the marine terminal; is that correct?

Mr. Austin: Well, that may be correct, Your Honor; but, of course, the cost accounting of the company is entirely immaterial in determining what costs are relevant and material under the Robinson-Patman Act in a proceeding before the Federal Trade Commission; otherwise, the Respondent could determine what costs to show the Commission. If Counsel for the Respondent is correct, he would furnish to the Commission such costs as would reflect favorably toward its defense and keep from the Commission a comparison of costs as reflect unfavorably toward its defense.

Furthermore, there is a perfectly logical place to start your comparison of delivery costs, and that is in all the gasoline stations. Now, the majority of the gasoline in the Detroit area comes all commingled in tank shipment from the River Rouge plant.

Mr. Hanley: Are you talking about the interstate commerce contention now?

Mr. Austin: No. I am talking about the delivery of gasoline. The gasoline comes in the tank cars, and I do
not think the commingling has anything to do with
4653 the interstate commerce part; but obviously, Your
Honor, the delivery costs which we must consider

are the delivery costs from River Rouge, because that is where the difference in the method of delivery starts, and then the differences in the cost of delivery resulting from the different methods of delivery, which are directly referred to in the Robinson-Patman Act. So there is no doubt where we are going to start. It is not a matter of going back to the production; it is a matter of starting at River Rouge.

Trial Examiner Ballinger: With the factual statement on the record, the objection is overruled, and Commission's Exhibits 92-A, B, C, and D, and 93-A, B, C, D, and E, for identification, are admitted in evidence.

(The documents heretofore marked for identification "COMMISSION'S EXHIBITS 92-A, 92-B, 92-C, 92-D, and 93-A, 93-B, 93-C, 93-D, and 93-E," were received in evidence.)

Mr. Austin: I would like to make this further statement, Your Honor, in view of the statement that I have just made in the record, in case it might be misunderstood.

There were certain direct shipments to jobbers shown in this case from Whiting, Ind. Now, if there were any substantial amount of direct shipments from Whiting, then I should say for the same reason the delivery costs from Whiting were material; but since those ship-
4654 ments were few in number compared to the total
shipments of the company, I do not make an attempt, and I do not intend to make an attempt—that is, assuming that my information is correct that those shipments were few in number, I do not intend to make an attempt to show freight costs from Whiting to River Rouge in order to compare it with the direct shipment cost from Whiting to the jobber. I think, however, that that would be material, and I did not want to say anything to indicate that I thought that that would not be material, if it were the practice of the company to ship directly to its jobbers from Whiting, Ind. I understand it is not the practice of the company so to do and that has only been done in some instances.

Trial Examiner Ballinger: Such is the testimony. Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Proceed.

By Mr. Austin:

Q. Referring to page 4606 of the record, you gave a list of the bulk plants in the Detroit area with the charge made per gallon by the transport hauler for transportation of gasoline from the River Rouge terminal to the respective bulk plants.

Now, the contracts introduced in evidence as Commission's Exhibits 92 and 93 use a slightly different terminology in referring to the bulk plants, Mr. Boatwright, and I would like to get them identified.

4655 Will you state, referring to Commission's Exhibit 93-A, which location there refers or indicates the Strathmoor bulk plant?

A. Well, I am speaking from memory, but I think it is Stanbury and Intervale. The location of each of those plants is Mr. Raupaugh's testimony, and my memory can be checked against him, but I think it is Stanbury and Intervale.

Q. Do you know which location there is for the North Detroit bulk plant?

A. Seven-Mile Road.

Q. Is there a bulk plant at Lance Avenue?

A. That is the Ferndale plant.

Q. That is the bulk plant indicated on the map as being located in Ferndale?

A. Yes.

Q. That being Respondent's Exhibit—I do not know which one it is.

A. It does not distribute gasoline, Mr. Austin. That is the Ferndale plant that I referred to as serving only the fuel oil and distillates.

Q. Well, I think that will relate the exhibits with previous testimony.

A. Yes.

Mr. Austin: Off the record, please, Your Honor.

(Discussion off the record.)

4656 By Mr. Austin:

Q. Now, Mr. Boatwright, as I read these contracts, Commission's Exhibit 92 and 93, there is nothing in them concerning the transportation of gasoline from the marine terminal at River Rouge to the bulk plants of the company's jobber companies. Is that your understanding?

A. Yes. The hauling to the jobber customers is handled by the Ogden and Moffet Transportation Company.

Q. And were you able to obtain the contract between the company and the Ogden and Moffet Transportation Company?

Mr. Hanley: I will say in that respect, Your Honor, that we did undertake to obtain it. We were advised by the traffic department in the Chicago office that they did not have it, and efforts were made through Detroit, and I do not undertake to say why they could not dig up a copy between the two offices, but they could not, and we were advised that they had telephoned to the Ogden and Moffet Company itself and they were to send us directly the contract. We have not received it. But they did assure us of the fact that the rate was as Mr. Boatwright has testified, .155 to each of the jobbers.

Mr. Austin: Cents per gallon—.155 cents per gallon.

Mr. Hanley: Yes, .155 cents per gallon to each of the jobber bulk plants. If you want to see that contract when we get hold of it—

4657 Mr. Austin: Well, when we are next in Detroit, Judge Hanley, if we are there on rebuttal testimony, I would appreciate it if I might see that contract.

Mr. Hanley: Yes, surely.

By Mr. Austin:

Q. Mr. Boatwright, have all of the company's bulk plants in the City of Detroit and Dearborn been supplied by transport truck from the marine terminal since 1936?

A. Yes, all of the plants in the Detroit metropolitan area operated by the Standard Oil Company have been served by truck transport since 1936.

Q. Now, will you state for the record when each of the four jobber customers of the Standard Oil Company in the City of Detroit began to receive delivery by transport truck?

A. Ned's Auto Supply started February 9, 1940.
The Wayne Oil Company, January 31, 1940.
The Sykeman Oil Company, January 31, 1940?
Citrin and Kolb, February 3, 1940.

Q. And prior to those dates, how was delivery made by the company to jobber companies?

A. I would assume that it was handled by railroad switching.

Q. Tank car shipments?

A. Yes.

Q. Do you know the freight rate which the company paid for tank car shipments of gasoline from its River 4658 Rouge terminal to the plants of its four jobbers in 1939?

A. No, I don't.

Mr. Austin: I have certain papers here which I would like to have marked for identificaiton, if Your Honor please.

Trial Examiner Ballinger: How many sheets are there?

Mr. Austin: There are six of them, and perhaps since they are separate papers they should be marked as separate exhibits.

Trial Examiner Ballinger: Well, is there more than one page on each?

Mr. Austin: Just one page on each.

Trial Examiner Ballinger: The Reporter will mark the documents Commission's Exhibits 94, 95, 96, 97, 98, and 99, for identification.

(The documents were marked for identification "Commission's Exhibits 94, 95, 96, 97, 98, and 99.")

Mr. Austin: These papers which are marked for identification as Commission's Exhibits 94 to 99, inclusive, are original papers which were delivered to Mr. McDonald, the Commission's examiner, by the Standard Oil Company office in Chicago in the course of an interview with Mr. Buell Jones, chief counsel for the Standard Oil Company, on December 5, 1939.

4659 By Mr. Austin:

Q. I would like to show these to the witness, and ask you, Mr. Boatwright, whether you can identify the forms there shown.

A. I have never seen these particular forms before. I can identify the blank upon which these entries are made. I have seen that.

Q. Will you do so?

A. Yes. This is merely a stenciled acknowledgment of orders which is transmitted to the Chicago office by the various field offices for tank car sales of gasoline.

Trial Examiner Ballinger: Is that the first one?

Mr. Austin: They are all the same.

The Witness: I understand they are all the same.

Trial Examiner Ballinger: All the same?

The Witness: Yes, sir.

Mr. Austin: Your Honor, I am sure that the record shows that these papers, or others which are similar in all respects except possibly as to some of the figures, were identified by Mr. Ranpaugh in Detroit. Certain invoices to which these forms are attached—in other words, one of these forms was attached to each invoice—certain of the invoices with the forms attached were offered in evidence, and, upon the objection of Counsel for the Respondent, the forms were detached, but the invoices were received
in evidence. And I can give the exhibit numbers just
4660 for the purpose of reference.

Mr. Hanley: We are not going to object to the authenticity of the form.

Mr. Austin: These papers, Commission's Exhibit 94 to 99, inclusive, are not the identical forms which were attached to the invoices in evidence, although some of them may be, but they are, as I say, similar in all material respects, except possibly as to some of the figures, to those which were identified here.

Trial Examiner Ballinger: These papers that have been identified are filled out. Are you now seeking to introduce merely the form without the figures appearing in it, or do you want the entire document?

Mr. Austin: Well, I now offer Commission's Exhibits 94 to 99, for identification, in evidence, and I understand that the authenticity of the documents is not disputed by counsel.

Mr. Hanley: Well, just a moment until I look at them. I have got an objection.

May I inquire the purpose?

Mr. Austin: Yes. The purpose of the offer is to show the freight rate per gallon paid by the company in 1939 on tank car shipments to its four jobbers in Detroit. Four of the exhibits, that is, Commission's Exhibits, for identifica-
tion, 94, 95, 96, and 97, represent shipments to each of
4661 the four, one shipment to each of the four—

Trial Examiner Ballinger: From what points?

Mr. Austin: From River Rouge to the bulk plant in Detroit.

Exhibits 98 and 99 indicate tank car shipments from Muskegon, Mich., to the bulk plants of two of the jobbers and show the freight rate for that shipment.

And in that connection I would like to point out that the contracts introduced in evidence as Commission's Exhibits 92 and 93 set forth a freight rate from Muskegon, Mich., to Detroit, and I therefore assume that the shipments from Muskegon, while perhaps not as frequent as those from River Rouge, are at least made to some extent in the regular course of business, and I do not believe there is any testimony to the contrary. So that I am offering the Muskegon invoices, or whatever those papers may be called, for the purpose of showing that freight rate if it does turn out to have materiality in a material number of shipments.

Mr. Hanley: That, as I understand it, is the purpose of these exhibits.

Mr. Austin: Yes, that is right.

Mr. Hanley: Commission's Exhibits, for identification, 94 to 99, inclusive, are objected to for all of the reasons assigned to the objection to the introduction of Commission's Exhibits 92-A to D, inclusive, and 93-A to E,
4662 inclusive; and for the further reason that upon the announced purpose for the offer of Commission's Exhibits 94 to 99, inclusive, are not the best evidence. They are on their face the Standard Oil Company form by which counsel states that he undertakes to establish a freight rate. This particular reason in this objection, Your Honor, is insisted upon vigorously and urged earnestly. The best evidence would be the freight bills.

In that connection, if we have freight bills, we will have no hesitancy in supplying them, but we want to supply the best evidence in this instance if any is to be regarded as material, or if this issue is to be regarded as material.

Further, these exhibits are objected to for the reason that they refer to specific shipments to several of the jobbers involved in this action, and on specific dates, and the announced purpose of the offer is to establish, according to counsel, the freight tariffs paid by the Respondent company in the year 1939; whereas, there is nothing in the exhibit, and can be nothing in the exhibit, to establish that such a rate was effective for any period of time in 1939 except on the date that may be indicated on the exhibit and that again is not the best evidence of the freight rate on that date, or on any other date.

Further, counsel states that he assumes that ship-
4663 ments may have been made with regularity to jobbers in Detroit from Muskegon, and that he seeks to prove that that may be the fact, or assume without challenge that

that may be the fact, through the medium of these exhibits, and that such exhibits are utterly immaterial and irrelevant and incompetent for such purpose, inasmuch as there is an invoice referred to in one of the exhibits only relative to a Muskegon shipment, and that, to say the least, the assumption of counsel is a violent assumption; absolutely untrue, and a matter of fact, if material at all, which the Government has the burden of sustaining in the first instance.

I am very serious about this objection, Your Honor.

If you want freight rates we will get them for you, but there is no reason on earth why the Government should undertake to back into this thing with a bunch of just random papers.

Trial Examiner Ballinger: Let me see one of those.

Mr. Austin: These are Standard Oil Company forms handed to the Commission's examiner by the chief counsel of the Standard Oil Company, Your Honor.

Trial Examiner Ballinger: Well, there is no evidence other than your own statement.

Mr. Austin: Well, I will bring Mr. McDonald here.

Mr. Hanley: I do not deny the statement that it was
given to Mr. McDonald. We gave you a bushel basket
4664 of stuff, which you still have. I am not objecting on
that ground. But it is hearsay as to the Standard Oil Company. That is our statement of what the freight rates are. I have been objecting through all this proceeding on the ground of hearsay.

We will get you the freight rates from the bills that were paid.

(Further discussion off the record.)

By Mr. Austin:

Q. Mr. Boatwright, will you state just what this form, marked in evidence as Commission's Exhibit 94, for identification, is used for by the company?

A. Why, it is an acknowledgment of orders; just a form statement.

Q. Well, does the company customarily enter the freight charge per gallon which it has to pay in shipping the order?

A. The form is filled out by the company, the Standard Oil Company.

Q. Yes. Where is it filled out?

A. I do not know whether it is filled out in the Chicago office or the Detroit office.

Q. Do your know that it is filled out in one place or the other?

A. Well, this particular form would be, yes.

Q. And is it the customary procedure of the com-
4665 pany to enter on the form the f. o. b. price charged the customer for gasoline and as component parts of that price the federal gasoline tax, the freight to destination, and the net price after those deductions at River Rouge?

A. Well, this form is filled out, as is the custom of the company, in completing these forms.

Mr. Hanley: May I ask one question on voir dire?

Trial Examiner Ballinger: You may.

Examination on Voir Dire by Mr. Hanley.

Q. Mr. Boatwright, you have been looking at Commission's Exhibit, for identification, 94, which has an item on it .22 freight to destination. The exhibit is dated April 6, 1939. Assuming that that was the freight rate on April 6, 1939, and that on his order the freight rate changed on April 7, 1939, what would the company pay, the freight that some traffic clerk put on this form, or would they pay the freight bill rendered by the railroad?

A. They would pay the freight bill.

Mr. Hanley: Doesn't that demonstrate the fallacy of this thing, Your Honor, when we offer to give you the best evidence?

Mr. Austin: If the Court please, it has been proven here that these are forms filled out according to the company's accounting procedure. They purport to show
4666 the freight rate. The exhibits range in date form April 4, 1939, to October 25, 1939. The freight rate shown on all is the same. It is not disputed, as I understand it, that these exhibits were handed to the Commission's examiner in connection with invoices showing shipments to the company's jobbers. It is my contention that therefore these papers constitute admissions on the part of the company of the freight rate paid for the purposes of this investigation, and I think they should be received in evidence, subject to the right of the company to correct them if the freight rate was different on any shipment or at any time not covered by these exhibits.

Mr. Hanley: May I inquire, your Honor, why counsel declines to receive the best evidence, which we are perfectly willing to give. We want to check these freight rates ourselves. And what do we do? We go to the freight bills that were paid. We will give them to the Commission.

Now, we have been up against technical objections on hearsay and everything of the kind in this proceeding. Now, we are entitled, I think, to have the best evidence when we, ourselves, offer to give it to you.

Mr. Austin: I am not rejecting the best evidence, Judge Hanley, but I think I am entitled to put these in now since they were supplied by the company. You will have a perfect right to correct them.

Trial Examiner Ballinger: The Examiner has
4667 heard enough discussion.

The documents tendered are plainly not the best evidence. They were, however, furnished by the Respondent to the Commission. For what use it does not appear. The circumstances under which they were furnished does not appear. As the law and the rules of evidence require the best evidence, and as the best evidence is available, the tendered documents are rejected.

Mr. Hanley: If you will give us a list, Mr. Austin, of those shipments, we will supply you with the original freight bills, as in point of fact you may already have with the bunch of stuff that was given you.

(Further discussion off the record.)

Trial Examiner Ballinger: Mr. Austin, those portray the charge made by the company, but they do not portray the charge made by the transportation company.

Mr. Austin: By the railroad.

Trial Examiner Ballinger: That is right.

Mr. Austin: Well, I think it is an admission by the company of the freight they paid.

Mr. Hanley: May we get along, Your Honor?

Trial Examiner Ballinger: Let us proceed.

Mr. Austin: The ruling has been made.

Trial Examiner Ballinger: I will say frankly to you that if the best evidence is not produced or is not
4668 furnished to you, or you cannot obtain it, the Examiner will then entertain a renewal of these offers.

Mr. Austin: Off the record.

(Discussion off the record.)

Mr. Austin: That is all the questioning I have, Your Honor.

~~I have a motion I would like to make.~~

Mr. Hanley: I would like to take about five minutes to ask a few questions.

Trial Examiner Ballinger: You may.

One moment. Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Proceed.

Redirect Examination by Mr. Hanley.

Q. Mr. Boatwright, you were asked to compare the 1937 and the 1940 189 forms to point out any differences, and you did indicate that there were some differences in the two forms in that there were breakdowns in certain accounts as between the four types of stations in the later 189 form.

A. Yes, sir.

Q. You also testified a number of times that it would be highly impracticable, if not impossible, to make cost allocations, not only to individual stations in the reseller channel in any numbers, but also as between groups.

4669 Do you recall that testimony?

A. I do.

Q. Would this breakdown of accounts to which you have testified aid at all in that respect?

A. Well, it would aid only to the extent that two of the accounts which I gave in my testimony were segregated as to particular types of expenses only among classes. It would help in the part as to the cost differential or similarity which may exist between the four different classes of resale outlets, but it would not help in the breakdown as among individual units of anyone of the four classes.

Q. And to what extent would it help in the groups?

A. It would be of very minor significance in the entire problem.

Q. Your attention was called to the amount of direct shipment volume in Detroit as compared with the reseller channel and consumer channel volumes. Has Detroit any peculiar attribute in reference to whether or not it is a high or a low percentage of direct shipments to tank wagon shipments as compared to other points in the Indiana territory?

A. Well, direct shipments in the Detroit field constitute about 25 percent of the total direct shipments made by the

Standard Oil Company throughout our entire midwestern area. This one field is responsible, therefore, for a higher ratio of direct shipments to tank wagon sales than 4670 the other fields are. That is because of the location of these tremendous producing units of automobiles, the tremendous activity of aviation, plus the fact that we have secured in times past some sales to governmental agencies in the Detroit area.

Q. You were asked in reference to Exhibit 33-A if the only costs you had allocated to the jobber sales were the itemized costs I think, A to E, inclusive.

A. Yes.

Q. Do you recall that?

A. Yes.

Q. I do not know what the inference of counsel is on that, Mr. Boatwright, but I want to ask you this:

Are these the only costs that in your judgment are properly allocable to the cost of selling jobbers in Detroit?

A. I think they are.

Q. You were asked what the effect might be, something substantial to that, if you had undertaken to make a calculation as to the amount of expense attributable to that proportion of direct shipments less shipments to jobbers in relation to the scattering of expense through 189 form. Do you recall that?

A. I recall the question.

Q. You made the calculation, which you testified about yesterday, on the basis of an assumption of a quarter of a cent a gallon cost on a jobber gallonage, did you not?

A. I did.

4671 Q. If you were to make a calculation involving the thirty-odd million other direct shipments, would you assume any such cost as a quarter of a cent?

A. Definitely not. Certainly not.

Q. So that would be an entirely different type of calculation, would it not?

A. It would be entirely different. And I do not know how I can illustrate it better. When the City of Detroit calls for bids—and the City of Detroit uses a million gallons of gasoline in a month, and all in the world we do is submit a bid. Now, there isn't any sales promotion or anything that you can do. You submit a bid in a sealed envelope, and you get the business or you don't get it. Now, what

~~is the cost of submitting a bid when you divide it by maybe~~ 10 million gallons.

Q. Mr. Boatwright, you were asked if certain bulk plants had been served by truck transports since 1936, and you said they had been.

A. Yes, sir.

Q. Do you know to what degree they were served?

A. Well, I do not know whether 100 percent of their receipts were truck transport.

Q. That is what I mean.

A. I know. I do not know.

Q. You were asked if you could make a special study of
any of the reseller stations in Detroit, and you said
4672 that you like to make such a special study. In fact,
you did make a special study of Ned's, did you not?

A. Yes.

Q. Which is reflected in 31-A and following pages?

A. Yes.

Q. Now, I want to ask you this:

Were there any characteristics attributable to Ned's operation that made it more feasible to make a special study of that situation with accuracy than attached to the ordinary rank and file reseller station involved in the reseller channel, Form 189.

Mr. Austin: I think that question has previously been asked and answered, Your Honor. I object to it as repetitious.

Trial Examiner Ballinger: There has been a good deal of repetition in this case.

The objection is overruled.

Mr. Austin: Or perhaps Counsel has forgotten it.

A. The question has been answered.

There are marked differences. In brief, these differences have to do with, first, the volume; second, the method of serving; third, the method of sales; fourth, the lack of any responsibility for sales promotion and driveway training, and so forth; fifth, the resultant fewer contacts
necessary because of these different arrangements
4673 than we have with the ordinary reseller account.

The salesman's contact with Ned's is of necessity much less frequent than it would have been with a regular reseller account because of our different business relationship.

By Mr. Hanley:

Q. Now, Mr. Boatwright, you are familiar with the set-up of the Detroit office of the Standard Oil Company, the size, the number of personnel, and so on?

A. Oh, yes.

Q. It employs, I think, Mr. Raupaugh said, around 260 people, something like that?

A. I would expect the pay roll to be in that neighborhood in that office.

Q. Assuming that the direct gallonage in Detroit were eliminated, in your judgment what difference would it make in the operation of the Detroit office in the matter of amount of space necessary to be used, hours of work, the amount of fuel, light, heat, taxes—

A. I just don't think there would be—

Mr. Austin: Just a moment.

I object to the question, Your Honor, because it is irrelevant and immaterial. It is along the lines of certain state-
ments that have been made previously regarding
4674 whether or not the elimination of customer would
result in the elimination of cost. That is entirely immaterial. The customer is there and the cost is there, and if you took the customers one by one and eliminated them, ultimately you will eliminate all cost.

Mr. Hanley: Not eliminating the customer; we are eliminating the whole standard group system method of doing business, concerning which counsel suggests we ought to have a special column.

Trial Examiner Ballinger: The objection is overruled. The witness may answer.

The Witness: Would you read the question, please?

(Question read.)

By Mr. Austin:

Q. —and so forth?

Trial Examiner Ballinger: Particularly consider that "and so forth."

A. There are so many additional items enumerated one would have to.

There would be a very slight effect upon our pay roll. The office space needed would not change, because we are crowded in the Detroit office now; and the water, light, fuel, and so forth, I can't see how that would be materially affected at all.

Q. Any particular change in personnel that you 4675 can think of?

A. Well, there might be a reduction of a clerk in the accounting department.

Q. There are some 260 employees.

A. And there might be some time saved in the stenographic department; there might be some time saved in the auditing department; there would be time saved in the different departments, although the time saved itself would not be adequate to eliminate from these respective departments one of the members of the department. In the aggregate there might be a reduction of the accounting staff by three people, something of that type.

Mr. Hanley: That is all, Your Honor.

Trial Examiner Ballinger: Anything further?

Mr. Austin: May we adjourn for lunch, Your Honor?

Trial Examiner Ballinger: The motion is granted, and now at 12:45 p. m. the hearing stands in recess until 2 p. m.

(Whereupon, at 12:45 o'clock p. m., a recess was taken until 2 o'clock p. m., of the same day.)

4676 Afternoon Session.

2 P. M.

Trial Examiner Ballinger: Come to order.

You may proceed.

Mr. Austin: Your Honor, I now move to strike from the record Respondent's Exhibit 33-A, 33-B, 33-C, 33-D and 33-E, being the exhibits, the first page of which is entitled "Costs justification of a jobber differential price 1.5 cents below tank wagon dealer price Detroit."

These exhibits have been offered by the respondent in an effort to establish that the difference in the prices for gasoline charged by the respondent in the Detroit area to reseller customers who purchase in tank car quantities, on the one hand, and those who purchase by tank wagon delivery, on the other hand, makes only due allowance for differences in cost of sale or delivery resulting from the differing methods and quantities in which the gasoline is sold and delivered.

It is contended that these exhibits are defective and insufficient for the purpose of establishing cost justification of respondent's price differentials, for the following reasons:

1. Respondent's cost of marketing gasoline and refined oils to tank wagon reseller customers in the entire Detroit field in 1940 are submitted in one total figure of 4677 $1,145,399.13, plus an additional total figure of $47,479.74 described as "direct leased service station expense." These total figures are comprised of numerous smaller items of costs and expenses of a widely varying nature, including expenses of sale, expenses of delivery, and expenses of a general or overhead nature, as indicated by respondent's account form 189, which is in evidence as respondent's exhibit 32. The separate amounts of expense for each of the more than 100 expense accounts listed on Form 189 are not shown, either for tank wagon reseller customers or for jobbers, and the exhibits afford no means by which the Commission can appraise the nature and extent of the cost differences or whether or not such differences in cost of sale or delivery result from the differing methods or quantities in which the gasoline is sold or delivered.

2. It is admitted that in separating and allocating its total marketing costs in the Detroit field between different products and different channels of distribution, the respondent did not take into account the volume of its sales of petroleum products to its four so-called jobber customers nor the volume of its products sold to other customers purchasing by direct shipment from respondent's 4678 marine terminal. It therefore appears that some undisclosed portion of the expenses of this direct shipment business is included in the very figure of $1,145,399.13 which respondent here submits as tank wagon reseller expense only. The method of accounting used by the respondent in setting up its marketing expenses for the Detroit field on form 189 makes the total expense figures, and many of the individual account figures, worthless for the purpose of establishing the cost differences here sought to be proved.

I would like to say there, too, that I do not think that that objection is at all cured by the computation which Mr. Boatwright made on the record upon the assumption that the jobber costs in Detroit amounted to .25 of a cent per gallon. He showed that upon such assumption there would be a deduction from the tank wagon reseller costs as shown on this exhibit, but the assumption was merely an assumption. It is not based on any fact and no allowance was made at all for the total amount of direct gallonage. In other words, the testimony is that the expenses shown on form 189 included all of the expenses in the Detroit field, including the jobber expense, and that the witness just does not know where the jobber expenses are, but they are in there some place, and part of them were right in the tank wagon reseller column.

4679 3. The price discrimination charged and proved in this case has been limited to price discrimination by the respondent between its customers in the Detroit area, including the cities of Detroit, Dearborn, Hamtramck and Highland Park. The total cost figures submitted by respondent on its Exhibit 33-B are total figures for the entire Detroit field, which includes Lansing, Ann Arbor, Pontiac and intervening rural territory. It appears that most of the territory in the Detroit field outside urban areas is served from bulk stations of the company which are operated by commission agents. Respondent's tank wagon reseller customers in the Detroit area, with the exception of certain outlying parts of Dearborn, are supplied from bulk plants operated directly by the company referred to herein as salaried stations. It appears that there are substantial differences in methods and expenses of sale and delivery of gasoline as between territories served by commission agents and territories supplied from salaried stations. In Respondent's Exhibit 33-B all tank wagon reseller expenses have been thrown together, whereas respondent's marketing costs outside of the Detroit area, particularly its costs of marketing through some 78 commission stations, have no relevancy in this proceeding and the inclusion of such costs may, for

4680 all that appears, have produced an inaccurate result.

4. Certain marketing expenses have been included in the totals given on respondent's Exhibit 33-B for tank wagon reseller sales, although it is admitted that such costs, for example, leased service station expenses and expenses in connection with dispensing equipment loaned, are chargeable only to certain phases of respondent's gasoline business and are not costs of sale and delivery which should be charged on an equal per gallon basis to all tank wagon reseller customers.

5. There are certain marketing expenses incurred by the respondent in the Detroit field, or allocated by it to the Detroit field, such as taxes, field office expenses, plant maintenance and general office expense, which are admittedly chargeable in some part to the marketing of gasoline to tank car reseller customers, and no similar expenses have been included in the statement of alleged cost of sale and delivery to this class of customers as shown on respondent's exhibits 33-C, D and E.

6. Respondent's exhibits 33-C, D and E are devoted to a cost analysis stated to have been made by the respondent for the purpose of determining the profitability of jobber operation in the State of Oklahoma in 1939. This
4681 cost analysis is offered as proof of the cost of sale
and delivery of gasoline to tank car reseller customers in the Detroit area in 1939 and 1940. The testimony shows that the marketing conditions and quantities of gasoline sold in Oklahoma to jobbers differ so greatly from the marketing conditions and quantities of gasoline sold to tank car reseller customers in Detroit that the Oklahoma cost study is worthless and should be refused as an offer of proof of Detroit costs. In the Oklahoma territory the company's only distribution of petroleum products was to 11 or 12 widely scattered jobbers, whereas in Detroit the company's distribution is in a thickly populated urban area and many of its costs are joint costs resulting from sales to many different classes of customers. Ten of the 12 jobbers located in Oklahoma purchased a total of less than 1,950,000 gallons of gasoline, naptha and refined oils in 1939, and 5 of them purchased less than 20,000 gallons each during the year. Citrin-Kolb Oil Company and Ned's Auto Supply Company each purchased more gasoline from the respondent in 1939 than the entire purchases of all of the Oklahoma jobbers. Certain large marketing expenses of the company, such as advertising, which were incurred in the Detroit area, were not incurred by the company in
Oklahoma. For some purposes, products other than
4682 gasoline and refined oils have been included in making
the cost computations for Oklahoma. It is submitted that the company's cost of doing business with jobber customers in Oklahoma is not the best evidence, and should not be accepted as proof of its cost of doing business with tank car reseller customers in Detroit, since it does not appear that a proper cost study producing more accurate results can not be made in the Detroit area.

7. Respondent has attempted to support the Oklahoma cost study as an offer of proof of cost differences in Detroit by testimony to the effect that while Oklahoma cost may not be the same as Detroit costs, the opinion of its cost expert is that the cost of sale and delivery to tank car reseller customers in Detroit is lower than in Oklahoma. Cost justification of price differences is a question of fact, not an opinion. To determine whether the respondent's price differentials are justified, the Commission must know the facts as to differences in distribution costs, if any, as between customers where the price discrimination exists, and not in some other remote area, whether the costs in that area be higher or lower. The opinion of respondent's witness that the company's costs of distribution to jobbers in Oklahoma are higher than similar costs in Detroit, 4683 is wholly insufficient to support respondent's Exhibits 33-C, D and E, or to provide the Commission with a means of determining the extent and nature of differences in cost of sale and delivery of gasoline to different customers in Detroit.

For all of these reasons, your Honor, I move that these five sheets constituting the Respondent's cost justification for its price differentials in Detroit in 1939 and 1940 be stricken from the record. I think it is clearly insufficient to sustain Respondent's burden of proof, but in addition to that I do not really believe it is proper evidence in support of the purposes for which it was submitted.

Trial Examiner Ballinger: I will hear from counsel for respondent.

Mr. Hanley: I shall not offer a long argument in resistance to the motion at this time unless the court cares to hear from me.

I think a complete answer to the motion lies in the fact that the issues as delineated by the pleadings in this case assert on the part of the respondent a cost differential justification.

We assert emphatically that the proof offered by the respondent has amply sustained the burden that is imposed by the statute upon the respondent, but irrespective of the merits of that contention, your Honor, this motion is inapposite and improvident at this time because as 4684 long as the issues stand framed as they do under the pleadings, if the proof of the respondent proved nothing except that it had failed in its proof, it is competent evidence to remain in the record and to be considered by the Commission. If it be purely negative on the affirmative assertion in the answer pleading of the respondent, it is proof and it is entitled to be considered.

Trial Examiner Ballinger: The Examiner is of the opinion and so rules, that the exhibits were tendered by the respondent as proof of its justification, that they are entitled to consideration by the Commission for whatever they are worth, and the motion to strike is denied

Mr. Austin: Now, if your Honor please, I renew the motion to strike, but restrict it at this time to Respondent's Exhibit 33-C, D and E, upon all of the grounds previously stated for the five exhibits, and for the additional ground that they, those exhibits, since they are directed to Oklahoma, and since it is not known that the cost study could not have been made for Detroit, are irrelevant and because the issues of this case do not include any question immaterial, and are not directed to the issues of this case of respondent's costs in Oklahoma.

I therefore move that Respondent's Exhibit 33-C, D and E, and also the material on Respondent's Exhibit 33-A, below the first item numbered 1, in other words 4685 everything opposite the items numbered 2 and 3 on Respondent's Exhibit 33-A be stricken from the record.

Trial Examiner Ballinger: Does counsel for the respondent desire to be heard?

Mr. Hanley: If the court please, I do not think that changes the main issue as defined by the motion at all. This is a part of the whole, as I understand counsel's present motion, and the tail would normally go with the dog, I assume.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

The exhibits embraced within the motion to strike were taken from the company's records. They form a part of the evidence tendered by the respondent in justification for the price discrimination.

The Examiner is of the opinion and so rules that the evidence shall be considered by the Commission for whatever it is worth, and the motion to strike is denied.

Mr. Austin: I now would like to make a statement on the record for the benefit of counsel for the respondent, if I may.

Trial Examiner Ballinger: Proceed.

Mr. Austin: Regardless of the ruling on the motions to strike and accepting for the purpose of argument 4686 the statement made by counsel for the respondent that these exhibits, Respondent's Exhibits 33-A to E are respondent's attempt at cost justification and are entitled to consideration by the Commission, counsel for the Commission intends to take the position before the Commission and before the courts, if necessary, that the respondent has not sustained its burden of proof in submitting, rather by introduction of the material contained in Respondent's Exhibit 33-A to E.

It may be that the material there submitted is some evidence, and therefore entitled to consideration; at the same time it may be insufficient evidence to sustain the burden of proof, and counsel for the Commission's position will be that of a party in a private suit who demurs to certain evidence submitted.

Now, I think it is therefore incumbent upon the Respondent to decide whether or not it wishes to stand upon the testimony which it has offered and the exhibits which it has offered, or whether it desires to introduce further proof of cost justification while it has the opportunity to do so in its case.

I do not think that the respondent may properly put in as little as it thinks is absolutely necessary with the assurance that when the case is finally submitted to the Commission, if the Commission rules against it it may then have the opportunity to go back and submit additional 4687 evidence.

If counsel for the respondent should desire to present this question to the Commission at the present time before it closes its case, as to whether it has sustained its burden of proof, I will not oppose any such attempt to submit the question, and in fact will gladly join in such submission.

On the other hand, if counsel for the respondent decides to stand upon the proof now in the record, counsel for the Commission can not state at this time whether he will make a formal motion to the Commission for the purpose of obtaining some ruling, or whether he will await final presentation of the case, but I am merely stating that if counsel for respondent desires the question submitted and determined now, I will certainly be glad to join in such a request, and facilitate the procedure of bringing the matter before the Commission.

I do not know of any usual procedure in such a case, but I should think if counsel joined in the request the Commission would make the decision, if it were desired by counsel.

Further, to clarify the position of Commission's counsel, it is my opinion that a proper attempt at cost justification and one ~~which~~ would satisfy respondent's burden of proof must at least include a comparison of the costs in the Detroit area, cost of sale and delivery as to the jobber
4688 customers on the one hand, and the tank wagon reseller customers in the Detroit area on the other hand, and I think that starting out with form 189 as a basis of respondent's cost accounting that it would be necessary, and this is not intended as a comprehensive statement because I do not intend to set forth how such an accounting study should be presented in detail at this time, but merely as a suggestion. I think that such a cost study should at least contain a statement of the expense for each one of the accounts on form 189, which it is claimed afford a cost differential as between the jobber and the tank wagon reseller business setting forth the total expense going into each account, the nature and type of expenses going into the account, and then a breakdown of that total expense, first by eliminating products other than gasoline, or at most gasoline and refined oils; then a further breakdown to show the tank wagon reseller expense, the jobber expense going into that account, and the total of all other, and finally a breakdown of the tank wagon reseller costs to the costs for the Detroit area, or if that be not entirely practicable, then a segregation of the tank wagon reseller costs and the cost of selling and delivering gasoline to tank wagon reseller stations served from salaried bulk plants, since it is my understanding based upon Mr. Boatwright's testimony that the entire Detroit area with the exception of some remote portion of Dearborn is served by
4689 salaried bulk plants.

Let me say again that this statement which I have just made is intended merely to state my own ideas and not specific methods of procedure or accounting practice, but if a study is made, the Commission's chief accountant, Mr. Lindyall and Mr. Warmack have sat in on the hearings here in Washington and are familiar with this proceeding, and are now available and will be available at any time to discuss with the company's accountant the specific methods to be followed in proceeding toward such a special study in Detroit if the respondent decides that it desires to make such a study.

It may be that some suggestions I have made are not practicable, but it is my opinion based upon consultation with our accountants that any such study should go at least as far as I have indicated regardless of the method of procedure that is used.

Mr. Hanley: Well, of course, your Honor, I should be remiss if I did not express appreciation to counsel for his forewarning of position he proposes to take, although I have apprehended that it would be the attitude of counsel for the Commission that he would attack the applicability of the Oklahoma survey as applied to the Detroit situation.

Before I express any views on the suggested method of legal procedure in this action, it just strikes me, your
Honor, that as to the accounting procedure that has
4690 been suggested, if I have been able to gain any grasp
of it at all, in the course of the study that I have been
required to make in the course of this litigation, rather than to indulge in the type of accounting that has been suggested, if I understand it, the executives and employees and stockholders of the respondent might better close up the shop and get a job on WPA. It just is not in the cards.

It simply is not a practical thing to do, but that is entirely apart, I take it, from the immediate consideration.

Counsel has suggested that it is his position that he will attack the applicablity of the Oklahoma survey to teh Detroit situation, and suggests a willingness to join with the respondents in getting a determination of that fact or to the submission of the case finally on its entire merits.

Inherent in that method, I take it, is the inference that there may be a foreclosure of the respondent if it does not do something in the interim and elects to rely on the cost evidence as presently in the record.

Frankly, I am now at some loss to understand how counsel for the Commission might join with us in getting a determination of that fact. I can see how the converse of that might be true. The evidence is in the record. Counsel for the Commission has moved that it be stricken and your Honor has denied that motion. That leaves nothing for

the respondent to do on this motion. It does appear
4691 that the Commission might, and counsel for the Commission might take an affirmative action in view of the ruling of the court; an action that respondent can not take. There just is not anything for respondent to do, and certainly I would have this view of it, and I have expressed it many, many times during the course of the trial, your Honor, that if there is any way that we can learn what the attitude of the Commission is and what they demand in the way of a showing on the part of the respondent, we are desireous of learning that. Indeed, we have been avid in our desire to know how we might present the facts in such form as would be most acceptable to the Commission.

I do not know that it would be possible to get any determination on the merits on any other kind of a motion whether made independently by counsel for the Commission or by counsel for the respondent, or jointly, because a determination on the merits of this showing would essentially be a determination of the case if that determination should be that the respondent had made a cost justification. If that should be the determination, your Honor, that would end the case. Of course, it would not end the case if the Commission should simply say this is not sufficient. It might eliminate the cost feature of the case but there would still be other matters of defense for consideration, but this might be entirely possible and certainly the respondent would welcome this, as to whether or not
4692 the attitude of the Commission would simply be to
say, well, we just won't consider any attempt at cost analysis in Oklahoma as applicable to Detroit. It does not make any difference what the cost analysis is in Oklahoma, how sound it may be, or what the opinion of those who know may be as to its applicability to the situation in Detroit, just on the face of it we refuse to consider anything except a Detroit survey.

Now, if that be the attitude of the Commission, then, of course, it automatically eliminates the Oklahoma survey, and would impose upon the Respondent the burden of making such a survey in Detroit as Respondent might be able to make.

To that extent certainly I think the Commission could properly go, and certainly to that extent the respondent is most anxious to be advised.

I have expressed many times, as your Honor will recall, a fear that we might be foreclosed on some procedural matter and I am most anxious to avoid that. We do feel justified in this method of establishing these costs because we did it all on a basis that had no relation to this lawsuit. We think it is as free from prejudice and from colorization by involvement in litigation as it is possible to advance figures. Every figure in here in respect of our justification as between the resellers on the one hand and the jobbers
on the other hand is a figure that was developed not
4693 to convince anybody of anything, but to enlighten our
own accountants and our own management as to what the facts are. Of course, they do not want to be fooled. They wanted to know that the accountants that made these surveys were not trying to convince anybody of anything. They were trying to develop the facts, and we thought that that might be more persuasive, might give a more convincing completion of an effort to develop the truth of factual background and situation than any attempted special study pointed directly to this lawsuit in an effort to convince in this particular lawsuit the particular issues involved here.

Now, I assure your Honor and counsel that if there is any way that we can learn what is necessary for Respondent to do beyond that which it has done to present this thing acceptably to the Commission, we are most anxious to do it.

We feel that we have proved our case on this particular issue but procedurally it may be true that the Commission will adopt counsel's theory that no matter what it proves as a fact, the Oklahoma survey just perforce can not be used in a Detroit situation. We think otherwise, but the Commission may adopt the view of counsel for the Commission, and if that be true, of course, we would want the opportunity at least to determine whether or not to simply
abandon our business to a substantial extent in De-
4694 troit, or whether to go ahead and make a survey.
This much is certain, that if that were done it would take a very substantial amount of time. Mr. Boatwright was asked and did indicate that it would take a number of months with a staff. I know Mr. Boatwright is very conservative; the way things go, it would take twice as long to get the thing into form, at least for presentation in a lawsuit.

Trial Examiner Ballinger: Well, Judge, in ruling upon the motion of counsel for the Commission the Examiner did not undertake to consider, and did not consider the weight of the evidence, but one thing he considered, and that was whether or not these documents had any evidentiary value. If they have evidentiary value, then the Examiner has no right to strike them from the record, and he is of the opinion that they may have evidentiary value, that they have evidentiary value, and upon that ground and on that ground alone he based his rulings.

Now, the Examiner would be delighted to see an appeal prosecuted to the Commission, but if an appeal is prosecuted the Commission would only pass upon the question as to whether or not these documents have evidentiary value, as to whether the Examiner was right or wrong in his ruling, and you would be in practically the same position you are now in. Therefore, I can not perceive how an appeal would be of any substantial value.

4695 Mr. Austin: I quite agree, your Honor and I was going to say that if I had decided to take the matter to the Commission on my own account it would not be in the nature of an appeal from your Honor's ruling; it would have to be in the nature of something like a demurrer to the affirmative defense, and we have no exact procedure of that kind, and that is why it seemed to me that either side could present the question. It is just a matter whether either of us wanted to do it.

Trial Examiner Ballinger: The Examiner would suggest, although he knows of no precedent, that something in the nature of a joint petition to the Commission to consider these documents that have been offered by respondent and the related testimony, with a request that the Commission express its opinion as to whether or not they form a sufficient basis to justify the acts of the respondent. Allowance or disallowance of the petition is a matter solely in the discretion of the Commission, but in view of the fact that respondent still places reliance upon the survey, the evidence that is offered as justification, the Commission might consider the matter and afford, in the event it found the evidence insufficient, respondent an opportunity to make a further survey.

I doubt if the case goes to final hearing whether the Commission thereafter would extend such an opportunity to the respondent.

Mr. Hanley: Well, surely, your Honor, if such pro-
4696 cedure is feasible, I know that the respondent will
be happy to join in the presentation of such a petition.

The respondent certainly does not want to get into a position of being foreclosed of its rights and if mere locality of this survey is to be the controlling factor, then I think that there ought to be a determination, indeed I felt all along, your Honor, that the respondent has been in the position of being forced to work more or less in the dark because we have not been able to get a glimmer for five or six years as to just what we were supposed to do.

Trial Examiner Ballinger: Certainly, Judge, counsel for the Commission has endeavored to be very helpful and to afford you the fullest opportunity.

Mr. Hanley: I appreciate that and right now he is suggesting some method, and your Honor is likewise endeavoring to be helpful, and I am trying to fit into that suggestion. I do not know how to do it.

I am willing on behalf of the respondent to join in such petition as your Honor suggests, or to follow the procedure suggested by Mr. Austin, of a demurrer to the defense, to raise the issue.

I am right now in this quandary, and placed there by the remarks of your Honor and by those of Mr. Austin, that while we feel, I feel primarily because of the attitude of
our own cost accounting people that our case is ade-
4697 quately proved on the costs, nonetheless I would feel
something more than foolish if it were found that because we used Oklahoma instead of a Detroit survey that our evidence was not worthy of consideration.

On the other hand, if the Commission feels that a consideration of the survey in Oklahoma and an analysis of it, the determination of whether or not it shows the differential is tantamount to an analysis of a similar survey, that we might make in Detroit, certainly under those circumstances I would not want to ask for a six-month continuance of this lawsuit and put my client to the very substantial—and when I say "substantial," I mean very substantial—expense of conducting a survey in the city of Detroit.

Now, Judge, if there is any way at all that this very fair attitude of Mr. Austin's in an effort to determine this question may be taken advantage of by the respondent, certainly I am prepared to do it. I do not care what the method is, or what the procedure, or how novel, or anything about that. I stand on no technicality at all. We can learn whether or not we have proceeded rightly. I want to learn it. If we have not done so, of course we want to do so. That is just all there is to it in my mind, Judge. I am ready to do anything that can be devised here.

Trial Examiner Ballinger: Well, the Examiner would
suggest that counsel confer and if they can agree
4698 upon a course that they think would be productive of
results, that it be adopted.

Mr. Austin: Yes.

I would like to say this, your Honor, that I do not think Judge Hanley was quite correct in saying that if the matter were presented to the Commission now and they decided that the proof offered were sufficient to satisfy Respondent's burden of proof that that would decide the case. I do not know whether he intended to say exactly that, but if the Commission decided that the proof was not sufficient, of course that would be then up to the respondent to proceed to present more proof. If the Commission decided that the proof already introduced was sufficient to satisfy the respondent's burden of proof, why then it would be up to counsel for the Commission if he could do so to introduce such evidence on rebuttal as to break down the proof offered. In other words, I do not think it will decide it either way. It will just decide whether you have to go ahead or whether I have to go ahead.

Mr. Hanley: It might only decide who had the burden of proof of going forward.

Mr. Austin: That is right.

Trial Examiner Ballinger: The Commission in view of
the heavy expense that a new survey would impose would,
I am sure, give very serious consideration to a peti-
4699 tion for an expression of its opinion.

Mr. Austin: And I think the Trial Examiner's suggestion as to a joint petition is probably the best way to present the matter if it is desired to present it.

It seems to me that the respondent must determine whether or not it desires to make a further cost study or introduce additional evidence in the event the Commission should decide that the proof already introduced is insufficient to satisfy the burden of proof. If the respondent does so wish, why then it seems to me that it is desirable that the matter be presented. Of course, if counsel does not intend to do it anyway, and intends to stand on this point, then there would be no point in submitting the matter.

Mr. Hanley: Well, if the Commission should take the position that this was an insufficient method of sustaining the burden, it would be my view that the respondent would want to do something in the way of adducing additional proof. I just feel there is no doubt about that.

Trial Examiner Ballinger: Judge, I doubt very much whether the Commission at this stage—although I am comparatively new here—would do anything more than express its opinion as to the method employed by respondent.

Mr. Hanley: Well, I think that would be perhaps very enlightening, as far as the respondent is concerned.

Mr. Austin: I think so, too.

4700 Mr. Hanley: In answer to Mr. Austin's apparent quandary, the respondent proposes to try its case and defend it to the utmost. If we have not proceeded properly, why then we want to get on the right side. That is all there is to that; and so far as I know, unless I am called off, that is just what we would do, and hence I will say this, and I am certainly authorized to go to this extent, that we will be happy to join in such petition as has been suggested and get whatever enlightenment the Commission in its wisdom and power deems to give to us.

Trial Examiner Ballinger: In view of the cooperative attitude of the respondent in this case throughout, the Examiner would be not only willing but very glad to approve and endorse a petition recommending that it be considered.

Mr. Hanley: Well, we can try it, Mr. Austin. That is the way proceedings grow, somebody starts one. It becomes an accepted method of procedure.

Trial Examiner Ballinger: Well, that is a matter that counsel can confer about later.

Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Hanley: Respondent moves that this hearing may be adjourned, to be reconvened on five days' notice given at the pleasure of the Trial Examiner to counsel for
4701 both sides.

Trial Examiner Ballinger: The motion is granted; and now, at 3:30 p. m., the hearing stands adjourned, to be reconvened upon five days' notice to respective counsel.

(Whereupon, at 3:30 p. m., Friday, June 27, 1941, the hearing was adjourned, subject to five days' notice.)

4702

Room 332, Federal Trade
Commission Building,
Washington, D. C.,
Monday, November 17, 1941.

Met, pursuant to notice, at 10 a. m.
Before: Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., appearing on behalf of the Federal Trade Commission.

Harold R. Hanley, Esq., (910 South Michigan Avenue, Chicago, Ill.) appearing on behalf of the Respondent.

4703

PROCEEDINGS.

Trial Examiner Ballinger: Come to order. Hearing on Docket No. 4389, in the matter of Standard Oil Company, is reconvened pursuant to notice at 10 a. m., November 17, 1941, in Room 332 Federal Trade Commission Building, Washington, D. C. The last hearing was held in Washington, D. C., June 27, 1941.

Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: You may proceed.

Mr. Hanley: Your Honor will recall that subsequent to the last hearing that we had it was determined that respondent would make a detailed cost survey applicable to the Detroit field, and a continuance was granted by the Commission until this date in order to provide the necessary time to complete that survey. Prior to undertaking the work, Mr. Boatwright came to Washington and conferred with Messrs. Lundvall and Warmack of the accounting staff of the Commission and with Mr. Austin as counsel for the Commission, and certain procedures were worked out at that time which the respondent has endeavored to follow insofar as it was possible to follow them.

Now, that work was completed by Mr. Boatwright and his staff some time last week, in the early part of last week, and Messrs. Lundvall and Warmack came to
4704 Chicago on Monday last and spent the better part of three days in conference with Mr. Boatwright and some of his staff, and I attended those conferences also.

Now, the work involved in making this survey has been a task of just very great magnitude. We realized that it would be that when it was undertaken, but I doubt if any of us, with the possible exception of Mr. Boatwright, recognized just how extensive a job it was. It involved the analysis of many, many thousands of individual documents, and Mr. Boatwright personally and members of his staff—many of his staff, Mr. Boatwright's staff, have been working continuously since, I think it is the 11th of August, if I am not mistaken in the date, right up until last week, and they were aided by any of the staff that could give them aid as to Detroit. They built up work sheets in the course of their study which number into the many, many hundreds, if not actually thousands—I don't know; there is a stack of them two feet high, and they are great long things, and as a result of that study Mr. Boatwright prepared certain conclusions and built a 189 form applicable to Detroit field for the year 1940 which breaks out the jobber cost.

Now, it appeared from our conferences in Chicago with Messrs. Lundvall and Warmack that they desired some additional supporting data other than appear in the conclusions that we have prepared—which Mr. Boat-
4705 wright has prepared. We recognized that in all probability we should, as a matter of safety, put in certain supporting data that did not appear in the conclusions themselves. I will say quite frankly, your Honor, that I was in doubt after reading the conclusions prepared by Mr. Boatwright, as to just what procedure to pursue, and just how far to go in the matter of supplying the court with additional and supporting detail and data. Your Honor will probably recall that I at least have been in something of a quandary throughout the course of our hearing relative to the extent of the burden that was placed upon the respondent. The statute requires that in the matter of justification, if it is pled, the burden is on

the respondent to rebut a prima facie case of discrimination, if that is shown, and in this case it is admitted. I have thought it was the law, and I believe it is the law, that the extent to which the respondent is required to go is no more than that of establishing a case of justification which, if unassailed or if not demonstrated to be fallacious, should prevail; in other words, the burden of going forward with the proof after the prima facie case of discrimination has been established.

There are, of course, two kinds of burden of proof: that is one. The other is the burden of convincing the trier of the fact.

I believe it to be the law that the burden is on the Commission ultimately to prove its case on the
4706 whole record. I believe it to be true in a proceeding of this kind, as in any case where an infraction of law is charged, that he who accuses has the burden of proving guilt before a conviction can be sustained, as in the case of a man charged with a crime and he undertakes to defend on the basis of an alibi, for instance, there is a period during the trial when he who asserts the alibi has some burden to go forward and show what he seeks to show in respect of his alibi; but the burden on the whole case never shifts away from the State. They must still prove guilt on the whole record.

Now, I refer to that, your Honor, because I believe that technically we would have the right to put in these conclusions which do establish our justification and rest, and that the burden would then shift to the Commission to demonstrate the fallacy of those conclusions, if they can. However, respondent has just concluded that even though we are right in that view of the law, that we desire, and I am [illegible] the Commission also desires, that we should go further and it was a question in my mind as to how we should go further and how far we should go.

Messrs. Warmack and Lundvall very aptly said that we were in a better position to supply the supporting data than the Commission was to delve into our records and get. Of course, that is true. Our accountants are familiar with the books and familiar with the work
4707 they have done, and while the Commission certainly has a right and the facilities for following our tracks in this study and making any study of their own that they desire, certainly I think it is true that our people can, in

the first instance, at least provide the Commission with supporting data with a great deal more facility and speed than even the very competent accountants for the Commission, who are unfamiliar with our records, could go into our office and dig it out for themselves.

Now, the ordinary method, I assume, of going forward, in view of this decision that I reached that we were going to waive any technical position that we thought might be right on the question of burden of proof—I suppose the ordinary method would be to develop the foundation by a witness who is qualified, namely, in this instance, Mr. Boatwright, by question and answer. It early became apparent that to do it in that manner would result in what I think would just be weeks of examination. It would involve preparation on our part of an examination based on these very voluminous work sheets, and then we would have to go through the very difficult task of asking questions and eliciting answers that would explain the various procedures and the various accounts, how they had been handled, what had been done in the matter of building up this new 189. That procedure has the distinct disadvantage of consuming a very large amount of time for every one, which it was desirable to avoid, I have no doubt.
4708 But it also has another serious disadvantage to my mind. It would result in a long record that might or might not be very consecutive in its continuity with reference to a clear and concise build-up of supporting data which in turn would impose the task upon all counsel and the court of worrying through that tremendously long record and building up for themselves a narrative story in consecutive form as to each of the several accounts that were involved.

It also has another disadvantage in that if it were done that way it would be extremely difficult to distinguish between those accounts that might appear of importance to the accountants for the Commission and to the Examiner and the Commission and those which were relatively trivial in character. It might easily result—and I fear would if I did it as thoroughly as I think I should do it perhaps, I pursued that course—in filling the record with what might be a large amount of undesirable detail.

As a result of all of these conclusions—and I will say, your Honor, that when Messrs. Lundvall and Warmack were in Chicago we did consider them all over a period of three days—and as a result of it a plan was evolved. It was not born all at one time but it just worked out as we considered these various possible methods of procedure, and that boils down to this: I explained to both of the accountants for the Commission that we were going 4709 to forget all about any legal question that might be involved as to where the obligation lay to proceed from this time on and that we might all consider it on the basis of just practical fact and a basis of what would most speedily and readily facilitate the work of everybody who is concerned in the matter. It finally resulted in a suggestion that Mr. Boatwright and his staff should undertake the work of writing up in narrative form and consecutively a detailed explanation of each of the important features of this study. After that is done—and it will be done by Mr. Boatwright and he will use his judgment as to what he thinks is important to put into it—then there will be a discussion again with Messrs. Lundvall and Warmack with this thought in mind: That if Mr. Boatwright shall have included too much detail in any particular that is regarded as unimportant and not of sufficient interest to remain, that can be eliminated down to a point where it suits everybody, or if, on the other hand, in some particular the explanation isn't sufficiently clear to satisfy everyone concerned, any deficiency can be supplied and further amplification made of the explanation. After it is thus revised, if it needs that revision, our thought was to offer that as an additional exhibit supporting the conclusions which we are now prepared to offer.

In respect of all of this program, your Honor, I explained to Messrs. Lundvall and Warmack that we, of course, reserved a right, which undoubtedly we have, to put 4710 in anything in addition to what they might think was sufficient explanation.

Having reached the conclusion that I have undertaken to explain, that we will assume the burden of going forward now and presenting this additional data, I want to make it very clear that what the respondent desires to do is to put in sufficient material so that any reasonable person examining it will be forced to the conclusion that it, taken by itself, is a complete and a sufficient explanation and justification of the position of the respondent, and that it is sufficient to warrant the respondent prevailing in its position unless and until it or some feature of it is—some important feature of it is demonstrated to be entirely fallacious.

So we desire to go that far.

Now, I believe that all of us in Chicago, including Mr. Lundvall and Mr. Warmack, reached a perfect accord in respect of this program, and I believe that we should be permitted to pursue it. I don't know how extensively it may have been discussed by Mr. Lundvall and Mr. Warmack with Mr. Austin or others here, but I am sure as they left Chicago they felt that this was a proper method of procedure and one that would greatly facilitate their work and that of all of the rest of us. I felt that we were under an obligation at this time to offer to the court the material that we do have prepared, for two reasons:

First, we were granted this continuance and we
4711 have prepared our conclusions and we have them,
and I just think we are under an obligation to produce them at this time. Secondly, I believe that it may aid Mr. Austin and his accounting staff if they have an opportunity now to begin their study of those conclusions. If we do offer them I just suggest, your Honor, that I shall not on direct examination undertake to develop much by way of foundation because that, it is anticipated, will be done by the additional material which Mr. Boatwright will prepare, and I suggest further that I do not believe that it would be proper to extensively cross examine Mr. Boatwright on these conclusions at this time, for the reason, among others, that many of the questions that would doubtless be suggested to a cross examiner will be answered by the exhibit which will later be prepared, and it would be a duplication of effort. One of the primary purposes of this program is to avoid as much direct and cross examination as we can. We do not want to duplicate the effort.

Trial Examiner Ballinger: Well, if your plan should be adopted, the right of cross examination would be reserved to a future date?

Mr. Hanley: Oh, of course. Of course. Understand, there is no disposition here to restrict cross examination, Judge. It is just a matter of how it can be done to the best advantage and with the least effort and by making the smallest record possible.

4712 Now, we would like to go forward on that basis, your Honor. I told these gentlemen in Chicago that, of course, this was a matter that had to be passed on by the Examiner and by counsel for the Commission, and that I felt under an obligation as a lawyer to come down here prepared to go ahead on any basis that might be suggested to me by the court, but that I did feel that we had arrived at something that was certainly very worth while in the matter of saving time and effort for everyone and we would like to go forward on that basis.

Now, I have taken the pulling oar here in the matter of explaining this thing as it occurred in Chicago, Judge, and I think I have accurately stated the results of our conference there. If I have not done so or if I have left out any important thing or inadvertently misstated anything, I believe that your Honor ought to hear Mr. Lundvall and Mr. Warmack.

Trial Examiner Ballinger: As this is a matter with which the Examiner is wholly unfamiliar, except upon your statement this morning, the Examiner will hear Mr. Austin or the representatives of the Commission.

Mr. Austin: If your Honor please, I have no objection to proceeding in general as outlined by Judge Hanley, which I understand will mean some further and reasonable amount of time being allowed the respondent to pre- 4713 pare the supporting data which has been referred to, and my conversations with Mr. Warmack and Mr. Lundvall are fully in accord as to what—as to the conferences held and so forth, with what Judge Hanley has said. I understand that the Commission has not been committed in any way to any procedure or any method of treatment in connection with this survey or in connection with the defense of cost justification, but I believe all that is necessary for me to say now is that I shall be very glad, of course, to have the supporting data for the conclusions reached put in to such an extent as may be desirable to the respondent and desired by our accountants, because, as Judge Hanley has pointed out, the preparation of that data is something which Mr. Boatwright and his staff can no doubt do more efficiently and more easily than our accountants could do it, and apparently, from what has been said, why, such data will be necessary for the consideration of the Commission one way or another. So that I am prepared to concur as to all that Judge Hanley has said regarding the desirability of that method of procedure.

Trial Examiner Ballinger: It occurs to the Examiner that it is a very desirable method to adopt, and we will proceed with the understanding that the respondents will be accorded further opportunity to submit supporting data.

Mr. Austin: That, I assume, will be made specifically

when respondent is through with what it has to present
4714 now. I assume that some request will be made for further extension of time for that purpose, and that would be a matter then for the Examiner to rule upon, so that—

Trial Examiner Ballinger: You may proceed.

JOHN W. BOATWRIGHT was thereupon recalled as a witness for the respondent, and, having previously been duly sworn, testified as follows:

Trial Examiner Ballinger: Mr. Boatwright, you have been previously sworn?

The Witness: Yes, sir.

Trial Examiner Ballinger: Recalled as a witness for respondent.

Direct Examination by Mr. Hanley.

Q. Mr. Boatwright, subsequent to the last hearing in this matter did you undertake a cost survey and study of costs for the Detroit field for the year 1940?

A. I did.

Q. Why did you choose particularly the year 1940?

A. In the first discussion—

Trial Examiner Ballinger: Just a moment. We will suspend a moment.

(A short interruption occurred.)

A. (continuing) In the first discussion on the task of making this special study of distribution costs held
4715 in Washington, I discussed the availability of records upon which such a cost could be predicated, outlined to Messrs. Lundvall and Austin—Lundvall, Austin and Warmack—the various records which we now have, and it was agreed that we should make the test upon the year of 1940.

By Mr. Hanley:

Q. And did you have a discussion with the gentlemen you have named in Washington, Mr. Boatwright?

A. Yes, I did.

Q. And about when did that happen?

A. It was in the early part of August, some time prior to August 11th. The exact dates I do not recall. I came down here and was here for two days covering the—discussing with these gentlemen procedures which seemed advisable.

Q. And was it not understood, Mr. Boatwright, at the close of the last hearing, or some time prior to your coming to Washington, that you would come to Washington and that you would have such a discussion with a view to outlining, as best you could agree, a method of procedure for conducting this study?

A. Yes. That offer was made—I do not know whether it was made on the record, but the offer was made on the part of Mr. Austin to make available for complete discussion and consultation the services of examiners for the Commission and that we did adopt that offer and did consult with said accountants.

4716 Q. Subsequent to that discussion did you proceed with the survey?

A. Yes, sir.

Q. And was there any given date when it was started?

A. Yes. We started on August the 11th.

Q. And since that time have you been continuously engaged in conducting the study?

A. I have.

Q. Did you, insofar as you found it possible and feasible, pursue the procedures that had been suggested by the Examiners or accountants for the Commission in conducting your survey?

A. Wherever I found it possible I did so.

Q. I wish you would very briefly give us just some idea of the extent of the work that was involved in preparing your conclusions and conducting this survey, Mr. Boatwright, as to the number of people engaged and just some idea of the records that had to be examined and their number, and so on.

A. Well, there were between 7—either 7 or 8 accountants and clerks assigned to the task for a period of slightly over 3 months. These men worked directly on the survey with no other duties. In addition to the staff, we called upon the regular accounting staff and the regular field sales staff for many analyses that they could provide us with the source of our data. The number of forms analyzed
is difficult to estimate, but it would surpass 50,000
4717 which, if anything errs on the side of an understatement rather than an overstatement. This work was

all done in Detroit, except that part which was necessary—incident to the general office portion of the expenses.

In addition to conferences held here, we held weekly conferences with the accounting staff of our own organization, discussing in complete detail each step of the procedure and determining what appeared to be the most logical method of handling individual problems and individual data. The 7 people have informed me of much night work, while we worked through all holidays and week-ends. It was a continuous job.

Does that adequately—

Q. Yes, sir.

A. —cover your question?

Trial Examiner Ballinger: You referred to 50,000 forms. Do you mean accounting forms?

The Witness: Not 50,000 different forms in the sense that each of the forms would be a—separate and unique, but each would represent a separate transaction in many cases, thus in a sample sale of tickets on credit cards we used over 11,000 sales to determine our standards.

By Mr. Hanley:

Q. Did you personally participate in this work, Mr. Boatwright?

A. Oh, yes, from start to finish.

Q. Was it all done under your direction and supervision?

4718 A. It was.

Q. Is it not a fact that your first assistant in your office participated personally and almost continuously in this work?

A. He did participate personally, and it was continuously throughout the entire assignment.

Q. As a result of the studies did you prepare certain conclusions relative to the costs of doing business with jobbers in the Detroit field as distinguished from the cost of doing business with reseller retailers?

A. I did.

Q. And did you prepare those conclusions yourself?

A. I did.

Q. And you have those conclusions here?

A. Yes, sir.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Mr. Hanley: May we have this document marked for identification, your Honor?

Trial Examiner Ballinger: You may. Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: The hearing will stand in recess for 5 minutes.

(A short recess was taken.)

Trial Examiner Ballinger: Come to order. You may proceed. ~~The~~ reporter will mark the document handed him by counsel for respondents Respondents' Exhibit
4719 100 for identification.

(The document was thereupon marked "Respondents' Exhibit No. 100," for identification.)

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Hanley:

Q. I show you now, Mr. Boatwright, what has been marked Respondents' Exhibit No. 100 for identification and will ask you if those are the conclusions ~~to~~ which you have just referred as being conclusions prepared by you and based on your cost survey in Detroit?

A. They are.

Q. I notice that your conclusions in Exhibit 100 are related to certain groupings of accounts. Is that true?

A. Yes, sir.

Q. And do those various groups of accounts, in your judgment, fall into the same category?

A. Yes. That was the object of classifying them in the form 189 which was discussed at a previous hearing. There would be a sub-account on salesmen's salary, and then subsequently on the form 189 there would be an account, traveling expense, salesman. Further down in the 189 would be a third account having to do purely with salesmen, such as operation and maintenance of sales-
4720 men's cars, while there would be still a fourth sub-account in the lower part of the sheet having to do with depreciation on salesmen's cars. In stating my conclusions, as outlined in Respondents' Exhibit 100, I have merely grouped accounts of a similar nature to facilitate the description and the understanding of the conclusions drawn.

Q. Now, Mr. Boatwright, was there a conference in

Chicago on November—beginning on November the 10th attended by Messrs. Lundvall and Warmack, accountants for the Federal Trade Commission, and yourself?

A. Yes, that conference started on the 10th, continued all that day, the second day, the 11th, and throughout the morning of the 12th. We were in discussion on ~~this~~ statement of the conclusions.

Q. Who attended that conference?

A. Those in attendance were Messrs. Lundvall, Warmack, Judge Hanley, Mr. Houghton, who is my direct assistant, and Mr. Russell, a cost accountant in my department, and myself.

Q. Is Mr. Houghton to whom you have just referred the gentleman whom you had in mind when I asked you a question a moment ago as to whether or not your first assistant had given his time continuously to this study?

A. Yes. Mr. Houghton is a cost accountant and office manager in my department, working—spending all of his time on analyses of this nature.

4721 Q. On the occasion of that conference did you have prepared a draft of what is now marked Respondents' Exhibit 100?

A. Yes. In the main it was a draft of what is now Respondents' Exhibit 100, although there were individual sentences or word changes made to clarify thought where the original manuscript did not give the exact interpretation that it was desired.

Q. Well, is it true that the draft that you then had in respect to the conclusions themselves was the same as Exhibit 100 is now?

A. Yes.

Q. Was there a copy of that draft exhibited to Messrs. Lundvall and Warmack at that time?

A. Yes. I had copies prepared, and a copy was furnished to all members participating in the discussion. It was read aloud and discussed, each of the gentlemen referred to having a copy to which they could refer.

Q. Indeed, Mr. Boatwright, is it not true that the procedure during that discussion largely followed the course of taking this draft of your conclusions and reading it aloud and then discussing the subject matter of each paragraph or sentence or conclusion, as the case might be?

A. That is exactly the procedure followed.

Q. You have heard the statement of counsel for the

respondent as to the determination reached in that conference as to what would be the best program of pro-
4722 cedure in preparing supporting data and presenting it in respect of these conclusions; have you not?

A. I have.

Q. And does that concur with your recollections as to the procedure that was outlined as a result of those discussions with the accountants for the Commission?

A. It does.

Q. In this grouping that you have used, Mr. Boatwright, in your conclusions, Exhibit 100, did you do that just as a matter of convenience to try and get the accounts that were of a similar character under one explanation or heading?

A. Primarily as a matter of convenience, although, if you take as an illustration, the various accounts having to do with salesmen, the salaries, the operation and maintenance of their vehicles, the depreciation on their vehicles, and their expense accounts, you have a similar allocation factor which applies, and rather than to explain the allocation four times, by grouping these you can explain the allocation only once and it is equally applicable to all four, so it was both a matter of convenience and a matter of brevity which prompted me to that end.

Q. I direct your attention particularly to page No. 55 of the Exhibit 100 entitled "Recapitulation of All Marketing Costs Schedules—Detroit Field—1940." Will
4723 you explain, please, just what that page represents?

A. Yes. You will notice at the extreme left of the page a numbering of the underlying schedules, the totals of which are brought forward to this page. The title of the schedule is given and then the marketing costs in dollars and cents by channels is shown. The channels selected are the tank wagon reseller, tank wagon consumer, the other method channel, jobber naphtha and gasoline, jobbers other products, the other direct shipment customers; then the sum total of these six channels represents the total petroleum marketing cost in the Detroit field. Automobile suppliers are then shown. Then our total cost for the entire field is shown in the last column. Adding up the various amounts shown under each of these columns gives the sum total expense of distributing our products in the Detroit field for 1940.

The recapitulation of this form ties in and checks with

the grand total of moneys expended in Detroit, as shown on the form 189, for the year 1940. The volume moving through each channel is shown in the third from the last line. A division of the volume into the moneys expended gives the cost per unit for marketing our various products by channels. That cost per unit indicated below "tank wagon reseller" is 1.67 cents per gallon. The various other channels, I think, would be of no immediate concern in the complaint until we reached the "jobber naphtha and gasoline" column, which shows a unit
4724 cost of .16 per gallon. The difference between the tank wagon reseller and the jobber naphtha and gasoline unit cost is shown on the last line of the page, being a net cost differential 1.51 cents.

Q. Mr. Boatwright, after your study of these costs and preparation of your conclusions, did you prepare a revised form 189 for the Detroit field for 1940?

A. Yes, I did.

Mr. Hanley: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: The reporter will mark the document handed him by counsel for respondent Respondents' Exhibit 101 for identification.

(The document was thereupon marked "Respondents' Exhibit No. 101," for identification.)

By Mr. Hanley:

Q. I hand you what has now been marked Respondents' Exhibit No. 101 for identification and will ask you what that is?

A. Respondents' Exhibit 101 is our usual form 189, comparative statement of marketing expense as far as the account designation and the account title is concerned in the first two columns in the left hand side of the exhibit. The channels in which our various marketing costs have been distributed differ from our usual form 189 for the reason that in our regular costs of accounting we do not isolate the marketing expenses incident to that class
4725 of business referred to as direct shipments. In this exhibit, however, we show the usual channel designation, tank wagon reseller, tank wagon consumer, other method, and then we isolate and set out separately those costs incident to direct shipment customers segregated among jobbers naphtha and gasoline, jobbers other prod-

ucts, and other customers. The figures shown on this exhibit appear in the order that they would on our usual marketing expense statement. Exactly the same figures appearing on this exhibit appear classified under schedules presented in the Respondents' Exhibit 100.

Q. Do the totals in respect of money expended for cost of marketing on Exhibit 101 for identification agree with the totals on the form 189 for 1940 covering the Detroit field, already in evidence in this case?

A. They do.

Q. Now, I think you have explained that in your conclusions, Exhibit 100, you have discussed each of the items of expense that appear on Exhibit 101 for identification?

A. Yes; the only difference being that the accounts are shown under schedules classified according to similar nature of cost incurred in the Respondents' Exhibit 100, while in the Respondent's Exhibit 101 the costs and the sub-account designations are in the order that the company maintains its regular distribution cost reports.

4726 Q. Directing your attention again to page 55 of Exhibit 100, and particularly to the last four lines of figures appearing on the page and across the page at the foot thereof, I will ask you if those same figures appear anywhere on Exhibit 101, and if so, where?

A. The line fourth from the bottom designated as "total expense" on page 55 of Respondent's Exhibit 100 appears opposite the title "grand total all expense" on Respondent's Exhibit 101. The total volume appearing on page 55, Respondent's Exhibit 100, appears opposite "total units" on Respondent's Exhibit 101, while the cost per unit of marketing shown on page 55, Exhibit 100, appears opposite "total units" on Respondent's Exhibit 101, while the cost per unit of marketing shown on page 55, Exhibit 100, appears opposite the title "average per unit" on Respondent's Exhibit 101.

Q. I note that the net cost differential of 1.51 cents appearing on page 55 in the last line thereof of Exhibit 100 does not appear on Exhibit 101. Is that correct?

A. It does not.

Q. I will ask you if it is not true that that figure 1.51 is simply a calculation—or the result of a calculation resulting in subtracting .16 cents appearing at the foot of the fourth column of figures on Exhibit 101 from 1.67

cents appearing at the foot of the first column of figures on 101?

A. Yes. It is merely the difference between those two figures.

Q. In other words, Mr. Boatwright, it is the dif-
4727 ference, as you have found it, between the costs incurred by the respondent in selling gasoline through the reseller tank wagon channel to retailers of gasoline and filling stations and the cost of the respondent of selling gasoline by tank car or tank truck to the jobber class of trade in the Detroit area?

A. That is correct.

Q. I will now direct your attention, Mr. Boatwright, to Respondent's Exhibit 33-A in evidence in this case.

A. Yes, sir.

Q. Exhibit 33-A and following pages are the schedules, as I understand it, which you prepared reflecting the results of a study which you made of the costs of serving jobber business in Oklahoma; is that correct?

A. Yes. Point No. 2 on page 33-A—on Exhibit 33-A does indicate the jobber marketing cost in the state of Oklahoma.

Q. And that, as reflected by 33-A, is .25 cents; is that correct?

A. Yes, sir.

Q. Is that the figure, Mr. Boatwright, on 33-A which would compare with the figure .16 cents on both page 55 of Exhibit 100 and Exhibit 101 under the column entitled "direct shipment customers, jobbers," column "naphtha and gasoline"?

A. Yes. The 25 hundredths, as indicated as a jobber marketing cost in the state of Oklahoma, is comparable with the figure of 16 hundredths cents per gallon as indi-
4728 cated by the special cost study in the Detroit field.

Q. Do you recall testifying as to your opinion and judgment relative to whether or not the cost of the respondent in serving jobber business in Detroit would be greater or less than the respondent's cost of serving jobbers in Oklahoma?

A. Yes. That is in the record several times, both as to the total of 25 hundredths, and as to individual components thereof.

Q. Do you recall testifying substantially that the cost of serving jobbers, as reflected on Exhibit 33-A, being .25

cents, was at least as great or greater than the cost to respondent of serving jobbers in the Detroit area?

Mr. Austin: Your Honor, unless it is leading up to something, I think I should object to mere repetition of the questions and answers appearing elsewhere in the record. I don't know what the purpose of it is here, but the record speaks for itself, unless counsel is leading up to some fresh question.

Mr. Hanley: I am not leading up to anything particularly, Judge, at all, to be quite frank about it. I just wanted to get the contrast in the record with a question or two.

Will you read the question, please, Mr. Reporter?

(Question read.)

Mr. Austin: Did you rule on the objection, your
4729 Honor?

Trial Examiner Ballinger: Yes. The Examiner overrules the objection. The Examiner will state this doesn't appear important to the Examiner but may be of assistance in final analysis.

Mr. Hanley: That is all; just summarizing. It is in the record.

A. I do not recall such testimony.

By Mr. Hanley:

Q. Now, I will ask you, Mr. Boatwright, if these exhibits, referring particularly to 33-A, on the one hand, and Exhibit 100 and 101, on the other hand, mean that it costs the respondent less to serve jobbers in the Detroit area than in the Oklahoma by the difference between .25 cents and .16 cents?

Mr. Austin: Object, your Honor, on the ground that it is immaterial now what the jobber cost is in Oklahoma. I think I should be consistent to have contended that before, that if it is now, certainly in view of this new survey, immaterial as to what the cost was in Oklahoma, then it is immaterial what the comparison is between the Oklahoma cost and the Detroit cost.

Mr. Hanley: We will still rely on the Oklahoma survey. We are not abandoning any evidence we put in here.

Mr. Austin: It seems to me that this is merely bringing out that this result now reached in the Detroit
4730 survey confirms testimony previously given, and if it does it seems to me that that appears on the record and is really a matter of argument, if it is of any benefit to

argue, that the witness' previous testimony has been confirmed by what he now states.

Mr. Hanley: I agree, now, Judge, I offer this merely in explanation of the exhibits that we all understand it.

Trial Examiner Ballinger: The Examiner is of the opinion that the effect is as stated by counsel for the Commission, but it may be of assistance later on and the Examiner will permit some limited examination.

Mr. Hanley: This is the last question I have on it.

Trial Examiner Ballinger: Objection is overruled.

The Witness: Would you read the question?

(Question read.)

A. Yes, that is the difference. The reasons for that difference, I am sure, will appear in many cases in the previous testimony given.

Mr. Hanley: At this time, if your Honor please, the respondent offers in evidence Respondent's Exhibits 100 and 101 for identification, with the reservation, as heretofore explained, that it is entirely probable that the respondent will desire later to adduce further direct testimony
4731 in connection with both of these exhibits on the occasion of offering the exhibit relative to supporting data which has been discussed in connection with our program of procedure.

Trial Examiner Ballinger: The Examiner understands that—the Examiner understands that it is your intention and that you will so request opportunity to offer further supporting data.

Mr. Hanley: That is right; and I will desire, I think, to amplify this examination. I am simply now undertaking to put in enough testimony by the witness to form a formal foundation for the offer of these two exhibits so that the Examiner and counsel and the Commission may have the opportunity to have them available right now, but will want to examine at greater length, I am sure, when the proper time comes.

Trial Examiner Ballinger: Any objection?

Mr. Austin: I have no objection, your Honor.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Respondent's Exhibits 100 and 101, for identification, are admitted in evidence, subject, however, to the right reserved counsel for the Commission to at a later date move to strike both exhibits.

(The documents heretofore marked "RESPONDENT'S EXHIBITS 100 and 101," for identification, were 4732 received in evidence.)

Mr. Hanley: Now, if your Honor please, I think I shall have some additional testimony to offer on the part of Mr. Boatwright, particularly in connection with certain studies that he has made in Detroit in connection with jobbers' advertising costs. I feel that I am in a position to go forward with that testimony, but if Mr. Austin is in a position to indicate at this time and is willing so to do, as to whether or not he is going to conduct any further hearings in Detroit, it would be more convenient, I think, to offer that testimony on that occasion. Mr. Boatwright obviously has to appear further in this case, and I would rather defer that testimony until that time, if you are going to hold hearings in Detroit anyhow, Mr. Austin. I say that because it will just make it easier for us all if we bunch our work as much as possible.

Mr. Austin: I do expect to be in Detroit again in rebuttal after the respondent has closed its case. I think it will be necessary, your Honor, to hold some further hearings in Detroit. That is my present intention.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Now, at 11:55 a. m., the hearing will stand in recess until 1:30 p. m.

(Whereupon, at 11:55 a. m. a recess was taken to 1:30 p. m.)

4733 Afternoon Session. 1:30 P. M.

Trial Examiner Ballinger: Come to order, at 1:30 P. M. You may proceed.

Mr. Hanley: If your Honor please, just before the noon recess it was suggested by your Honor that respondents should proceed to introduce everything that was ready at this time, and respecting that admonition of the Court we are prepared at this time to go forward with the introduction of certain evidence which Mr. Boatwright and his staff have accumulated in connection with the advertising expenditures of the various jobbers involved in this case.

I think I should make a completely frank statement of our position in reference to this evidence.

Mr. Boatwright and his staff, of course, with the aid of the bookkeeping departments of the various jobbers, have compiled figures which reflect the expenditures during the year 1940 for the several jobbers involved.

We propose to prove the amounts of money and the cents per gallon that the jobbers have expended in advertising. We propose to do that because it ties in with the whole question of advertising cost as it has been set up by Mr. Boatwright in his conclusions and in his allocations in this new form 189, which is now Exhibit 101.

4734 This has been done by Mr. Boatwright personally in part and by members of his staff, aided by members of the bookkeeping and accounting departments of various jobbers. It has been done under the direction and supervision of Mr. Boatwright. He has outlined the procedure which should be followed, prepared the forms which should be used, and which were used, and all of it finally came into his hands as a finished product so far as the work sheets were concerned, and he then prepared the conclusions based on that method of procedure, and the work that was developed by himself, his own staff, and those who assisted from the offices of the various jobbers.

Now, I may say that, informally, I am advised that Mr. Austin deems this type of proof immaterial. I don't question that now. I mean to say I don't argue about that now, your Honor. Suffice it to say just now that we propose to introduce it and to rely upon it as important evidence in the case. When Messrs. Lundvall and Warmack were in Chicago we discussed this question.

I want to say now that both of those gentlemen advised us, and we thoroughly understood that they could not and did not attempt to bind the Commission in any wise through any method of procedure that we may have used. So we recognize fully that the Commission is at liberty, and these gentlemen individually as accountants are at liberty, to question any method of procedure or any plan of
4735 allocation that we may have used.

However, in our discussions of the subject, and as we made disclosures to these gentlemen from the Commission as to what we had found to be the facts in connection with the advertising done by the jobbers, they did state, and I assume unofficially, because they were not undertaking to bind the Commission, that in their judgment there was necessarily some substantial reciprocal benefit from the advertising done by both parties, namely, the respondent on the one hand, and the jobbers in Detroit on the other hand.

Now, we are not able to prove, and we shall not be able to prove, in my judgment, the dollars and cents value of the respondents' advertising to the jobber gallon sold, nor, conversely, do we expect to be able to prove the value to the respondent in its business generally in dollars and cents, that is to say, of the advertising that has been done and paid for independently by the jobbers.

Trial Examiner Ballinger: Do you expect to establish any approximation?

Mr. Hanley: Not as to that. I think it is an utter impossibility, Judge. We can do this, and we propose to do this: We can establish in dollars and cents, and by gallon unit, the amount of money that has been expended by the respondent in advertising and, likewise, the amount of money and the amount per gallon unit that has been expended
4736 by the jobbers.

Now, as to just what reciprocal benefit in dollars and cents may accrue, we have no yardstick. There just isn't any way to do it, at least we know of no way. The advertising which was done by the respondent we concede may have induced John Doe, or somebody, to stop in at a service station that was supplied by the jobbers. Likewise, some advertisement that the jobbers bought and paid for may have induced John Doe, or his companion, to stop in at a station and buy Standard gasoline that was supplied by our company directly to some reseller, and with which the jobbers had no concern.

Now, of course, we have no means of telling just what the effect of those advertisements may be in terms of dollars and cents. The best we can do is to establish the expenditures of our own company, and the expenditures of the jobbers, which we can do, and, as I say, and again, I wish to qualify it because I don't want to create any false impression as to anything that was said to us by Mr. Lundvall or Mr. Warnick, that while they reserved the position that they were not able in any measure to bind the Commission, they did tell us that they recognized that there was some reciprocal benefit accruing as a result of that joint advertising effort, and I think I may say with reason, your Honor, that a man need not be a distribution cost accountant, or accountant of any kind, it is just common

sense that that naturally would result, and I think it
4737 is just apparent on the face of it.

Now, the purpose of this examination of Mr. Boatwright is to establish what he found as the result of his investigation and examination of the accounts and records of the jobbers.

I am making this statement now, your Honor, because of the suggestion your Honor made that we should proceed. Frankly, I am perfectly willing to defer this until Mr. Boatwright makes up his statement which he is going to make up, because he will treat this subject in that statement any way, and, however I need to support it at that time, I can do it. We have the figures now, and I think we are entitled to prove them by Mr. Boatwright, if your Honor desires us to proceed just the same as we would be entitled to prove the results and conclusions that any expert accountant found upon his examination of another man's books, and, as your Honor well knows, that happens hourly in the courts of the United States. That has been the kind of an examination that has been made. These are not our records; they are the jobbers' records. That is where this material came from; but I may say that an expert accountant has analyzed those records and reached the conclusions, and that we are entitled to prove those conclusions on the basis of his examination just the same as your Honor would be entitled to receive the evidence of a certified public accountant who had gone into the
records of the Standard Oil Company and examined
4738 them and reached certain conclusions and was prepared to testify.

Trial Examiner Ballinger: These were the books and records regularly kept by the jobbers?

Mr. Hanley: Yes, sir, they were.

Now, I want to say further, your Honor, that I am ready and prepared to prove those conclusions right now. I just want to make this statement, your Honor, so you will know what the character of the evidence is, and I am perfectly willing to defer it and prove it any way that may be suggested to you. I do not want to quarrel a minute about a hearsay objection, and I won't, if there is any; but we are ready to go ahead and establish this proof right now if your Honor thinks it proper that we should do so.

Trial Examiner Ballinger: I will be glad to hear from counsel for the Commission.

Mr. Austin: Well, your Honor, I would object to the admission of any testimony regarding the advertising costs of any of these jobbers, because we are not concerned with that here at all, and I think it is entirely irrelevant and immaterial.

We are here concerned with the costs of the Standard Oil Company, and the question here is differences in costs of sale and delivery of the Standard Oil Company as between its different classes of customers.

4739 I do not dispute that advertising is a cost of sale, but the question here is only as to the allocation of the advertising costs of the Standard Oil Company, and whether there is any basis for charging those costs to different customers or different classes of business on other than a gallonage basis.

I can not see how the amount spent by jobbers for advertising has any bearing whatever upon the allocation of the costs of the Standard Oil Company, and I think that the cost of the Standard Oil Company—that that is the only thing that is being allocated, and is the only thing that is material. Whether or not there is some reciprocal benefit, as stated by counsel for the respondent, resulting as from the jobber advertising to the Standard Oil Company, or from the Standard Oil Company advertising to the jobber, I think is immaterial. Whether there be such benefit, reciprocal benefit, or not, I don't know, but even conceding for the purpose of argument that there might be some reciprocal benefit, we are not talking about reciprocal benefits here at all,—we are talking about an allocation of the Standard Oil Company's costs. Whether or not any benefit was received by them from somebody else's benefit, in my opinion can have no relevancy as to the allocation of the money spent by the Standard Oil Company.

Trial Examiner Ballinger: Mr. Austin, see if I understand the situation, have it clearly in my mind. When

4740 evidence was offered with reference to the cost of sale to the retail outlets, the question was raised as to whether or not the jobbers, and those that they supplied, did not derive some benefits, and that there should not be some allocation of that cost to the jobbers.

That question is present, is it not?

Mr. Austin: Yes, if it was not raised directly it was at least raised inferentially by the cross-examination.

4741 Trial Examiner Ballinger: Now, such being the case, isn't it proper for the Respondents here to show that likewise reciprocal benefits inured to the benefit of the retail outlet trade served by the Respondent?

Mr. Austin: I don't think so, because that isn't the question. I don't care how much benefit the Respondent got from somebody else's advertising. We are only concerned with an allocation of certain marketing expenses of the Standard Oil Company. Now, how much benefit they got from someone else it seems to me is beside the point.

Trial Examiner Ballinger: Do you—

Mr. Austin: Let me say further, if you please, that I don't understand that it is claimed that any advertising done by the jobbers was done under any agreement with the Standard Oil Company that they would spend any particular amount of money or that it was any part of the agreement or contract, if any, between the company and the jobber. I believe there was no contract, so that any advertising that was done by either party was done voluntarily and not under any obligation as to amount or as to character. If there was some benefit received by the company, some additional consumer acceptance created by the jobber advertising, that is an incidental benefit the company received, but I contend that is entirely beside the question of an allocation of the money spent by the company.

4742 Trial Examiner Ballinger: If it is, or is intended to be later claimed by counsel for the Commission that some portion of the advertising cost inured to the benefit of the jobbers and their trade and that, therefore, there should be a deduction from the amounts claimed by the Respondent for advertising purposes, then the Examiner is of the opinion that this evidence is proper.

Mr. Austin: Well, I think, Your Honor, that it would be very—it would be a fallacious argument—and I think that the argument made by counsel is fallacious—in contending that there is any—that there may be a set-off against any such benefit. If the jobber gets some benefit from the advertising of the company, that is certainly relevant and material, as Your Honor has just stated; however, I would not concede that there could be any set-off against that by any benefit the company might get from the jobber advertising, because we are concerned here only with the allocation of a certain amount of dollars and cents spent by the Standard Oil Company and not concerned with any allocation of any amount of money spent by anyone else, so all I can do is make my position on the record clear on that point.

Trial Examiner Ballinger: The reciprocal benefits both ways were intangible; weren't they? They were not susceptible of determination?

Mr. Austin: In one way, but it is the very subject
4743 we are inquiring into, which means benefits or costs
which were received by the various classes of customers. The other matter of any benefits of the company received from any benefits to the jobbers, I contend is entirely outside the case.

Trial Examiner Ballinger: Let me see if I understand your position. It is that the company was under no contractual obligation to render any advertising services for the benefit of the jobbers?

Mr. Austin: And that the advertising was not directed to any particular customer. I think that is conceded.

Trial Examiner Ballinger: And, therefore, as the jobbers did derive some benefit, that then some portion of the advertising cost of the Respondent should be allocated to the jobbers. That is correct, isn't it?

Mr. Austin: Yes.

Trial Examiner Ballinger: Now, wouldn't it be likewise true if the jobbers who are under no contractual obligation to render any advertising service to the company did, as the result of their advertising, render services that inured to the benefit of the company; wouldn't they be entitled to an offset—

Mr. Austin: No, because they—

Trial Examiner Ballinger: —so far as the two could be ascertained or offset?

Mr. Austin: I should think not, because I should
4744 think that the company's cost of advertising remains
the same, remains exactly what it was, regardless of how much advertising the jobbers did and whether the company did any less advertising because the jobbers did some or not, it seems to me is beside the point because all we have is the actual amount of money the company spent.

May I just make one more suggestion on that point: That if it were true that such reciprocal benefits were material and could be taken into account, then that would be equally true of any advertising that could be done by any other service station, whether it was a jobber or whether it was one of these resellers to whom the company delivers in tank wagon. According to that, if any one of those service stations put an advertisement in the newspaper with their name on it, then that would justify a lower price for the gasoline bought from the Standard Oil Company. Maybe they put out an advertisement of their own; at least these companies have the sign that the Standard Oil Company puts up. It seems to me impossible to give consideration to anything of that sort in an allocation of the company's cost.

Trial Examiner Ballinger: Let us assume that the jobbers were out of the picture entirely. Is it your contention that the cost of advertising would have been reduced?

Mr. Austin: I don't know. That would be entirely up to the company to decide how much advertising it
4745 wanted to purchase under any set of conditions as
to its customers, but it seems to me when it has purchased a certain amount of advertising you can certainly look at the amount expended for advertising and see how that is to be allocated and you can't say that because a certain customer put in an advertisement in its own paper that that affects the nature of the Standard Oil advertising or the allocation of that cost, because we start out knowing that the advertisement of the company didn't contain any customer's name, was not directed to any particular customer, and the effect of that was customer acceptance generally. Of course, that may be getting into an argument on allocation, which is beside the point here, but however it has to be allocated. It seems to me you have got to consider the cost of the advertising, the nature of the advertising, and who benefited by it; and, therefore, considering those things, you make your allocation and what advertising one of the customers did on its own, it seems to me cannot affect either the amount of cost or the proper allocation of the cost of the company.

Trial Examiner Ballinger: The Examiner is of the opinion the matter presents a question that should be passed on by the Commission, that he would not care to assume responsibility. Therefore, the Examiner will let in the evidence.

Mr. Austin: Well, if Your Honor please, that was 4746 just one objection which Your Honor has just passed on.

I would there in addition on the—like to object to the introduction of testimony through Mr. Boatwright such as was described by Judge Hanley. He spoke of it being the usual practice to put in the evidence the contents of another man's books by a qualified accountant who has examined the books. Now, if the question is material as to what is in the books, I quite agree that Mr. Boatwright would be well qualified to testify as to what is in the jobber's books. Here it is not what is in the jobber's books that is material. It is a question of what the jobbers actually did, and if this type of testimony is to be admitted I would prefer that it be admitted through the jobbers themselves so that I would have full opportunity to cross-examine them concerning the nature of the advertising and all questions concerning it, whereas Mr. Boatwright could only testify that he found certain figures in their books showing what they had spent. He would not know anything as to the accuracy of those figures, wouldn't purport to. All he would know would be what he saw there.

Now, of course, I think what Judge Hanley referred to is that in many cases an accountant may be put on to testify to what was in another man's books because that may be material to rebut or to answer testimony of the person himself or contradict it, but here we are interested in what was actually done and not merely what the books say 4747 was done, and I think on that ground Mr. Boatwright would be incompetent to testify to any more than what the books actually show, and, since I believe that what was actually done is material, I would prefer to have the jobbers placed on the stand, if that testimony is to be allowed, and I here, therefore, object to the testimony of Mr. Boatwright if the testimony is directed to the question of the actual advertising expense and the nature of the advertising of the jobbers.

Mr. Hanley: I can clarify that, Judge, to assist the court in the ruling which may be made. The evidence that I now seek to offer does go to the fact of what these jobbers actually did and how much money they actually spent in 1940 in advertising the products of the Standard Oil Company; so there can be no misunderstanding about what we are trying to show. We are trying to show what they spent, really, actually spent in advertising their products, as reflected by their own records and as analyzed and examined by Mr. Boatwright and members of his staff. Now, Judge, just to clarify this thing—I don't want to argue the objection which Mr. Austin has made on the hearsay question or on the materiality question at this time unless Your Honor wants us to thresh it out completely at this time. However, I do want to say this: That, first, on the materiality and value of this type of testimony in this case, Mr. Austin made the statement in substance that it didn't make any difference how much the jobbers 4748 spent on advertising, we would have spent the same amount; and he reasons apparently from that that anything the jobbers did in the way of advertising our product is immaterial.

Now, I think he is right in his statement that, irrespective of what the jobbers did, we would have spent the same amount of money. I believe that is true; and, as far as that goes, Judge, I am not only willing to rest this advertising question on that statement if we can depend on that as being the decision of the Commission, I am willing to rest this whole cost proposition on the proposition that it would have cost us just as much to market our gasoline in Detroit if we didn't have a gallon of jobber business with any one of these four jobbers. Now, if we can depend upon that attitude on the part of the Commission we can quit putting in any cost testimony at all, if that is the way it is going to be, because it just doesn't cost us anything to sell gasoline to these jobbers, and this .16 that we have put in through the medium of Exhibits 100 and 101 at the end of this laborious cost study is a gross overstatement of our cost of selling to the jobbers; but we do say this, Judge: As long as you are going to take the position in the Commission that it costs us something, then we say we are entitled to a credit for what they do for us. After all, one of our cost justifications here is the fact that these jobbers assume a burden of which we are relieved by them which we have to assume and carry on the reseller 4749 channel.

Trial Examiner Ballinger: Judge, the Examiner has indicated very clearly, I think, his views with reference to that. Now, this question, however, as to proof by the jobbers of the actual expenditure of the money presents an entirely different question. Now,—

Mr. Hanley: As I say, Judge,——

Trial Examiner Ballinger: —if the evidence you now propose to offer today is admitted, of course it will necessitate, in the opinion of the Examiner, the calling of the jobbers so that counsel for the Commission may at least have an opportunity to cross-examine them and ascertain the actual expenditures made and the purposes for which they were made.

Mr. Hanley: Well, I reassert, Judge, that we are offering this now in line with Your Honor's suggestion to me before the noon recess that I should proceed as far as I could go at this time, and we have this evidence ready.

Trial Examiner Ballinger: I so understood, and I also understood that the foundation evidence was to be later offered and that we are merely utilizing the time now available to admit probably the cart before the horse.

Mr. Hanley: Possibly so. It will appear undoubtedly in Mr. Boatwright's analysis of this supporting data what he has done in connection with this analysis of the jobber advertising effort. If this objection is persisted in and if Your Honor takes the same view of it then as now, I apprehend that it will be necessary for us to call these jobbers in order to support and to offer that portion of the analysis that we then offer as prepared by Mr. Boatwright, and that is perfectly all right, Judge. We are willing to do that. I don't want to argue the hearsay phase of this thing at all. We are willing to do that. I am just offering this now, and I am making this explanation now before making a lot of question-and-answer record, so that both counsel and the Examiner will know what this type of evidence is.

Trial Examiner Ballinger: That is what the Examiner—

Mr. Hanley: I am perfectly willing to defer it.

Trial Examiner Ballinger: That is what the Examiner had in mind when he made the suggestion. In other words, this is merely informative to counsel for the Commission, and unless counsel desire to proceed differently the Examiner will suggest that you proceed, and the Examiner states at this time that when the—if there are exhibits that are offered in evidence the Examiner will withhold his ruling on their admissibility until the foundation evidence is introduced.

Mr. Austin: If Your Honor please, perhaps I should say that I don't think the record—I think the record will show that I didn't say that the Standard Oil Company 4751 would have spent the same amount on advertising even if they had no jobber business. I think I stated, in answer to Your Honor's question, that I didn't know what they would have spent, that they might have spent the same amount, or in any event would have spent what they wanted to spend although I don't think it would make a bit of difference if it were conceded, which it isn't, but even if it were conceded that they would have spent the same amount because these customers are here and have to be considered, and what they would have spent if they did not have these customers is, to my mind, likewise immaterial. Furthermore—perhaps this is unnecessary, but in view of my objection on the ground of hearsay Your Honor will recall that Mr. Gershenson of Ned's Auto Supply Company produced a voluminous file of advertising covering a period of about four years at the hearing in Detroit, and I don't believe any of that was introduced in evidence, but at page 245 of the record Mr. Gershenson testified that that file of advertising was 99 percent other ads, not gasoline. So that I think it already appears on the record that 99 percent of Ned's advertising was not directed to gasoline but to other products which they sell. Perhaps that 1 percent may amount to a few dollars; I don't know.

Trial Examiner Ballinger: The Examiner has stated that unless proper supporting evidence is adduced, any conclusions in the form of exhibits will be excluded.

4752 Mr. Hanley: Well, we accept that ruling of the court; Your Honor, and I will just say in connection with this testimony counsel is at liberty to use it as impeachment if he so desires, but we have measured the ads. We know what is in them. Now,—

Trial Examiner Ballinger: Let us proceed.

Mr. Hanley: That is all we have, Judge. You may take the witness.

Mr. Austin: Well, I don't intend to do any cross-examination now, but just one or two brief questions occurred to me this morning I would like to ask Mr. Boatwright at this time.

By Mr. Austin:

Q. Is this form here similar to the old Form 189, Exhibit 101?

A. The first two columns, as I mentioned this morning, are—

Q. No; just give the exhibit number.

A. Well, I was going to explain the similarity and the dissimilarity.

Q. Well, pardon me. All I wanted to know was the number of this so that I could refer to it.

A. That is not an official form of the company.

Q. No; the exhibit number, please, Mr. Reporter.

Mr. Hanley: 101.

Trial Examiner Ballinger: 101.

4753 By Mr. Austin:

Q. 101; that—

A. That is right.

Q. Now, on Respondent's Exhibit No. 101, Mr. Boatwright, I notice that there is no column headed "Income and Expense, Leased Service Stations." There was such a column on Form 189, Respondent's Exhibit 32. Will you state what has happened to the expenses that appeared in the leased service station column on the Form 189 for 1940, or where those expenses have been included in Respondent's Exhibit 101?

A. Both the income and expense items previously under the channels so designated on the 189 have been allocated between tank wagon reseller and other method channels following the title of each such subaccount.

Q. And in the column on Exhibit 101 entitled "Other Method," the total gallonage for that column is 4,920,137. That is the same figure, is it not, which appeared on line (3) at the bottom of the page of Form 189 for 1940?

A. I don't have the 189.

Mr. Austin: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Read the question, will you, please.

(Question read.)

By Mr. Austin:

4754 Q. Will you let me add to that question that you just finished reading: Under the column entitled "Other Method"?

A. The figure is the identical one in both cases.

Q. Mr. Boatwright, in Respondent's Exhibit 101, the column we were just speaking of entitled "Other Methods," which appears under "distribution through company bulk plants," do the expenses in that column include any expense for the sale of gasoline, naphthas, or refined oil?

A. No.

Q. And on Respondent's Exhibit 101 I note that the total of all expense for automobile supplies is slightly smaller than on Form 189 for 1940, and the total of all expense for petroleum products is larger. What is the cause of that difference?

A. Actual count of the calls of the salesmen resulted in a slight difference in the allocation of calls among petroleum products and non-petroleum products. Therein lies the entire difference.

Q. In other words, is that a correction—would you call it a correction, or would you say that this form is more accurate in that respect?

A. That form is one of the most accurate things that I can conceive of being prepared.

Trial Examiner Ballinger: You mean—

The Witness: Respondent's Exhibit 101.

4755 Q. Well, in that respect you consider that your present allocation of expense as between total petroleum products and automobile supplies is—that Exhibit 101 is the accurate figure rather than the old figure?

A. Yes.

Mr. Austin: I don't believe I have anything further, Your Honor.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

After informal discussion off the record, the Examiner now, at 2:40 p. m., adjourns the hearing to be reconvened in Washington, D. C., January 6, 1942, at the hour of 10 o'clock a. m., in the Federal Trade Commission Building, the hearing room to be later announced.

(Whereupon, at 2:40 o'clock p. m., November 17, 1941, the hearing in the above-entitled matter was adjourned.)

4756

Room 332, Federal Trade
Commission Building,
Washington, D. C.,
Tuesday, January 6, 1942.

Met, pursuant to notice, at 10 a. m.

Before:

Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., appearing on behalf of the Federal Trade Commission.

Harold R. Hanley, Esq. (910 South Michigan Avenue, Chicago, Ill.), appearing on behalf of the Respondent.

4757.

PROCEEDINGS.

Trial Examiner Ballinger: Come to order.

Hearing of Docket No. 4389, case entitled "In the matter of Standard Oil Company," is reconvened pursuant to notice at 10 a. m., Eastern Standard Time, January 6, 1942, Room 332, Federal Trade Commission Building, Washington, D. C.

The last hearing was held in Washington, D. C., November 17, 1941.

You may proceed.

Mr. Hanley: This is off the record, Judge.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

JOHN W. BOATWRIGHT was thereupon recalled as a witness for the Respondent, and, having been previously sworn, testified further as follows:

Trial Examiner Ballinger: Mr. Boatwright, you have been previously sworn.

The Witness: I have.

Direct Examination by Mr. Hanley.

Q. Mr. Boatwright, do you recall the hearing in this matter held in Washington on November 17, 1941?

A. I do.

4758 Q. Do you recall at that time the introduction into evidence of exhibits known as Exhibit No. 100, which was a rider with certain conclusions which you made in connection with the cost survey in Detroit, and Exhibit 101, a revised Form 189 for the year 1940 in Detroit?

A. I recall both exhibits.

Q. Do you recall that on the occasion of that proceeding it was agreed between counsel for the Commission and counsel for the Respondent and the accounting staff of the Commission that certain additional and explanatory material should be prepared by you and your associates to further amplify Exhibit No. 100?

A. I recall the discussion of that subject.

Q. And do you recall that that arrangement was approved by the court, and it was arranged that we should adjourn this hearing until a future time to give you opportunity to make that amplification?

A. I do.

Q. Mr. Boatwright, do you recall that as a part of that arrangement it was agreed that when you had proceeded to a point where you were prepared to cast it into final form that a conference should be had with counsel for the Commission and the accounting staff of the Commission to discuss the new set-up of conclusions and explanatory material?

A. Yes, sir.

4759 Q. Was there a time when such conference was held, and, if so, where was it held, when, and who was present?

A. Such a conference was held in the Federal Trade Commission Building in Washington. Those present represented the attorney for the Commission, Mr. Austin, Mr. Lundvall, and Mr. Warmack, and for the Respondent, Judge H. R. Hanley and myself. It was held, I think it was the 22d and 23rd.

Trial Examiner Ballinger: Of December?

The Witness: Yes, sir.

By Mr. Hanley:

Q. December, 1941?

A. That is correct.

Q. And during those two days of conference, please explain to the Court just what the course of the conference was, Mr. Boatwright, what took place.

A. Well, it seemed advisable to all present that the best understanding of the work and of the summary of that work could be obtained by jointly reading and discussing the material that had been prepared. I had with me at the time preliminary copies of all cost schedules, explanation of such schedules, completely documented as to origin of figures and adjustment of our original costing procedure in this one bound volume. Copies were given to each member present, and we proceeded to read the report point by point. That reading covered practically 90 percent, I would estimate roughly, of the total volume,
4760 there being some points where the material in the
report was not relevant to the case, such as information on barreling, and so forth, which is merely inserted in there for purposes of reconciliation, where we did not read but skipped over it and went to points where there was likely to be some controversy or lack of complete understanding.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Proceed. On the record.

By Mr. Hanley:

Q. Now, Mr. Boatwright, if I understand correctly, the exhibit that was being there discussed was primarily your conclusions as to how you had segregated out costs allocable to jobber business in Detroit for the year 1940; is that correct?

A. Well, the material discussed was the procedure followed, first, in segregating; then the segregation and the conclusions which resulted from that work.

Q. Yes, sir.

A. Yes.

Q. But is it not true that the figures and the explanatory material had primarily to do with the segregation out of jobber costs from the old form 189?

A. Yes.

(Discussion off the record.)

4761 Mr. Hanley: On the record.

By Mr. Hanley:

Q. Mr. Boatwright, during the course of that conference did it develop that the accountants for the Commission and counsel for the Commission raised certain questions as to how allocations were originally made—

A. Yes, they—

Q. —on the old Form 189 as between the various channels of business that appeared on Form 189?

A. Yes, that question was raised by both the accountants, and, I think, the attorney for the Commission. Toward the close of the conference wherein we had discussed the process of determining the jobber cost and the method of correction of the original 189 they then raised the question as to the procedure for determining the original allocation on our distribution cost procedure.

Q. Now, Mr. Boatwright, as a result of that discussion, was there any agreement reached in the conference as to how the Respondent should proceed in the manner of making some explanation of that original allocation?

A. There was.

Q. And will you please tell the court just what developed?

A. Well, in brief, a request was first made for an understanding of our code of accounts and a reconciliation of the original cost figures on our distribution cost
4762 analysis as shown by our comparative statement of expense. Our comparative statement of expense in each field is built monthly with various allocation ratios changing from month to month. The annual statement is merely a recapitulation of the monthly statements. I explained the difficulty of offering a complete reconciliation of each figure on our comparative statement of expense, and it was agreed that I should prepare a narrative type description of a regular costing procedure for each account on our comparative statement of expense, offering illustrations of typical types of expenses and how those typical types of expenses were allocated among the channels as reflected on our comparative statement of expense.

I think that summarizes, briefly, my recollection of the entire discussion on that point.

Q. Subsequent to that conference did you prepare, or cause to be prepared under your direction such an explanation of the allocation of cost as it appears in the regular Form 189 of the Respondent?

A. Yes. Following the conference I returned to the office in Chicago and did prepare, in conjunction with members of my staff, a supplement to our original explanation of the Detroit jobber cost analysis, this supplement being an explanation of the distribution cost procedure as followed by the company regularly, and is illustrated by types of expenses showing how they are allocated 4763 among the different channels of our distribution.

Mr. Hanley: Now, off the record, Judge.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

By Mr. Hanley:

Q. I now hand you, Mr. Boatwright, a document entitled "Supplement to Standard Oil Company, Indiana, Distribution Cost Analysis—Tank Wagon Reseller Channel versus Jobber Gasoline Sales—Explaining Regular Costing Procedure—Detroit Field, 1940," consisting of 33 pages in a folder—

Trial Examiner Ballinger: It is a bound statement?

Q. —which is a bound volume, and will ask you if that is the explanation of the regular allocation of cost distribution employed by Respondent in making up the regular Form 189, to which you have been referring?

Trial Examiner Ballinger: The document referred to will be marked Respondent's Exhibit 99, for identification.

(The document referred to was marked for identification "Respondent's Exhibit No. 99.")

A. That volume is the explanation of our regular costing procedure digested and illustrated.

By Mr. Hanley:

Q. As I understand it, Mr. Boatwright, you undertook in the analysis reflected by Exhibit No. 99—

Trial Examiner Ballinger: For identification.

4764 Q. —for identification, to explain by explanatory comment and by illustration the method of allocation of the cost under each of the numbered accounts which appear on Respondent's Accounting Form 189.

A. Yes, sir.

Q. Mr. Boatwright, you have, as I understand it, frequently in your testimony explained the method of accounting as reflected by the regular Form 189. Is that not true?

A. I think my explanation is to be found in the record in many cases on many individual accounts.

Q. Is it not true that such a Form 189 is prepared by each of the 27 sales fields or divisions of the Respondent by months each year?

A. That is true.

Q. And has that been true over a considerable number of years past?

A. It has.

Q. And it is true?

A. Yes, sir.

Q. Indeed, is it not the current method of cost accounting employed by the Respondent in its marketing business?

A. Yes, sir.

Q. In your cost survey in the Detroit field, whereby you undertook to segregate out of the regular Form 189 those costs which might be applicable to jobber busi-
4765 ness, did you take out those costs by the method and by months as those costs were originally put into Form 189?

A. Yes. That was absolutely essential to result in a balanced piece of work.

Q. Adverting to the regular Form 189, I will ask you if it is not true, Mr. Boatwright, that as these Forms 189 are prepared by the various fields or division offices they are prepared cumulatively by months, that is to say, there will be one prepared at the end of January in a given year and one at the end of February in that year, and the one at the end of February will include both January and February business? 7

A. Yes, sir.

Q. And does that follow through during the course of the year?

A. That follows through during the entire year.

Q. Is the result of the method such as to disclose in the December 31 Form 189 the whole of the year's business?

A. It discloses in the December 189 the whole of the year's business in terms of volume as well as a complete statement of all expenses incident to doing that volume.

Q. Is it not true that because the Form 189 is built up from month to month, as you have just explained, that in order to segregate out any particular item of cost it is necessary to analyze the source of material and accounts month by month?

4766 A. Oh, yes.

Q. And did you do that—

A. That was done.

Q. —in preparing your jobber costs?

A. Yes, sir.

Q. I believe you have stated, Mr. Boatwright, that what has now been marked Respondent's Exhibit 99, for identification, being the explanation of allocations in the regular Form 189, was prepared under your supervision and direction by yourself and by your associates and members of your staff.

A. Yes, sir.

Q. And it was prepared, as I understand it, in conformity with the views expressed and the agreements reached at the informal conference in Washington with counsel and accountant for the Commission.

A. Yes, to the best of my understanding of the agreement. To a certain extent, of course, I am attempting to guess what is needed for someone not thoroughly acquainted with the accounting procedure, but I have attempted a digest of our accounting instructions which will clarify an understanding of our regular costing procedure.

Q. I think you have said that it covers an explanation both of comments and narrative story as well as by illustration of each of the accounts that go into Form 189.

A. Yes. I should say that by illustration, if you

4767 have three accounts, let us say, that were handled in an identical manner I did not give three separate illustrations, but I would give one illustration that would typify all three of those accounts, so that the procedure is illustrated quite well throughout the entire treatment.

Mr. Hanley: The Respondent offers in evidence exhibit marked Respondent's Exhibit No. 99, for identification.

Mr. Austin: No objection.

Trial Examiner Batfinger: Respondent's Exhibit No. 99, for identification, is admitted in evidence.

(The document heretofore marked for identification "RESPONDENT'S EXHIBIT NO. 99," was received in evidence.)

By Mr. Hanley:

Q. Mr. Boatwright, on the occasion of the hearing on November 17 you had with you a prepared statement of conclusions in the matter of the Detroit field cost survey, which was received in evidence as Respondent's Exhibit No. 100. Do you recall that?

A. I do.

Q. You have explained the result of a conference with counsel and accountants for the Commission in which it was indicated that some further explanation of those conclusions was desired.

4768 A. Yes, sir.

Q. And you have indicated that you undertook to make such further amplification.

A. Yes, sir.

Q. Did you find it expedient to simply enlarge and amplify the original Exhibit No. 100 in order to meet the requirements as you understood them of this further amplification?

A. Well, I should explain that the further amplification was first written as a separate document, and then I attempted to place myself in the position of the accountant for the Commission and traced through, following the explanation of various accounts, and I found constant reference back and forth between two bound volumes, making it very difficult for an individual to follow the explanation consistently throughout. Rather than leaving it in that manner, it seemed much more convenient for all parties concerned if following each cost schedule the complete explanation, documented and illustrated, be placed in the same binder immediately following the schedule. Accordingly, I followed that procedure in writing the explanation of the Detroit jobber cost analysis.

Q. You recall the fact, do you not, Mr. Boatwright, that there was considerable testimony elicited from you on the occasion of the hearing November 17 in connection with the introduction of the original Exhibit No. 100?

A. Yes.

4769 Q. Does all of the material in the original Exhibit No. 100 appear in the [illegible] document to which you have just now been referring, and which is entitled "Standard Oil Company (Indiana) Distribution Cost Analysis—Tank Wagon Reseller Channel versus Jobber Gasoline Sales—Detroit Field—1940?"

A. All of the material originally appearing in the conclusions as originally presented as Respondent's Exhibit No. 100 does appear in the bound volume to which you have just referred.

Q. In addition to all of the material appearing in the original Exhibit No. 100, does there now appear in the document which I have just identified by its title the additional explanatory material and schedules to which you have referred?

A. Yes, sir.

Q. Do all of the questions and answers appearing in the transcript of the testimony for November 17, 1941, in connection with Exhibit No. 100 apply now to the document just above identified by title?

A. Yes, sir.

Mr. Hanley: Off the record, please.

(Discussion off the record.)

Mr. Hanley: On the record, if you please, Mr. Reporter.

Trial Examiner Ballinger: On the record.

4770 By Mr. Hanley:

Q. Do you recall, Mr. Boatwright, that on the occasion of the hearing on November 17, 1941, there was introduced an exhibit known as Respondent's Exhibit No. 101, which was a revised Form 189, based on your cost study in Detroit and upon the conclusions which you had reached as reflected by what was then marked Exhibit No. 100?

A. I do so recall.

Q. In connection with the new document which you have prepared, and which was identified above by title, being an amplification of what was marked originally Exhibit 100, did you revise and correct any errors that may have existed in the revised Form 189, being Exhibit 101?

A. Yes, sir.

Q. Did those errors amount to any substantial amount?

A. No.

Q. Did they in any particular change the differentials in cost as appeared?

A. No. They neither changed the differential nor did they change the unit cost in a given channel.

Q. As I understand it, Mr. Boatwright, they were trivial, mechanical errors in calculation?

A. That is correct. In spite of the fact that the other work had been completely checked by second operators, there were minor human element—human errors
4771 found in the original which were corrected.

Q. In view of that discovery, have you prepared new and corrected Forms 189 revised on the basis of your latest calculation and on the basis of this expanded report of your study?

A. I have.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Hanley: The Respondent now desires to physically withdraw from the record Respondent's Exhibit No. 100 and to substitute therefor as Respondent's Exhibit No. 100 the bound document, consisting of 133 pages, and entitled "Standard Oil Company (Indiana) Distribution Cost Analysis—Tank Wagon Reseller Channel versus Jobber Gasoline Sales—Detroit Field—1940."

Trial Examiner Ballinger: Any objection?

Mr. Austin: No objection.

Mr. Hanley: Further—

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: The motion is granted and leave is granted counsel to withdraw Respondent's Exhibit 100, heretofore admitted in evidence, and substitute therefor the document now numbered Respondent's Ex-
4772 hibit 100.

(The document heretofore received in evidence as "Respondent's Exhibit No. 100," was withdrawn from evidence and a new document, consisting of 133 pages, was marked "RESPONDENT'S EXHIBIT NO. 100," and received in evidence.)

Mr. Hanley: At this time Respondent requests permission to withdraw physically from the record what is marked on the record as Respondent's Exhibit No. 101, being a revised accounting Form 189 for the Detroit field for the year 1940, and to substitute physically therefor a revised Form 189 for the Detroit field for the year 1940, which revised form reflects a correction of the trivial errors to which the Witness Boatwright has just referred. It is further requested that the substituted exhibit may be identifed as Respondent's Exhibit No. 101.

Trial Examiner Ballinger: Motion is granted. Substitution may be made. The Reporter will mark the document Respondent's Exhibit No. 101.

(The document heretofore received in evidence as "Respondent's Exhibit No. 101," was withdrawn from evidence, and a new document was marked "RESPONDENT'S EXHIBIT NO. 101," and received in evidence.)

Mr. Hanley: I just have a very few more questions: I think I will be through, Mr. Austin.

By Mr. Hanley:

4773 Q. Mr. Boatwright, I think on the occasion of your examination on November 17, 1941, you explained in some detail the method which you had pursued in conducting the cost study in Detroit.

I desire now to ask you if, in your judgment as an economist and cost accountant, that study was conservatively conducted and has resulted in the allocation of all or more than the actual cost incurred by the Respondent in handling the jobber business in Detroit?

A. You are correct in that I did give statements relative to the procedure followed in determining the jobber cost. Throughout this study we have attempted at every possible case to measure as accurately as it is physically possible the cost incident to a particular type of sales. Likewise, we have attempted, wherever an allocation of costs was found to be necessary, to accept what we regarded as being the most logical method of cost allocation. In any detailed cost study you go down to certain points where it is a matter of judgment. In the exercise of this judgment we have attempted to adopt procedures which would throw all possible costs against the jobber. To illustrate: I think of four accounts in particular —one of them being the payment of a federal capital stock tax, the experimental development and research work, the pro rata general administration, and the law ex-

4774 pense—to which accounts we gave considerable thought and study as to the best means and the most equitable means of allocating a just portion to the jobber volume. I have found illustrations where certain cost accountants would advocate an allocation on a gross margin basis. Others advocate a unit of sales basis. Others on a realization basis, and various and sundry methods of allocation.

Now, in these four accounts it seemed to us that we should not claim that these accounts of an over-all nature afforded a basis of a cost differential, and accepted as our allocation procedure, therefore, the per gallon of sales through jobber and other direct shipments as well as through tank wagon.

Now, from my knowledge of the company, I know that, in terms of effort, it costs our company less effort and hence less cost for law expense, as an illustration, or for pro rata general administration, as an illustration, to do business through jobbers than it does through tank wagon outlets, but I had no accurate means of measurement of the distribution of effort, not being available. That shows the per gallon method of allocation.

Now, these four items alone result in a charge of jobber gasoline in excess of $12,000 out of the total assessable to those outlets of slightly over $24,000. In other words,
50 percent of the total jobber cost, as revealed by
4775 this analysis, is in there on a per-gallon basis, not
feeling that we could justify, in the absence of more detailed time study, any other method of allocation. I feel that that is a most conservative method of handling that particular group of accounts.

Now,—

Q. Well, just permit me to interrupt you a moment, Mr. Boatwright, so we can get that into language that any layman can understand.

Does what you have said mean this: That, in your judgment, from your knowledge of the business and from your experience and training as an economist and accountant, that it costs the Respondent less per jobber gallon in connection with these various accounts to which you have just referred than it costs per reseller channel gallon?

A. Definitely.

Q. Does it follow that when you have allocated on the per-gallon basis, as you have done in this study, that you have, in your judgment, added a burden of cost to the jobber gallon to which it is not entitled?

A. Yes; except that I have no other measure by which to allocate.

Q. I understand that you have done that because you have not been able to determine upon any measure—

A. Yes.

4776 Q. —of division; but I want this very clearly before the Court, if it is true: Is it definitely your judgment that the method that you have used overburdens the jobber gallon as contrasted with the reseller channel gallon?

A. That is true.

Q. All right.

A. Now, the second thing that—carrying out on your previous question as to the conservative nature, there were several positions and accounts which, had I been asked when I was on the stand at the previous hearing, I would have stated were absolutely unrelated to any jobber business. I found, however, from a careful and thorough search of our files, that maybe some of these individuals spent a half hour or an hour or a substation auditor loaned his car to a salesman for a month. There are many little cases of that type throughout the analysis which, I think, indicates the degree of care to which we went in the analysis of each position by month throughout the entire year to result in every possible charge to the jobber business.

Thirdly, all of the members on the payroll were assumed to work only a 40-hour week. We know this is not true of salesmen and people in a supervisory capacity. Having determined the amount of time devoted to jobber business, the 40-hour week was used as a divisor, which resulted in a ratio of effort which overstates, if any, the proportionate share of the effort, and hence the cost of a
4777 particular position that is applicable to jobber business.

I think I would call attention only to one-fourth factor. Practically all of the supervisory selling expense—because practically all of the gasoline is sold by members of the supervisory group—is across the luncheon table. In spite of this fact, and in spite of the fact that our supervisor would eat lunch anyhow, we charge the time value against the cost of this business.

I think those are the four principal things that I could recall at the present time indicating the conservative nature of the cost as presented against jobber gasolines.

Mr. Austin: May I interpose a question?

Mr. Hanley: Surely.

By Mr. Austin:

Q. Mr. Boatwright, when you just said that most gasoline is sold across the luncheon table, referring to your sales supervisory force, will you explain that a little as contrasted with your account 004, Salary—Salesmen, because I have always assumed that the biggest part of selling expense was under Salary—Salesmen.

A. It is for tank wagon business. You will recall, I am sure, from previous testimony, that there is no contract between the Respondent and any one of the four jobbers. The contact with these accounts is largely that of the manager of the Detroit field. He is the individual 4778 in the Detroit field with whom the jobbers wish to deal and do deal practically all of the time.

Q. Then, you were referring to jobber sales of gasoline when you said that most sales were over the luncheon table?

A. Yes, sir.

Q. I do not think it appeared clearly in the record, and I wanted to straighten that out.

A. Thank you for your question, because that is what my reference was.

Q. May I ask, too, on that point: Account 002, Sales Promotion, does that include the salaries of the men who supervise and have control over the salesmen?

A. Yes, that includes the salaries of the individuals who supervise the day-to-day activity of your sales group.

Q. And are they in turn under the officials whose salaries are included in the account entitled "Salary—Supervision"?

A. Yes, sir.

By Mr. Hanley:

Q. Mr. Boatwright, do you feel that in this cost analysis that you have discovered and allocated every possible cost to which the Respondent has been put in conducting its sales business with the jobbers in the Detroit field?

A. I know I have.

Q. Basing you answer on your knowledge of the 4779 Respondent's business, on your training and knowledge as an economist and accountant, do you believe that it actually costs the Respondent as much as .16 of a cent a gallon to sell gasoline to the Detroit jobbers?

A. I know that is the outside top figure.

You will recall my testimony that there are certain accounts where I had to use a gallonage factor in allocation, which my judgment tells me is an overcharge, but concerning which I had little alternate but to adopt that procedure. Therefore, that is why I said I know that that is the outside top figure.

Mr. Hanley: Judge, barring some inadvertent oversight—of course, I would like to reserve the opportunity to correct at some future time, if necessary—I think that is all that we have to offer at this time.

As I understand it, Mr. Austin proposes to conduct the cross-examination after he has taken some time to study this matter and proposes to do that in Detroit, and possibly put on further testimony.

Trial Examiner Ballinger: If upon reflection you find that you overlooked any questions, you may submit them when we will reconvene.

Mr. Hanley: Now, off the record.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

4780 Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Referring to Respondent's Exhibit 99, Mr. Boatwright, you stated that that was an explanation of the regular costing procedure of the Standard Oil Company which it uses and has used, I believe, for a number of years past in the preparation of its "Comparative Statement of Expense" Form 189; is that correct?

A. Yes, sir.

Q. We have now introduced as Respondent's Exhibit 101 a new comparative statement of expense for the year 1940, which is not Form 189, but is a form containing different channels of cost allocation and a form which was prepared for the purposes of this proceeding. Is that correct?

A. Yes, sir.

Q. And in making an allocation of the expense in any of the acounts shown on Form 189, or in Respondent's Exhibit 101, I assume, Mr. Boatwright, that it is necessary to start out with the expense itself, that is, the first thing you have is the amount of the expense which comes in, and before you do anything with it as an accountant you first obtain the number of dollars that the company has spent; is that right?

A. Yes.

Q. There has been reference made several times to the withdrawal of the direct shipment expenses from the

4781 channels of expense listed on 189 and in the same manner as the direct shipment expense went into those channels.

A. Yes, sir.

Q. For the purpose of this proceeding and of an understanding of the Respondent's Exhibit 101, would it not be correct to state that, starting out with the total expense for petroleum products listed in that column, then the first step was to determine the direct shipment marketing expense in the manner shown in Respondent's Exhibit 100, and that that expense was then deducted from the total of petroleum products marketing expense?

A. I am quite sure as I followed your statement that you have stated it correctly. However, so that the record is clear—

Q. Yes, restate it.

A. The first process was to determine the direct shipment cost. Having determined the direct shipment cost, this was then taken out of the original cost for marketing in Detroit, according to the method that that same cost had previously been allocated to the different channels of sale.

Q. But would it not be equally correct, Mr. Boatwright, to say that that direct shipment expense was deducted from the total expense for all petroleum products in each column?

A. No, not quite, for this reason: I found that where expenses had been allocated on a time ratio basis—
4782 you will recall the salesmen account 004 is allocated on the basis of estimates of time. Now, if you are going to take a hundred dollars out of that, the direct shipment cost—as representing the direct shipment cost, then that hundred dollars is spread throughout all channels, and so there will even be found a small part of it to be assigned originally to automobile supplies. Therefore, it was necessary to take that small portion out of the automobile supplies, the same as the total petroleum products. Therefore, instead of making my deduction from the total petroleum products channel, I made my deduction from the total marketing expense for each subaccount.

Now, any allocation that was on a time basis I found direct shipments, because that very application of a ratio of time resulted in a charge to automobile supplies, which was taken out. Aside from that—

Q. Even though that expense was not an automobile supply expense?

A. That is correct.

Q. Well, I was—

A. You asked me a question at the previous meeting and you followed that question with the statement "In your judgment, then, is there a more accurate method?" And I confirmed that it was just—it was a more detailed analysis, is a better way of putting it.

4783 Q. I am just leading up to one thing here, and for the purpose of simplicity I was just ignoring automobile supplies entirely.

A. I see.

Q. What I wanted to establish was this: Ignoring automobile supplies, with the reservation that you have just explained—

A. Yes, sir.

Q. —Is it not correct to state that the figures for marketing expense on Respondent's Exhibit 101 are arrived at in this way, that the direct shipment expense is deducted from the expense of total petroleum products, that is step 1; step 2—and each of these steps may include several things—step 2, direct shipment expense has been divided between jobber expense-gasoline and naphthas, jobber expense—other products, and direct shipment expense—other customers?

A. Yes, sir.

Q. Step 3, the remainder of the total petroleum products' expense, after deducting direct shipments, has been allocated between tank wagon reseller, tank wagon consumer, and other methods?

A. Yes, sir.

Q. Now, just one more question.

Is it, then, true that the costing procedure described in Respondent's Exhibit 99 is the costing procedure which was
followed in allocating the total petroleum products
4784 expense, after deducting direct shipments expense,
between tank wagon reseller, tank wagon consumer,
and other methods on Respondent's Exhibit 101?

A. Yes, for this reason: The costing procedures you have outlined in 99 is a method by which these costs were originally spread to the channels including direct shipments.

Now, inasmuch as I took direct shipment cost out, according to the identical method of entry, then your residual amount is allocated between tank wagon reseller, tank wagon consumer, and other methods, and in some cases automobile supplies are explained there also, according to the procedure outlined in Respondent's Exhibit 99.

Q. Yes.

A. Yes.

Mr. Austin: Off the record, please.

(Discussion off the record.)

Mr. Hanley: In view of this line of examination, I would like to ask just two or three more questions.

Trial Examiner Ballinger: Proceed.

By Mr. Hanley:

Q. Mr. Boatwright, Exhibit No. 99 explains, as I understand it, the method of allocating costs as costs are set up in the regular 189 accounting form of the company—of the Respondent; is that true?

A. Yes.

4785 Q. When you made your cost study in Detroit for the year 1940, as I understand it, you extracted and segregated from the cost allocations in the regular Form 189 all of the costs that were attributable to jobber business; is that true?

A. Yes, sir.

Q. As I understand it, you extracted those costs from whatever allocation they happened to be in in the original or regular Form 189?

A. Yes, sir.

Q. Furthermore, you took them out as of the time they went in, that is, month by month?

A. Yes, sir.

Q. Did that have the result of leaving a residual amount in each of the channels of cost on the original regular 189, exclusive of jobber costs, which residual amount was distributed on the basis of the company's regular accounting procedure, as explained in Exhibit 99?

A. Yes. Your question is correct, provided you will add to your jobber cost your other direct shipments, which were also taken.

Q. I mean my question to include direct shipments, all direct shipments, inclusive of jobber costs—of jobber shipments.

A. Then your statement is correct.

Mr. Hanley: Is that what you had—

4786 Mr. Austin: Yes. You put it the other way, Judge, but it comes out of the same way.

(Discussion off the record.)

Mr. Austin: May I ask whether the records and facilities of the company in Detroit or in Chicago either will be available to the Commission's accountants in the event we desire to make some check of—or—some check of any of the material in Respondent's Exhibits 99, 100, or 101, or desire to perhaps conduct some study of our own in the event that we should differ from any of the Respondent's theories?

Mr. Hanley: If Your Honor please, the records and accounts, files, of the Respondent, whether they be in Detroit or Chicago, or both, having any bearing at all on this matter are and will continue to be available to the Commission and its counsel and accountants and examiners at any time that they desire to make the examination. Furthermore, the records are not only available, but if it is desired on the part of the Commission's representatives at any time to make any examination, Respondent will undertake to supply any facilities or aid that may be helpful in that direction and do anything that we can to facilitate the efforts of such representatives. Just in connection with that, if it is desired to make such an examination, if we may have, oh, a few days' notice so we can make help and space, and so on,—

Mr. Austin: Yes.

4787 Mr. Hanley: —available, we would appreciate it if we might have that few days' notice.

Mr. Austin: I believe counsel for the Respondent has in the past at various times upon the record expressed his company's willingness to cooperate with the Commission—

Mr. Hanley: Yes, at any time.

Mr. Austin: —if we want to make a cost study or any examination which we wish to make.

Mr. Hanley: That is true.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Mr. Austin: I would like to postpone cross-examination of the witness, Your Honor, pending an opportunity to study the rather exhaustive cost study which has been presented.

Trial Examiner Ballinger: That privilege will be granted you.

Mr. Austin: And I now move that the hearing be adjourned subject to reconvene upon five days' notice.

(Discussion off the record.)

Mr. Austin: In connection with the motion to adjourn, I would like to state that the exhibits just introduced by the Respondent involve the results of extended cost study, which it took some three months to make in the City of
Detroit, and that it is, at least from my standpoint, a
4788 rather complicated marketing study which will re-
quire some considerable application on my part before I am able to determine either the subject matter or the extent of cross-examination of this witness which may seem desirable. Also it seems probable—in fact, it is at present planned—or it is the present plan—that the Commission's accountant be assigned to the study and analysis of some matters in connection with the Respondent's accounting study, which assignment will require his traveling to Detroit or Chicago, or both, and the extent of which study as to time cannot now be determined. Furthermore, when the hearings are proceeded with it is the intention of the Commission's counsel to produce certain additional evidence in Detroit in rebuttal upon the question or relating to the—to Respondent's defense of charging of—well, just Respondent's defense of meeting competition. Perhaps that is enough. I was trying to avoid a technical statement.

Trial Examiner Ballinger: The Examiner understands that when we do reconvene that counsel for Respondent will conclude or close his case and that it is then the intention of counsel for the Commission to proceed with any evidence of rebuttal that it may have and close its case; is that correct?

Mr. Austin: Will you read that again, please?

(Statement read.)

Mr. Hanley: If your Honor please, that is the
4789 Respondent's understanding, assuming that we do re-
convene in Detroit and assuming, further, that it may be necessary to conduct some short further direct examination of the Witness Boatwright in connection with the advertising evidence of the jobbers.

Trial Examiner Ballinger: Certainly. Certainly.

Mr. Austin: Well, in view of the statement which I have just made, Your Honor, I do not feel that it is possible at the present time to set a definite date for resumption of hearings or that it would be advisable to try to do so, because it is impossible for me to know now just when I will be prepared.

Trial Examiner Ballinger: I am not questioning you as to a date for resumption of hearings, but when we do reconvene can we proceed to take all the testimony that the Respondent has and all the testimony that the Commission may have and close the case?

Mr. Austin: On that point, Your Honor, I will be prepared, on behalf of the Commission, to complete the case, so far as testimony in Detroit is concerned, if the next hearing is held there, as we now anticipate. However, I may also desire to hold a further hearing in Washington for the purpose of taking the testimony of - taking expert testimony in rebuttal on the question of costs.

(Discussion off the record.)

4790 Trial Examiner Ballinger: The motion of counsel for the Commission is granted, and now, at 12:40 p. m., the hearing stands adjourned to be reconvened upon five days' notice to respective counsel.

(Whereupon, at 12:40 o'clock p. m., January 6, 1942, the hearing in the above-entitled matter was adjourned.)

4791 Room 859, Federal Building,
Detroit, Michigan,
February 16, 1942.

Met, pursuant to notice at 10:00 a. m., War time

Before: Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., attorney for the Federal Trade Commission.

Harold R. Hanley, Esq., 910 South Michigan Avenue, Chicago, Illinois; and

Arthur J. Abbott, Esq., of the firm of MacMahon, Abbott & Roberts, 2230 Buhl Building, Detroit, Michigan; appearing for the Respondent.

4792 PROCEEDINGS.

Trial Examiner Ballinger: Come to order.

The hearing of Docket No. 4389, case entitled in re Standard Oil Company of Indiana is reconvened at 10:00 a. m. pursuant to notice, February 16, 1942, in room 859 Federal Building, Detroit, Michigan. The last hearing was held in Washington, D. C., January 6, 1942.

You may proceed. Off the record.

(Discussion off the record.)

Mr. Hanley: On the record, if your Honor please.

This being the first reconvening of hearings in this action under the present state of the law, the Respondent would like to take this first opportunity to make a motion, if I have your Honor's permission.

Trial Examiner Ballinger: Proceed.

Mr. Hanley: Now comes the Respondent and moves the Federal Trade Commission and Trial Examiner for a dismissal of this action, and of the original and amended Complaint herein, upon the following grounds and for the following reasons:

First, that the Congress of the United States has passed a law, being formally House Bill No. 5990, now designated Public Law 421, 77th Congress, Chapter 26, Second Session, and cited as "Emergency Price Control Act of 1942," ap-

proved January 30, 1942; that such law and sub para-
4793 graph D of Section 205 thereof provides, among other
things, as follows:

> "No person shall be held liable for damages or penalties in any Federal, State, or Territorial Court on any grounds for or in respect of anything done or omitted to be done in good faith, pursuant to any provision of this Act, or any regulation, order, price schedule, requirement or agreement thereunder, or under any price schedule of the Administrator of the Office of Price Administration or of the administration of the Office of Price Administration and Civilian Supply, notwithstanding that subsequently such provision, regulation, order, price schedule, requirement, or agreement may be modified, rescinded, or determined to be invalid * * *."

That the Emergency Price Control Act referred to supersedes and abrogates the applicability of the Clayton Act as amended by the Robinson-Patman Act as said amended Clayton Act is thought to be applied in this proceeding.

That orders of the Office of Price Administration (formerly Office of Price Administration and Civilian Supply) have been heretofore made and are now in effect, which orders have frozen and fixed the prices at which Respondent may sell gasoline and certain other commodities, in Detroit, Michigan, and elsewhere in the United States.

That any voluntary change in said prices on the
4794 part of Respondent or any change in said prices that
might ensue as a result of any orders issued in this proceeding would result in a derogation of and violation of the orders of the Office of Price Administration and a violation of the Emergency Price Control Act of 1942, and would make Respondent amenable to severe criminal penalties involving heavy fines or penitentiary sentences or both.

That in view of the action of Congress and the existence of present law, and in view of the delegation of executive authority under congressional sanction, continuation of this proceeding is without authority, becomes moot and of no effect or validity, and cannot be legally further maintained, and no orders herein can be legally issued or enforced except an order of dismissal.

That the Federal Trade Commission is without power to inflict any penalties for claimed past infractions of any law but in any instance has authority only to provide for the future conduct of a convicted Respondent through the medium of a cease and desist order, which of necessity is prospective in character, and that any such cease and desist order in this proceeding would necessarily lie with existing orders of the Office of Price Administration and or with any such orders being currently issued or to be issued in the future by that governmental agency.

That any result in the present action other than
4795 complete dismissal thereof would result in irreconcilable conflict and would result in a situation which would make it impossible for the Respondent to comply with the orders of both the Office of Price Administration and the Federal Trade Commission and would be in derogation of the entire spirit and the letter of the law passed by the National Congress, and of the executive authority as exercized by the President of the United States in the furtherance of the war effort of the United States in its National defense.

4796 (Mr. Hanley continuing.)

That any effort of Respondent to comply with, obey or to disobey or avoid any order herein except an order of dismissal, would of necessity subject the Respondent to severe damage and penalties in violation and derogation of the Emergency Price Control Act.

2. That heretofore and within a short time after the organization of the Office of Price Administration and Civilian Supply and repeatedly since, there has been brought to the attention of responsible officials and the legal department of the Office of Price Administration and Civilian Supply and latterly to officials of its successor the Office of Price Administration the fact of the existence of not only the Robinson-Patman Act but of numerous anti-price discrimination laws effective in the several states in which the Respondent conducts marketing operations and elsewhere in the United States. This subject has been discussed on numerous occasions with said officials through the medium of correspondence and personal conferences. The officials and the legal department of the Office of Price Administration have taken and presently take the position that the authority of the Office of Price Administration has and does supersede, invalidate, abrogate and suspend the application of not only the Robinson-Patman law but any and all state anti-price discrimination laws.

4797 It is the position of the officials and of the legal department of the Office of Price Administration that Respondent is required and obligated to respect each and all of the orders of the office of Price Administration, irrespective of the fact that the same may be offensive to, violative or in derogation of and in direct collision with the mandates of any one or all of the several state anti-price discrimination laws and/or of the Robinson-Patman Act, wherever applicable, and it has been pointed out to said officials that the Federal Trade Commission claims and asserts jurisdiction over, and applicability of the Robinson-Patman Act to substantially all situations concerning which the Office of Price Administration undertook and continues to undertake, the freezing, ceiling and fixation of prices.

The substantial effect of the position of the officials of the Office of Price Administration thus requires that which is tantamount to a violation of what the Federal Trade Commission claims to be the mandate of the Robinson-Patman Act and is so claiming in this proceeding and said orders of the Office of Price Administration direct and require what would in substantial effect constitute a violation of any order in this proceeding that might be issued by the Federal Trade Commission, other than an order of dismissal.

That is the announced and obvious intention of the 4798 Office of Price Administration to proceed vigorously with rigorous enforcement of its price fixing orders heretofore made and hereafter to be made and to do so irrespective of claimed applicability or effect of the Robinson-Patman Act or any state anti-price discrimination law.

That this situation obviously renders the further continuance of this proceeding or the issuance of any orders hereunder, except an order of dismissal, a proceeding in violation of law, and a purely moot proceeding without force, effect or validity, and the continuance of such proceeding and the issuance of any orders herein, except an order of dismissal, is without authority, creates an intolerable and impossible situation for the Respondent, dissipates its resources and energies, results in its harassment and is derogatory of the discharge of its obligation as a citizen to participate in and further the war efforts of the United States, and to meet the demands of its Government to participate in and further such war efforts.

3. That the United States Department of Justice has recognized the emergent character of the need of the United States to defend its existence under circumstances of desperate necessity; has agreed to cooperate with government agencies and orders in meeting the exigencies of the situation; has suspended or agreed to refrain from
4799 the institution of actions under the Federal Anti-
Trust Laws in circumstances that would otherwise give rise to the institution of such actions, all as is in part clearly epitomized in numerous public pronouncements and letters published by the United States Attorney General and more particularly and basically in letters of the Attorney General to John Lord O'Brien, General Counsel for Office of Production Management and to Leon Henderson, Administrator, Office of Price Administration, dated April 29, 1941, and published in the "Federal Register."

That the determination of the issues in this case have now only a slight academic importance if any importance at all, even if such issues could be validly and legally determined which they cannot be under existing law and circumstances; and that the determination of such issues would not and do not further the public interest and would not and do not contribute to the effectiveness and progress of the national defense efforts, on the contrary the continued prosecution of this action creates chaos and uncertainty and retards and hampers the efficient operation of the established governmental war program.

That in the circumstances it is wasteful of time, effort and money and is detrimental and antagonistic to the governmentally planned commercial and industrial economy of the Nation during the war effort, for the
4800 Federal Trade Commission to even seek a judicial
determination or confirmation of the clear provisions of, and mandates implicit in, existing laws and governmental authority which abrogate and nullify the applicability of the Robinson-Patman Act as it is sought to be applied in this action.

4. At this time the Respondent renews each and all of its several motions for dismissal of this action heretofore made in the proceeding.

Trial Examiner Ballinger: Judge, the Trial Examiner is not clear with reference to the last portion of the motion. Can you briefly recapitulate the grounds upon which you have previously moved to dismiss this case?

Mr. Hanley: Judge, I can't.

Off the record.

(A discussion was had off the record.)

Trial Examiner Ballinger: On the record.

Both motions submitted by Counsel for Respondent are addressed to the sound discretion of the Commission and over which the Trial Examiner has no jurisdiction nor power to rule upon, other than to deny. Both motions are accordingly denied.

Mr. Hanley: Off the record please.

Trial Examiner Ballinger: Off the record.

(A discussion was had off the record.)

4801 Trial Examiner Ballinger: On the record.

Trial Examiner Ballinger: Let's proceed. Call your witness.

Mr. Abbott: In that connection I wish to say that we are prepared this morning to proceed along that line with the jobber, Ned's Auto Supply Company. In the case of Wayne Oil Company and the Citrin-Kolb Oil Company, the persons we were to testify, Mr. Ledbetter on behalf of the Wayne Oil Company and Mr. Manning on behalf of the Citrin-Kolb Oil Company, are both sick this morning. Mr. Ledbetter has phoned in that he will be available shortly but he is still at home and unable to get out, and Mr. Manning, I am told, will not be able to be here presently but will make some arrangements about testimony on behalf of the Citrin-Kolb Oil Company, I believe.

I am prepared at this time, however, to proceed with the testimony of Mr. B. S. Kott of the Ned's Auto Supply Company.

Mr. Kott, will you take that stand?

B. S. KOTT was thereupon called as a witness for the Respondent and, having been first duly sworn, testified as follows:

Direct Examination by Mr. Abbott.

Q. Witness, will you state on the record your full name?

4802 A. My full name is Benjamin S. Kott, K-o-t-t.

Q. Where do you reside, Mr. Kott?

A. In Detroit, Michigan.

Q. What is your residence address?

A. 3046 Calvert Avenue.

Q. What is your business?

A. I am office manager for Ned's Auto Supply Company.

Q. How long have you been identified with Ned's Auto Supply Company?

A. A little over ten years.

Q. During all that period what has been your duty? What have been your duties in that organization?

A. I have been in charge of their office.

Q. In that connection, has it been one of your duties to supervise the keeping of their books?

A. Yes, it has.

Q. What is the nature of the records kept for the year 1940 concerning advertising costs? I mean by that, what kind of books are they kept in?

A. Well, we keep complete books in our office. We have a disbursement journal showing who we paid the money to, and we have a ledger that compiles all this information.

Q. Are those books kept on a fiscal basis or a calendar or yearly basis?

A. Our company keeps their books on a fiscal year basis.

4803 Q. What is the fiscal year for Ned's Auto Supply Company?

A. Our year ends on August the 31st.

Mr. Austin: If your Honor please, I would like to ask what the purpose of this testimony is regarding the advertising expenses of jobbers.

Mr. Abbott: The purpose is to substantiate the tabulation which appears in Exhibit 100, on page 34, which has already ben received in evidence subject to Judge Hanley's offer to substantiate it, lay a foundation for it by testimony of the jobbers themselves.

Mr. Austin: Is that in connection with the claim that the Respondent may take into account some reciprocal benefits obtained from jobbers' advertising?

Mr. Abbott: That is correct.

Mr. Austin: In connection with the allocation of its own advertising costs?

Mr. Abbott: Well, the record already shows the purpose, Mr. Austin. We offered, as I understand, although I was not present, to substantiate the table on page 34 of

Exhibit 100, and that is the purpose of this testimony, nothing else.

Mr. Austin: Your Honor, I would like to renew my objection to this line of testimony upon the ground that it is entirely irrelevant and immaterial; that the Robinson-Patman Act provides only for a cost justification
4804 based upon differences in the Respondent's cost and makes no reference whatsoever to any justification based upon costs of the customer of the Respondent.

I further call attention to the fact, or, rather, wish to submit, that even if there had been a contract between the Respondent and the customer providing for an advertising allowance of a certain amount of money,—I think it is claimed here that the advertising amounted to about a fifth of a cent a gallon expenditure both for Respondent and jobbers—even if there had been a contract allowing the jobber a fifth of a cent per gallon advertising allowance and it had been used for that purpose, such an arrangement would be illegal and prohibited under Section 2(d) of the Robinson-Patman Act. Certainly, such an arrangement becomes no better when the fifth of a cent is given without any strings attached to it at all and without any contract, merely because the customer happens to expend it for advertising.

I think that if it would be illegal if it was under contract that it should be so spent, unless a similar allowance were made to all customers—unless a similar allowance were made to all the customers, then a fortiori the allowance of a price difference which may be used for advertising is immaterial on the question of cost justification.

4805 Mr. Abbott: Is that all?

Mr. Austin: That is all.

Mr. Abbott: I wish to say, your Honor, that this matter was already interposed in connection with the introduction of Exhibit 100, and the same reasons, as I recall from reading the transcript, were put forward at that time and your Honor overruled the objection to Exhibit 100, which was introduced in connection with the testimony of Dr. Boatwright, and that exhibit is already in evidence, including page 34 of the exhibit upon which page these advertising costs of the jobbers appear in tabulated form. Therefore, the Examiner has already ruled on the objection.

Trial Examiner Ballinger: Was not the previous testimony and the exhibit admitted subject to motion later to be submitted to strike?

Mr. Austin: Yes, your Honor. That was admitted subject to motion to strike unless it was supported by the evidence, which I believe, Mr. Abbott proposes to put in now.

Mr. Abbott: That is what I am just now doing.

Mr. Austin: But I wish to renew the objection I made previously even though your Honor did rule on it before adversely to me. I am simply urging again at this time the objection I made previously, and I should add to that objection a motion to strike from the record pages 34, 35, 36, and 37 of Respondent's Exhibit 100. That is the purpose of my motion. I should have stated that at
4806 the outset.

Trial Examiner Ballinger: Pages what?

Mr. Austin: Pages 34, 35, 36, and 37, Respondent's Exhibit 100.

Mr. Abbott: Well, 37 is a chart. Do you mean to include the chart?

Mr. Austin: Yes, the chart is part of this particular point.

Mr. Abbott: Mr. Boatwright advises me that page 37 has nothing to do with reciprocal benefits from jobbing advertising and, therefore, should not be included in your pending motion. That has to do only with advertising expenditures of the Respondent.

Mr. Austin: Well, as I understand it, it is tied right up with the other, isn't it?

May we be off the record?

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: The motion at this time is overruled, likewise the objection, subject, however, to renewal at the conclusion of the testimony.

Mr. Abbott: Very well.

Mr. Reporter, did you take the last question and answer?

The Reporter: (Reading.) "What is the fiscal year for Ned's Auto Supply Company? Answer: Our
4807 year ends on August the 31st."

By Mr. Abbott:

Q. And are the books and records of the company kept on the fiscal year basis from that date in one year to the same date in the next year?

A. That's right.

Q. Now, are the books substantiating advertising costs for 1940 in court; that is to say, did you bring them with you?

A. Yes, they are. They are here.

Q. Prior to bringing the books into Court, were you requested as a part of your duties as office manager for Ned's Auto Supply Company to prepare for the purpose of this hearing a chart or statement summarizing the books, the book entries bearing upon and reflecting advertising costs of your company for the calendar year 1940?

A. Yes, I was.

Q. Have you prepared a synthesis or summary of such book entries?

A. Yes, sir.

Q. For the purpose of this hearing?

A. Yes.

Mr. Abbott: We offer, for identification, this exhibit.

Trial Examiner Ballinger: The Reporter will 4808 mark the document Respondent's Exhibit 102, for identification.

(The document referred to was marked "Respondent's Exhibit 102" for identification.)

By Mr. Abbott:

Q. I now show you, Mr. Kott, Respondent's Exhibit 102, for identification, and ask you to identify that and state what it represents?

A. This the same letter that I prepared, and it represents the amount of money the company spent for advertising in the year 1940, the calendar year 1940.

Q. And that was taken by you from the books of the company which are, as you say, in court?

A. Yes, sir.

Mr. Abbott: I will say that the government asked us to have the books in court in order that we might verify these figures if it was required.

By Mr. Abbott:

Q. Now, these items on the chart that you prepared, Respondent's Exhibit 102, itemize the expenditures for advertising in different categories?

A. Yes, it does.

Trial Examiner Ballinger: Now, one moment. What do you mean by different categories?

The Witness: It is types of advertising, your Honor.

4809 By Mr. Abbott:

Q. And in what categories are they classified?

A. Newspaper advertising, radio advertising, outdoor advertising, magazines, engravings, art work, telephone directory, newspapers—that is, handbills, by that I mean handbills—donations, theater and club program advertising, outdoor sign maintenance, and sales promotion material.

Q. Opposite each one of those categories do you have placed the amount which was expended by Ned's Auto Supply Company as disclosed by the books for each of those items; is that correct?

A. Yes, sir.

Q. You have also placed on the exhibit the total for the year 1940, is that correct?

A. That's right.

Q. And are the figures that are placed opposite each one of those classifications or categories true and correct?

A. Yes, they are.

Q. And do they accurately reflect the condition of the books of Ned's Auto Supply Company touching those items for the year 1940?

A. Yes, they do.

Q. Now, further, referring to the Exhibit 102, for identification, were you asked to supply as a part of this chart or statement a breakdown of the amount and percentage of sales of all classes of merchandise that you sell in 4810 order to ascertain the amount allocable to gasoline?

A. Yes, I was.

Q. Will you state in what way that has been presented upon the exhibit, in what classifications?

A. It was broken down into two main classifications: "store sales" and "service station sales" and under "store sales" it was broken down further.

Q. Yes. And what is the breakdown under each one of those classifications?

A. Under "store sales" we have it broken down to "tires and tubes, automotive accessories, small home accessories and home appliances."

Q. And under the other, "store sales" how is it broken down?

A. You mean "service stations."

Q. "Service station sales." Yes.

A. Gas island, lubrication, brake work, and other service items.

Q. What is the meaning of gas island?

A. That means merchandise sold on the gas island.

Trial Examiner Ballinger: What does gas island mean?

The Witness: That means—

Trial Examiner Ballinger: Or what does it refer to?

4811 The Witness: It is referred to the location where the car drives on to purchase gasoline.

By Mr. Abbott:

Q. In other words, you call that an island in the service station, do you?

A. That's right, yes.

Q. Do you have in most of your stations more than one of such islands?

A. No, just one.

Q. Just one island in each station?

A. That's right.

Q. The gasoline sales are designated by reference to an island?

A. That's right.

Q. Is that right?

A. Yes.

Q. Now, opposite each one of these classifications, both of "store sales" and "service station sales" have you placed the gross amount of the realization from each of such sales for each of the items included in the exhibit?

A. Yes, I have.

Q. In dollars?

A. In dollars and cents.

Q. Were those figures secured by you from examination of the books of account?

4812 A. It was made up under my supervision, my direct supervision.

Q. And it was made by people who are subordinate to you in the organization?

A. Yes, sir; yes.

Q. But all under your supervision?

A. Yes.

Q. And those figures are reflected there in dollars for each one of the items that you testified concerning?

A. Yes.

Q. And that is all the merchandise that you sell?

A. That's right.

Q. Now, the totals are brought down covering both "store sales" and "service station sales", are they not?

A. Yes, sir.

Q. For the year 1940?

A. Yes.

Q. The calendar year. Then in the second column, what do the percentage figures represent?

A. That is the percentage that the particular department sale bears to the total sales.

Q. And the total of all those percentages adds up to 100 per cent, does it not?

A. Yes, sir.

Q. And that reflects, as I understand it, a total picture
of your operations showing the amount of sales in
4813 dollars and also the amount of sales in percentages?

A. Yes, sir.

Q. For each item of merchandise, and shows gasoline sales separately from the others, does it not?

A. Yes.

Q. Futher, Exhibit 102 shows something with reference to gasoline gallonage tax, does it not?

A. Yes. We have removed all gasoline taxes from our figures to make it on a comparable basis.

Q. Does that include both the Michigan state gallonage tax of three cents a gallon and also the Federal excise tax on gasoline?

A. Yes, it does.

Q. It includes both of those items for the year 1940?

A. Yes.

Q. So that the figures showing total sales for 1940 are not exclusive of tax, is that correct?

A. The only tax it includes and it is included in all the figures is sales tax, Michigan sales tax.

Q. And they are included in the sales figures?

A. Yes, sir.

Q. And they were not excluded?

A. They were not excluded from any of the figures.

Q. Now, Mr. Kott, do these figures as shown on Exhibit
102 correctly state the items of advertising expense
4814 of your company for the calendar year of 1940?

A. Yes, they do.

Mr. Abbott: Respondent offers this exhibit in evidence.

Trial Examiner Ballinger: Any objection?

Mr. Austin: Yes. I object to it, your Honor, on the ground that it is irrelevant and immaterial and, in addition to the previous objection, which I assume applies to all of this, that this is offered for the purpose of attempting to prove some alleged benefit received by the Standard Oil Company from advertising of jobbers. The fact that the jobber spent certain amount of money for advertising of various kinds it seems to me is entirely beside the point and has no probative value whatsoever for the purpose for which it is offered. In other words, unless the advertising was advertising of Standard Oil Company products and so stated, there could be no benefit to the Standard Oil Company from such advertising.

Furthermore, if it is claimed that the advertising was advertising of Standard Oil Company products, the only way to determine that would be by putting in evidence the testimony or the advertising copy itself; otherwise—because that is the best evidence, and, otherwise, it will be just like trying to say what is in a contract without producing the contract. So that I object to any evidence of advertising unless the advertising is produced 4815 in evidence, either the advertising itself or competent evidence is produced to show the nature of the advertising, so that the Commission may be in a position to determine whether or not any of the alleged reciprocal benefits could have been received.

4816 Mr. Abbott: On that point, if you are through, Mr. Austin, I think it is already in evidence that the Standard Oil Company, the Respondent here, furnishes all the gasoline that is sold by Ned's Auto Supply Company. If it is not already in evidence I will ask the witness the question, but I think it sufficiently appears from the record already that all the gasoline that is sold at the gas islands of the Ned's Auto Supply Company is furnished by the Respondent.

Mr. Hanley: Perhaps, your Honor, it would save some time—

Trial Examiner Ballinger: That may be, at the present time; but the testimony is that they also sold, I believe it is, Ford Benzol.

Mr. Abbott: Well, I will ask the witness a question.

By Mr. Abbott:

Q. Mr. Kott, there appears on this exhibit as the realization from gas island sales a figure in an amount disclosed by the exhibit. Now, will you state whether that is the realization, explicitly from gasoline, furnished by the Respondent, Standard Oil Company of Indiana? Do you wish to look at the Exhibit (handing document to witness)?

Trial Examiner Ballinger: Read the question to the witness.

Do you fully understand it?

4817 Witness: I would like to hear it again.

(The question referred to was read by the Reporter.)

Trial Examiner Ballinger: You understand that doesn't include any cost of advertisement in connection with Ford Benzol or any other gas?

Witness: It does include Ford Benzol.

Trial Examiner Ballinger: It does include that?

Witness: Yes.

Mr. Austin: May I say this: I think, your Honor, you referred to cost of advertising and counsel is referring to sales of products. I believe what the witness said was that the sales of gasoline, there, included Ford Benzol, is that correct?

Witness: Yes.

Mr. Austin: I wanted to be sure of that.

I would like to say further, Your Honor, that my objection isn't limited to that, anyway. Ned's Auto Supply sells tires and a lot of other things, as appears here, and my contention is advertising is spent on tires and automobile accessories cannot be claimed to be of any benefit to the Standard Oil Company for the purposes of this case.

Mr. Abbott: That is broken down, your Honor, on the exhibit. In other words, we allocate 19.3 percent of the advertising only to gasoline and the exhibit shows 4818 that the accounting basis for that is this: That we take the amount of gas island sales, which is 19.3—I think you have a copy of the exhibit here—that's the amount of gasoline sales to total sales.

Exhibit 100, page 34, shows that 19.3 percent is applied to the total of advertising costs, resulting in a figure of $22,851.31. You have Respondent's Exhibit 100 here, and refer to page 34. You will see that the amount which is allocated to gasoline advertising for Ned's Auto Supply is $22,851.31. That has been applied to the number of gallons sold by Ned's Auto Supply in the year 1940, which is already in evidence, on the testimony of Mr. Citrin—or Mr. Charles Gershenson, and that shows the amount per gallon for each gallon of gasoline sold in the year of 1940.

Trial Examiner Ballinger: May I inquire of the witness whether this is based upon—and when I say "this", I refer to Respondent's Exhibit 102 for identification—is based upon advertisements actually appearing in newspapers, periodicals, hand bills and otherwise?

Witness: Yes, sir.

Trial Examiner Ballinger: Now do not various products appear in the same advertisement?

Witness: Yes, they do.

Trial Examiner Ballinger: Now upon what basis
4819 did you segregate the amounts that were allocable to
each item or each product?

Witness: On the basis of proportionate sales.

Trial Examiner Ballinger: On the basis of proportionate sales.

Witness: Yes.

Trial Examiner Ballinger: That is highly speculative, isn't it?

Mr. Hanley: Just a moment. The Respondent objects to the Trial Examiner's question on the ground that it is highly speculative and conjectural. I am sorry, Judge, but I think it is.

Trial Examiner Ballinger: I am asking the witness.

Witness: Do you want me to answer?

Trial Examiner Ballinger: (Addressing Mr. Hanley.) Your objection is overruled.

Mr. Hanley: All right.

Trial Examiner Ballinger: You may answer.

Witness: It is impossible to directly allocate the value that we get out of our advertising to any particular department. The value—an ad that is run on one particular product will bring benefits to all the products that we sell. Therefore, the most logical method of determining the per-
centage applicable to a given department is by taking
4820 the percentage of sales that the particular department
bears, to the total sales.

Trial Examiner Ballinger: In your advertisements aren't the products other than gasoline, more prominently displayed?

Witness: On some ads they are, and on some, they aren't.

Trial Examiner Ballinger: Have you any advertisements where gasoline is the conspicuous item included in the advertisement, or where it appears in equal space and in equal sized letters with other products?

Mr. Austin: Your Honor, if there is such advertising, it should be produced.

Mr. Hanley: Well, may not the witness answer the question?

Witness: I believe I have.

Trial Examiner Ballinger: Can you produce it?

Witness: Yes, sir. Do you want me to get it?

Trial Examiner Ballinger: Have you it here?

Witness: Yes, I have.

Mr. Abbott: Yes, I asked him to bring the portfolio of advertising for the year 1940. I think that's what the Commission wanted.

Mr. Austin: I believe there is a book that Ned's produced the last time. I would like to have that brought back.

4821 Mr. Hanley: I just suggest, your Honor, that if the Government wants anything he had better ask for it. This witness is not the Respondent, he is a witness. We called him. If they want something, ask for it.

Mr. Austin: I shall do that all right in good time, but, your Honor, at this point I would like to call your attention to Page 245 of the record where Mr. Gershenson testified that his advertising, which was submitted for, I think a period of three years, was 90 percent other than gasoline. Since that is on the record I think any such evidence that is proposed, here, is inadmissible until such evidence is overcome.

Mr. Hanley: If your Honor please, I object to counsel arguing his case before the Commissioner, on the examination of the Trial Examiner, before the witness. If he wants to make an objection, it is his privilege, and your Honor may rule. If he wants records, he has the power to get them.

Trial Examiner Ballinger: Will you comply with the Trial Examiner's request?

(Thereupon the witness left the witness stand and procured some documents.)

Mr. Abbott: I understand the Trial Examiner wishes to have a proffer of the advertising which appeared in the year 1940, showing the nature of the advertising?

4822 (No response.)

Witness: (Handing two photographs to the Trial Examiner.)

This is outdoor advertising.

By Mr. Abbott:

Q. Have you got the newspaper clippings also?

A. Yes; I have.

Mr. Abbott: Well, I suppose if those are to be considered, they ought to be marked in some way; at least for identification.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Austin: If your Honor please, the objection pending is to the introduction of this exhibit which, on its face, has nothing but the advertising expenditures of Ned's Auto Supply Company and the amount of their sales. Now specifically, I think, I would like to elaborate the objection to this extent: That it is perfectly obvious that the sales of gasoline or petroleum products by Ned's Auto Supply Company have no relation to the amount, if any, spent on advertising. Ned's might have sold a certain amount of gasoline, there, and at the same time not spent five cents on any advertising that mentioned any Standard Oil Company products. If Ned's advertising were devoted entirely to refrigerators and bicycles there would be
4823 no doubt that they would nevertheless sell some
gasoline to people coming in there because there is a lot of point-of-sale advertising at the station. We are not talking about that here, now. We are talking about other kinds of advertising.

Trial Examiner Ballinger: The Trial Examiner has heard enough. The objection to the exhibit is sustained and the exhibit is denied. The exhibit is rejected.

(Thereupon, pursuant to the ruling of the Trial Examiner, Respondent's Exhibit 102, for identification, was rejected.)

Mr. Abbott: I understand the basis of the denial, your Honor, is that the relation between the amount expended—

Trial Examiner Ballinger: No proper basis has been laid for its admission.

By Mr. Abbott:—

Q. Mr. Kott, it appears from the exhibit 102, for identification that there were newspapers to the extent of several thousand dollars which were included in that exhibit. Just in what connection were those newspapers used?

A. They are given to customers that make purchases at our company.

Q. Are they given to persons who purchase gasoline on the gas islands?

A. Yes, sir.

Q. Or to persons who visit the store and purchase
4824 other merchandise?

A. A person that visits the store may get a newspaper if he asks for it but they are usually presented to a customer that comes on our gas island with a car.

Q. And it is the custom of your company, and has been for some time, is it not, to give every person who drives up in a car to the gas island a copy of a Detroit Newspaper?

A. That's right.

Q. And it that done every day?

A. Yes, sir.

Q. How long has it been the custom to do that?

A. From about three to four years back.

Q. And is it being done at the present time?

A. Yes, it is.

Q. Was it being done in 1940?

A. Yes, it was.

Q. The figure which appears opposite the designation "newspapers" on Exhibit 34, then, is the amount paid for newspapers distributed to customers of Ned's Auto Supply Company: primarily gasoline customers?

A. Yes, sir.

Mr. Austin: Your Honor, now I move to strike out the answer of the witness and the preceding testimony regarding giving away newspapers at stations on the ground that
it has nothing to do with the advertising of Standard
4825 Oil Company's products as such and that on its face
such testimony does not tend to prove the point which the Respondent is offering this evidence for, according to Mr. Abbott's own statement.

Mr. Abbott: If your Honor please, here is a very large item amounting to several thousand dollars, as disclosed by Exhibit 34 which, according to the testimony of this witness, is expended for the purchasing of Detroit newspapers, which are given to all customers who come upon the gas island to make purchases at Ned's Auto Supply, at all the stations. Now that is very definitely an item of expense which can be designated by the jobber as advertising expense. It is one means of creating good will of the customer and one way of getting him to come in and purchase gasoline and other merchandise.

Now the witness has testified that this is primarily one of the inducements to purchase gasoline at Ned's Auto Supply Stations and I respectfully urge it is important to go into the matter of this expenditure of newspapers, because it does relate primarily to gasoline sales.

Mr. Hanley: If your Honor please, I would like to make just one inquiry, for my own information, before your Honor rules on this objection, and on these arguments.

I understood that it was clearly in the record that Ned's Auto Supply Company sold the branded gasoline of the Standard Oil Company of Indiana, the Respondent in
4826 this action. If it is not, then I think that we have been most remiss but I think it is clearly in the record that that is true. If it is true, then it doesn't make any difference whether Standard Oil Company is registered in the advertisement or whether it is the brand name of the gasoline; they are synonymous, and I submit, your Honor, that your Honor may not exclude, properly, an advertisement that advertises a branded product of the Standard Oil Company, even though the Standard Oil Company isn't named anywhere in the advertisement.

Trial Examiner Ballinger: To a consumer of gasoline other than one which has been regularly patronizing Ned's store would an advertisement advertising Ned's Firestone tires import the sale at Ned's of Standard Oil Company gasoline?

Mr. Hanley: Yes, your Honor.

Trial Examiner Ballinger: How could it?

Mr. Hanley: I say "yes." If a patron of Ned's goes to Ned's because he is drawn there by virtue of any advertising, and becomes a user and a devotee of the Standard Oil Company's products, then anything that brings a customer to Ned's adds to the benefit for the—

Trial Examiner Ballinger: But it doesn't bring a customer to Ned's to obtain Standard Oil Gasoline.

Mr. Hanley: What difference?

Trial Examiner Ballinger: But after he gets there 4827 he then discovers that Ned's is selling Standard Oil gasoline.

Mr. Hanley: And he goes back and continues to use Standard Oil gasoline. What difference does it make how you get a customer, if you get him and keep him. That is the essential point of this business of merchandising. I don't know much about selling but I know that is the answer to it.

They put Standard products on some of our advertising, Judge. They actually place it right in their ads. There is a picture of the billboard where they put Red Crown on. That is not Standard Oil Company. I know that.

Trial Examiner Ballinger: Let us proceed.

By Mr. Abbott:

Q. Mr. Kott—

Trial Examiner Ballinger: Is there a pending motion? Wil you read it.

"Mr. Austin: Your Honor, now I move to strike out the answer of the witness and the preceding testimony regarding giving away newspapers at stations on the ground that it has nothing to do with the advertising of Standard Oil Company's products as such and that on its face such testimony does not tend to prove the point which the Respondent is offering this evidence for, according to Mr. Abbott's own statement."

Trial Examiner Ballinger: The motion is granted and the testimony referred to is stricken.

4828 By Mr. Abbott:

Q. Mr. Kott, in the company's advertising relating to gasoline during the year 1940, to your knowledge state the fact as to whether any distinction was made between Standard Oil products, gasoline products, and Ford Benzol, in the gasoline advertising? Was there any distinction made as between those two products?

A. In some advertising where we might have inserted the Standard Red Crown it was definitely just Standard Oil advertising.

Q. Now, was there any designation made in the advertising of Ford Benzol in your advertising copy?

A. No.

Q. In other words, you never issued any advertising, to your knowledge, in which there was ever any reference made to Ford Benzol?

A. Not to my knowledge.

Q. In all cases, according to your definite knowledge, of gasoline advertising, if there was any tie-up between the gasoline and the name of the supplier, it was Standard Oil, is that correct?

A. Yes, it was.

Q. Now, Mr. Kott, I show you Respondent's Exhibit 100 in this case and refer particularly to page 34 of that Exhibit. This Exhibit is already in evidence. I wish 4829 you to take the exhibit and I want to ask you one or two things concerning some figures in it. There appears in this exhibit identified as Respondent's Exhibit 100, as amended, a summary of reciprocal advertising benefits in the case of Ned's Auto Supply, which is in paragraph 3 or line 3, rather, of Exhibit 100, and it includes a percentage figure of 19.3 percent. What does that figure refer to, if you know?

A. I believe that is the figure, that is the percentage of our gas island sales to the total sales of our company.

Q. Is that same figure as appears on Exhibit 102, for identification, opposite the figure of total sales of gas island products for the year 1940?

A. I believe it is.

Q. 19.3 percent, is that correct?

A. Yes.

Q. Now, do you know as a fact, and of your own knowledge, or from the examination of the books of your company, that that percentage figure is correct?

A. Yes, sir.

Mr. Austin: Your Honor, I am perhaps a little slow in gathering what was going on here; the purport of it; but I believe that the questions and answers regarding Page 34 have been for the purposes of comparing that with an exhibit which your Honor ruled should not be admitted in evidence and since a comparison of this exhibit with 4830 a paper not in evidence is not material, I therefore, move to strike all questions and answers in regard to the exhibit on Page 34.

Mr. Abbott: We are making a record, here, which we have a right to do, regardless of the ruling of your Honor, in regard to the proposal in Exhibit 102. We have to make a record to show what the picture is, here, because otherwise it would be incomplete, which we have a right to do.

Mr. Austin: It is quite incomplete and the point is Exhibit 102 for identification was offered for the purpose of substantiating these figures on Page 34 and the Trial Examiner has ruled that a mere repetition of these figures on a letter or on any other form does not substantiate them.

Trial Examiner Ballinger: Is there a motion pending? Will you read it?

"Mr. Austin: Your Honor, I am perhaps a little slow in gathering what was going on here; the purport of it; but I believe that the questions and answers regarding Page 34 have been for the purposes of comparing that with an exhibit which your Honor ruled should not be admitted in evidence and since a comparison of this exhibit with a paper not in evidence is not material, I therefore, move to strike all questions and answers in regard to the Exhibit on Page 34."

Trial Examiner Ballinger: The motion is granted and the questions and answers are stricken.

By Mr. Abbott:

4831 Q. There also appears on page 34 of Exhibit 100, in the detailing advertising costs of Ned's Auto Supply, which is the third column, the figure $22,851.31. What, according to your knowledge, does that represent?

Mr. Austin: I object to that question, your Honor, on the ground it is likewise immaterial what that figure represents. It is stated in this exhibit itself what it represents and I believe that all that is intended here is to have the witness say that that is the figure that is on Ned's books.

Now my objection goes to the point that testimony should not be admitted regarding the advertising expenditures made by Ned's Auto Supply unless it is shown that those advertising expenditures were for advertising of Standard Oil Company products or advertising some way related to the creation of customer acceptance on Standard Oil Company products, and I believe—

Trial Examiner Ballinger: The Trial Examiner is ready to rule.

Mr. Austin: I was just going to say: I believe that the mere showing of what is on Ned's books is immaterial unless that is tied up in some way to evidence from which the Commission may determine whether there is reciprocal benefit.

Trial Examiner Ballinger: The objection is sustained.

Mr. Abbott: In order to make a record here, if the Court please, I would like to have the Trial Examiner
4832 permit the witness to state the answer to the last
question, because otherwise, the record will be incomplete.

Trial Examiner Ballinger: The record is fairly complete. It is, I take it, conceded that all of the figures appearing on Page 34 of Respondent's Exhibit 102 for identification which has been rejected, am I right.

Mr. Abbott: That is correct.

Trial Examiner Ballinger: That being the case, the record discloses exactly the situation.

By Mr. Abbott:

Q. There also appears, witness, on the same page of Exhibit 100; namely 34; the statement and figure: "Gallons—4,310,465." What, to your knowledge, does that represent?

Mr. Austin: Your Honor, I object to further questioning of this nature. I think it is taking up time and encumbering the record.

This exhibit—or, rather, these pages of Exhibit 100, pages 34 to 37, inclusive, were admitted over a general objection as to the relevancy of this testimony but subject to being supported by evidence of the nature of the advertising expenditures and my understanding certainly was that this was to be supported by testimony which would be of —would have probative value in establishing the fact
that the advertising referred to here was of some
4833 advertising benefit in creating customer acceptance
for Standard Oil Company products; and in the absence of any production of evidence of that kind, I don't think it is material to continue with a mere attempt to show that these figures here were taken from Ned's books. I believe that's all that is being done at the present time.

Mr. Abbott: The question that is now propounded merely relates to the gasoline gallonage for the year 1940 and if this witness knows what the gallonage was why, of course, he is competent to answer the question.

Trial Examiner Ballinger: That appears numerous places in the record; on the gallonage.

Mr. Abbott: Well, if it will be conceded that it does so appear, then, of course, this question is merely cumulative.

By Mr. Abbott:

Q. But, do you know?

A. I believe that is the number of gallons of gasoline sold on our gas islands during the year 1940.

Trial Examiner Ballinger: That's your six stations?

Witness: Yes.

By Mr. Abbott:

Q. There also appears on the same page of Exhibit 100 the statement, and a figure "53¢" opposite or under the name "Ned's Auto Supply Company." What does that represent?

4834 A. That is the proportion of advertising expense to each gallon of gasoline sold.

4835 Q. I see. That is the expense after applying the figure or the percentage figure 19.3 per cent, is it not?

A. That's right.

Q. Now, witness, referring again to Exhibit 100, on page 34, we find that the breakdown of the advertising cost shown there includes several items: First, direct mail. What is the nature of that kind of advertising, if you know? I don't mean the amount, but what is the nature of it?

A. Direct mail, I presume means—

Q. Not what you presume but what you know, if you do.

Mr. Austin: There is none of that on there for Ned's Auto Supply.

Mr. Abbott: Oh, yes.

By Mr. Abbott:

Q. That is blank. The next item is newspapers.

Trial Examiner Ballinger: One moment.

Q. What does that include, if you know.

Trial Examiner Ballinger: Will you read the last two questions and answers and the comment?

(The record was read.)

By Mr. Abbott:

Q. The question is this: "What does the item opposite the word "newspapers" include?

A. That includes actual ads run in the Detroit newspapers during the year 1940.

4836 Q. Does it also include anything in the way of newspapers handed out to customers who came upon your gas islands at any of the stations?

A. No, it does not.

Q. Is that included in another item on the exhibit?

A. Yes, it is.

Q. Now, the second is "posters." If you know, what does that item include?

A. That includes billboards posted on the streets and highways of the City of Detroit and its surroundings.

Q. Do you have any photographs of any such billboards?

A. Yes, I have.

Trial Examiner Ballinger: One moment. The Examiner desires to ask the witness a question.

By Trial Examiner Ballinger:

Q. Are all of these figures appearing on Respondent's Exhibit 100, at page 34, taken from Respondent's Exhibit 102, for identification, which was rejected?

A. I do not know where this was taken from, your Honor. This is the first time I have seen this particular paper.

Q. Well, do they correspond directly with—

A. I don't remember all of the figures but some of them seem to be the same.

Trial Examiner Ballinger: Let me have Respondent's Exhibit 102, for identification.

Mr. Abbott: Yes, sir.

4837 (The Exhibit referred to was handed to the Trial Examiner.)

By Trial Examiner Ballinger:

Q. Will you take and compare the two and state whether or not they are identical?

A. They don't seem to be identical, your Honor.

Q. In what respect.

A. Some of the figures are different.

Q. Point out wherein they are different.

A. On No. 102 it says "newspaper advertising, $66,000" and on page 34 it says "newspapers, $77,000."

Q. Can you explain the variation?

A. That is what I am trying to see right now.

Mr. Austin: Is your total of $118,000 the same on both?

The Witness: Yes, it is. The total is the same.

Mr. Abbott: There seems to be a difference in the classification.

Trial Examiner Ballinger: Merely a difference in classification of advertisement, is it?

The Witness: I believe so.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Abbott: It is conceded by the Respondent that Exhibit 100, page 34, which contains a tabulation of 4838 advertising expense for the different jobbers is in the case of Ned's Auto Supply Company substantially a copy of the figures which appear on Exhibit 102, for identification, which latter exhibit relates only to the advertising costs of Ned's Auto Supply Company.

Trial Examiner Ballinger: Such being admitted, the Examiner rules that no further examination on Respondent's Exhibit 100, page 34, is permissible.

Mr. Abbott: Do I understand also that the Examiner rules that the witness cannot be asked any questions along that line, in order to make the record?

Trial Examiner Ballinger: You may make a proffer of testimony only, what you intend to prove by it.

Mr. Abbott: Well, first, the proffer has already been made by the questions which have been asked of the witness. In so far as we expect to make it in the future along this line, it would consist in this: We proffer in evidence a portfolio showing newspaper clippings and also photographs of posters and billboard advertising and also samples of all other advertising used by Ned's Auto Supply Company in the year 1940, in order to substantiate our position that those were advertising costs which, to the extent of 19.3 per cent, are properly allocable to advertising costs for gasoline, that being the percentage which is used in Exhibit 100, page 34, based upon the percentage 4839 between gasoline sales and total sales for the year 1940.

Now, I will agree with your Honor that this is an arbitrary allocation as between gasoline sales and total sales, applying that same percentage to the total cost of advertising. We contend, however, that that is a proper allocation based as it is on the testimony in the record to the effect that that is the only way in which it can be gotten at for the purpose of determining with any degree of certainty what is the proper amount of the advertising costs of Ned's Auto Supply Company which is to be allocated to gasoline sales.

Trial Examiner Ballinger: You also have the further discrepancy in that the witness hasn't testified that that represents the allocable cost of the sale of gasoline, and that within the gasoline is included Ford Benzol. That hasn't been excluded.

Mr. Abbott: Along that line, if the Court please, there will be further evidence showing that this is a proper allocation to gasoline even though it does include Ford Benzol.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Abbott:

Q. I want to ask you this further question based on your knowledge of the bookkeeping methods of Ned's Auto
4840 Supply Company. Is it possible to segregate in
the figure of total gasoline sales in the year of 1940 either by gallons or by dollars the sales as between Standard Oil gasoline and Ford Benzol?

A. It is possible.

Q. Have you the books here upon which that segregation can be made?

A. I believe I have.

Q. How long would it take you to make them?

A. Possibly about ten minutes.

Mr. Abbott: I will ask for an adjournment at this time. It may be possible for us—

Trial Examiner Ballinger: Before we take an adjournment, upon what basis can you make that segregation?

The Witness: Well, we know exactly how much gasoline we sold, how much we bought from Standard Oil, and how much we bought from Ford Benzol.

Trial Examiner Ballinger: And you could only make it upon the basis of gallonage?

The Witness: That's what the question was, your Honor.

Trial Examiner Ballinger: Well, the Examiner states in advance that if segregation was made upon that basis, the Examiner would reject it.

Mr. Abbott: Can you also make it on the basis of dollars of realization as between Ford Benzol and gasoline?

4841 The Witness: I think I can. I know what the
cost of a gallon would be and what it sold for, and if I know the gallonage, I can determine the value of it.

Mr. Abbott: Very well. May we take a recess at this time? It is 12:00 o'clock. I mean, just—

Trial Examiner Ballinger: Does counsel for the Commission want to make any objection to that line of testimony?

Mr. Abbott: Well, we haven't propounded any question yet.

Mr. Austin: If your Honor please, I would like to state my position on the record here a little more fully, apart from the general objection which went to all of this testimony including the admission of pages 34 to 37 of Respondent's Exhibit 100.

My position is this, that if it is the contention of Respondent that certain of Ned's advertising and the other jobbers' advertising was of value to the Respondent in creating consumer acceptance for Respondent's products, that the Respondent should offer the advertising copy or photographs or other evidence, competent evidence of the advertising itself, from which they claim this benefit is received. Then Examiner and the Commission can determine by looking at the advertising whether there is any substance to the argument of material benefit, and 4842 you can't do it unless you see the advertising.

Now, if the Respondent wants to offer actual advertising copy and there is any basis at all for the claim that that advertising copy might create some consumer acceptance for Standard Oil Company products, I won't object to the admission of it, and then it can be shown how much money was spent on that type of advertising. But my objection as to the admission of all these figures simply showing that the jobber spent a certain amount of money on advertising and they sold a certain amount of gasoline, without showing that any of the advertising was advertising of a type which might create consumer acceptance for the Respondent's product—

Trial Examiner Ballinger: The Examiner is of the opinion that counsel for the Commission has outlined the proper course to be pursued. If this line of testimony is considered desirable by Respondent, he has outlined it.

The Examiner has overruled the Commission on at least one or two occasions in an effort to permit the Respondent to make a showing along the lines the Respondent is now attempting to do, but before the Examiner can admit such testimony in evidence, some substantial basis must be laid, which has not been, in the opinion of the Examiner.

If you will go back, bring in your advertisements, let us see what they are, then establish or offer some 4843 testimony here as to what value they have, the Examiner would be disposed to admit it, but the Examiner must of necessity exclude this class or kind and character of evidence.

Mr. Abbott: I see. It is after 12:00 o'clock. May we have a recess at this time? I don't know whether you intend to take a recess or not, but I would like to—

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

The hearing stands in recess for ten minutes.

(A short recess was taken.)

Trial Examiner Ballinger: Come to order.

Mr. Abbott: You may take the witness.

Mr. Austin: I have no cross-examination.

Mr. Abbott: That is all, then, Mr. Kott.

Trial Examiner Ballinger: One moment. Off the record.

(There was a discussion off the record.)

Mr. Austin: If I may withdraw my former statement, I think perhaps I would like to ask the witness one or two questions.

Trial Examiner Ballinger: You may.

Cross-Examination by Mr. Austin.

Q. Are you familiar with the various types of ad- 4844 vertising which Ned's Auto Supply Company has used in the last three or four years?

A. No, I am not.

Q. Have you seen any copies of the advertising used, the individual advertisements?

A. Just by looking through the papers.

Q. Have you seen any such file kept by Ned's Auto Supply Company?

A. I know there is one in the office.

Q. Have you examined it?

A. Just as a matter of course, I have looked at it once in a while.

Q. Do you know whether it is a fact that a large part of the newspaper advertising which Ned's Auto Supply Company has used or purchased during the past three or four years has been advertising of products other than gasoline? And before you answer that I would like to explain that I am referring to individual advertisements. I am asking you whether you do not know that many of the individual advertisements inserted by Ned's Auto Supply Company in newspapers have made no reference to gasoline or petroleum products?

A. I don't think I am qualified to answer that question.

Q. Have you got here a book which is kept by Ned's Auto Supply Company, a thick volume, pertaining to copies of newspaper advertising?

4845 A. I believe it is here. One of the other men with our organization is present and he and I came down together, and he is the one that is responsible for that end of the testimony.

Q. Do you think that book is here now?

A. Yes.

Mr. Austin: That is all.

Mr. Abbott: That is all, Mr. Kott.

Trial Examiner Ballinger: You are excused.

(Witness excused.)

Mr. Hanley: Off the record?

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Mr. Hanley: In response to the request of the Examiner in respect to the question which is in his mind, as he has expressed it, relative to the brand of products and the amounts thereof that were furnished to several jobbers mentioned in the Complaint, the Respondent will supply information disclosing the following facts: The purchases in gallons of each branded product of the Respondent furnished to each of the jobbers, each of the jobbers named in the Complaint, for the years 1937 to 1940, inclusive.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

4846 Mr. Abbott: If the Court please, at this time, the witnesses for the Wayne Oil Company and Citrin-Kolb Oil Company are not available on account of illness, and we shall have to defer their testimony. At this point, it being now 12:35, I move that we adjourn until 1:30 or 2:00 o'clock.

Trial Examiner Ballinger: You reserve the right to offer further testimony on behalf of the Respondent?

Mr. Abbott: We do.

Trial Examiner Ballinger: Is counsel for the Commission ready to proceed with the cross-examination of Mr. Boatwright?

Mr. Austin: Yes.

Are you planning to go ahead after lunch to put in some more testimony now or—

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Motion for counsel for Respondent is granted and now, at 12:35 p. m., the hearing stands in recess until 1:45 p. m.

(Whereupon, at 12:35 p. m., a recess was taken until 1:45 p. m.)

4847 Afternoon Session.

2:00 P. M.

Trial Examiner Ballinger: You may come to order. You may proceed.

JOHN W. BOATWRIGHT, resumed the stand, having been previously first duly sworn, and testified further as follows:

Trial Examiner Ballinger: Mr. Boatwright, you have been previously sworn?

Witness: Yes, sir.

Mr. Austin: On January 24th last I addressed a letter to counsel for the Respondent requesting that certain statements and information be produced at the time of this hearing, and one of those statements was mentioned this morning. I would like to ask counsel if he has a statement showing the number of gallons of gasoline of each grade sold to each of the four Detroit jobbers in each year from 1937 to 1940.

Mr. Hanley: Just a moment.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Hanley: Well, if it is addressed to me, I think the witness has prepared such a statement and I think the witness should answer as to what has been pre-
4848 pared in response to that request.

Cross-Examination by Mr. Austin.

Q. Have you such a statement, Mr. Boatwright?

A. I do have such a statement.

Q. Will you produce it, please?

A. Sure.

Mr. Hanley: I may say at this time that I think this is the information that your Honor was requesting this morning and about which we said we would produce at the appropriate time.

(A paper was handed to Mr. Austin by the witness.)

Mr. Austin: I would like to mark this paper, for identification.

Trial Examiner Ballinger: The Reporter will mark this paper "Commission's Exhibit No. 100," for identification.

(The letter referred to was marked "Commission's Exhibit No. 100," for identification.)

Q. Mr. Boatwright, does this Commission's Exhibit 100 for identification, show the number of gallons of gasoline of each grade, that is, of Solite with Ethyl, Red Crown and Stanolind sold by the Standard Oil Company to each of the four jobbers who are named in the complaint in this action during the years 1937, 1938, 1939, and 1940?

A. Yes, sir.

4849 Mr. Austin: I offer the statement in evidence.

Trial Examiner Ballinger: Any objection?

Mr. Hanley: No objection.

Trial Examiner Ballinger: Commission's Exhibit No. 100 is admitted in evidence.

(The statement referred to, heretofore marked for identification as COMMISSION'S EXHIBIT NO. 100, was received in evidence.)

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Hanley: At the request of the Court, it is stated that the differential accorded the four jobbers named in the complaint in this action amounted to one and one-half cents off the dealers' tank wagon price for Standard Red Crown gasoline for the years 1937, 1938, 1939, and 1940. The difference in respect to Solite with Ethyl or otherwise known as premium gasoline was one and three-quarters cents off the dealers' tank wagon price for Solite with Ethyl gasoline.

The differential accorded in connection with the Standard Oil Company brand known as Stanolind or third grade gasoline has been one cent off the posted dealer tank wagon price for Stanolind gasoline.

This statement is made with the qualification that
4850 there may possibly have been short and temporary periods when there was some difference in this differential, but it is made by the Respondent with the understanding that in the main these have been and are now the differentials in force.

These prices refer to prices given to tank car and transport truck dealers as distinguished from tank wagon dealers.

In connection with this inquiry by the Court, reference is made to Respondent's Exhibit No. 52-B and succeeding pages which details the dates and prices effective in connection with regular or house-brand gasoline differ-
4851 entials.

Mr. Austin: Now, Judge, were you also going to make a statement with regard to the differential during 1937 and part of '36 and '38, as to whether it was a half a cent on Ethyl as well as on regular?

Mr. Hanley: You mean in respect of Ned's service stations?

Trial Examiner Ballinger: Yes.

Mr. Austin: Yes, that was the question the Trial Examiner asked this morning and I thought that it was in the record but I can't swear that it is.

Mr. Hanley: I think it is. May I have another moment, Judge?

Trial Examiner Ballinger: Yes. It is not clear on the record.

The record fixes the date as March 7th, 1938; from September, 1936, to March 7.

Mr. Raupagh: No. Your Honor, the date was September 1, 1936, to March 1, 1938. However, that didn't go on a tank car basis until I think it was March 7th or 8th.

Mr. Hanley: That's right. There was a week when they went back on a tank wagon basis. How many deliveries they got, I don't know.

Trial Examiner Ballinger: The record isn't clear as to that but I assumed that that half a cent—and
4852 I don't think it is material at all—

Mr. Hanley: Well, it comes back to my mind now and I don't undertake to state the reason for it but the fact is they were on the half cent on March 1st and went back on the regular basis; the half cent allowance was eliminated for about a week and then they went on a tank car basis and whether they got deliveries during that week, I don't know.

Trial Examiner Ballinger: Is that material to anything in the case?

Mr. Hanley: I don't think it would make the slightest difference, Judge.

Trial Examiner Ballinger: The only thing I wanted to call your attention to is your exhibits, those letters written by Mr. Raupagh, which preclude your going on that, on the basis of that letter, on March 1st, so that the time they went on it was March 7.

Mr. Hanley: Well, I can take care of that.

At the request of the Trial Examiner it is stated by the Respondent that from September 1, 1936, until on or about March 1, 1938, the one half cent discount off tank wagon price which has been heretofore testified to and appears of record in this case, as accorded to Ned's Auto Supply Company, was also accorded to Ned's Auto Supply Company in connection with Solite with Ethyl gasoline or premium brand. That is to say; that Ned's Auto Supply Company received a discount of one half cent during 4853 said period on Solite with Ethyl gasoline off dealer tank wagon price of Solite with Ethyl gasoline. Ned's Auto Supply Company did not, during said period, handle or purchase Respondent's Stanolind brand or third grade gasoline.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Hanley: It is understood that the record discloses, and it is now conceded by the Respondent, that during said period Ned's Auto Supply Company was accorded a discount of one half cent off the dealer tank wagon price of Standard Red Crown gasoline, which gasoline was the house brand gasoline of the Respondent.

By Mr. Austin:

Q. Mr. Boatwright, do you recall that on November 17 1941, at a hearing in this matter in Washington, that a sheet of figures was introduced by the Respondent throug yourself which was then marked Respondent's Exhibi 101 and admitted in evidence? That sheet was entitled "Comparative Statement of Expense—Detroit field, year 1940." It is the large sheet on somewhat similar form a same information given on the substituted Exhibit 101 on November 17th. Do you recall that, Mr. Boatwright?

A. I do so recall.

4854 Q. And on January 6th the sheet was withdrawn and another similar sheet was substituted for that first sheet as Respondent's Exhibit 101. Do you recall that, Mr. Boatwright?

A. I do so recall.

Q. And am I correct in stating that the former Exhibit 101 covered the same scope and purported to give the same information given on the substituted Exhibit 101?

A. That is correct.

Q. Turning to page 4754 of the record you stated, Mr. Boatwright, referring to the former Exhibit 101:

"That form is one of the most accurate things that I can conceive of being prepared."

Do you recall that testimony?

A. I do.

Q. Now, I have made some comparison of the former exhibit 101 with the present exhibit 101 and according to my count on former exhibit 101, in the three columns setting forth what is stated to be direct shipment expense, that is, the three columns under the heading direct shipment customers, there are a total of 187 expense entries, and further comparing those forms, and comparing the expense entries in the direct shipment columns with the corresponding entries on present Exhibit 101, I find that 56 entries on the substituted exhibit, or 30 per cent of the total entries, are different from the corresponding entries on the former exhibit. Now, I would like to ask you,
4855 Mr. Boatwright, assuming that my count is correct, whether that means that 30 per cent of the figures for

direct shipment on the former exhibit 101 were inaccurate, or does it mean that between November 17th and January 6th you changed your decision as to method of allocation ~~to be applied to certain accounts?~~

Mr. Hanley: Just a minute. That is objected to as incompetent, irrelevant, and immaterial. What counsel refers to as former Exhibit 101 is no longer a part of the record in this lawsuit and counsel has no right to examine in connection with it. It is a quibble and querulous and an entirely fictitious attempt to demonstrate bad arithmetic on the part of the witness, if indeed there ever was any bad arithmetic on the part of the witness, which, if it existed has now been corrected by the substituted exhibit 101.

Trial Examiner Ballinger: May I inquire of counsel for the Commission the object and purpose of this line of examination?

Mr. Austin: It has two purposes your Honor. In the first place I assume that in all good faith of course the witness when he introduced this former exhibit said it was so accurate—he said, in fact, he thought it was one of the most accurate things he could conceive of. Now it turned out 30 per cent of those figures were changed between November and January and I think that that in itself
4856 is important to demonstrate the extent of accuracy
going into the preparation of these forms and the extent of errors that are likely to occur in a form of this kind and, secondly, I am not sure whether they were errors in arithmetic, or not, and that's what I have asked the witness because if there were changes in method of allocation used and if the Standard Oil decided certain accounts should be allocated certain ways on November 17th and certain other ways on January 6th, I think we are entitled to find out and see why they were so used or changed.

Mr. Hanley: On the statement of counsel the question is further objected to on the ground that there is no point of direction, indicated in counsel's question as referred to in the witness' answer that it was the most accurate thing he could conceive of in respect of whether it alluded to the arithmetical calculation or the method of accounting allocation and the question is unfair to the witness and he cannot answer it unless and until he knows what the question of counsel means and unless and unti he has an opportunity to review his own testimony in al of its connotations in connection with his answer then given.

Mr. Austin: There wasn't a contest at that point.

Mr. Hanley: I think this is most unfair, Judge. It just isn't fair.

Trial Examiner Ballinger: Mr. Austin, shouldn't 4857 this line of examination, if it was to be pursued, have been pressed at the time counsel for Respondent moved to withdraw the original exhibit and to substitute in lieu thereof the present exhibit? That motion having been allowed without opposition from counsel for the Commission, that exhibit, that is, the original exhibit, was withdrawn from the record and is no longer a part of it.

Mr. Austin: That's right.

Trial Examiner Ballinger: I am a little bit in doubt as to—

Mr. Austin: I couldn't make the comparison, your Honor, until I had them both. I couldn't do it then.

Trial Examiner Ballinger: But the original is no longer a part of the record and how can you make a comparison unless it is put back into the record?

Mr. Austin: If that's your feeling on it perhaps I had better have it marked for identification and, perhaps, offer it in evidence; but I think where the Respondent has put in two different statements purporting to set forth the same information and there is that much difference in a month and a half's time, that I am certainly entitled to find out what the differences were. If they were errors in arithmetic, all right; if they were different methods of computation in certain accounts, I would like to know that.

Mr. Hanley: Judge, we withdraw that statement 4858 with a fair statement that there were errors in it, that the comptometer girls made.

Trial Examiner Ballinger: My recollection is that in connection with the request to withdraw the exhibit the witness made a statement of the reason why it was so desired. Now if it is the object and purpose of this examination to assail and attack the reasons then assigned, it might be proper. I would like to be advised with reference to that.

Mr. Austin: Will you give me just a moment, your Honor?

Trial Examiner Ballinger: I will.

Mr. Austin: I will find that testimony. Page 4770 of the record on January 6th, at the time this exhibit was substituted—does your Honor desire to read it on the record?

Trial Examiner Ballinger: You may include it in the record.

Mr. Austin: "Q. In connection with the new document which you have prepared and which was identified above by title, being an amplification of what was marked originally Exhibit 100, did you revise and correct any errors that may have existed in the revised form 189, being Exhibit 101?

"A. Yes, sir.

"Q. Did those errors amount to any substantial amount?

"A. No.

4859 "Q. Did they in any particular change the differentials in cost as appeared?

"A. No. They neither changed the differential nor did they change the unit cost in a given channel.

"Q. As I understand it, Mr. Boatwright, they were trivial, mechanical errors in calculation?

"A. That is correct. In spite of the fact that the other work had been completely checked by second operators there were minor human elements—human errors found in the original which were corrected.

"Q. In view of that discovery have you prepared new and correct forms 189 revised on the basis of your latest calculation and on the basis of this expanded report of your study?

"A. I have."

Now in connection with that, your Honor, you will note that it states that those errors did not amount to any substantial amount. It says—the testimony is that they did not in any particular change the differentials in cost and did not change the differential or the unit cost in a given channel, all of which statements, I believe, are incorrect, on the basis of these forms.

Trial Examiner Ballinger: If this examination is designed to intend to show that those answers were incorrect, the Trial Examiner will permit them.

4860 Mr. Austin: That is the purpose.

Mr. Hanley: If your Honor please, we admitted they were incorrect when we withdrew the exhibit. Now we are not entitled to be examined on an exhibit that is withdrawn from this lawsuit. That's withdrawn from this lawsuit. It is not in the case at all.

Mr. Austin: I am challenging these answers that were given.

Trial Examiner Ballinger: Read the question.

4861 Mr. Hanley: That question is further objected to as argumentative and calling for a conclusion of the witness and a calculation on the part of the witness. It is complex, intricate and incapable of a direct answer and I would like to ask the Commission to hand me, now, the official exhibit; former 101 and present 101.

Trial Examiner Ballinger: The Trial Examiner hasn't the original.

Mr. Hanley: Who has, your Honor?

Mr. Austin: You have got them, haven't you; copies of of all of them?

Mr. Hanley: No, you have them. They are in evidence.

Mr. Austin: All right.

Mr. Hanley: You have them. We haven't anything except what you have got in your books.

Mr. Austin: You have copies of the present Exhibit 101.

Mr. Hanley: I am not sure I have copies of what you are talking about, at all. I am asking for the official record of former 101 and present 101.

There isn't any thirty percent error, Mr. Austin, in those exhibits and I know it and I want to see the original exhibits.

Trial Examiner Ballinger: Mr. Boatwright, without

Exhibit 101; and opportunity to compare it with 4862 the existing exhibit; could you answer that question?

Witness: That question—

Mr. Hanley: And, if your Honor please, we will ask to defer this question until we have had that opportunity, if it will expedite the trial.

Mr. Austin: I think the witness can answer now as to whether or not there were any different methods of allocation used in the November 17th exhibit and in the January 6th exhibit.

Trial Examiner Ballinger: He stated in his original examination it was withdrawn because of inaccuracies.

Mr. Austin: I want to show your Honor that all of these answers that I read are not correct. That is my contention.

Trial Examiner Ballinger: Suppose you take up the particular answers and ask him with reference to those.

Mr. Austin: There is a question pending, first, as to whether or not any of the changes between those two forms resulted in any difference in allocation.

Mr. Hanley: There is no objection to the question as to whether there was any difference in allocation.

Witness: I don't recall a single case where any change in the allocation procedure was adopted.

Mr. Hanley: I wish to make it clear now, your Honor —I think it is appropriate at this time—but the Commission will not get another figure from the Respondent in 4863 this law suit. It will, as we have always offered their records, but if we are to be subjected to this kind of an examination because some comptometer girl stumbled over a key, we are just not going to give you any figures.

Trial Examiner Ballinger: Judge, you haven't been subjected to any unfair rulings up to the present time, in the knowledge of the Trial Examiner.

Mr. Hanley: Judge, you must concede to me that this is a most unfair type of examination. We withdrew this exhibit because we admitted that there were mechanical errors in it.

Trial Examiner Ballinger: This line of examination is designed and intended to test the accuracy of the witness' statement as a grounds for the withdrawal. It is proper cross examination.

Mr. Austin: Now, a question was asked about the original exhibit. Well, the original exhibit was one of several copies of the same comparative statement of expense which were all handed to myself, Mr. Warmack and the Trial Examiner and one of them went in the record in Washington. That being the case, and assuming that everybody here had copies, I didn't bring the original exhibit over here with me because it would make that much more to get in my brief case.

4864 Mr. Hanley: Do I understand that you do not have the Commission's exhibits here, Mr. Austin?

Mr. Austin: I have got them all here except these two. Well, wait a minute. Yes, excepting 99, 100 and 101 because I knew that you all had identical copies that were made by you and I didn't bother to bring them here. I had enough bulk.

Trial Examiner Ballinger: Mr. Austin, you have a copy of the original exhibit furnished you by counsel for Respondent at the time it was offered, have you not?

Mr. Austin: Yes, both of the present exhibit and former exhibit.

Trial Examiner Ballinger: Well, that may serve the purposes of any examination at this time, subject, however, to check.

By Mr. Austin:

Q. Now, Mr. Boatwright—

Mr. Austin. Pardon me. Off the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Austin: I would like to mark this paper for identification.

Trial Examiner Ballinger: The Reporter will mark the document "Commission's Exhibit 101" for identification.

4865 (The document referred to was marked "Commission's Exhibit 101" for identification.)

By Mr. Austin:

Q. Mr. Boatwright, is this Commission's Exhibit 101, for identification a copy as prepared in your office of the former Respondent's Exhibit 101?

Mr. Hanley: That is objected to because the term "Former Exhibit 101" is not properly identified.

By Mr. Austin:

Q. Does it appear to you to be a copy of the comparative statement of expense.

Trial Examiner Ballinger: The objection will be overruled.

Witness: Do I answer?

Trial Examiner Ballinger: You may answer.

A. It does appear to be.

Q. Now, I won't pretend to go through all of these figures, Mr. Boatwright, but, in the first place, I call attention to the answer given by you on January 6th, in which you said that—

Mr. Abbott: What page?

Mr. Austin: Page 4770.

Q. (continuing) where you said that these errors were trivial and that they did not amount to any substantial amount. And I ask you to read the total expense 4866 first on Commission's Exhibit 101, for identification, and second, on Respondent's Exhibit 101, the total expense under the column "Direct Shipment—other customers."

Mr. Hanley: That is objected to for the reason that what counsel refers to as Respondent's Former Exhibit 101 has been withdrawn from the testimony and is no longer in the record, no longer a part of the evidence, was conceded to be erroneous in the matter of calculation, and that it is now improper to examine by way of impeachment in connection with an exhibit which the Court has permitted to be withdrawn on the conceded theory that the same was erroneous in its conclusions.

Trial Examiner Ballinger: The objection is overruled.

Mr. Austin: I would like to say now, if I may, that we are passed the point of it being error. I am simply showing that in certain instances the amount of the errors which existed because it was stated previously that the errors were trivial and were substantial in extent so—

Mr. Hanley: If your Honor please, may I inquire what it all amounts to?

Trial Examiner Ballinger: Did I understand that to mean that they were trivial as to the difference in each item or trivial as to the aggregate?

Mr. Austin: Well, now, the question before the witness is as to an aggregate figure.

4867 Trial Examiner Ballinger: The Examiner has ruled that the witness may answer.

Witness: The amount as shown under "Direct Shipment—other customers" on Respondent's Exhibit 101 aggregates $60,476.29. On Commission's Exhibit 101, for identification, under the column "Direct Shipments—other customers" that totals $62,967.92.

Trial Examiner Ballinger: How many items enter into that, Mr. Boatwright?

Witness: Where?

Trial Examiner Ballinger: Into that total?

Witness: I would have to count them. I don't know.

Trial Examiner Ballinger: You may.

Witness: Is your question directed only to the grand total number of expense classifications?

Trial Examiner Ballinger: No. How many items enter into that total, make up that total.

(Witness counts as requested.)

Witness: I count sixty items of expense classifications.

Trial Examiner Ballinger: The Examiner understands counsel for the Commission to state that there are variations in thirty of those items, is that correct, Mr. Austin?

Mr. Austin: No. On that we were only talking about one column just now, your Honor. In three columns, that is, all the "Direct Shipments" columns, I said there
4868 were 187 items, of which there were 56 were changed.

Mr. Hanley: If your Honor please, the Respondent objects to the counsel for the Commission testifying that there are differences in 30 of the items between what is called former exhibit 101 and present exhibit 101 and, particularly because former exhibit 101 has been withdrawn from the record.

Trial Examiner Ballinger: Objection is sustained as to any testimony if it can't be agreed upon between counsel.

Mr. Hanley: It certainly hasn't been agreed upon, and I won't agree to anything about that exhibit.

Mr. Austin: Commission's Exhibit 101 is only for identification at the present time, your Honor.

Trial Examiner Ballinger: Now, off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Mr. Boatwright, on Commission's Exhibit 101, for identification, what is the unit cost or expense per gallon assigned to "Direct Shipments—other customers"?

Mr. Hanley: May it be understood, your Honor, that counsel is now talking about Exhibit 101 in evidence?

Mr. Austin: No, Commission's Exhibit 101, for identification, is what I said.

Mr. Hanley: Well, does that mean what you have
4869 referred to as the former?

Mr. Austin: Yes.

Mr. Hanley: Then that question is objected to as immaterial, incompetent, and irrelevant, because what counsel calls former exhibit 101 has been withdrawn from the testimony and is no longer a part of the record, concededly erroneous and counsel is not entitled to examine concerning it.

Trial Examiner Ballinger: The objection is overruled and exception allowed counsel for Respondent, and it will be understood that the same objection is made to any similar questions and the same ruling and an exception.

Mr. Hanley: Well, if I am not to be permitted to make objections to these questions that are asked, Judge, I would like to amplify my objection and have it stand, if I may be permitted.

Trial Examiner Ballinger: You may, if you desire, interpose an objection to each one.

Mr. Hanley: All right.

In addition to the objection already made, the Respondent objects to any examination concerning what counsel now refers to as exhibit 101 or former exhibit 101, not a part of the record, for the reason that such exhibit while compared was voluntarily withdrawn by Respondents by permission of the Court and without an objection by
4870 the prosecution, and that the same was conceded to be erroneous in certain mechanical particulars; that Respondent's witnesses have testified that there is no difference in the method of allocation used in the preparation of either of the two exhibits namely, the so-called former exhibit 101 withdrawn from evidence by permission of the Court and the existing exhibit in evidence numbered 101; that examination on the part of the Commission of this witness or any witness as to differences between said two exhibits is immaterial, irrelevant and incompetent, encumbers the record, wastes the time of the Court and is a harassment to both the Government and the Respondent in that it has been conceded by the Respondent that there were certain errors in calculation appearing in what is

known as former exhibit 101, and the examination of counsel for the Commission is now simply a capricious attempt to take the Respondent to task for errors that may have been made by comptometer girls or bookkeepers in computing the results as they appear on the exhibit which has been withdrawn and which has been conceded to be erroneous in its conclusions.

Trial Examiner Ballinger: Off the record.

(There was a discussion had off the record.)

Trial Examiner Ballinger: The objection is overruled.

Mr. Austin: There is a question pending.

Reporter (Reading) "Mr. Boatwright, on Commission's Exhibit 101, for identification, what is the unit
4871 cost or expense per gallon assigned to 'Direct Shipment—other customers?' "

A. The unit cost for "Direct Shipment—other customers" was 20/100 of a cent.

Q. And what is the cost for that class of business shown on Respondent's Exhibit 101?

Mr. Hanley: That is objected to because the exhibit is the best evidence.

Trial Examiner Ballinger: The objection is overruled.

Mr. Hanley: Well, your Honor, they are in evidence. Must we go through the whole thing?

Trial Examiner Ballinger: Merely to save time of going and looking up exhibits, the witness may answer.

A. On Respondent's Exhibit 101, the comparable figure is 19/100 of a cent per gallon.

By Mr. Austin:

Q. Then, Mr. Boatwright, referring to your previous testimony: "They neither changed in differential nor do they change the unit cost in a given channel"—is it now your opinion that that statement is correct or do you wish to change it?

A. I am afraid when that question was asked that I was thinking of the matter of litigation or the matter of this complaint. Throughout my thinking, as I have been on the stand, all questions and all defense calculations
4872 have been predicated on the tank wagon reseller channel gasoline cost on the one hand, a jobber gasoline cost on the other hand.

May I ask, did either of those figures change?

Q. I concede they did not between the two forms.

A. That was the basis of my answer.

Mr. Hanley: From the concession of counsel it is moved by the Respondent that all this line of examination be stricken.

Trial Examiner Ballinger: The motion is denied.

By Mr. Austin:

Q. One more question, Mr. Boatwright, as to a particular cost. Will you state the expense charged under account 250 "General Office Expense, Accounting Department to Jobbers, Naphtha, and Gasoline" on Commission's Exhibit 101, for identification, and the same figure, or, rather, the corresponding figure on Respondent's Exhibit 101?

Mr. Hanley: That is objected to because the exhibit is not identified.

Trial Examiner Ballinger: One moment Judge. Read the question.

(The question was read.)

Mr. Hanley: That is objected to because the exhibit is not identified, and if the answer is in the exhibit, the exhibit is the best evidence.

Trial Examiner Ballinger: The objection is over-
4873 ruled.

A. I think you stated 205.

Mr. Austin: 250.

Witness: Did you mean 250?

Mr. Hanley: May we know, if your Honor please, what counsel is talking about?

Mr. Austin: What did I say?

(The record was read.)

Mr. Hanley: May I understand if Commission's Exhibit, for identification, now 101, is what you have heretofore called former exhibit 101?

Mr. Austin: That's right. By strange coincidence the number is the same.

Witness: Now on the Commission's Exhibit 101, marked for identification, "Direct Shipments—other customers, naphtha and gasoline, jobbers" shows an entry of $1,266.25.

Q. All right.

A. The corresponding figure on Respondent's Exhibit 101 "Direct Shipment—other customers, jobbers, naphtha and gasoline," is $364.71.

Q. That indicates, does it not, Mr. Boatwright that—

or rather, that shows that approximately $900 was deducted from that account in the jobbers, naphtha and gasoline column between November 17th and January 6th?

A. Let us say that it was not deducted but that there was an error in the calculations which when cor-
4874 rected reflects that magnitude.

Q. Now, will you look at these two sheets again, again referring to Commission's Exhibit 101, for identification, and Respondent's Exhibit 101, and tell me whether it is not true that the figure for that same account; that is, account number 250 in the tank wagon reseller channel is approximately $800 larger in Respondent's Exhibit 101 than it is in the former exhibit, which is now Commission's Exhibit 101, for identification?

A. The statement of the counsel—

Mr. Hanley: Just a moment. Respondent adds to the general objection that that calls for an arithmetical calculation by the witness is apparent on the face of the exhibits.

Mr. Austin: It is only apparent after the witness looked at them, which he has now done.

Trial Examiner Ballinger: The objection is overruled. The witness may answer.

A. The statement of the counsel for the Commission is correct. It is an approximate item of $800 difference in the tank wagon reseller channel.

By Mr. Austin:

Q. Mr. Boatwright, in allocating that account number 250 between channels, was the same method of allocation used in the former exhibit which is now Commission's
4875 Exhibit 101, for identification, and the present exhibit, Respondent's Exhibit 101?

A. To the best of my memory, yes, sir.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: Well, put this on the record.

Mr. Austin: I was going to say it seems to me we are getting into more properly redirect, but I don't object if they want to put it in now.

Trial Examiner Ballinger: That will come in on redirect.

Mr. Austin: It makes no difference to me.

Mr. Hanley: Well, it is going in here on cross-examination. We better have it on the record, Judge. I would like to have this on the record because there is going to be something predicated on this cross-examination.

Trial Examiner Ballinger: If there is no objection, the witness may make an explanation.

Mr. Hanley: May he make it on the record, your Honor?

Trial Examiner Ballinger: Certainly.

Mr. Hanley: Thank you.

Witness: Well, the counsel for the Commission called to my attention the number of individual entries changed between the Commission's Exhibit 101 and Respondent's Exhibit 101. I would like to call attention to the Court
that the very fact that there are a large number of
4876 individual expense items changed is an indication
of thoroughness in tracing through each individual
error through all of these ramifications, because these expense items influence one another.

To illustrate this condition, assume that an error has been made in the application of a percentage on a painter doing decorating work. Not only would it change the three entries under the three respective channels in Account 075, Advertising, it would change the allocation in—and the entries in the accounts having to do with Federal Insurance, three more; in the accounts having to do with Social Insurance, three more; tracing that change through to the influence upon supervision, would change each of those by penny amounts; and tracing it to the supervisor of the painters, it would change that group. Therefore, it is in the tracing through of the number of accounts influenced that results in the accounts which you got of the large number of changes. Actually there were but few basic changes. The ramifications of that resulted in the amount that you derived.

Mr. Hanley. And may I ask you Mr. Boatwright, what, if any, was the change in the differential?

Witness: There was no change in the differential.

I think the counsel for the Commission agreed or admitted that there was no change in those columns.

Mr. Austin: You mean as between the jobber gasoline
and the tank wagon reseller?
4877 A. That's correct. That is my understanding as
being the subject of this complaint.

By Mr. Austin:

Q. But, of course, that might well be, might it not, that one change would offset another change and there might be a number of errors and yet your differential might remain the same because some errors might be one way and some the other?

Mr. Hanley: That is objected to as argumentative and speculative.

Trial Examiner Ballinger: The objection is overruled. The witness may answer, if he can.

A. Well, naturally, no impartial group of operators are going to make errors on just one side. Of course, if there are errors they are offsetting errors, and that is why in the magnitude of the sum total of the change it didn't change the differential. There were errors, human errors.

By Mr. Austin:

Q. Mr. Boatwright, you have said at page 4622 of the record and at page 4530 and at 4531, and perhaps at other places that—

Mr. Hanley: Well, that is objected to as too indefinite. If you want to specify, please specify.

Mr. Austin: I think he said it other times, but I am giving you those two specific references.

4878 Trial Examiner Ballinger: The Examiner requests counsel to withhold any objections until the question has been completed.

Mr. Hanley: I will be glad to do that, Judge.

By Mr. Austin:

Q. You said, Mr. Boatwright, that the cost of selling the Standard Oil Company's products to direct shipment customers was infinitesimal and that you couldn't find it and could not isolate it. Do you recall giving that testimony?

A. I do.

Q. You have now found those costs in this cost study, have you not?

Mr. Hanley: That is objected to as calling for a conclusion and opinion of the witness. The cost study has been submitted. It has been submitted on the basis of a study which does not even pretend to reflect the facts that that much cost is involved in selling jobber customers.

Trial Examiner Ballinger: The objection is overruled.

By Mr. Austin:

Q. And this cost study represented by Respondent's Exhibit 101 does purport to isolate the direct shipment expense, does it not?

A. When you speak of direct shipment expense, will you clarify as distinguished between jobbers and other customers, or, are you speaking from the general—

4879 Q. General—

A. —general classification?

Q. I am speaking of all three columns, yes.

A. It does isolate the direct shipment expense, which causes me to raise the question as to whether the previous answer in its context referred only to "direct shipment—other customers". I am not certain as to the answer in that respect. It seems to me that it applied to the direct shipment—other customers, as I have admitted on the stand throughout a selling cost to jobbers.

Could you tell me from the context as to whether we were talking at that time of jobbers only or were we talking of direct shipment customers?

Trial Examiner Ballinger: Would you like to see the transcript?

Witness: I would like to have that phase of the question clarified for me because throughout the entire period that I have been on the stand, I have admitted to a selling cost to jobbers. I have stated that it was practically an impossibility to determine the selling cost, other direct shipment customers in particular with reference to gasoline which we have so frequently raised the question about.

(There was a discussion off the record.)

4880 Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Now, that is just the question that I am raising now, Mr. Boatwright, and in response to your statement I would now like to call your attention to testimony given at page 4622 of the record, the following question and answer:

"Q. Did you not state that no computation had been made of the costs of distribution of petroleum products to jobbers or other direct shipment customers in the Detroit area because those costs were infinitesimal or because you 'could not find them'?

"A. I did."

A. Is there a question pending that I should answer?

Q. There is not. Mr. Boatwright, you have just attempted to distinguish between the feasibility, if I may put it that way, of computing market costs per gallon for jobber gasoline business for direct shipment other customers' business. Is it not true, Mr. Boatwright, that on Respondent's Exhibit 101 the cost of marketing petroleum products to direct shipment other customers is shown to be .19 of a cent per gallon whereas the marketing cost for naphtha and gasoline to jobbers is shown to be only .16 of a cent?

Mr. Hanley: That is objected to. The exhibit is the best evidence. The question merely asks the witness to read from the exhibit.

4881 Trial Examiner Ballinger: Overruled.

A. The unit costs as read by the counsel for the Commission are a correct statement.

Q. And with regard to the total marketing costs of direct shipment business all three channels, as segregated by the Respondent on its Exhibit 101 and which have heretofore been referred to as infinitesimal, will you state the total amount of the expense now allocated to direct shipment business?

Mr. Hanley: That's objected to as already appearing in the exhibit.

May I say to your Honor that we will be here for weeks if everything has to be testified to that appears on exhibits?

Trial Examiner Ballinger: Read the question.

(The question referred to was read by the Reporter.)

Mr. Hanley: That is further objected to as argumentative.

Trial Examiner Ballinger: The objection is overruled.

A. The total amount of marketing costs allocated to the three direct shipment channels read as follows: Jobber naphtha and gasoline, $24,389.05; jobber other products, $1,658.65; other direct shipment customers, $60,476.29.

Mr. Hanley: I move to strike the answer as a repetition of an exhibit already in evidence and as an encumbrance on the record.

4882 Trial Examiner Ballinger: Motion is denied.

By Mr. Austin:

Q. And that's a total of about $86,000, is it not, Mr. Boatwright?

Mr. Hanley: That's objected to as already in evidence.

Mr. Austin: It isn't in evidence.

Trial Examiner Ballinger: Read the question.

(The question referred to was read by the Reporter.)

Trial Examiner Ballinger: Was there an objection to that?

Mr. Hanley: Yes, there was, your Honor.

Trial Examiner Ballinger: The objection is overruled.

A. The total is slightly in excess of $86,000.

By Mr. Austin:

Q. Now again turning to the record at page 4512 and 4513, reading from the record:

"Q. (By Mr. Hanley.) Will you explain, please, if you know, Mr. Boatwright, why there isn't assigned to the so-called direct shipments a separate channel on form 189?

"A. Yes. Direct shipments originate with the sales contract, as a rule, with some major buyer. Most of these sales contracts are made by the general office on a bid basis. A price is submitted and we either get the 4883 business or we don't get the business. That applies to the greatest proportion of our direct shipments. To figure a marketing cost on a direct shipment of several train loads of gasoline per year to a given customer where all you do is submit a bid in a sealed envelope would be an impossibility within a realm in which you could carry your decimal points and costs. The cost is so small that it has not appeared advisable or desirable to attempt to isolate the costs of that particular channel."

Now in that testimony, Mr. Boatwright, in referring to bids were you referring to direct shipment consumer business?

A. I must have been because I know of no bid that has been made on these four jobbers for a year.

Q. Yes. I assumed you were referring in that testimony to direct consumer shipment business.

A. And I must have been referring to gasoline, also, although you read one question and one answer. I notice that in the answer I made reference to gasoline business. Is that not correct?

Q. Yes.

A. That's right.

Q. Do I gather from that, Mr. Boatwright, that there is a substantial amount of business with direct shipment customers other than gasoline?

4884 A. Well, we sell them motor oils and industrial lubricants and that take a large part of your industrial salesmen and your lubricating salesmen's time. These products are problem products; where an individual will have a particular unit requiring a product with definite specifications to offset, maybe, ice formation, maybe salt, maybe corrosion or one thing ~~and~~ another. One industrial engineer will go out and work with that buyer and they will devise or prepare a formula for an oil which meets that specific need and, as such, that costs money. That's time. But when the actual sale is made, after drawing up the formula, it may be with some large industrial organization; it may be a direct shipment of the carload of the material, but time has been incurred in devising the formula.

Q. It isn't true, is it, Mr. Boatwright, that direct shipment business, even as to gasoline, is obtained merely by submitting a bid in a sealed envelope?

A. No, it isn't—

Mr. Hanley: May I have the question?

(The question referred to was read by the Reporter.)

Mr. Austin: He said, "No, it isn't."

The Witness: I think that is an incomplete answer and I should complete the answer.

Trial Examiner Ballinger: Complete the answer.

A. It isn't entirely true that we get a calculation
4885 merely by submitting a bid. There is, of course, a certain amount of leg work. It is my judgment, based on my acquaintance with the volume that moves in this area, that a major portion of the gasoline is secured on that basis.

Q. In what column do the marketing expenses ~~now~~ charged to that business appear on Respondent's Exhibit 101?

A. They appear in the column "Direct Shipments Customers, Other Customers."

Q. And is it ~~true, Mr. Boat~~wright, again referring to Respondent's Exhibit 101, in that direct shipment other customer channel, is it not true that more than $13,000 in salesmen's salaries alone are now charged to that class of business?

A. That is a true statement, the exact figures being $13,312.69.

Q. And is it not also true that a total expense of more than $60,000 is charged to that channel?

Mr. Hanley: Just a moment. That is objected to as a continuation of a line of questioning that simply asks for a repetition of that which already appears in an exhibit admitted in evidence.

Trial Examiner Ballinger: The objection is overruled.

A. It is a true statement that slightly in excess of $60,000 is now chargeable to that channel.

4886 Q. Do you know what proportion of the gallonage charged to that channel is gasoline?

A. I do not recall from memory.

Q. You said here on page 4512, "A price is submitted and we either get the business or we don't get the business. That applies to the greatest proportion of our direct shipments."

A. I still think that is entirely true.

Q. And the business to which you were there referring is business which is included in this direct shipment other customer channel, is it not?

A. Yes, sir, but also included in that direct shipment other customer's channel is asphalt, candles, motor oil, industrial oil, greases, requiring a tremendous amount of time, effort and cost on the part of our lubricating salesmen and lubricating engineers, this channel never having been a subject of controversy in the complaint during my entire period on the stand, I did not attempt to segregate according to individual products; that is, total direct shipments, all products; direct shipment, customers.

Q. Yes, I understand that, Mr. Boatwright.

A. I just wanted that to be clear.

Q. I did not understand and do not now understand—and you may correct me, if I am wrong—that in so far as getting business on sealed bid, that that applied only

4887 to gasoline. Is it or is it not true that the business in those other products is also obtained upon bids and with the same customers to whom the gasoline is sold?

A. Sometimes it is. However, your large industrial buyers usually buy on specifications. The product on which they state the specifications are quite likely to be the products in which there is a standard of uniformity that can be used for those products. The purchase of an industrial lubricant is quite frequently a formula purchase in which the representative of the industry and the representative of the Standard Oil Company will concur on the specific formula needed for a specific purpose. After a concurrence is reached, then we place our price quotation on that particular formula but it is in the working out of the formula that the time is involved ~~and~~ ~~it is~~ in working out with the industrial representative the needs of the particular unit and being sure that we can satisfy them, that takes the time.

There is, of course, some bidding by envelope on industrial oils, motor oils, but relative to gasoline, we are talking of a minor portion.

Mr. Austin: Your Honor, I move we adjourn at this time for five minutes.

Trial Examiner Ballinger: We will have a recess for five minutes.

(A short recess was taken.)

4888 Trial Examiner Ballinger: We will come to order.

Mr. Austin: If your Honor will turn to Respondent's Exhibit 99, page 1, I am going to refer to that.

By Mr. Austin:

Q. That page is headed "Schedule No. 1. Salesmen and sales promotion expense."

The first sentence of the text reads as follows: "A memorandum is maintained by each salesman showing the amount of time spent in selling products applicable to each channel of distribution during the last month of each quarter."

Have you a copy of any of those forms, Mr. Boatwright, with you?

A. They are not forms.

Q. Well, they are described here as memoranda. Would it be possible for you to produce those salesmen's memoranda for any quarter of 1940?

A. I don't think that it would be, because they wouldn't be retained.

Q. What is the practice in making them out and what is done with them?

A. Well, as a rule what is done is that the salesman will make his observations and he will call his distribution of time to the sales promoter, which will formulate in a discussion on the distribution of time between the sales-

4889 man and the sales promoter which, in turn, becomes a basis of segregation on the part of the accounting department; little notes and notations and efforts, and so forth.

Q. This says: "A memorandum is maintained by each salesman showing the amount of time spent in selling products applicable to each channel of distribution during the last month of each quarter." If such memoranda are maintained I would like to know whether they can be produced?

A. And I don't know that they can be produced.

Q. Well, do you have those memoranda, or does the company have them, for December, 1941?

A. I don't know. I doubt it.

Q. What happens to them?

A. Well, they are just notations or memoranda that the salesmen make and may keep for purposes of discussion with the sales promoter in allocating the time or effort of a group of salesmen. I don't know what happens to them; whether the sales promoter keeps them or whether the sales promoter calls for them or—I know there is no official form.

Q. There is no official form?

A. No, sir.

Q. Does each salesman make such a memoranda and turn it in?

A. I am not sure each salesman does. Instructions
4890 state the salesman should make the estimates of time.
I am not sure that they do, in each case.

Q. Well, according to this first schedule under Exhibit 99, those memoranda are the basis for the method of allocation described, is that not so?

A. The memorandum and the discussion with the sales promoter results in the allocation ratios to be used in spreading the salesmen's salaries and expenses.

Q. This second sentence, here, refers to those memoranda as time records. It says, "This time record is reviewed and approved by the Sales Manager, Assistant Field Manager or Field Manager."

A. The time record—

Mr. Hanley: Just a moment until he finishes the question.

By Mr. Austin:

Q. The question is if it is a time record why can it not be produced?

A. The time record that I was referring to at that moment is the time record that is made up following discussion and consultation with the sales manager which becomes the basis of allocation of these costs to our various sales channels. I think, in fact, you have copies of most of these time estimates as so prepared.

4891 Q. You are now referring to the quarterly distribution of time report; are you not?

A. That is correct.

Trial Examiner Ballinger: Mr. Boatwright, you probably stated it but I would like to have you repeat it, if necessary: State exactly what steps are taken to finally formulate this record. Commence at the inception and trace it through.

The Witness: Well, I don't have the letter of instructions on it. I shall give it to you as best I can from memory in the sequence of events.

The instructions provide that the allocation of effort among channels should be prepared by a salesman; the salesman and the sales manager, previously referred to as sales promotor. Then, at the end of the last month of each quarter, in discussion, determine the ratio—

Trial Examiner Ballinger: Discussion between who?

The Witness: Sales promoter and salesman; determine the ratios to be used in the allocation of the salesmen's salaries and expenses.

Trial Examiner Ballinger: Is that carried through to the books?

The Witness: It is.

Trial Examiner Ballinger: To a record; each month?

4892 The Witness: No, that is the last month of each quarter.

Then these ratios go to the accounting department.

The accounting department is then—I am sorry, I skipped a step there. From the sales promoter they go to the manager or assistant manager.

Trial Examiner Ballinger: Of the district?

The Witness: Of the district, who reviews and approves. They then go to the accounting department whose—

Trial Examiner Ballinger: Where is the accounting department; in Chicago?

The Witness: In Detroit.

Trial Examiner Ballinger: In Detroit.

The Witness: Yes; which has the privilege and frequently do review these estimates with various people involved, being either the sales promoter or salesman of the individual classifications of salesmen.

These figures are then used in the allocation of selling costs among the various channels. They are reported to

Chicago and a record is maintained in Chicago dating back for a period of five years on each of the different fields by class of employees.

When a change of marked significance takes place, Chicago asks of the field a letter of explanation as to why the change. The field provides Chicago with the basis 4893 justifying the change of the ratios among the different channels.

That, I think, is the complete sequence.

By Mr. Austin:

Q. Is it your testimony now, Mr. Boatwright, that a memorandum is not maintained by each salesman for the last month of each quarter showing the time spent in selling the various products?

A. It is my testimony that some individual salesman may not. Many of them do.

4894 Q. But do I understand that you are not able to produce any of those memoranda here referred to even for the last quarter of 1941?

A. Oh, a person could produce memoranda on some salesmen but not all of them. You could take your automotive engineers; you could take your lubricating—your industrial salesmen; you could take your lubricating salesmen. Some of those memoranda are in existence, sir.

Q. When you said that this time record is reviewed and approved by the sales manager, assistant field manager or field manager, were you referring to the salesmen's memoranda?

A. No, I am referring to the composite memoranda which is prepared by the sales promoter by groups of salesmen.

Q. That isn't referred to here on the first page of exhibit 4, is it?

Mr. Hanley: Excuse me, will you read that?

(The question was read.)

Mr. Hanley: Have you finished, Mr. Austin?

Mr. Austin: Yes.

Mr. Hanley: That is objected to as not being a question and just an argumentative statement of counsel.

Mr. Austin: It is not argumentative. I am referring to the quarterly—

Trial Examiner Ballinger: The objection is overruled.

Mr. Hanley: Just a moment. I submit, your
4895 Honor, there isn't anything that the witness can
answer.

Trial Examiner Ballinger: Read the question.

(The question was read.)

A. I don't know whether it is or isn't without reading the page, but even if it is not referred to inasmuch as you had copies which we had furnished, I probably have erred in not including direct reference to copies which you already have, but that is—I just thought it would be understood.

By Mr. Austin:

Q. Well, this memorandum I assumed was put in for not only for the benefit of counsel but for the Examiner and for the Commission, and I see no reference in—on pages 1 and 2 to the quarterly distribution of time reports which you now say is the basis for allocation of salesmen's salaries.

Mr. Hanley: That is objected to as a statement of counsel and not a question, and there is nothing for the witness to answer.

Trial Examiner Ballinger: Read that.

Mr. Austin: I wanted to find out, your Honor, whether or not this statement here is or is not correct. The very first line says "a memorandum is maintained by each salesman." Now we are told that that isn't so. And in the next sentence says: "This time record is reviewed
by so and so," which on its face refers to the memo-
4896 randum, but now we are told that it is not the sales-
man's memoranda at all, but a quarterly distribution
of time report which is referred to, and no mention is made
here of a quarterly distribution of time reports.

Trial Examiner Ballinger: Do you understand the question?

Mr. Hanley: If your Honor please, the statement of counsel is objected to because there is no question. I ask for the record.

Trial Examiner Ballinger: Read the question.

(The record was read.)

By Mr. Austin:

Q. Then let me ask you this, Mr. Boatwright: What is it that is used for allocating field expenses to the various sales channels on your comparative statement of expense from 189, and before you answer that, I am referring to the third sentence on page 1 of this exhibit which you have before you, Exhibit 99: "Upon approval, it is used in allocating field expenses to the various sales channels on our comparative statement of expense from 189 for the succeeding three months."

Now, as I read this, the pronoun "it" in the sentence just quoted refers back to the salesmen's memorandum. If that is not so, I wish you would explain what is used for that purpose.

4897 Q. The quarterly statement of allocation of time is used for allocating the expenses of salesmen among channels and was intended as the report referred to while this was being written.

Q. Will you state again, although I believe you did state to the Examiner as part of a longer statement that you made, how that quarterly distribution of time report is prepared, and who prepared it, what is used as a basis for the time allocations contained therein?

A. Do you want me to repeat that entire series that was just—

Q. No. I am just referring to the preparation of the quarterly distribution and time report; not what is done with it but the preparation of it.

A. The actual preparation is, I think, in all cases made between the members of the sales promotion department and the salesmen. That is the first step in the process.

Q. Does the sales promotion manager call in each salesman, or what does he do?

A. Oh, he need not call in all salesmen. He may call in a few. He may discuss it with one, two, three—I don't know the numbers—but he is in direct charge of their work and their efforts, and is supposed and is being paid to know what they do and is in consultation with them at all times.

Mr. Austin: Perhaps before going further it 4898 should appear on the record that the quarterly distribution of time reports which we have been referring to are those reports which are introduced—four of which have been introduced in evidence as Commission's Exhibit 83 and Commission's Exhibits 88 to 90.

Trial Examiner Ballinger: Is that correct?

Mr. Austin: I will show them to you if you want to check them.

Witness: I don't know the numbers, your Honor.

Trial Examiner Ballinger: Let the witness examine them.

Witness: The quarterly reports were supplied. However—(witness examines a paper indicated by Mr. Austin). That is correct.

Mr. Hanley: If your Honor please, it seems to me appropriate to suggest at this time that the accountants for the Commission have been for many weeks investigating the records of the Respondent and checking the exhibits offered by the Respondent, being Exhibits 99 to 101, both inclusive, and have had access to the work sheets, and while I do not question at all the propriety of this line of cross examination, if it be directed to any discrepancies, I do suggest that it is a waste of time unless the accountants for the Commission have developed something that is out of line with the conclusions that have been reached in the exhibits.

Trial Examiner Ballinger: The Examiner assumes
4899 that this line of cross examination is the result of the investigations made by the Commission accountants.

Mr. Hanley: Judge, I really don't know what it is about. I don't question the propriety of the examination if there is something that counsel thinks is wrong about the mode of procedure, but if he is just now following up in testimony what has been done by the Respondent, and doesn't find any fault with the conclusions—you may find fault in ultimate argument with the method of allocations; I am not arguing about that—but if he is just following the method of procedure, then I think it just encumbers the record because it has all been explained in detail in the exhibits and it is just repetitious to go through it again.

Trial Examiner Ballinger: The Examiner has no idea of the ultimate objective of this line of cross examination. Counsel may proceed.

Mr. Austin: I would like to say in response to the statement that has just been made that one reason for these particular questions about this alleged salesmen's memorandum prepared quarterly is that the Commission's accountants, who as Judge Hanley says, has had access to Respondent's books and records, and who says that very fine cooperation has been given him, nevertheless was unable to see or be shown any such memorandum as is referred to in the first sentence of this first page. If 4900 we had been able to see it, we wouldn't have to ask about it.

By Mr. Austin:

Q. Mr. Boatwright, the quarterly distribution of time reports which you just referred to for salesmen's salaries, as you have just described its preparation—that represents the estimate of the sales promoter and the sales manager of the allocation of the salesmen's hours during the quarter, does it not?

A. When you speak of hours, I am not sure what you mean by hours—if you will change it to a ratio thought, it is correct.

Q. Well, yes, distribution of time, but it is an estimate of time, is it not?

A. Yes, it is an estimate that is prepared in the manner that I have indicated.

Q. And it is not based upon any actual showing or record of the time spent by each individual salesman on each channel during the month?

A. It is not. The exception to that being in your case of industrial engineers where they keep an actual time record. That is mentioned in the exhibit where actual columns appear by time.

Q. You do have in your accounting department in the Detroit field, and I assume in other fields, a form entitled "Distribution of Time by Method of Delivery"?

4901 A. That is correct.

Q. And is that form filled out and carried out by each employee in the accounting department for the last month of each quarter?

A. I think it is carried—it is filled out by each member of the accounting department that is not in a supervisory capacity. I think that the stop-off in the upper level is at that range. I am not sure about that, however.

Q. Simply using that for an example, is that same form or any similar form filled out by each salesman during the last month of each quarter?

A. No form is filled out by the salesman.

Mr. Austin: I believe that the Respondent was good enough to obtain copies today of the quarterly distribution of time reports for salesmen's salaries for December, 1939, and March, 1940, Detroit field; and if so, I would be glad to have those produced at this time.

Mr. Hanley: Well, just a moment. Are those records of the Detroit office?

Mr. Austin: Yes.

Mr. Hanley: Well, until I can look at them, Mr. Austin, we don't care to produce anything.

Mr. Austin: Do you mind letting me have them now?

Mr. Hanley: No. I am sorry.

Mr. Austin: Can you look at them now?

4902 Mr. Hanley: I can't look at them now.

Trial Examiner Ballinger: If we take a ten minute recess?

Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: We will take a recess of ten minutes.

Mr. Austin: I would like to say on the record that these are, as I understand it, the same reports, four of which are now in evidence but only two of those in evidence are for the year 1940, and I want to get the other two that were used for allocation of salesmen's salaries in 1940.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: We will take a five minute recess.

(A short recess was had.)

Trial Examiner Ballinger: Come to order. Proceed.

Mr. Austin: Judge Hanley, have you had a chance to check those distribution of time reports for December, 1939, and March, 1940, which I asked for?

Mr. Hanley: If your Honor please, the Respondent is now prepared to comply with the request of counsel for the Commission to supply to him copies of distribution of time for salesmen for December, 1939, and March, 1940,
4903 and in so doing I wish to state for the record that these are simply copies made by stenographers from the original records of the company and we do not vouch for their accuracy but we think they are accurate.

Mr. Austin: Thank you.

Well, counsel has just handed me the quarterly distribution of time reports for salesmen for December, 1939, and March, 1940, which was what I asked for. He has also handed me the quarterly distribution of time reports for the accounting department, Detroit field, for December, 1939 and March, 1940. I didn't ask for those accounting reports at this time but I did—

Mr. Hanley: I am sorry. I will take them back, if you don't want them.

Mr. Austin: I will return them because I expect later to ask for those two and also the two for June and September, 1940. In other words, I hope to be able to get all four of those. I only asked for two in connection with the salesmen's time because the other two for 1940 are already in the record.

Mr. Hanley: Forgive me for giving you too much.

Mr. Austin: I would rather get the four altogether, Judge, if I may have them at all.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

4904 Mr. Austin: I would like to have these two papers marked for identification.

Trial Examiner Ballinger: The reporter may mark these two documents as Commission's Exhibits 102 and 103, for identification.

(The documents referred to were marked "Commission's Exhibits 102 and 103.")

By Mr. Austin:

Q. I show you these two documents just marked for identification, Mr. Boatwright, and ask if you will state what they are?

Trial Examiner Ballinger: Indicate the exhibits you are referring to.

A. Commission's Exhibits 102 and 103, marked for identification, are the distribution of time reports of salesmen by method and by class of product for the months of December, 1939, March, of 1940, for the Detroit field.

Q. Were the originals of these two reports and the percentages shown thereon or some of the percentages shown thereon used for the allocation of salesmen's salaries to channels on company form 189 for the Detroit field for 1940 as shown in Respondent's Exhibits 99 and 101?

A. The originals from which those two exhibits have been copied constitute the basis of allocation of salesmen's salaries among channels on the original form 189

4905 for the three months period immediately following the months indicated on these respective exhibits. That allocation ratio changes by quarters for each quarter.

Q. And do these two exhibits, for identification, 102 and

103, plus Commission's Exhibits 88 and 89 constitute the four quarterly distribution of time reports which were used for the allocation of salesmen's salaries in the Detroit field for the four quarters of 1940?

A. I am not sure that your reference to the exhibit numbers are correct. If they are correct, that is the true statement.

Q. I would rather have you see them (indicating).

A. Reference to the exhibit numbers was correct. And the statement is correct.

Mr. Austin: I offer these two time reports, Commission's Exhibits 102 and 103, for identification, in evidence.

Mr. Hanley: No objection, subject to correction if the typewriting girls made any errors.

Trial Examiner Ballinger: Commission's Exhibits 102 and 103, for identification, are admitted in evidence, subject to check.

(The documents referred to, heretofore marked for identification "COMMISSION'S EXHIBITS 102 and 103" were received in evidence.)

By Mr. Austin:

4906 Q. Mr. Boatwright, showing you Commission's Exhibit 102, I note that the next-to-the-last line is entitled "percentage" and the last line is entitled "distribution of percentage."

Will you explain the use of the figures in those two lines in allocating salesmen's salaries in the regular accounting procedure of the company?

A. The next-to-the-last line which is indicated as "percentage" is the percentage of time of the salesman devoted to tank wagon reseller, tank wagon consumer, other methods, and automobile supplies, and is used for the allocation of the salaries of individuals in the salesmen's classification to the respective trade channels. The distribution of percentage is a restatement of the first three of those ratios, namely, the tank wagon reseller, the tank wagon consumer, and the other methods, so as to add to one hundred percent, which excludes that portion originally allocated to automobile supplies of 4.8 percent.

I am afraid I would have to refresh my memory from the instructions as to the use of that last line.

Q. Are the figures or ratios, as I believe you called them, stated opposite the heading "percentages" applies to the salaries of all salesmen in the Detroit field in allocating those salaries to channels on form 189?

A. Yes, sir.

Q. Is it not true that the ratios on the last line opposite "Distribution of percentage" are used for an alloca-4907 tion of the amount of salaries charged to Account 7004, general pro rata, for the purpose of allocating any salary expense falling within that account?

A. Well, your Honor, I think that is true, but I cannot testify without consultation with the instructions on the last line. To the best of my knowledge and recollection, your statement is a true statement.

Does that meet your question?

Mr. Hanley: If your Honor please, if it is important, may we have the opportunity to investigate it?

Trial Examiner Ballinger: I was going to suggest that if this is important, then the witness should have an opportunity to consult the other records.

The Witness: Well, there are two men here, right here, if I could just have a minute with either Mr. Houghton, or Mr. Otterbeck who could just give me this right now, but I can't—

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: You may take Mr. Austin's statement that he doesn't know that it is important.

Mr. Austin: I might perhaps refresh the recollection of the witness or he might confer with the gentlemen here, which would be much better, but for the present line of questions, I doubt if it makes any difference in view of the fact—

4908 By Mr. Austin:

Q. —and is this not true, Mr. Boatwright, that the same result would be reached whether the bottom line ratios or the next-to-the-bottom line ratios were applied to the salesmen's salaries? Meaning by that that the automobile supplies do not go into account 7400 anyway?

A. That's right. The automobile supplies do not go into 7004, and that I thought was taken care of when I stated that the first three were restated to total 100.

Q. My recollection is that somewhere here in one of your exhibits it is explained that there were certain statements from the Chicago office which are added on to your 7004 account and allocated under that bottom line of ratios?

A. That's right.

Q. But I don't care about looking that up, and I could even be wrong whether it is this account or whether it is in the accounting department or both that that happens?

A. Yes, sir.

Trial Examiner Ballinger: If that is material, it should be definitely gone into at this time.

Mr. Austin: I don't think so, your Honor.

May this be off the record?

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

4909 Mr. Austin: Pursuing this line of questioning I will refer only to the ratios stated on the next-to-the last line of these reports opposite the heading "percentage" and to which the witness has given a definite answer and unless I find that the bottom line again becomes material, why, I think—

Trial Examiner Ballinger: That may be wholly disregarded.

Mr. Austin: Yes.

By Mr. Austin:

Q. Have you still that exhibit, Mr. Boatwright, that is Commission's Exhibit 102?

A. I do.

Q. Now, the answers that you just gave me only referred to the percentage ratios, or rather, at the bottom of the first four figure columns, is that correct?

A. Yes sir.

Q. Will you tell me whether any use is made of the percentage ratios in either of the last two lines on the other half of the form; that is, under the columns which are headed "Refined oils, naphtha, and gasoline," and so forth, the products columns, any use of those percentages under those product columns made in allocating expenses to Form 189?

A. Not to Form 189.

4910 Q. And was any use made of those percentages in allocating salesmen's salaries to tank wagon reseller, tank wagon consumers or other methods channels on Respondent's Exhibit 101?

A. No.

Q. Now, Mr. Boatwright, will you please turn to page two of Respondent's Exhibit 99. The first sentence in the text, there, "total salaries paid to salesmen in the months of January and July were distributed to the various channels as follows:—" and then there is an example, is that correct?

A. Yes, sir.

Q. Does that sentence which I have just read mean that the percentages under the column "per cent of effort" in the example, where applied to salaries of all field salesmen in charging that expense to account 004 on form 189 for the months in the first and third quarters of 1940?

A. Yes, sir.

Q. And were those percentage figures under January and July, respectively, taken from Commission's—or, rather, from the original of Commission's Exhibit 102 and Commission's Exhibit 88, respectively?

A. Again my only question is to refer to 88. If that number is correct for the July report, that is—

Q. 88 and 89.

4911 A. Yes. That is correct.

Q. And the same is true, is it not, Mr. Boatwright, as to the percentage ratios shown on the next to the last line of Commission's Exhibit 103, those percentages being applied for the second quarter of 1940 and the ratios shown in the same place on Commission's Exhibit 89, those percentages being applied to the last quarter of 1940?

A. That is correct.

Q. And those percentages were applied to all salesmen's salaries for those respective quarters?

A. Yes, sir.

Q. Now I would like to have you state on the record at this point the percentage of salesmen's salaries in the Detroit field which were charged to the tank wagon reseller channel on form 189 in each of the four quarters.

Mr. Hanley: May I ask a question, if your Honor please?

Trial Examiner Ballinger: You may.

Mr. Hanley: Mr. Boatwright, are the figures as now requested, reflected anywhere in Respondent's Exhibit 99 or in any other exhibit?

The Witness: Yes. The figure which he has requested is to be found on either Commission's Exhibit 102, 103, 88 or 89.

Mr. Hanley: If your Honor please, the Respond-
4912 ent objects to the question for the reason that the
answer is to be found on several of the exhibits as enumerated by the witness, which exhibits are already in evidence and the answer will simply be repetitious and cumulative on the record.

Trial Examiner Ballinger: It is merely for convenience. Although it is cumulative, the witness may answer.

Mr. Hanley: The Court says you may answer.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

A. The percentage charge of the tank-wagon reseller channel for the first three months of the year; namely, January, February, and March; amounted to 29.7 per cent. The ratio charged for April, May and June was 29.1 per cent. The ratio charged July, August and September was 27.8 per cent while the ratio charged the last quarter of the year was 27.4 per cent.

By Mr. Austin:

Q. To digress just a moment, Mr. Boatwright: On page 2 of Respondent's Exhibit 99, the example that we were just looking at in the middle of the page, we have been referring to two columns which are headed: "Per cent of effort." What do you mean by "effort"?

4913 A. The distribution of effort of the selling staff.

Q. Does that mean hours or does it mean salaries in dollars?

A. Well, your distribution of hours becomes the distribution of salaries.

Q. Well, are those percentages percentages of time or were they weighted according to the different salaries paid?

A. They are percentages of time.

Q. And wherever you have referred to distribution of effort, or per cent of effort throughout Respondent's Exhibit 99 and Respondent's Exhibit 100, as is frequently done, have you referred to hours rather than dollars?

A. That has been my intent and I think that is a perfectly true statement. You are asking, however, for throughout an entire exhibit. I would say yes.

Q. Well, for instance where a supervisory employee's salary has been allocated according to distribution of effort of employees working under him, you were referring, there, to distribution of hours worked by the employees under him and not necessarily to distribution of their salaries?

A. Yes.

Q. I thought it would be well to clear that up now because, frankly, when I first read these exhibits "effort" meant salary to me and I arrived later at the conclusion it meant hours.

4914 A. Yes, your statement is correct.

Q. Now if you please, Mr. Boatwright, will you turn to Respondent's Exhibit 100, Schedule 1-B, which is on page 18, or it commences on page 18. The first column of dollar figures in that schedule, under the heading "Annual direct shipment cost" states, among other things, the amount of the salaries of the various classes of salesmen assigned to direct shipments, is that correct?

A. Yes, sir.

Q. Those salaries being shown on the first—rather, the top line of figures opposite each salesmen's classification?

A. It is opposite the designation "account 004—salaries" yes, sir.

Q. Thank you. Were the percentages which you have read into the record from the four quarterly distribution of time reports applied to the time of salaries of reseller salesmen used in Exhibit 1-B to determine the amount of these salaries allocated to direct shipments to be deducted from the tank wagon reseller channel on form 189 in compiling Exhibit 101?

A. The component parts of the percentages as read in the record have been used in determining the ratios used on subschedule 1-B, yes, sir.

Q. What do you mean by the component parts?

4915 A. Well, here I am dealing with individual classes of salesmen. The figures which we read in the record was for all classes of salesmen.

Q. Well, did you not state that the percentages shown in the next to the last line of the quarterly distribution of time reports were applied to the salaries of all salesmen in allocating those salaries to form 189?

A. Yes, sir.

Q. Then if they were applied to the salaries of all salesmen, were they not applied to all of the salary included in these charges to direct shipments in the first column on Schedule 1-B?

A. No. In the first column on 1-B, that is a direct measurement of the effort on the part of the salesman for direct shipment business. That does not involve the application of the ratios read into the record for the simple reason that the ratios read into the record do not give consideration to time spent on direct shipments and, as we stated, our original form 189 has any direct shipment charge scattered throughout all of the channels on the original 189. Therefore, we had to measure the effort involved in direct shipment, which was done, which led to the first column of figures on sub-schedule 1-B.

Q. I understand that that is the way that those figures opposite account 004 on schedule 1-B were arrived at
4916 but I believe the method of arriving at them is
shown on Schedule 1-A. Now I recognize, also, that those are direct charges to direct shipment business; direct allocations, at least; but now Schedule 1-B is compared with the method of adjustment used in withdrawing those amounts from the former channels on form 189.

A. Yes, sir.

Q. And is it true that all of the salaries, including this portion of the salaries shown on Schedule 1-B, was allocated on form 189 according to the ratios which you have read into the record from the quarterly distribution of time reports?

A. The salaries originally charged for salesmen were allocated for the amount in question as read into the record according to those percentages in total.

Q. And these figures on schedule 1-B in the first column opposite account 004 are a part of the total salesmen's salaries, are they not?

A. Yes, sir.

Q. Now, if you will turn to page 19, which is a continuation of schedule 1-B, at the bottom of that page there are some summaries and the total of salesmen's salaries allocated to direct shipment costs is shown as $13,639.17 is that correct?

A. Yes, sir.

4917 Q. Now in withdrawing that expense from the channels on form 189 for the purpose of allocating it and charging it to direct shipments, what per cent of that $13,639 was withdrawn from the tank wagon reseller channel?

A. 2.67 per cent.

Q. And it is not true, is it, Mr. Boatwright, that those salaries or the salaries of any of the salesmen concerned there, were allocated to the tank wagon reseller channel by any such figure in the original allocation of expense on form 189?

Mr. Hanley: I don't understand the question, your Honor. If the witness does, I have no objection to his answering.

Trial Examiner Ballinger: Do you understand the question?

Mr. Austin: May I withdraw it, and I will start over again?

Trial Examiner Ballinger: Yes. The question is withdrawn.

By Mr. Austin:

Q. You have read into the record, Mr. Boatwright, certain figures which were used in the preparation of form 189 for 1940; certain percentage ratios which were used in charging to the tank wagon reseller channel salesmen's salaries in the Detroit field in 1940 by quarters and those percentages were for the first quarter—I am just 4918 repeating, now, what is in the record—29.7 per cent; for the second quarter, 29.1 per cent; third quarter, 27.8 per cent; and for the last quarter, 27.4 per cent. Now my question was whether, in deducting on Schedule 1-B only 2.67 per cent of those schedules, you have withdrawn those salaries from the 189 channels to the direct shipment channels in the same manner in which they went into the 189 channel?

A. The only difference being that in withdrawing we had to work by class of salesmen. You will notice that this entire exhibit is set up by classes of salesmen.

Trial Examiner Ballinger: You say this entire exhibit.

The Witness: I am sorry. Sub-section 1-B.

By Mr. Austin:

Q. On Respondent's Exhibit 100.

A. As referred to. It was necessary to work by classes of salesmen and, accordingly, we took that expense out by class of salesmen.

The reason for the difference in the ratios that you are referring to is the fact that many reseller salesmen didn't call at all upon a jobber account. Maybe two—I don't recall the exact number—would call upon a jobber. Therefore, when we take just those that were affected by direct shipments, we did so remove, in each case, according to the grouping of the salesmen.

Q. But you took these—so you say, now, that you 4919 took the salesmen's salaries assigned to direct shipment out of the 189 channels by classes of salesmen, is that correct?

A. That is correct

Q. But you did not, Mr. Boatwright, charge the salaries, these same salaries, to th 189, originally, by classes of salesmen, did you?

A. No, they were allocated in total, originally.

Q. So is it or is it not true that the salesmen's salaries charged to direct shipment in Respondent's Exhibit 100 were removed from the 189 channels in exactly the same way that they went in?

A. They are removed in the way that they went in except that it was necessary, in attempting to segregate the cost of direct shipment, to deal with parts of the total. For instance, we had one or two reseller salesmen out of the entire group—

Q. Mr. Boatwright, if I may interrupt,—

Mr. Hanley: Just a moment. If your Honor please, I think the witness ought to be permitted to complete his answer.

Mr. Austin: I would like to interpose an objection to further answering because of the fact it is not responsive to my question. I am only trying to find what was done and not why it was done. I am directing my question to the method used, which he has explained, and I am asking whether—

4920 Trial Examiner Ballinger: Read the question.

(The question referred to was read by the Reporter.)

Mr. Austin: Now I would like to get an answer to that question without an explanation.

Trial Examiner Ballinger: Read the answer.

(The answer referred to was read by the Reporter.)

Mr. Austin: Beginning with "for instance," I submit the answer be stricken.

Mr. Hanley: I submit it is a fair answer to the ques-ion and the only way the witness can answer truthfully.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Austin: If there is any doubt in the Examiner's nind, I withdraw the objection.

Go ahead, Mr. Boatwright.

A. (Continuing.) I was about to illustrate—

Trial Examiner Ballinger: Will you just state what vas in fact done?

The Witness: That's what I was doing.

Trial Examiner Ballinger: Proceed.

The Witness: Now may I have the answer as far as I went?

The Reporter: "A. They are removed in the way that they went in except that it was necessary, in attempt-
4921 ing to segregate the cost of direct shipment, to deal with parts of the total. For instance, we had one or wo reseller salesmen out of the entire group—"

A. (Continuing.) —making any calls on jobber accounts. The time of these particular reseller salesmen was removed from the form 189 on the basis of the ratios of the time of the reseller salesmen.

On the other hand, a salesman in another classification other than reseller salesman may be only one of a family of salesmen, would have made calls. Therefore we removed his time from the original 189 on the basis of the ratios for that class of salesman. Does that meet your question, Mr. Austin?

By Mr. Austin:

Q. Yes, I think I understand that Mr. Boatwright, but now let me ask you again whether you charged the salesmen's salaries directly to channels on form 189 according to the allocation of time of the particular class of salesman?

A. Each of the particular class represents a part of the component total; represents a component part of the total; the ratios which have been read into the record.

Q. And in reaching those ratios they are a composite percentage, are they not, of all salesmen?

A. Yes, sir.

Q. And those ratios were applied to the salaries of all salesmen, were they not?

4922 A. Yes.

Q. And in deducting the part of the salaries of these various salesmen you did not apply those figures, did you?

A. I did not. I applied it by individual families of salesmen.

Q. In that connection I would like to recall to you, Mr. Boatwright, the testimony given on page 4784 of the record, as follows:

"Now inasmuch as I took direct shipment cost out, according to the identical method of entry, then your residual amount is allocated by the tank wagon reseller, tank wagon consumer and other methods and in some cases automobile supplies are explained, there, also, according to the procedure outlined in Respondent's Exhibit 99."

In your opinion were the salaries of salesmen which were allocated to direct shipment removed from the channels on form 189 for 1940 in the identical method of entry to which they were entered in those channels?

Mr. Hanley: Now, just a minute, if your Honor please. That question is objected to because it is unfair to the witness in view of the line of cross-examination that counsel has been pursuing for some considerable time past, in this: That counsel has requested and received from the Respondent certain quarterly reports of time distribution of salaries, which are made currently in the accounting procedure of the Respondent. The Respondent, in
4923 connection with this case, has, at the instance of the Government and the prosecuting authorities in this case, made a special cost study in connection with selling gasoline to jobbers in the Detroit area and the witness has testified in connection with that special cost study that costs were taken out of the reseller channel on Respondent's form 189 in the manner in which such costs were put into form 189. The application and the intention, and the unfair intention of the prosecution now is to tie the Respondent to taking out costs of form 189 in the reseller channel in its special study on the same basis that the Respondent in its ordinary course of business keeps its account and ratios and allocates salary expenses, the inference being, on the part of the Government, first: that the Respondent was remiss in not keeping expense accounts in connection with jobber business and, secondly: that the Respondent having made a special study to determine a

cost of doing jobber business, which the Respondent contends is a loaded and exorbitant cost, as presented, the Respondent is now criticized for having made such a cost on a different basis than that upon which the original distribution of cost was made, without reference to jobber business.

Trial Examiner Ballinger: The objection is overruled. The question doesn't call for a statement of fact but calls for the witness' opinion, which is proper.

Mr. Hanley: If your Honor please, I then object to the question because it does not call for a question of 4924 fact.

Trial Examiner Ballinger: Will you read the question?

(The question referred to was read by the Reporter.)

Trial Examiner Ballinger: The objection is overruled.

A. I think that is an entirely correct answer, because each of the component parts was used in making up the total and we took it out according to the way—and the data taken directly from these time reports—

By Mr. Austin:

Q. The salaries went in, Mr. Boatwright, according to the percentage on these four exhibits, quarterly distribution of time reports. You have testified to that, have you not?

A. Yes.

Q. And they came out by application of the different percentages, did they not?

A. Yes, sir; because we had to measure by individual man.

Q. That's what you did; whether you had, or not?

A. That's what we did; after a consultation by you and the accountants for the Commission, we used the cost of the man.

Mr. Austin: I would like to say, with reference to what Judge Hanley said on the record, I certainly concede that the only method of bringing out inconsistent methods of allocation, that inconsistent results follow. The in-4925 consisten ies themselves don't follow and I don't think in the case of these separate accounts, it is important and, therefore, I do wish to emphasize that I think where an inconsistent method of allocation has been used, it is being brought out because we believe that it may have led and, in fact, has led, to inconsistent results and in so far as the special cost study is concerned, I was going to say my contention—it may not be of importance, but answering Judge Hanley, I feel that not only that the Respondent should have made a special cost study but that where a particular method of allocation to direct shipments is used, that the same method of allocation should have been used to the other channels as well, instead of simply leaving the other channels as they were before and in attempting to vary from the accounting procedure used by the company for its own purposes but which is conceded was never gotten up or planned for a purpose of a cost study under the Robinson-Patman Act.

I just have two more questions on this point which, I think, will bring out what I have in mind, here.

By Mr. Austin:

Q. Will you turn to Schedule 1-A in Respondent's Exhibit 100, page 45? What does that schedule show, Mr. Boatwright, very generally?

A. That schedule shows the direct shipment cost for salaries of salesmen, their traveling expense, the op-
4926 eration and maintenance of their vehicles and the depreciation of their vehicles as an allocation among the channels jobber, naphtha and gasoline jobbers, other product and direct shipment other customers.

Q. Now restricting your attention to the first column under account 004—salaries. That column shows, does it not, the amount of salaries of each class of salesman which was charged to direct shipment business in each of the three direct shipment columns that you just mention?

A. Yes, sir.

Q. And is it not true that the portion of each class of salesmen's salaries charged to direct shipments is charged directly to direct shipment channels by dollars?

A. It is, sir.

Q. And have you made any computation charging the salaries of each salesman, or of each class of salesman, to bulk plant channels directly by dollars, according to the distribution of effort as shown for each class on the quarterly distribution of time reports?

A. Not by salesmen, no.

Q. And you haven't done it by classes of salesmen, have you?

A. No. That is done in total.

Q. And is it not true that the percentages, or the percentage ratios, as I believe you have called them, at 4927 the bottom of the quarterly distribution of time reports, are not weighted according to the salary value of the time distributed?

A. They are not.

Mr. Hanley: That is objected to and it is requested that the answer be stricken because it is immaterial.

Trial Examiner Ballinger: The objection is overruled.

Mr. Austin: If your Honor please, I will move that we now adjourn until 10:00 o'clock tomorrow morning.

Trial Examiner Ballinger: The motion is granted.

Now, at 5:30 p. m. the hearing stands adjourned until 10:00 o'clock a. m., Tuesday, February 17, 1942, in Room 859 Federal Building, Detroit, Michigan.

(Whereupon, at 5:30 p. m. the hearing was adjourned to reconvene on Tuesday, February 17, 1942, at 10:00 a. m.)

4928

Room 859, Federal Building,
Detroit, Michigan,
February 17, 1942.

Met, pursuant to adjournment at 10:00 a. m., War time.

Before:

Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., attorney for the Federal Trade Commission.

Harold R. Hanley, Esq., 910 South Michigan Avenue, Chicago, Illinois; and

Arthur J. Abbott, Esq., of the firm of MacMahon, Abbott & Roberts, 2230 Buhl Building, Detroit, Michigan; appearing for the Respondent.

4929 PROCEEDINGS.

Trial Examiner Ballinger: Come to order.

The hearing of docket No. 4389, in the matter of Standard Oil Company, is reconvened in room 859 Federal Building, Detroit, Michigan, at 10:00 a. m., Eastern Standard Time, February 17, 1942. The last hearing was in the same room in the same city, February 16, 1942.

You may proceed.

JOHN W. BOATWRIGHT resumed the stand and testified further as follows:

Cross-Examination by Mr. Austin.

Q. Mr. Boatwright, I think you said that schedules 1-A and 1-B in Respondent's Exhibit 100 are arranged by listing the various classes of salesmen operating in the Detroit field.

A. That's correct.

Q. You will note that one of the classifications mentioned on those two schedules, part of the expense of which group is charged to direct shipments, is agent salesmen.

A. Yes, sir.

Q. On the quarterly distribution of time reports, two of which were introduced in evidence yesterday as Commission's Exhibits 102 and 103, covering salesmen's salaries, I see no classification of agent salesmen, and I wonder 4930 if you would explain or tell us where agent salesmen are included, if at all, in the quarterly distribution of time reports.

A. Yes, they are included. The agent salesman is an individual who operates one of the large bulk plants. His efforts are divided between selling and operating the plant as the operating head of that unit.

Q. Did you say that he operates one of the large bulk plants?

A. Yes.

Q. Do you mean the salaried stations, "A" stations?

A. Yes. He maintains a time card showing the split between his operating function and his selling function. That portion of his salary as a result of this time card maintenance which would be assignabl eto selling is included with salesmen's salaries. The other portion of his salary is included in another expense classification. That part which is included with salesmen I think is to be found in either the tank wagon reseller salesmen or tank wagon consumer salesmen; just exactly the classification, I couldn't tell you, in one or the other, however.

Trial Examiner Ballinger: Mr. Boatwright, when you refer to the bulk plant, do you refer to one of the six bulk plants in the Detroit area?

The Witness: It might be one of those or it might be the plant at Pontiac.

4931 Trial Examiner Ballinger: Oh, yes.

The Witness: Or some other—Lansing is another illustration, Jackson, and so forth.

Trial Examiner Ballinger: I understand.

The Witness: Yes.

4932 By Mr. Austin:

Q. Mr. Boatwright, I will show you here what is a copy of Commission's Exhibit 82 and please glance at that for the purpose of refreshing your recollection on that exhibit (handing document to witness).

Referring to Commission's Exhibit 82, Mr. Boatwright, are not agent salesmen salesmen whose salary so far as it is charged to account 004, is charged on what is known as payroll number six?

A. Yes, sir.

Q. And can you tell me whether that salary—I guess I asked you this before but I will ask you again—whether that salary is included in any of the classifications listed on the quarterly distribution of time reports or whether it is added in account 7004 for the purpose of distribution in that account?

A. May I check that?

Trial Examiner Ballinger: Yes. Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Now, Mr. Boatwright, turning to Commission's Exhibit 82B, does the tabulation there set forth not indicate that the salaries of agent salesmen and agents are charged to account 7004 and allocated according to the bottom
4933 row of percentages on the quarterly distribution of time sheets rather than included in any of the salesmen classifications on those quarterly reports?

A. Yes, that is correct. The agent salesman's time, which is charged to selling expense, is allocated according to the average distribution of time of all salesmen charged entirely to 004.

Q. And that is indicated, is it not, Mr. Boatwright, on schedule 1-B of Respondent's Exhibit 100, on Page 19?

A. Yes, sir.

Q. In the row of figures opposite agent salesmen certain percentages are given showing the percentage of the agent salesman's salary which is allocated to the tank wagon reseller, tank wagon consumer, and other methods channels and, I take it, that those percentages are the average annual percentages applied to the salesmen's salaries on the quarterly distribution of time reports.

A. Yes, sir.

Q. And by average I mean the composite of percent on the four reports?

A. Except there is a slight exception to that statement. You will recall the work we had to pursue in deriving these respective ratios as shown on 1-B; that this entire allocation was carried through on a monthly basis by individual salesmen.

4934 Q. Yes.

A. Therefore, you may not find that these identical percentage figures on a quarterly time distribution report as these are a composite for the year based on the application of the percentage shown on the quarterly time distribution report by month, for each quarter.

Then we recapitulated to get the year figure, which is, in fact, an average of four. With that exception, your statement is true.

Q. You were just talking, now, about the figures opposite agent salesmen, weren't you?

A. Yes, sir. However, that is true of the figures opposite any of these classifications. Each of them had to be built up by individual men by individual months because our ratios change throughout the year. Therefore, the figures that you find opposite any of these salary classifications on page 18 and 19 of Respondent's Exhibit 100 represent, in fact, an averaging process because we had to build it on a monthly basis as the ratios change throughout the years.

Q. Well, the percentages applied in charging salaries of all salesmen to 189 were constant throughout each quarter, were they not?

A. Constant for a quarter but when you bring the four quarters together, the figures you will find, for any class
of salesmen on sub-schedule 1-B, pages 18 and 19
4935 just referred to, are averages that derive from the
application of these quarterly figures through the
year.

Q. I think that that was explained yesterday and I was only trying to find out, now, about the agent salesmen and I presume that the percentage figures opposite agent salesmen on account 004 are the average of the four quarterly percentages in the similar columns on the quarterly distribution of time sheets in the lowest column, is that not right?

A. They are averages. They are not an arithmetic average.

Q. Wouldn't they be for the agent salesman, since each time sheet covered takes three months?

A. A straight arithmetic average would be getting the four figures and dividing by four. Actually this is more the equivalent of a weighted average but it is an average in that sense, yes sir.

Q. I think I see. In other words, if there were some difference in the amount of salary paid the agent salesman in the different quarters—

A. It would deviate from an arithmetic average or there might be an agent salesman who, let us say, in a given month estimates 50 percent of his time, and, hence, fifty percent of his salary should be charged to selling activity. The following month he might estimate 30 percent of his time, so you would give recognition to that variation.

4936 Q. That would affect the amount of salary showing through account 004?

A. That is correct. I just wanted that exception understood.

4937 Q. Referring again to Commission's Exhibit 82, in your opinion, Mr. Boatwright, does not that exhibit present a more complete and accurate picture of the company's regular method of handling salesmen's costs in allocation between channels on 189 than the statement on the first two pages of Respondent's Exhibit 99?

Mr. Hanley: May I have that read, please?

(The question referred to was read by the Reporter.)

Mr. Hanley: Judge, I am sorry, but that is objected to because it is not an opinion question. There is no objection to the witness testifying as to what the facts are with reference to the company's method of allocating salesmen's costs but—

Trial Examiner Ballinger: You are objecting to it on the ground that it calls for an opinion?

Mr. Hanley: It calls for an opinion on a question of pure fact and the witness is qualified to testify to fact. He doesn't need to express an opinion and shouldn't be permitted to express an opinion.

Trial Examiner Ballinger: The objection is overruled.

A. No, I don't know that it is any more complete or any better explanation. It seems to me they are entirely consistent with each other, the only difference being that in this Commission's Exhibit referred to, 82, we have
shown that a small part of the salaries of salesmen
4938 that result from selling effort of agent salesmen,
whereas in the pages 1 and 2 of Respondent's Exhibit No. 99 do not break down the explanation by individual classes of salesmen.

Q. Well, I see, Mr. Boatwright, that as a matter of fact Commission's Exhibit 82 does not set forth the procedure used in the compilation of the quarterly distribution of time reports any more fully than Commission's Exhibit 99, and I think I will ask the Court, with leave of counsel for Respondent, just to strike out beginning with this last question because I don't believe that it accomplishes anything. I was under the impression previous to asking the question that perhaps Commission's Exhibit 82 should be mentioned here by way of reference because I thought it added to or perhaps was a little more complete than Respondent's Exhibit 99 in this respect. I don't know whether that is true or not. The witness says they are consistent and I think that I perhaps overlooked the omission of material regarding—

Mr. Hanley: If your Honor please, counsel for the Respondent is entirely agreeable to striking any part or the whole of counsel for the Commission's examination.

Trial Examiner Ballinger: From what point does your motion run?

Mr. Austin: From the last question I asked the
4939 witness.

Trial Examiner Ballinger: Calling for an opinion?

Mr. Austin: Yes, that is right.

Trial Examiner Ballinger: Will you read back?

(The record was read.)

Trial Examiner Ballinger: Mr. Reporter, you will note commencing with "referring again to Commission's Exhibit 82, in your opinion, Mr. Boatwright, does not that exhibit present a more complete and accurate—" are stricken from the record.

By Mr. Austin:

Q. Mr. Boatwright, as Commission's Exhibit 102 and 103 certain percentage ratios are entered for the time of "Specialty Salesmen—Heating Oil" and "Domestic Heating Oil Salesmen."

Will you explain where the time or salaries of these salesmen is included in sub-schedules 1-A and 1-B of Respondent's Exhibit 100?

Mr. Hanley: Just a moment, please. Your Honor, I believe I am right. I want to be sure that my general objection stands to the continued use by counsel of these time distribution reports in connection with our special study in Detroit. I made a general objection to the use of the words "quarterly time reports."

4940 Trial Examiner Ballinger: It is understood that you have a general objection running to all this line of examination.

Mr. Hanley: Very well.

A. These particular salesmen mentioned on Commission's Exhibit 102 "Specialty Salesmen—Heating Oil" and "Domestic Heating Oil Salesmen" are not shown on Respondent's Exhibit 100 on pages either 18 or 19 as they have no connection in any way with direct shipment business.

By Mr. Austin:

Q. Are they shown on pages 15 or 16 either?

Trial Examiner Ballinger: Pages 15 or 16 of Respondent's Exhibit 100.

A. No, sir.

Would you like a clarification of what these men do for your understanding?

By Mr. Austin:

Q. I don't know that that is strictly necessary. It is true, isn't it, that the same is true, is it not, of various

"A" and "B" schedules throughout Respondent's Exhibit 100, that they do not necessarily include a listing of all of the expense in the schedule of that number on form 189?

Mr. Hanley: I suggest to you, Mr. Boatwright, that in your answer you may make whatever explanation you
think is necessary. Counsel has asked a question
4941 and you may answer and make whatever expla-
nation you care to.

The Witness: I only thought in explanation—

Mr. Austin: Your honor, I object to that. I think that is for the Examiner to rule upon. I think when I ask the witness a question I have a perfect right to ask for a "Yes" or "No" answer, and if counsel wishes to object, he should address his objection to the Examiner and not to the witness.

Mr. Hanley: I am not objecting; I am just telling my witness that he may answer the question.

Trial Examiner Ballinger: We are discussing a matter that is not entirely clear to the Examiner. If the witness desires to make an explanatory statement, he may do so, in order to clear up the situation.

The Witness: Well, there are places, your Honor, where questions are raised and I merely wonder whether it wouldn't be of help to either the Commission or to the Court if I gave an explanation.

Mr. Hanley: Just go ahead and do it. Just go ahead and make your explanation.

Trial Examiner Ballinger: You may make your explanation.

The Witness: Well, the reason—

Mr. Austin: Your Honor, I again object on the record
to any remarks directly by counsel for the Respon-
4942 dent to his witness under cross examination as to
how the witness should answer a question, and I request the Examiner to instruct counsel for Respondent that such remarks are improper.

Trial Examiner Ballinger: The witness has been instructed and he may offer his explanation.

Mr. Austin: I am referring to remarks by counsel, and I believe that it is improper for counsel whose witness is under cross-examination to give any instructions or directions to the witness as to how he should answer questions on cross-examination.

Mr. Hanley: I will state to the Court and counsel that I haven't the vaguest idea what the explanation will be. I don't understand this thing at all myself.

Trial Examiner Ballinger: The matter has been disposed of. It is unnecessary for the Examiner to rule on the motion and the witness will proceed to offer any explanation he may desire.

The Witness: Well, I was merely going to explain that these fuel oil salesmen are individuals who sell heating oil requirements for domestic home owners. It is entirely a tank wagon type of business. Now, the special salesman indicated on Commission's Exhibits 102 and 103 is a man who supervises the activity of the domestic fuel oil salesmen. All of this business is purely tank wagon. All of it moves entirely through our bulk
4943 plant and has no connection whatsoever with the complaint that we are discussing. Therefore, they do not appear on the Respondent's Exhibit 100, on sub-schedules either 1-A or 1-B, on pages 15 or 16, 18 or 19.

Mr. Hanley: Of what exhibit?

The Witness: That was identified.

Mr. Hanley: Of exhibit what?

The Witness: 100.

Trial Examiner Ballinger: Respondent's Exhibit 100.

The Witness: Now, throughout Respondent's Exhibit 100 we will come to places where expenses incurred purely of a tank wagon nature are not shown in the sub-schedules for the simple reason that they have no bearing and are absolutely irrelevant to costs incident to direct shipment business.

I think that answers both of your questions.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

4944 Trial Examiner Ballinger: On the record.

Mr. Austin: May I suggest we take a five minute recess, your Honor?

Trial Examiner Ballinger: The hearing will stand in recess for five minutes.

(A short recess was taken.)

Trial Examiner Ballinger: We will come to order.

By Mr. Austin:

Q. Will you turn to Respondent's Exhibit 99, page 17, Mr. Boatwright?

A. Yes, sir.

5 Q. That refers to the expenses of the Field Office Accounting Department going into account number 800?

A. Yes, sir. May I add: And supplementary classifications incident thereto.

Q. Is it the company's regular accounting procedure to allocate the salaries of employes in the Accounting Department between the channels on Form 189 by the percentage ratios shown on quarterly distribution of time reports prepared for accounting employes?

A. Yes, sir.

Q. Have you the quarterly distribution of time reports used for the allocations of these expenses, salary expenses for 1940, as referred to in the first sentence on Page 17?

A. Do I have them personally, do you mean?

4945 Q. Do you have them here?

A. I do not have them here.

Q. Well, I think they are here because Judge Hanley handed me two of them yesterday and I gave them back to him.

A. He may have them, sir. I do not have them.

Mr. Abbott: As soon as Judge Hanley comes in, we will furnish those, if he has them.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Will you refer to page 17 on Respondent's Exhibit 99 again, Mr. Boatwright?

At the bottom of that page there is an example of the allocation of expense in Account 200 for January, 1940.

A. That is correct.

Q. And were the percentage figures shown opposite the title "Percent of Time Spent" applied to all salaries for that month going into Account 209 in the preparation of Form 189?

A. The percentage shown there in the illustration offered on page 17 of Respondent's Exhibit 99 are applied to the salaries carried on the Field Office payroll. The first three of these percentages are restated to equal 100 percent and are then applied to the salaries of the general office members of the payroll.

4946 Q. By general office members of the payroll do you mean certain employes in the Detroit Field whose salaries are paid from the general office?

A. I do.

Q. And what employes are those?

A. The office manager, the assistant office manager and the credit manager.

Mr. Austin: Off the record please.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Were those three employes who you just mentioned as being paid from the Chicago Office, supervisory employes?

A. They were.

Q. And they supervise the activities of the other employes in the Accounting Department who are paid in the field?

A. They do.

Q. It appears from the example on Page 17 of Respondent's Exhibit 99 that a certain percent; in this case, for January, 1940, 9.9% of the salaries of the employes paid to the field was charged to automobile supplies.

A. That is correct.

4947 Q. In the second line of dollar figures in that example the heading for that is "General Office." Do the figures in that line refer to the salaries for January, 1940, for the three supervisory employes that you have named?

A. Yes sir.

Q. And will you explain why none of the salaries of those three employes were charged to automobile supplies?

A. There are several reasons. First, the General Office has never regarded that the weight of effort required on the part of these three men because of automobile supplies merited an allocation to those particular products.

Secondly, the magnitude of the charge is such that it did not, in its turn, appear to merit an allocation of expense to the automobile supplies.

Thirdly, the expense was the same nature, remained the same nature prior to and after starting to deal with automobile supplies and remains of the same magnitude, now that we cannot sell these respective products.

Because of that line of thinking the accountants in the General Office have never allocated that part of the office accounting payroll carried in the General Office to automobile supplies.

4948 Q. Do those supervisory employees supervise the activities of the employees under them with respect to automobile supplies?

A. They do.

Q. And when a portion of the salaries of the supervisory employees was charged to direct shipment business for the purpose of this cost study, is it not true that the allocation of those supervisory salaries followed the allocation to direct shipments of the salaries or the time of the individuals working under them?

A. Your statement is correct.

Mr. Austin: Judge Hanley, have you got those quarterly distribution of time sheets for the accounting department, two of which you offered me yesterday?

Mr. Hanley: Yes, I have them, and I decline to produce them, if your Honor please. We will produce any records of the company, but I will not produce any transcripts, any take-offs or reproductions of any records of our company in view of our experience yesterday, February 16th. The records are available. Mr. Austin may have them in court if he wants them; he may have them in the office in Detroit or in Chicago or wherever they are. We will produce them on your Honor's direction any place you say, but we will not produce anything from here on out in the way of a transcript of any of our records.

4949 Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

The Examiner requests counsel for Respondent to produce the original records requested by counsel for the Commission.

Mr. Hanley: Now, on the record. If your Honor will do so, will you please specify exactly what records you want?

Trial Examiner Ballinger: Can counsel for the Commission designate with particularity the records he desires?

Mr. Austin: Yes. I would like the quarterly distribution of time reports for the accounting department, Detroit field, 1940; that is, the four reports which were used for the allocation of accounting salaries in 1940, those forms being those referred to in the first sentence on page 17 of Respondent's Exhibit 99.

Trial Examiner Ballinger: Is that a sufficient designation?

Mr. Hanley: Judge, may I go off the record for just a moment?

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

4950 The records requested will be produced at this afternoon's session.

Mr. Austin: I would like to say on the record, Judge, that there has never been any question raised by the Commission in this case as to the accuracy or, at least, as to the honesty and truth of the expense figures of the company. We never questioned as to whether any item of expense on any of these cost studies was actually incurred, never have doubted that it was, but the questions yesterday went to the point of determining whether certain changes between the previous cost study and the present cost study were errors or whether they were changes in methods of allocation.

Mr. Hanley: Is this on the record?

Trial Examiner Ballinger: It is on the record.

Mr. Hanley: All right, you can put this on the record, too. I learn the hard way, and I learned something yesterday and from here on out in this lawsuit, if the Commission wants records, the records are available but Respondent will not do arithmetic for the Commission.

Trial Examiner Ballinger: Proceed.

Mr. Austin: Well, your Honor, that will require an adjournment, and I am afraid there will be frequent adjournments unless I can make up a list of the things I

want and ask for them at once because I wish to
4951 proceed with the cross-examination in the order that
I have it and I can't proceed further now until I get those records.

Trial Examiner Ballinger: In order to enable counsel for Commission to make up a list of documents he desires produced, the hearing will stand in recess for ten minutes.

(A short recess was taken.)

Trial Examiner Ballinger: Come to order.

Mr. Austin, can you now designate the documents you desire Respondent to produce?

Mr. Austin: I would like to ask Judge Hanley to produce the original letter which I addressed to him under date of January 24 requesting the production of certain documents and information upon this hearing.

Mr. Hanley: Just a moment. I think I can find it, your Honor.

In answer to that, your Honor, I have the letter, but I don't think I should be requested to produce it. Mr. Austin wrote it and I assume he has copies.

Trial Examiner Ballinger: The Examiner understands that you received the letter described?

Mr. Hanley: That is right.

Trial Examiner Ballinger: And that you now have in your hand either the original or a true copy thereof?

Mr. Hanley: I have in my hand a letter which I
4952 received from Mr. Austin under date January 24th.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Austin: It being conceded that the letter under date of January 24th requesting certain information and statements and records was addressed to Judge Hanley by me and received by him, I now offer in evidence what purports to be a carbon copy, and what I can positively identify of my own knowledge as a carbon copy of that letter.

Mr. Hanley: If you say it is, that is perfectly satisfactory.

Trial Examiner Ballinger: The document will be marked "Commission's Exhibit 104-A, 104-B, and 104-C."

(The document referred to was marked "Commission's Exhibit 104-A, 104-B, and 104-C" for identification.)

Mr. Hanley: And the offer of these exhibits?

Trial Examiner Ballinger: It hasn't been offered yet.

Mr. Austin: I did offer it on the record, your Honor, and I think the objection now ought to be to the offer.

Trial Examiner Ballinger: All right.

Mr. Hanley: The objection is, any letter that counsel for the Commission writes is not evidence in the case.

Trial Examiner Ballinger: It is evidence of a request having been submitted. 4953

Mr. Hanley: It is self-serving and of no probative value. It may be evidence, to be sure, of a request.

Trial Examiner Ballinger: It is only for that purpose that the letter is offered.

Mr. Hanley: Well, if that is the only purpose, there is no objection.

Trial Examiner Ballinger: Commission's Exhibit No. 104-A, B, and C, for identification, is admitted in evidence.

(The document referred to, heretofore marked for identification "COMMISSION'S EXHIBIT 104-A, 104-B, and 104-C," was received in evidence.)

Mr. Austin: Judge Hanley, have you an original letter written by me to you under date of January 27, 1942?

Mr. Hanley: Yes, your Honor, I have the letter.

Trial Examiner Ballinger: You have the original?

Mr. Hanley: Under date of January 27, 1942, from Mr. Austin.

Mr. Austin: May I have that original?

Mr. Hanley: Well, you may look at it but you can't have it. I am sure of that.

Mr. Austin: I would like to have that marked for identification.

Mr. Hanley: No, you can't do that.

4954 Trial Examiner Ballinger: Have you a copy, Mr. Austin?

Mr. Austin: I have my file copy.

Mr. Hanley: You may look at it.

Trial Examiner Ballinger: Can you use your file copy?

Mr. Austin: I probably can.

Do I understand that the Respondent refuses to produce that letter of January 27th for the purpose of being identified in the record?

Mr. Hanley: Judge, we don't refuse to produce anything that we have. That is a matter of record. If Mr. Austin writes us a letter, are we to be hanged because we don't produce the letter?

Trial Examiner Ballinger: Judge, you have been asked a direct question. Will you or will you not produce the letter?

Mr. Hanley: I have it here.

Trial Examiner Ballinger: Will you produce it?

Mr. Hanley: Yes. I produced it in court, but I do not want to—

Trial Examiner Ballinger: Will you deliver it to the Examiner?

Mr. Hanley: —to strip my file. I think that a copy should be introduced, if the letter itself is material, 4955 which I do not think it is.

Trial Examiner Ballinger: Have you a copy available, Mr. Austin?

Mr. Austin: Yes.

In view of the fact that the original is not made available by counsel for the Respondent I, therefore, request that this copy of the letter of January 27, 1942, from myself to Judge Hanley be marked for identification.

Trial Examiner Ballinger: The Reporter will mark the document "Commission's Exhibit 105," for identification.

(The letter referred to was marked "Commission's Exhibit 105" for identification.)

Mr. Austin: I understand there is no question about this letter having been received, your Honor, and I, therefore, offer it in evidence for the purpose of showing certain explanations which this letter contains making more definite and certain the requests contained in the previous exhibit, Commission's Exhibit 104.

Mr. Hanley: May I see it?

("Commission's Exhibit 105" for identification, was handed to Mr. Hanley.)

Mr. Hanley: If your Honor please, there is no objection to the exhibit on the basis of its accuracy. It is conceded that it is a copy of a letter which was sent under date January 27th to the Respondent. Its introduc-4956 tion into evidence is objected to for the reason that counsel is not entitled to put in his correspondence in evidence as evidentiary of any fact in the lawsuit. It is a self serving declaration. It has no probative value. If counsel desires to make demand upon the Respondent for any records, counsel should make them in court.

Trial Examiner Ballinger: The document is only being offered in evidence as showing a previous request for production and is limited to that purpose only.

Mr. Hanley: Do you receive that in evidence?

Trial Examiner Ballinger: I haven't yet. It hasn't been admitted in evidence. I am waiting the conclusion of your objection.

Mr. Hanley: I finished, your Honor.

Trial Examiner Ballinger: The objection is overruled. The document is admitted in evidence as "Commission's Exhibit 105."

(The letter referred to, heretofore marked for identification "COMMISSION'S EXHIBIT 105," was received in evidence.)

Mr. Austin: Now, your Honor, in view of the refusal of Respondent to produce certain statements requested in my letters, Commission's Exhibit 104, as further explained by Commission's Exhibit 105, I would like at this time to request the production of certain records of 4957 the Respondent at this hearing and continuations thereof in Detroit.

Mr. Hanley: If your Honor please—

Trial Examiner Ballinger: Do you refer now to the documents referred to and designated in the two letters?

Mr. Austin: Well, some of them. I was going to now going to make certain specific requests.

Trial Examiner Ballinger: Will you please make your requests at this time.

Mr. Hanley: If your Honor please, I desire to place something on the record at this time. Counsel for the Commission has said "in view of the refusal of the Respondent" to do certain things, he wishes something else to be done. I say to your Honor there is no refusal and there never has been any refusal on the part of the Respondent to produce any records that the Respondent has that are pertinent to this case. We will produce them. We will produce them any place, any time that your Honor directs. We have always taken that position.

Trial Examiner Ballinger: Counsel will please designate the records he desires to be produced.

Mr. Austin: The records I will now endeavor to describe are in addition to the request which previously has been made on the record for the quarterly distribution of time reports, and I don't want to say that will be a com-

plete list of everything I may ask for, but it will be
4958 what I have in mind from time to time. If I should
desire later that more records are desired—

Mr. Hanley: Do we have to have a speech every time counsel wants to make a request, your Honor?

Trial Examiner Ballinger: Mr. Austin, please designate the records you now want produced.

Mr. Austin: All right.

Complete form 189 for the Detroit Field for the years 1939 and '40.

Next, all contracts for the sale of gasoline entered into between the Respondent and Ned's Auto Supply Company covering the years 1936, 1937, and 1938 or any parts thereof, together with any riders or amendments thereto and copies of any correspondence relating to or modifying the terms of these contracts.

Mr. Hanley: Well, we can wash that No. 2 out right now. There are none and never have been.

Trial Examiner Ballinger: Judge, when the time comes for return, you may make an explanation.

Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Austin: I would also like to have the documents requested in paragraph No. 4 in Commission's Exhibit
104, also the books and records requested in para-
4959 graph numbered 5 in Commission's Exhibit 104.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Austin: Perhaps it would be better to say 104-A. Books, records, and accounts showing the total amounts of salaries of the employees assigned to each of the persons whose salaries are charged to account 000 for the purpose of allocation to all channels on Respondent's Exhibit 101. By that I mean that it is my understanding—

Mr. Hanley: That is objected to, any explanation.

Trial Examiner Ballinger: The objection is overruled.

Mr. Austin: By that I mean that it is my understanding that the employees' salaries going into Account 001 were allocated to direct shipment channels on Respondent's Exhibit 101, according to the percentage of their respective supervisors which were allocated to direct shipments, so that I would like to know the total salaries for the employee or employees under such supervisory employee whose salary is included in Account 000.

Mr. Hanley: Your Honor, what Mr. Austin would like to know and what he is going to get is very different. He is going to get the records.

4960 Mr. Austin: I will explain what records I want so that can be shown and from the records which are produced.

Request is made for books, records, and files of Respondent showing the territory in the City of Detroit and the Detroit metropolitan area serviced by each of the Respondent's tank wagon reseller salesmen in that area in 1937, and the names and addresses of the customers of the tank wagon reseller customers located in the territory of each salesman.

Next, request is made for the production of the completed company Form 189 for each of the company's 27 fields for the year 1940.

Mr. Boatwright, is that the correct number of fields? 27?

The Witness: Yes, sir.

Trial Examiner Ballinger: You mean by that 27 fields scattered throughout the United States?

Mr. Austin: Throughout the territory of the Standard Oil Company.

Mr. Abbott: It covers 14 states.

Mr. Austin: That is correct.

Mr. Abbott: That is for 27.

Mr. Hanley: No. Just a moment.

Mr. Austin: 1940.

Mr. Hanley: Just for a matter of record, will you 4961 please note an objection? That is objected to by the Respondent as entirely immaterial.

Trial Examiner Ballinger: The objection is overruled. Off the record.

(There was a discussion off the record.)

4962 By Mr. Austin:

Q. Where is the advertising copy for newspaper and billboard advertising of the Respondent in the Detroit area kept; or does the company have such copy in its file?

A. An official copy is maintained in the file in the Chicago office.

Mr. Austin: In that event I would like to have advertising copy for all newspaper and billboard advertising used by the Respondent in the Detroit area in 1940.

Request is made for the production of books, records and files showing the gallonage of sales of the Respondent in the Detroit Field in 1940 of each product sold through commission agents or by commission drivers, the commissions for which were charged to the tank wagon reseller and tank wagon consumer channels, respectively, on Respondent's Form 189.

Mr. Hanley: That specific request is objected to for the reason that an exhibit has been offered and received in evidence disclosing the information with respect of the amount of gallonage of different brands delivered to the different jobbers named in the Complaint.

Trial Examiner Ballinger: Off the record.

4963 (There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

The objection is overruled.

Mr. Austin: Further amplifying that request:

What I want is the gallonage represented by the commission salaries in the tank wagon reseller and tank wagon consumer channels, by products.

Mr. Abbott: That is for 1940?

Mr. Austin: 1940, Detroit Field.

Trial Examiner Ballinger: Is that all?

Mr. Austin: That's all your Honor; except I would like to say that the letter which went in evidence, which is Commission's Exhibit 104-A, 104-B and 104-C, requests some of that information by statement and the Commission is perfectly willing to accept a statement of whatever of this information can be so produced and assembled, and willing to have it put in the record over the testimony of Respondent's witness without producing the books and records, if the Respondent so desires.

Trial Examiner Ballinger: Counsel for the Respondent is requested to produce the documents indicated and the Trial Examiner now requests the counsel for the Respondent to indicate when they can be produced.

4964 Mr. Hanley: If your Honor please, the request made by counsel for the Commission will be responded to as quickly as it is possible to do so. Some of the records, I think, are in Chicago; some may be in Detroit; but wherever they are, they will be produced. They will be crated and shipped to your Honor, this building, care of this room.

Trial Examiner Ballinger: Such of them as are in Detroit should be produced at the afternoon session.

Mr. Hanley: I am not sure of that, Judge. I don't know. Maybe they can. If they can, okay, but I just don't know. I can't say that.

Trial Examiner Ballinger: In order to afford counsel for the Respondent ample time, the hearing will now stand in recess until 2:20 p. m.

(Whereupon, at 12:30 p. m., a recess was taken until 2:20 p. m.)

1965 Afternoon Session.

2:20 P. M.

Trial Examiner Ballinger: We will come to order. Counsel for the Commission may proceed.

JOHN W. BOATWRIGHT resumed the stand and testified further as follows:

Cross Examination (Continued) by Mr. Austin.

Q. Mr. Boatwright, I wish to quote on the record from your testimony at page 4305:

"The shipment of gasoline to jobbers is regarded as a direct shipment and is not used in making any expense allocation on Form 189, that is made by the field offices, direct field expenses. In allocating some of the administrative expense of the company on direct shipments may be made to allocate to fields as a part of the gallonage. Having allocated the fields, the allocation within a field is made on a basis excluding jobber direct shipments."

I have particular reference to the second sentence read, Mr. Boatwright, which refers to the use of some of the administrative expense of the company on direct shipments to allocate to fields as a part of the gallonage, will you explain how and in what accounts and as to what
1966 expenses direct shipments are used by the company in making allocations of expense to fields?

A. At the time that answer was given I worded it "may be made" intentionally as I was not entirely certain at that particular time. I can answer, now, that direct shipments are not used in allocation of expenses either to the fields or within the fields.

Q. That is true, is it, as to the expense of all the departments of the general manager's department going into Account 255; referring, now, to the method used in allocating between company channels where that is done prior to allocation to fields as well as to allocation to fields?

A. Direct shipments are not a part of gallonage used in allocating expenses of the general office, general manager's department, either to the fields or to channels within a field.

Q. When I said "company channels", Mr. Boatwright, I understand that in some of those accounts the expense is allocated by the general office to the tank wagon reseller, tank wagon consumer and other methods channels on the basis of the entire company's expense and then a portion of the expense in each channel is allocated to the field.

A. There are some general office expenses that it is necessary to allocate first between departments.

Q. By departments, you mean manufacturing—

4967 A. On the one hand; marketing on the other.

There are some divisions of the general manager's department; let us say the reseller sales promotion department, which is charged to a channel and then prorated to the fields as a charge to that channel. Direct shipments are not a part of any gallonage used in any such proration.

Q. When an expense is allocated to channels in the general office before allocation to fields, and where that expense is not allocated to channels on a gallonage basis but is allocated directly, are direct shipment expenses subject to the direct allocation in such a case?

A. I don't think of any department which has a direct channel allocation in which direct shipments enter.

Q. How about the gasoline refined oil department?

A. Direct shipments are a part of that departmental expense. That department, as you will recall my explanation, is, in that sense, a bulk sales department. It also controls the prices, tank wagon prices and tank wagon reseller prices through all of these four thousand odd points. That departmental expense is allocated to fields on the basis of gallonage, excluding direct shipments.

Q. I am going to have some further questions on that particular account, I think, a little later, so that I won't pursue that further and I am satisfied, now, with the an-

swer that direct shipments are not used in any gallon-
4968 age allocation either to fields or to channels by the
general office.

A. That is correct.

Q. How many jobbers are there in the Detroit Field outside of the City of Detroit?

A. Three.

Q. Where are they located?

A. I would have to consult the record. I don't know the individual towns.

Mr. Abbott: I will make a note of that and bring it to your attention so you can give that information tomorrow morning.

Just a moment; I want to ask you this additional question. What period do you want, that you refer to?

Mr. Austin: 1939 and 1940; that is, the period covered in the cost study.

By Mr. Austin:

Q. Did your answer relate to the years 1939 and 1940, Mr. Boatwright?

A. I was thinking of 1940.

Q. Is the expense of marketing gasoline to those other three jobbers included in this cost study, as well as the expense of marketing to the four jobbers in Detroit?

A. It is.

Q. Turning to Page 26 on Respondent's Exhibit
4969 100 you will notice at the bottom of that page it re-
fers to a charge per outlet to jobber outlets.

A. Yes, sir.

Q. And according to my computation, dividing the sum of $5.44 into the sum of $636.48, there are 117 jobber outlets in the Detroit Field—or perhaps I should say, there was that many during the period covered by this cost study. Will you verify that computation?

A. (After making computation.) Yes, sir.

Q. And does that 117 jobber outlets include the outlets of the jobbers outside of the City of Detroit as well as the outlets in the City of Detroit?

A. Yes.

Q. Do you know the number of those 117 outlets which are outside of the Detroit metropolitan area?

A. I do not recall the number. I have it. It is not with me at the present time.

Mr. Austin: I think it is on the record, if your Honor please. That is, I think the number of the outlets of the four Detroit jobbers is on the record.

Mr. Abbott: That is true.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

4970 By Mr. Austin:

Q. We have been referring to jobber outlets, Mr. Boatwright. Will you state what you mean by a jobber outlet as distinguished from a jobber?

A. Yes. A jobber outlet, as I have used it, refers to a reseller outlet that receives its supplies from a jobber-supplying company.

Q. And by reseller outlets you mean a retail service station, do you not?

A. Either a retail service station or a parking lot—well, let us phrase it this way: An outlet that sells direct to the customer at retail price; that is, the ultimate supplier.

Q. Will you turn to page 92 on Respondent's Exhibit 100, please?

A. Yes, sir.

Mr. Austin: I will withdraw that, Mr. Boatwright.

There is another matter here that I passed over thinking that I had to wait for the record but I believe I can take it up and I would rather do it now.

Trial Examiner Ballinger: The question is withdrawn.

Mr. Austin: I would like to have this paper marked for identification, your Honor.

Trial Examiner Ballinger: The Reporter will
4971 mark the document Commission's Exhibit 106, for
identification.

(The document referred to was marked "Commission's Exhibit 106", for identification.)

By Mr. Austin:

Q. I show you this paper, Mr. Boatwright, and ask you if you can identify it? (handing document to witness.)

A. This is a report showing the distribution of time by method of delivery by individual employes by months by specific positions. It instructs the employes to post in columns that actual number of hours and or the fractional parts of hours spent each day by that employee according to method of delivery.

It then states that the tank wagon method of delivery includes only deliveries of naphtha, gasoline, and refined oil through tank truck compartments. Other method of delivery includes all other deliveries excepting automobile supplies.

Q. This Exhibit 106, for identification is a blank form, is it not, Mr. Boatwright?

A. It is.

Q. You said a moment ago it is a report and I wanted to make it clear that—

A. It is a blank form.

Trial Examiner Ballinger: Issued by the Stand-4972 ard Oil Company?

Witness: Yes, sir.

By Mr. Austin:

Q. That is what I was about to ask.

And is this form the form that you referred to yesterday as being used by each of th employes in the accounting department except the supervisory employes during the last month of each quarter for the purpose of making their distribution of time reports?

A. May I check to see whether there are exceptions to that? You say by each member. It is entirely possible that there are specific members whose sole duty will fall in a particular channel. I would like to check to ascertain whether they, in their turn, do maintain this form or—

Q. Do the supervisory employes use it?

A. The supervisory employes do not use it. Let me check that.

Mr. Austin: Please. Just a minute.

Mr. Abbott: If the Court please, why can't the witness check it, if he wants to?

Mr. Austin: It doesn't have to be done at this exact moment, does it?

Mr. Abbott: Why not?

Mr. Austin: Why does the witness have to check it at this particular instant?

4973 Mr. Abbott: I think it is reasonable to check it if he wants to.

Trial Examiner Ballinger: The question has been asked the witness and only partially answered by the witness who had stated it will be necessary, in order to complete the answer, to make certain checks.

Mr. Austin: If your Honor please, I have tried to get a word in here to explain to you and to the witness that my question was not what the witness was attempting to answer. My question was whether this was the form that the witness referred to in his testimony yesterday and that is the only answer I wish. Now, if the witness, upon reviewing his testimony of yesterday, finds it is inaccurate, I wish he would check it, but at the moment I am only trying to identify the form that he testified to yesterday that was kept at the end of each month by some, and I understood you to say all, of the accounting department employes and I do not wish his answer to that question to mean that to answer the question itself as determining how many employes keep the form.

Witness: Under those conditions your question can be answered. That is the form I referred to. In your statement of the question you stated it is a more 4974 comprehensive manner than I used the description yesterday and that is why I wanted to check whether it was used as comprehensively as your question stated. It is the form referred to.

Mr. Austin: And I wish to have it understood that the witness' answer is only that this is the form I referred to yesterday and I have not attempted to state correctly what he testified to yesterday.

Trial Examiner Ballinger: It is so understood.

Mr. Abbott: Do you still wish to make an examination of your records?

Witness: As to the position of the counsel for the Commission, as now stated on the record, I see no need for any inquiry on my behalf.

Mr. Austin: Mr. Abbott, I have no objection, if you have something to ask the witness.

Mr. Abbott: Doctor Boatwright, I simply wanted to ask you whether this is a form which is in use in the office of the Standard Oil Company in its accounting division?

Witness: It is.

Trial Examiner Ballinger: And has been in use for a period of a couple years, is that right?

Witness: It is.

Mr. Abbott: And I understand from your testi-
4975 mony it is the form you referred to in your testimony yesterday?

Witness: It is.

Mr. Abbott: That's all. I have no objections.

Trial Examiner Ballinger: Without objections, Commission's Exhibit 106, for identification, is admitted in evidence.

(The document referred to, heretofore marked for identification "COMMISSION'S EXHIBIT 106, was received in evidence.)

By Mr. Austin:

Q. Have you determined, Mr. Boatwright, what employes of the field accounting office use and fill out and turn in a form similar to Commission's Exhibit 106 at the end of the last month—or during the last month of each quarter?

A. All members of the accounting department payroll, with the exceptions mentioned yesterday; namely, the office manager and the assistant office manager and the credit man; all others do maintain that form.

Q. And is the information entered on these forms—or, perhaps, I might more correctly ask whether the forms themselves as filled out and turned in at the end of each quarter are used for the compilation of the quarterly distribution of time report for the accounting department, which is used, in turn, to allocate the salaries of the
4976 staff between channels during the following quarter?

A. Those forms are the basis which are summarized and the over-all ratio of the distribution of effort of the accounting department derived therefrom, which is then used in the allocation of the "office expense—salaries"—accounting" among the channels on Form 189.

Q. You say that the information on these forms is summarized. By that do you mean that the quarterly distribution of time report is a composite obtained by totalling the information on these forms as to time spent in channels?

A. It is.

Q. I note that there is one tank wagon channel here and there are not separate tank wagon reseller and tank wagon consumer channels. Will you state how the time percentages entered under tank wagon consumer and tank wagon reseller channels on the quarterly distribution of time report obtained from the figures on this report?

Mr. Abbott: Do you want to see the Exhibit?

Witness: That is not necessary.

A. Yes, I will explain that.

There is only one tank wagon channel shown. That is then charged to the clearing account we have referred to in the past, in this testimony yesterday, three thousand series. Having charged to the three thousand series, it is then allocated between tank wagon reseller and 4977 tank wagon consumer on the basis of the gallonage through those respective channels.

Q. Then as I understand it, time which the employee spends on both tank wagon reseller and tank wagon consumer accounts, is entered on the column on the form, Commission's Exhibit 106, in the tank wagon column?

A. In the tank wagon column, yes, sir.

Q. I suppose it is hardly correct to call them channels on this form.

A. That's right.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

4978 Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Is the entire time of the employees using this form, Commission's Exhibit 106, during the last month of each quarter accounted for on this form?

A. Yes, sir.

Q. In other words, each employee, if I understand you correctly, enters on this form in one column or another all of the time which he devotes to company business during the last month of the quarter.

A. That's correct.

Q. Will you turn to Respondent's Exhibit 100, schedule 7-A—

Mr. Abbott: Pardon me just a minute, Mr. Austin. What page?

Mr. Austin: Which appears on page 76.

Mr. Abbott: That last question, when you said "employees," didn't you mean to restrict that to the accounting department employees?

Mr. Austin: I said all employees using this form.

Mr. Abbott: Well, I think it ought to—

Mr. Austin: That perhaps is incorrect if the form is used by other departments but I did mean accounting employees, yes.

Mr. Abbott: Well, I wanted that to appear definitely on the record. 4979

Mr. Austin: We had been discussing that department.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Have you that schedule before you, Mr. Boatwright?

A. I do.

Q. Are the various sub-departments in the accounting department listed on that page, Mr. Boatwright?

A. Several of them are.

Q. What is the first department listed?

A. The "Accounts Receivable" department.

Q. Now, just taking that sub-department as an example, will you state the amount of the salaries in that department which in this cost study have been charged to the "jobber, naphtha, and gasoline" business?

A. The charge to "jobber, naphtha, and gasoline" for the Accounts Receivable Department is $547.42.

Q. Can you tell me in what column or columns on the distribution of time form, Commission's Exhibit 106, that charge here to jobber, naphtha, and gasoline was entered by the employees in the Accounts Receivable Department at the time the expense was incurred?

A. It would be entered as a part of the tank wagon column on Commission's Exhibit 106.

4980 Your Honor, may I amplify that just a moment?

Trial Examiner Ballinger: You may.

The Witness: I think you will recall and I think that the attorney for the Commission will recall that I have stated that any of the direct shipment channel costs as we have now segregated it were spread throughout the various channels on our Form 189.

You ask me now whether that entire estimate may have been in any one channel. I don't know in fact that it was all in the tank wagon channel. A part of it may even have been in Other Methods. The reason I add that additional statement is that the time ratios as established based on the compilation resulting from maintaining what is now Commission's Exhibit 106 is that the time is distributed among the channels ignoring this particular jobber, naphtha, and gasoline as a separate component part of the allocation of time of the individual.

By Mr. Austin:

Q. Well, I asked you about, taking as an example the Accounts Receivable Department, and your first answer was that the expense of that department which has here been charged to jobber, naphtha, and gasoline was originally entered in the tank wagon column on Commission's Exhibit 106. Now, is that still your answer or do I understand you now to ~~qualify~~ that answer?

Mr. Abbott: Just a moment, Mr. Austin. You
4981 don't mean that it is entirely charged to naphtha,
gasoline, do you?

Mr. Austin: He said that it was charged on this form, Commission's Exhibit 106, at the time the expense was incurred. We are talking about where that expense was originally entered before there was any thought of a cost study or lawsuit.

The Witness: And as I recall your question, it was, do I wish to amplify the answer?

By Mr. Austin:

Q. No. I am not clear whether your subsequent explanation applied to your answer to my original question which was directed only to the Accounts Receivable department. Your original answer was that that expense went into the tank wagon column on the distribution of time form. Then you made an explanation which I understood to be more or less general. So I would like to ask you again whether that jobber expense which has been taken from the salaries of the Accounts Receivable Department and charged to jobber, naphtha, and gasoline in the cost study was originally charged to tank wagon column on this form?

A. I would answer that it may be in part in the tank wagon channel and in part in the Other Methods channel.

Q. Have you any way of determining what part went into which channel without getting out all of these forms
and reviewing them or could you tell it even then?

4982 A. No, you couldn't tell it even then because, you
see, the form as it is now set up and as you have a
copy there in blank does not provide for a separate time
factor. Therefore, I couldn't tell even then.

Q. This is a time form, isn't it (indicating)?

A. It is.

Q. And when the employee enters a certain amount of time in one of these columns, does he say what kind of a customer that time was spent on?

A. No, he does not.

Mr. Abbott: When you say "this" you mean Exhibit 106?

Mr. Austin: 106, yes.

Trial Examiner Ballinger: Mr. Boatwright, are the entries appearing on Respondent's Exhibit 100, page 76, actually taken from records or are they the result of some arbitrary allocation?

The Witness: No, neither is quite a correct statement, your Honor.

Trial Examiner Ballinger: Clear it up, please.

The Witness: In the first conference that I had with the accountants for the Commission, during which Mr. Austin was present, the question of the allocation of this account was discussed at quite some detail. We are looking at a problem in retrospect as we were trying to isolate it 4983 from the composite those expenses incident to a particular class of customer. I explained that the records in their then present form did not lend to a complete isolation. I did explain, however, that we had the number of tickets by these various classes of customers, and that we could establish a standard time performance for different parts of the accounting work. It was suggested that I establish a standard time for a period of two weeks.

At the end of the two weeks period we found that the first and second week standard time per ticket was almost the same. We feared that it might vary slightly if we took in the month and closing inasmuch as we started maintaining this record on the 11th. Therefore, we continued this record for a complete month to get the complete cycle of business.

Having determined the standard of time by these various types of tickets, we then counted the tickets and determined by the application of this standard the time for each of the various departments according to the standards established in the actual conduct of the work. Now, those standards are predicated upon the time period, as I recall.

the dates from August the 11th through September 10th so as to give us a complete month.

That was outlined and discussed and, to the best of my knowledge and recollection, it was concurred in as being perhaps the best procedure that we could adopt.

4984 Mr. Abbott: Your testimony refers to 1941 when you say September and August?

The Witness: The establishment of the standards was based upon August 11-September 10, 1941. It was necessary because we could not go back and establish standards based on the prior year.

Trial Examiner Ballinger: Then this is not mathematically absolutely accurate but it is the best approximation that could be made; is that correct?

The Witness: Your Honor, I know of nothing in accounting that is absolute. Most anything that we do in distribution-cost accounting is the best that can be done when done conscientiously. I would say that this is the best approximation that we could prepare in such an analysis.

By Mr. Austin:

Q. Mr. Boatwright, in referring to certain conferences, particularly, I believe you referred to a conference in December, last December, you didn't mean to intimate, did you, that the procedure used in allocating the expenses of the accounting department or of any other department to the seven channels on Respondent's Exhibit 101 was approved or indorsed by any of the Commission representatives?

A. I did not mean that anybody told me that if we did it in this specific way it would be acceptable. Following
the preceding hearings, you generously offered to
4985 consult with and to make available the services of
the accountants for the Commission. I merely utilized those conferences so that our work could be as completely in conformity with the desires of this particular complaint as possible and at the same time further enrich my own experience as to the procedure to be used.

I think it should be clearly understood, your Honor, that it was stated in all of these conferences that there was nothing done in any of them that was in any way binding upon any member of the Commission or upon the Commission. That was clearly stated and I would like it to be clearly understood at this point. But I did do this: I got all of the help I could while I was in those conferences.

Q. Well, it is also true, is it not, Mr. Boatwright, that at the conference in December, that was the first time that any of us at the Commission had seen Respondent's Exhibit 100?

A. Well, frankly, even at that time you hadn't seen Respondent's Exhibit 100 because at that committee meeting I had it in its preliminary form.

Q. Yes.

A. And I had it in the preliminary form so that if there were some points that the accountants would want or that you would want, that we could modify it; in placing it in final form, Respondent's Exhibit 100 was in a
4986 practically complete form at that time but the copy you have before you is changed in some few points in keeping with the results of that conference.

Q. Now, it is also true, isn't it, Mr. Boatwright, that at the time of that conference the conclusions of the cost study had previously been offered in evidence and were then in evidence as of November 17th referring now to the ones that were withdrawn after the conference?

A. The conclusions were in evidence. The reason for the change was that in one of the conferences the request was made that we show the method of reconciliation, or I think the terminology as used was that we spell out the procedure. It was the spelling out of the procedure which resulted in the draft which is now Respondent's Exhibit 100, a copy of which you are referring to.

Q. And it was the spelling out of the procedure which led to the conference in December, was it not?

A. Yes. Following the spelling out of the procedure, which was left largely to my discretion or interpretation of what would be needed by the Commission and its accountants, I redrafted the conclusions and then in the conference which followed that I explained in detail the preliminary draft of the report which is now Respondent's Exhibit 100, so that we might all have an understanding and at each schedule I was alert as to whether my
4987 concept of spelling out was adequate to meet the needs of the Commission and its accountants.

Q. Wasn't the main purpose of that conference in December, as you understood it, Mr. Boatwright, to determine and talk over whether the spelling out had been done in sufficient detail rather than to discuss the correctness or incorrectness of any methods of allocation used?

A. Yes, it was to determine whether or not what we intended to introduce as Respondent's Exhibit was in sufficient clarity to make known to the Commission all details of the special cost analysis. We did not ask nor did the Commission accountants state at any point that this procedure or that procedure used is acceptable and, therefore, binding. That was not asked or requested nor was it ever stated. They were strictly informal conferences.

I might even add, your Honor, that I greatly appreciate the privilege of the discussion we had.

Q. Getting back to this quarterly distribution of time of accounting employees, do I understand that the portions of the salaries of those employees charged to direct shipment channels on sub-schedule 7-A of Respondent's Exhibit 100 were determined as a result of a time record which was kept for a month during August and September, 1947?

A. Yes, sir.

Q. And when that time record was kept, did the employees separate the portion of their time spent upon direct
shipment account business? Perhaps I should say
4988 direct shipment accounts since we are talking about
the accounting department.

A. Yes, they did maintain a record of the exact amount of time devoted to direct shipment business.

Q. Did the employee keep or was he asked to keep at that time any record of the column where he would have entered that direct shipment expense normally?

A. No.

Q. And if he had shown that, it would have been possible to remove the direct shipment expense directly from these channels, would it not?

Mr. Abbott: I object to that upon the ground it is purely hypothetical. The question is—

Mr. Austin: Well, unless the witness is of the opinion that that was something which was not practical to do, I think the question should be answered.

Trial Examiner Ballinger: The objection is overruled.

The Witness: I don't think it is practical.

By Mr. Austin:

Q. Don't you think that the employee knew where he would have put the expense of that time?

Mr. Abbott: I object to that.

Q. If he hadn't been keeping this separate account?

Mr. Abbott: Object to that on the ground that the witness couldn't know what the employee knew or 4989 thought at the time. That is what the question asks.

Mr. Austin: Well, the question involves the question of whether the employees of the company have a definite accounting procedure under company instructions. This is something in connection with the company books.

Mr. Abbott: Repeat the question and answer objected to.

Trial Examiner Ballinger: Read the question.

(The question referred to was read by the Reporter.)

Trial Examiner Ballinger: Objection is sustained, what the witness thinks.

Mr. Austin: All right.

By Mr. Austin:

Q. Mr. Boatwright, you have already stated that the entire time of the employee is entered on the distribution of time form, Commission's Exhibit 106?

A. Yes, sir.

Q. During the last month of each quarter?

A. Yes, sir.

Q. During each month in which this form is kept, the employees keeping it have to enter on the form the time spent by them on direct shipment accounts; is that correct?

A. The time spent on direct shipment—

Q. Pardon me.

Mr. Austin: Will the Reporter read the question?

4990 Trial Examiner Ballinger: Read the question.

(The question referred to was read by the Reporter.)

A. Their time is on the report but not by separate classification.

Q. But they do have to enter that time on this report, do they not?

A. Yes, sir.

Q. Now, do not the accounting instructions of the company cover that question and direct or instruct the employee as to where that time is to be entered?

Mr. Abbott: Now just a moment. Object to that upon the ground that the instructions are themselves the best evidence of what they contain.

Trial Examiner Ballinger: The objection is overruled. The witness may answer.

A. Not to my knowledge, sir.

By Mr. Austin:

Q. Then do you mean that whenever an accounting employee is keeping one of these reports during the last month of the quarter and he spends some time on a direct shipment account that he just enters it wherever he chooses?

A. That's to the best of my knowledge, yes, sir.

Q. Then is it your testimony that the accounting employees in dealing with such expenses have no instructions as to what to do with them when they enter that time on these reports?

4991 A. It is my testimony that I recall reading no such instructions. You are asking me, however, as to details of six volumes about two inches thick, and if that has to be answered accurately, your Honor, then I must reread those instructions. I recall no such instruction.

Mr. Abbott: Well, I renew the motion, if the Court please, to move to strike out all of the testimony relating to these instructions upon the ground that it now appears that the instructions are in writing, in a volume, and that it is inadmissible for counsel for the Commission to ask this witness to state what they are. If he wishes to do so, he may ask us to produce the book of instructions which is the best evidence.

Mr. Austin: I would like to recall—.

Trial Examiner Ballinger: The witness has disposed of the matter by stating that he has not the instructions before him and does not recall them with sufficient particularity to enable him to answer the question.

Mr. Austin: I would like to recall to your Honor and to Mr. Abbott that last Spring we were told by Mr. Boatwright and Judge Hanley here that they preferred not to produce the company's code of accounts and I certainly have no desire to ask to have the code of accounts produced and put into the record if it isn't absolutely necessary.

Mr. Abbott: You mean the instruction book?

4992 Mr. Austin: Yes, that is the code of accounts, as far as I know.

Mr. Abbott: Well, it is different terminology than I understood it to be.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Mr. Boatwright, if you are not familiar with the general practice of the company regarding the entry of direct shipment time on the accounting division quarterly reports, can you tell me what the practice in that respect is in the Detroit Field?

A. Well, our practice in that respect is uniform in all fields, Mr. Austin. I can tell you this, that we make no accounting as a regular cost procedure of time devoted to direct shipments. Inasmuch as we make no such accounting for the sales, our instructions are silent on that subject, to the best of my memory, not only in Detroit but in all fields.

Q. Going back to the example that we were considering, which is the sum of $547 charged to jobber, naphtha, and gasoline from the salaries of the Accounts Receivable—

Trial Examiner Ballinger: And appearing in Respondent's Exhibit 100, page 76.

4993 Q. —would any of that expense have been entered in the Automobile Supplies channel under the accounting practice of the company?

A. No, not to my knowledge.

Q. And is it your opinion that the greatest part of it was entered in the tank wagon column?

A. I can't say that. Our practice is just this: We have a group of clerks. These sales tickets go through and the clerks handle the tickets. They do not know whether this ticket represents a sale to a direct shipment customer, a jobber, a tank wagon reseller, or a tank wagon consumer, nor do they care; it is a ticket. And as it is a ticket, I don't know whether they would enter the most of it in a tank wagon channel or the most of it in the Other Methods channel, but it is just a ticket.

Q. Turning to Schedule 7-B on page 79 of Respondent's Exhibit 100, will you explain, Mr. Boatwright, why if none of the Accounts Receivable direct shipment expense was entered in the Automobile Supplies column part of that expense was deducted from that column in making adjustment of 189 channel.

A. Then a part must have been entered in Automobile Supplies channel.

Q. Well, Mr. Boatwright, weren't those deducted from the respective channels on 189 and made according to

4994 —made by quarters according to the quarterly percentages on the accounting department quarterly distribution time report?

A. Were the adjustments from the 189 made on a monthly basis based on the quarterly estimates of the accounting department?

Q. Yes. That is, when you decided how much of the direct shipment charge in the first column on Exhibit 7-B was to be deducted from each of the four channels including Automobile Supplies on Form 189, did you not apply the percentage, the ratio percentages for the same class of employees on the quarterly distribution of time sheets?

A. Yes, sir.

Q. In other words, for the accounts receivable you took the ratio of time in the various channels for accounts receivable on the quarterly distribution of time report—

A. We took the distribution of time for the accounting department and removed this determined direct shipment cost from the original 189 on the basis of its original inclusion in that form.

Q. Now, from that, it would follow that part of the time the accounts receivable department was spent on Automobile Supplies, is that right?

A. It does.

Q. But would it follow that any of the time of that department devoted to direct shipments was originally
4995 charged to Automobile Supplies?

A. I think that it might, for this reason: The Accounts Receivable or any of these other departments distribute the sum total of their time to these various channels on the Form 189, ignoring that portion devoted to direct shipments. Therefore, in the formulation of their time allocation, this small amount devoted to direct shipment may be absorbed in their record as to tank wagons, may be absorbed in part in Other Methods, may be absorbed in part in Automobile Supplies.

Q. How can the employee ignore time spent on direct shipment business if it is his duty to enter all of his time on this report?

A. He enters all of it on that report but that employee is not instructed to maintain a separate estimate of the time devoted to direct shipments. It represents such a small part of his total effort that it has not been deemed advisable or worthwhile to establish a set of records to maintain that cost separately in the past. It would cost us as much to maintain the records as would be shown on the records once maintained.

Q. Well, I wasn't suggesting that any separate records are kept or should be kept from the standpoint of the company or making any suggestion on that at all, but what I have in mind is a very practical question, it seems to me, Mr. Boatwright, and it is just this: That when 4996 one of your accounting employees spends so much of his time handling slips or accounts or whatever it may be in connection with the direct shipment customer and it happens to be the last month of the quarter, it seems to me that it is very natural to suppose that he will have to enter—in fact, you have testified that that time will have to be entered somewhere on this form, and it seems to me very natural to suppose that he might ask and receive instructions as to what to do with it.

A. He has no instructions as to what to do with it.

Mr. Abbott: May we take a recess at this time, your Honor? A five minute recess? May we have a recess for five minutes at this time?

Mr. Austin: I think so, yes.

Trial Examiner Ballinger: The hearing stands in recess for five minutes.

(A short recess was taken.)

4997 Q. Mr. Boatwright, the time of the asphalt products salesmen is devoted entirely to direct shipment business, is it not?

A. Yes, sir.

Q. And that is shown to be the fact on sub-schedule 1-B on page 18 of Respondent's Exhibit 100, is it not?

A. Yes, sir.

Q. The same is true of the candle salesmen and the white oil salesmen, is it not?

A. Yes, sir.

Q. And does it not also appear from schedule 1-B, Respondent's Exhibit 100, that all of the time of these salesmen was entered in the other methods channel in the preparation of the quarterly distribution of time report for salesmen?

Mr. Abbott: I object to that upon the ground that it merely asks that the exhibit be read and it is already in evidence.

Trial Examiner Ballinger: Read the question.

(The question referred to was read by the Reporter.)

Trial Examiner Ballinger: The objection is overruled.

Mr. Abbott: It appears right in column 4 of the exhibit.

Trial Examiner Ballinger: He may answer.

4998 A. The time of these sales representatives is charged one hundred percent to the other methods channel.

Q. So there are instances, are these not, Mr. Boatwright, in the accounting procedure of the company where direct shipment time is charged directly to certain of the channels on Form 189?

A. Now we are switching, aren't we, Mr. Austin? You say "in the accounting procedure". We are speaking, here, purely of salesmen and these salesmen do spend their time on other method products and their expenses for salary and other incidental expenses are charged to the other method. That does not mean that members of the accounting department separately keep records and books of sales of these individuals. Your question has to be answered no. It does not follow from one premise to the second.

Q. Well, I wasn't attempting to go to the second premise. I was simply asking whether where time or expenses are charged directly to channels, whether there is an accounting practice of the company as to the entry of direct shipment expenses in a particular channel.

A. There is an accounting practice and accounting instruction—I am sorry there are not accounting instructions. There are practices in the company where an individual spends his entire time on direct shipments and in his preparation of the distribution of his time by
4999 channels he indicates it a 100% in a given channel. That is particularly applicable to these three classes of salesmen.

Q. Will you turn, please, to Respondent's Exhibit 99, Page 13? That page—or rather, the upper part of that page, refers to Account 070 E. L. A. Expense?

A. Yes, sir.

Q. Quoting from that page: "Equipment loan agreement expense is charged directly to the channels to which the cost is applicable * * * because no general prorata account is provided for this type of expense, no proration is made at the end of the month."

Does that mean, Mr. Boatwright, that all equipment loan agreement expense is charged directly to the Form 189 channels in the regular accounting practice of the company?

Mr. Abbott: Just a moment, if the Court please.

I think that where Mr. Austin put in the asterisks, that it separates the text so as to change the meaning of the quoted part and requires that the omitted part be included in the question.

Wouldn't you just as soon reframe that so as not to leave out the two sentences that are omitted?

Mr. Austin: I don't agree with you, Mr. Abbott, but I will take the witness' opinion on that.

Trial Examiner Ballinger: The Witness, in answering the question, may take into consideration, the entire text.

5000 Mr. Abbott: That is satisfactory.

A. E. L. A. expense is charged direct.

Q. Now will you turn, please, Mr. Boatwright, to Page 52 of Respondent's Exhibit 100 and will you state the amount of E. L. A. salary expense charged to jobbers, naphtha and gasoline?

A. The amount requested is $8.95.

Q. Now will you turn to Page 53, Sub-schedule 5-B, and can you tell me from that schedule where that direct shipment expense charged to jobbers, naphtha and gasoline, was originally charged in the regular accounting procedure of the company?

Mr. Abbott: You mean the item of $8.95?

Mr. Austin: Yes.

Mr. Abbott: I object to that question upon the ground, that the exhibit speaks for itself and is already in evidence.

Trial Examiner Ballinger: Objection is overruled.

Mr. Abbott: The figure appears on there and is not ambiguous.

Trial Examiner Ballinger: The objection is overruled.

A. I would refer you to the following page; namely, 54, where you find the item of $8.95, the identical amount, under the tank wagon reseller channel. Therefore,—

5001 It also appears on Page 53, doesn't it?

A. Yes, sir. In both cases.

Mr. Austin: Now will you read my previous question?

Reporter: "Q. Now will you turn to Page 53, Subschedule 5-B, and can you tell me from that schedule where that direct shipment expense charged to jobbers, naphtha and gasoline, was originally charged in the regular accounting procedure of the company?"

A. The answer is it was charged originally to the tank wagon resellers channel.

Q. And can you state from the exhibit the amount of E. L. A. expense, salary expense, which was in this cost study charged to direct shipment other customers?

Mr. Abbott: I object to that upon the ground that the exhibit speaks for itself and is already in evidence.

Trial Examiner Ballinger: The objection is overruled.

A. $133.53.

Q. And can you tell me where that expense was originally charged in the regular accounting procedure?

A. In the original accounting procedure that account was originally charged to the tank wagon consumer channel.

5002 Q. And what was the amount of salary expense E. L. A. which is now charged to jobbers other products?

Mr. Abbott: Same objection; that it already appears on the exhibit.

Trial Examiner Ballinger: The objection is overruled.

A. $2.89.

Q. And where was that $2.89 originally charged in the regular accounting procedure?

A. Originally charged in the regular accounting procedure to the other methods channel.

Trial Examiner Ballinger: Mr. Boatwright, if you have any explanation that you care to offer, you may do so.

Witness: There is no explanation needed, your Honor.

By Mr. Austin:

Q. You have already testified that these E. L. A. salary expenses are direct entries to channels in the regular accounting procedure of the company, is that right?

A. Yes, sir.

Q. And bearing that in mind do not these figures which you have just read and as to the original allocation of which you have just testified indicate that the company's regular accounting practice where accounting instructions call for a direct allocation of time or expense to 5003 channels is to charge time and expense in connection with jobber gasoline, naphtha and refined oil business to the tank wagon reseller channel, time and expense in connection with direct shipment consumer gasoline, naphtha and refined oil business to the tank wagon consumer channel, and time and expense in connection with direct shipment business in other products to the other methods channel?"

Mr. Abbott: Do you want the question read? Is that intelligible?

Witness: I think I got the import of the question.

Trial Examiner Ballinger: First you may state if you understand the question.

Witness: I understand the question to be do the accounting instructions provide that any E. L. A. expense incurred on jobber naphtha and gasoline should be charged to the regular tank wagon reseller channel.

Mr. Austin: No, that isn't exactly it, Mr. Boatwright. In the first place I asked you about the regular accounting practice, rather than accounting instructions and, in the second place, I referred, as the question shows, generally to accounts where there is a direct allocation of time or expense, the E. L. A. being only an example.

Mr. Abbott: I object to the question as originally propounded on the ground it is so long that it is unintelligible and does not convey any interrogation which the wit- 5004 ness can be expected to answer.

Trial Examiner Ballinger: Does the witness now, in view of the explanation, understand the question?

Witness: I am afraid I do not. As I heard the question originally posed, and as I listened to its re-reading, it seemed to me that this statement was that the accounting practice and instructions—

Trial Examiner Ballinger: The objection is sustained. Counsel may restate the question.

Mr. Austin: Your Honor, my contention is that that question, at least when written out, is strictly intelligible to Mr. Boatwright and to every accountant in this room and I see no reason why it shouldn't be answered. I can't make it any clearer. I took some time to write that question out at length, which I don't generally do. To me it is perfectly clear and I don't know as much about the accounting procedure of the company as Mr. Boatwright.

When I said I think it is clear, I mean when written out and when Mr. Boatwright has a chance to read it. I am not saying Mr. Boatwright doesn't understand it—

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

The question is withdrawn.

By Mr. Austin:

5005 Q. Is it not the company's regular accounting practice wherever time or expense is allocated directly to channels, to charge time and expense in connection with jobber gasoline, naphtha and refined oil business to the tank wagon reseller channel?

A. I don't know. I don't think that there is a regular practice in that respect, inasmuch as there is such a small amount of equipment furnished; not only in Detroit, but in any field; to any jobber account. I cannot testify that there is a general, accepted practice.

Q. Well, it does appear, Mr. Boatwright, in this E. L. A. account that the jobber gasoline and naphtha expense was allocated direct to the tank wagon reseller channel in Detroit, does it not?

A. Yes, that is indicated by this for these particular expense items and we ascertained that by tracing each expense item clear through the books and we know that in this particular case they were charged to these particular channels, but I couldn't testify that that is a general practice based on a sample of this magnitude. I just don't know.

Q. That was my question; as to whether your practice, which was evidently followed as to these direct shipment expenses in the E. L. A. account in Detroit, represent the general practice of the company in allocating time and expense direct to channels.

5006 A. I would say that my uncertainty as to that particular question would be such that if I were making a similar study in any other field in our territory and encountered any other E. L. A. expense, I would insist in that study, that we do exactly what we did in this study, namely, that we traced that particular expenditure clear through our books to find out where it was originally charged. In other words, I do not feel that there is a general practice sufficiently to accept it and base my actions accordingly. I would trace them, Mr. Austin.

Mr. Austin: I would like to ask now, whether the Respondent is prepared to produce the quarterly distribution of time reports for the accounting department used for allocation of time in 1940?

Mr. Abbott: Off the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record. We will have a recess for five minutes.

(A short recess was taken.)

5007 Mr. Hanley: If your Honor please, there having been offered and received in evidence a letter written by Mr. Austin to counsel for the Respondent dated January 24, 1942, the Respondent at this time offers in evidence what has now been marked, for identification, Respondent's Exhibit 103-A to C, both inclusive, which is the answer to Mr. Austin's letter.

(The letter referred to was marked "Respondent's Exhibit 103-A to C" for identification.)

Mr. Hanley: May I say, your Honor, that copies of that letter were sent to the Trial Examiner in this lawsuit.

Trial Examiner Ballinger: Any objection?

Mr. Austin: I object to it, your Honor, because the letters that I introduced were in the nature of a notice to produce, and any reply that the Respondent may have made prior to the hearing I think is immaterial, notice to produce being in effect at the time of the hearing, and I think that any reply to that should be and has been made on the record here.

Trial Examiner Ballinger: Well, in order that the record may be complete, the objections are overruled. Respondent's Exhibits 103-A, B, and C, for identifiction, are admitted in evidence.

5008 (The letter referred to, heretofore marked for identification "RESPONDENT'S EXHIBIT 103-A to C", was received in evidence.)

Mr. Austin: I move, your Honor, that we adjourn this hearing until, let's say, 9:45 tomorrow morning.

Trial Examiner Ballinger: The motion is granted and now, at 4:50 p. m., the hearing stands adjourned, to be reconvened at 9:45 o'clock, February 18, 1942, in Room 859 Federal Building, Detroit, Michigan.

(Whereupon, at 4:50 p. m. the hearing was adjourned to reconvene on Wednesday, February 18, 1942, at 9:45 a. m.)

5009

Room 859 Federal Building,
Detroit, Michigan,
February 18, 1942.

Met, pursuant to adjournment at 10.00 a. m., War time.

Before:

Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., attorney for the Federal Trade Commission.

Harold R. Hanley, Esq., 910 South Michigan Avenue, Chicago, Illinois; and Arthur J. Abbott, Esq., of the firm of MacMahon, Abbott & Roberts, 2230 Buhl Building, Detroit, Michigan; appearing for the Respondent.

5010 PROCEEDINGS.

Trial Examiner Ballinger: Come to order.

The hearing of docket No. 4389, in the matter of Standard Oil Company, is reconvened in room 859 Federal Building, Detroit, Michigan, at 10:00 a. m., Eastern Standard Time, February 18, 1942. The last hearing was in the same room in the same city, February 17, 1942.

You may proceed.

JOHN W. BOATWRIGHT resumed the stand and testified further as follows:

Cross-Examination by Mr. Austin.

Q. Mr. Boatwright, is there a tax known as the Michigan Privilege Fee?

A. Yes.

Q. Will you state generally what sort of a tax that is?

A. That is in the exhibits here. I will have to get the exhibit and refer to it.

Q. Have you any knowledge on that subject beyond what is stated in the exhibit?

A. No.

Q. If not, then I suggest that you refer to the page in the exhibit.

A. I shall.

5011 Q. That is at the bottom of page 93, Mr. Boatwright, I think.

A. I have that part of Respondent's Exhibit 100, page 93, referring to the Michigan Privilege Fee Tax. This tax represents a charge to the company for doing business in the State of Michigan and is based on the assets held in the State of Michigan.

Q. Is a part of that privilege fee charged upon the value of the River Rouge terminal?

A. Yes.

Q. Is any part of that portion of the tax charged to the Detroit Field?

A. Not in the marketing expense, no, sir.

Q. Not in this cost study or on Form 189?

A. It is not. That is purely a charge to the manufacturing department.

Q. In other words, the company makes a split with those taxes in such a case?

A. Yes, sir.

Q. And charge part to manufacturing?

A. Yes, sir.

Q. I would like to ask you a few questions about Commission's Exhibit 21, Mr. Boatwright; it is a card headed "National Credit Identification Card, Standard Oil Company, Indiana," and quoting from the exhibit:

5012 "This card may be used by customer whose name and vehicle license number are shown on face hereof in purchasing on credit merchandise manufactured or distributed by Standard Oil Company (Indiana) or by any of the within named companies, at any place of business reselling such merchandise; also for purchase of tire repairs, lubrication, battery service, and washing."

That portion of the printing on the card is read with particular reference to the statement that the card may be used by the customer in purchasing merchandise on credit at any place of business of the Standard Oil Company or any of the "within named companies."

A. Was your statement completed, Mr. Austin?

Q. Yes, except I would like to ask you to state on the record from the exhibit, if you can, what companies in your opinion are meant by the words on the front of the exhibit "the within named companies."

Trial Examiner Ballinger: Have you two questions?

Mr. Austin: This is the only question.

Mr. Hanley: If your Honor please—

Trial Examiner Ballinger: Haven't you two separate questions?

Mr. Austin: I don't think so. I think this is the only question I asked. I was just making a statement previously so as to direct the witness' attention to the subject matter that I wanted to question him on. 5013

Mr. Hanley: If your Honor please, that question is objected to because the exhibit is the best evidence of what the exhibit says.

Trial Examiner Ballinger: That objection is overruled.

By Mr. Austin:

Q. Subject to the notation on the front of the card, Mr. Boatwright, that "distributors may honor this card at their option" may these credit cards be used by the holders to obtain credit in purchasing petroleum products, automobile supplies, in any of the states listed on the back of the card at the outlet of any of the companies there listed?

A. Yes, provided the operators of the individual outlets honor credit cards.

Q. And if the operators of the individual outlets do choose to honor the card, does the Standard Oil Company of Indiana assume the responsibility for collection of the credit?

A. Yes, sir.

5014 Q. Now, will you please explain what happens, then, when a resident of Detroit is, say, in Chicago and purchases gasoline there, or where the same man may be in the east and purchases gasoline at one of the American Oil Company stations, say, in Washington or Maryland? How is that credit slip handled?

A. Well, the credit slip goes from the reseller outlet, the point at which the purchase was made, to the office of the respective supplying company, either Pan-Am, in the one case, or to the office of the Chicago Sales Division of the Standard Oil Company of Indiana, in the other.

If the owner of the car is a resident of Detroit and his account is held in the Detroit Office, the clearance of the ticket for that particular transaction is handled by inter-field billing between the Chicago Office and the Detroit Office.

If the holder of the credit sales ticket is a supplier other than the Standard Oil Company, it is handled by an inter-company billing and forwarding of sales tickets to the original extender of credit.

Q. By the original extender of credit you would mean Standard Oil of Indiana?

A. Standard Oil of Indiana, yes sir.

Q. And where the ticket is held by a resident of Detroit would the credit slip come back to the Detroit Office
5015 for collection?

A. It would.

Q. And is the expense of handling and collecting those credit slip charges incurred in territories outside the Detroit Field included in Account 208 or Account 200 in this cost study? I will broaden that question and ask you whether it is included and, if so, where?

A. It is a part of so many accounts, Mr. Austin, all of which are clearly explained in the manuscript of Respondent's Exhibit 100. A part of it is in Account 208 "Credit Information Expense."

Another part is in the Account 200, "Office Expense—Salaries" accounting.

Still another part of the total credit charge—or cost, rather, to the company, will be found in expenses of collection of bad debts, bad debts written off, and so forth. Any credit charge is likely to be a component part of several of the expense classifications.

Q. Does the Detroit Field also have some expense in handling and forwarding credit slips issued here on credit cards which are held by transients who reside in places outside the Detroit Field?

A. The only expense incident to credit card sales made by Standard Oil of Indiana outlets to holders of credit cards issued originally by the supplying companies
5016 is the mailing expense of the credit sales tickets to the original supplying company issuing credit.

Q. Does that also apply to Standard Oil Company credit cards where the holder of the card resides in Chicago or some other territory of the company? In your previous answer you referred to another supplying company.

A. That is the manner in which I understood your question. When you used the word "that", does that also apply—what is your antecedent of "that"?

Q. I mean that your only expense is for mailing expense of forwarding the card of the other supplying company. I asked you if that was also true where the credit card is also a Standard Oil Company credit card held by a resident, or presented by a resident of another field?

A. Do you mean does the only expense entering on the Detroit marketing cost statement incident to the credit card issued, let us say, by the Chicago Sales Division—

A. And honored here.

A. —and honored here in Detroit, amount to the postage of sending the sales ticket to the Chicago Division? That is the only expense incident to the credit transaction.

Q. Well, is there any other expense which is given rise to by the use of the credit card?

A. That's what caused my pause. Naturally, the vol-
ume that was sold constitutes a part of the volume of
5017 the Detroit Division and would be represented in
its regular bookkeeping functions, but expense inci-
dent to credit itself is limited to that postage expense.

Q. Yes. Well, I was really only referring to credit.

A. That's what I thought. That's why I answered as I did.

Q. Of course I understand that the expense of selling gasoline in Detroit through an outlet here, is an expense of the company. As a matter of fact, the expense of selling the gasoline to a credit card customer is an expense of the service station, isn't it?

A. Your statement is correct.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. I would like you to devote your attention for a moment, Mr. Boatwright, to the question of point-of-sale advertising, particularly signs, globes, banners, maps, display cards, and so forth, displayed or distributed at reseller outlets.

I think that you previously testified during these hearings that that sort of point-of-sale advertising including globes, and so forth, is supplied by the company to reseller outlets of its jobbers as well as to the reseller outlets
served directly by the company, is that correct?

5018 A. I did so testify.

Q. And are the jobber outlets, meaning service stations, either supplied by the jobber or operated by the jobber, either one; are jobber outlets treated the same as to the distribution of the point-of-sale advertising by the company including identification advertising as service stations purchasing direct from the Standard Oil Company?

A. I know of no discrimination between the two types of outlets with respect to point-of-sale advertising.

Q. Are the globes, signs, maps, and so forth installed at the station or delivered by the company to the station direct, or is this type of advertising simply supplied to the jobber in a certain amount for his stations and then either distributed or installed by the jobber?

A. I couldn't answer that question. I could with respect to some parts of point-of-sale advertising, but as to all parts, I don't know.

Q. Well, the globes and service station signs are installed directly by the company, are they not, at the station?

A. Yes sir.

Q. And I suppose that if you say you can't answer the previous question in its entirety, perhaps you will as to certain things like maps and display cards of various kinds which, perhaps, might reach the station through the office of the jobber or might reach it directly; is
5019 that what you mean?

A. Yes. There might be a certain part of this point-of-sale advertising that would be furnished in total to the jobber supplying company who, in turn, might make the distribution. I don't know.

Q. But in any event, it is true, is it not, that advertising of the sort that we have just been discussing, is supplied to jobber outlets in substantially the same manner and quantities as it would be to retail outlets? Now perhaps I shouldn't insert the word "quantities," Mr. Boatwright, but the question is this: Does it make any difference whether it is a jobber outlet or a direct outlet in the supplying of this advertising? Would the treatment of the station be the same whether it be independently operated or supplied through a jobber?

A. I think the treatment would be the same whether served by tank wagon from one of the bulk plants of the Standard Oil Company, or whether served with Standard Oil products through a jobber distributor.

Q. That's a better way to put it. Thank you. I didn' think of the tank wagon, tank car description, for a moment.

And is it the duty of the advertising manager to supervise and direct the installation of point-of-sale advertising?

A. That comes under his jurisdiction, yes, sir.

Q. And the maintenance of it; like replacing a
5020 globe or repairing a sign?

A. Yes, although your reseller salesman will report to your advertising manager any adjustment tha need be made on replacing a broken globe and the probabilities are that it will not even move through the advertising representative. The reseller salesman will merely report a broken globe at such and such a location. Tha report goes immediately to the Maintenance Departmen and a new globe is installed automatically.

Q. Nevertheless the installation and maintenance o that material is under the general charge of the advertising manager, is it not?

A. Oh, yes. It is his responsibility.

Q. And does he have the same duties with respect t advertising at the outlet supplied with Standard Oil gasoline by jobbers, as he does by the outlets served directl by tank wagon?

A. Practically the same responsibility. There is a slight difference. That is, his follow-up is not as close He anticipates and expects jobbers to report to him neede adjustments and they do so do. Having the report onc on his desk, he then follows through to see that the necessary maintenance is taken care of.

5021 Q. But aside from the question of the information reaching him or request reaching him for new equipment or replacements, are his duties the same as t the installation and maintenance at both types of outlets

A. I think they are the same.

Q. Mr. Boatwright, will you turn to page 94 of Respondent's Exhibit 106.

A. I have the page.

Q. On the subject of death benefits, Account 525, th statement on that page is:

"This company makes payments to beneficiaries of active employees and employees who have been retired o annuity at the time of death of the employee."

Is it and and has it been the policy of the company to make a death benefit payment to every active employee or retired employee who dies?

A. It is and has been the policy of the company to make a death benefit payment to employees, either active or retired, on an annuity during the time period that I have been with the company. That dates from 1932, Mr. Austin. This plan was explained to me as I joined the employment of the Standard Oil Company in 1932. It was not new then. I just do not know how far back it was extended.

Q. You stated on pages 4466 and 4467 of the record
that these benefits were not available to all employees
5022 and that each case is handled individually by the
board of directors.

A. The actual payment is subject to the approval of the board of directors.

Mr. Hanley: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

The Witness: Would you like that statement on the record?

Mr. Austin: Yes.

Trial Examiner Ballinger: Then you had better ask a question.

Mr. Austin: Well, the question was asked by Judge Hanley. I don't remember what it was exactly.

Mr. Hanley: Do you desire that on the record?

Mr. Austin: I would like to have the witness repeat his statement.

Mr. Hanley: I asked him the question as to what the board of directors determined. I think I asked him if it was the amount.

Mr. Austin: Yes, I think that was it.

Mr. Hanley: And then he made his statement as to how this thing was done.

What counsel wants is to have you repeat that explanation.

The Witness: If you want in brief the scope of
5023 the plan, that can be stated briefly—

Mr. Austin: Well, I would like to have you repeat just what you stated off the record.

The Witness: I shall. —namely, that the plan for death benefit compensation is printed and prepared in booklet form which is in the possession of the personnel director in various sales fields, and a copy of that plan is given to each employee of the company.

Now, the full benefits of the various plans the company has for its employees, including the death benefits plan, becomes applicable after one full year of service, and after that full year of service the plan is operative on all individuals.

By Mr. Austin:

Q. Well, what do you mean then when you said that each case is handled individually by the board of directors?

A. I mean that the funds are voted by the board of directors in each case. A death benefit payment is voted individually by the company and payment made thereafter.

Q. Does the amount of the payment depend upon merely the amount of the salary or annuity of the employee?

A. No. The amount of the payment is stated in the plan. The board—

Q. Well, I realize the length of service might also
5024 enter into it.

A. It does.

Q. But what I mean is, does the board of directors have some accepted or published, if it is, formula which it uses, or does it determine for each employee the amount of death benefit according to its feeling toward the employee?

A. Oh, no. It has a published formula which is stated in printed form, a copy of which is given to each employee when they become eligible to participate in the plan, but upon death the funds are voted individually by the board in keeping with the plan as announced.

Q. Is it your understanding, then, that all employees within the classification that you have mentioned here as active employees or employees on annuity who die during 1940 received—that is, that their beneficiaries received the death benefit payment voted by the board of directors?

A. That is my understanding.

Q. I would appreciate it if you could produce one of those books that you have just referred to, if those are in fact used and available here in Detroit.

Mr. Hanley: Do you mean the outline of the plan, Mr. Austin?

Mr. Austin: The outline that is distributed to the employees as Mr. Boatwright has described.

Mr. Hanley: On death benefits?

Mr. Austin: Whether it includes other things or
5025 not, I don't know.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Mr. Hanley: Well, on the record.

If your Honor please, we will be glad to supply what counsel has requested, but it seems to me that we are getting into a good deal of detail about it. Concededly the company does pay death benefits; concededly, they are a cost of doing business. As I understand it, the only question here is whether or not there is a proper allocation of those costs.

It just strikes me, your Honor, that it doesn't make much difference what the detail is; what the plan is or what it amounts to does, or, rather, are we right in the method of allocating that we have presented here.

We will furnish the information. We will do that.

Trial Examiner Ballinger; Well, that is desired by counsel for the Commission.

Mr. Austin: Yes. I don't concede that that is a proper cost of sale to the company. Unless I know the details, I think, at least, the details as to the method of payment would be important, Judge Hanley, to determine whether or not it is purely an additional form of compensation.

Mr. Hanley: We will get that information. I am not
just sure at the moment whether it is available in Detroit
or whether we will have to ask for it from Chicago,
5026 but we will get it for you just as quickly as we can.

Mr. Austin: Well, of course, if some of them are distributed to the employees here and handed out right along, I suppose then that it would be easy—

Trial Examiner Ballinger: Further discussion is off the record.

(There was a discussion off the record.)

By Mr. Austin:

Q. Mr. Boatwright, at a previous hearing discussing the question of death benefits, I asked you how the amount of death benefit payments allocated to the Detroit field is determined by the general office, and you stated that you did not have that information, and would have to look up the instructions on that particular account. I wondered if you had done that, and if you can now tell me how death benefit expense is allocated between fields.

A. A death benefit charge in the Detroit Field is a direct charge for any employee in the Detroit Field. If the death benefit payment is made on an employee of the general office, it becomes a charge against that individual department, and then is allocated to the field as are the expenses of that department allocated.

Q. Well, would an expense of that type, that is, a death benefit paid upon death of an employee in the Chicago office—you say that that is distributed to the fields 5027 on the same basis as the expense of the department in which the employee worked, but when that expense is distributed to the field, would it appear in the death benefit account or would it appear in the expense of the general office account?

A. It would appear in the death benefit account.

Q. Then simply the method of distribution would be the same?

A. Yes.

Q. And if a retired employee of the Detroit Field dies after having been on an annuity basis for several years and his beneficiaries are paid a death benefit, is that death benefit charged to the Detroit Field?

A. May I simply restate your assumption to be sure that it is clear?

Q. Yes.

A. Assuming an annuitant based on years of experience in Detroit retires in Florida or California and spends the remaining years of his life there and then upon his death—

Q. Well, regardless of where he lives as long as he works here.

A. My point is he lives out of the Detroit area.

Q. Oh.

A. In some other area, his expense for death benefits would be charged to the Detroit division.

Q. And, of course, if he still lived in Detroit, the 5028 same would be true?

A. Oh, yes. Yes, the death benefit charge is predicated upon the point of his experience.

Q. Do you have any record here of what the death benefits were charged to the Detroit Field in 1940, how many payments there were and whether the deceased employees were active employees or annuitants?

A. We would have that on our worksheets. I do not have them with me. We have the dollar value. Would that be of interest?

Q. The dollar value is on the Form-189, isn't it?

A. Yes, but I understood your question to be the number of individual cases.

Q. Yes. Have you got that?

A. I do not have that with me, no.

Mr. Abbott: If your Honor please, I submit that that is wholly immaterial. It is a question of whether the allocation is proper, as I understand it.

Mr. Austin: Well, the question, Mr. Abbott, was only directed to determine if the witness knows it readily as to whether or not these deceased employees were annuitants or were they active employees?

Mr. Abbott: What difference would it make?

Mr. Austin: At the time they died.

Mr. Abbott: What difference does it make whether—

Trial Examiner Ballinger: The witness can't answer the question, so that is the end of it.

5029–30 Mr. Abbott: Well, I raise the objection that it is immaterial. I can't see how it is in any way material.

Trial Examiner Ballinger: Unless it is further insisted upon the question of materiality doesn't arise.

By Mr. Austin:

Q. Will you turn to page 92 of Respondent's Exhibit 100? You will note on page 92, Mr. Boatwright, a figure on the third line of $3,635.34 which is described as total salary charges to the jobber-gasoline and refined oil channel.

A. I observe the figure.

Q. How was that figure arrived at?

A. By a recapitulation of all salary items chargeable to jobber, naphtha, and gasoline, having first measured the proportion of that employee's time devoted to such sales activity.

Q. Have you the various items of salary which went into that item of $3,635.34?

A. Yes, sir.

Q. Can you state the amounts in various accounts going into that?

A. I could from my worksheet, sir. I could do that this afternoon. I couldn't do it right now. I don't have those worksheets with me.

Q. Where are they?

A. They are in the Detroit office.

5031 Mr. Abbott: Do I understand that you want him to do the mathematics whereby he gets the result of $37.45, Mr. Austin?

Mr. Austin: No, it is $3,635.34, which is the total of salary items going into various accounts and I want to know what the individual salary items are which were added up to make that total.

Witness: Mr. Austin, if that is to be requested in just that form would it be in keeping with your request if we didn't show the amounts by months?

Mr. Austin: I don't want them by months, Mr. Boatwright.

Witness: You will recall that all of this work had to be done by months.

Mr. Austin: Yes. At least it was done by months.

Witness: It had to be done by months, to do it accurately. Therefore, if your request is for an itemized breakdown of each component, contributing part of the amount $3,635.34 referred to, it would be of some assistance if we could furnish that either by years or by departments or in some recapitulated form rather than give—

By Mr. Austin:

Q. I thought that was the sum of—for instance, we are only talking about the jobber refined oil and gasoline column?

5032 A. Yes.

Q. And I thought that this was a sum of certain total annual salary figures going in the various accounts in that column, various items in that column.

For instance, up at the top it would be just the entire item or a number of accounts.

A. That part is easy. The more difficult part comes in the pulling out of the salary items of such accounts as E. L. A. Safety, Real Estate, and Tax, where we have both salaries and other operating costs thrown in the same account.

We have them segregated on our work sheets and they were segregated in recapitulating to get the total.

Q. So that I really didn't want it unless there was something you actually had on your work sheets.

A. We have it in total.

Mr. Abbott: How much of a job would it be to do it the way he wants it?

Witness: I don't know, without going back and looking at the work sheets, Mr. Abbott.

Trial Examiner Ballinger: Can't you pass this over, temporarily?

Mr. Austin: There may be other questions, your Honor. I assumed that the work sheets would be here. I think, in fact, without any request on my part, I think naturally
5033 in examining on the cost study it would be handy
for the witness to have it at hand and, furthermore, I didn't leave it to conjecture; I asked in one of my letters, I think that is in evidence, to counsel for Respondent, that the work sheets be here and be available so the witness could refer to them.

Trial Examiner Ballinger: Mr. Austin, you hardly expected them to have work sheets on all of Respondent's Exhibit 100 in here, did you?

Mr. Austin: I don't know how voluminous they are.

Witness: Your Honor, I brought a suitcase and two portfolios full.

Mr. Hanley: If your Honor please, I think I may state, your Honor, that we do have the work sheets here. Am I right about that?

Witness: You are correct. I brought a suitcase and two large brief cases.

Mr. Hanley: They are at the office. They are very voluminous, Judge.

Trial Examiner Ballinger: You mean you have them in Detroit?

Mr. Hanley: Yes, sir, and we can produce them in the Court Room after the luncheon recess if—

Mr. Austin: Let us proceed. It is a little difficult to get this stuff back in its proper order but maybe
5034 we can find out what is needed and pass up a few
of these things. If there gets to be too much of this, we may have to suspend, but I can go ahead at this moment. I don't think all of this is terribly important but—

Witness: May I point out that a work sheet will show a recapitulation but that it is made by comptometer operators who thumb through the work sheets and pick up items. It is not an itemization. If you request an itemization of the component parts, that has to be drawn off. It is not in the work sheets in any particular form.

By Mr. Austin:

Q. I don't know what you mean by component parts.

A. Stating the individual people who devoted some part of their time and their salary.

Q. No, I just wanted the salary figure in each account, Mr. Boatwright. Every account on Exhibit 101 has a number.

A. Yes, sir.

Q. And in certain of these accounts there are entries in the jobber naphtha and gasoline channels?

A. Yes, sir.

Q. And some are entirely salary and others aren't.

A. Yes, sir.

Q. All I want is the amount of salary entry in each one of those accounts in the jobber naphtha and gasoline channel. Just the amount in dollars.

5035 A. It could be furnished on some accounts with practically no effort. On other accounts it would require a segregation.

Q. But that segregation was made, was it not, for the purpose of arriving at this figure?

A. It was made.

Q. I don't want anybody's name or any division by months, or anything else; simply the amount in each account for the year 1940.

A. So that I may be clear: Is that a request that we do get such information?

Q. I would like to have it if it is readily available. By "readily available," I mean if the figures are actually in existence and do not require any computation; simply a matter of finding them on your work sheet. If that is true, I would like to have them.

Mr. Hanley: Judge, may we go off the record just a moment?

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Could you take Exhibit 101, Mr. Boatwright, and by going through the accounts, the account titles on that exhibit, state by accounts whether all or a part of the expense entries in that account represent salary charges?

5036 A. All or a part.

Q. Yes. I would like to know what accounts are all salaries and what accounts are part salaries.

A. Yes, sir. I shall read, first, the account numbers and then I shall designate whether expense items entered thereunder are entirely salaries or included, as a part thereof, salary charges.

Account 000, salaries; 001, salaries; 002, salaries; 003, salaries; 004, salaries; 005, salaries; 006, salaries; 008, salaries; 021, purely compensation paid on a commission basis.

Q. I would like to interrupt to say that I really intended to include all compensation in my question. While I only asked you about salaries, I intended to include commissions, so if you will carry your answer along on that basis, I will appreciate it.

A. I shall continue on that basis.

Resuming: Account 024, compensation paid largely on a commission basis, although there is a small component part incurred in the form of salaries at salaried stations.

Q. What is the nature of the expense going into Account 024, Mr. Boatwright?

A. 024 is incurred where a station runs out of some given piece of merchandise. Let us say it runs out temporarily of Stanolind gasoline. Now it may be with-

5037 out stock there, for any number of reasons. At least once a year it will run out because they are cleaning the tanks.

During that period when the agent does not possess stocks of that particular merchandise he will haul from an adjacent station. For that hauling the company compensates him on the basis—in most cases, in Detroit, it would be .4 of a cent a gallon for actually hauling from the adjacent station.

On the other hand, we would compensate the agent at the bulk plant from which he received his supplies a small amount for loading the other agent's truck.

Q. Are those "B" agents, you are talking about now?

A. They may be "B" agents and that is why I say this is largely commissions.

There is, however, some of this expense incurred among salaried stations but because the tanks are larger—just a moment. That is in the exhibit. I will have to check it.

Trial Examiner Ballinger: While we are checking this, we will take a recess for five minutes.

(A short recess was taken.)

5038 Trial Examiner Ballinger: Proceed.

The Witness: I think at the adjournment we had just been discussing account 024. Is that not in keeping with your recollection?

By Mr. Austin:

Q. Yes, and I think the question was, or if not, I will ask it now: How much, if any, of the expense in that account represents other than payments to commission agents or commission drivers?

A. A very small portion of it.

Q. 1 per cent?

Mr. Abbott: If the Court please, I don't think that it is fair to ask him to guess at the percentage. I object to the question on that basis.

Trial Examiner Ballinger: If he has information that will enable him to fix approximately some percentage, the witness may do so; if he hasn't, he may so state.

The Witness: Well, I would say that it would be approximately 1 per cent, with the expectation it would be under rather than over.

Does that meet your request?

Mr. Hanley: If your Honor please, may the Respondent reserve the right to check if this thing is of any importance at all?

Trial Examiner Ballinger: You may.

5039 Mr. Hanley: May we have the right to check?

Trial Examiner Ballinger: You may and offer any corrective testimony.

Mr. Hanley: Thanks.

A. (Continuing.) Account 025: This is a rental paid to the owners of truck chasses compensated on a commission basis. It is not a salary item but it is a payment to employees for equipment furnished.

030: There is a small item of salary expense entering into this account which results from compensation paid to a driver of the manager's car.

031: No part salary.
032: No portion salary.
033: No portion salary.
045: Part salary.
046: Part salary.

047: Part salary.
048: Part salary.
053: Part salary.
054: Part salary.

Q. Would you pause there, Mr. Boatwright, and tell me whether the salaries going into those operation and maintenance of vehicle accounts are the salaries of the employees working under the superintendent of equipment?

A. They are the salaries of the mechanics working 5040 in the garage.

Q. And the machine shop?

A. It is possible that the machine shop might be called on to aid one of the mechanics on particular jobs and, if so, it would be in there.

Account 055: Part salary.
060: Part salary.

Q. Will you pause a minute, Mr. Boatwright?

A. Surely.

Q. On Account 055, what is the nature of those payments? That is a payment to commission agents, is it not?

A. Vehicle tank expense other than mounted on company chasses are expenses incurred by the company in maintaining a tank mounted on a chassis owned by the commission agent. We paint that tank; we maintain it as we do tanks on our own equipment. Therefore, salaries thus incurred would be entered in this expense account.

Q. I see. Then that is an expense, I believe, which you previously described as incurred only in connection with commission stations, but it is also true, judging from your present description, that the payments going into the accounts are not made to—they are not commissions or payments to the commission agent?

A. Your statement is correct, they are not.

Q. If you will restate that, if you can, you can do it better, I am sure, than I can.

5041 A. Yes. The items of expense entering into this account are incurred by and paid by the company and do not form any part of the compensation of the commissioned driver or employee.

Q. But they are an expense which is incurred only with the operation of commission stations or deliveries by commission agents; is that not true?

A. Yes, sir.

Account 060: Part salary.
Account 060A: Part salary.
060B: Part salary.
060C: Part salary.
061: No salary item included.

In future discussion of the individual accounts, the statement "none" will mean that no salary or commission cost is included in the account referred to.

061B: None.
061C: None.
062: None.
063: None.
064: Part salary.
065: None.
065A: None.
065B: None.
065C: None.
5042 066: Part salary.
066A: Part salary.
066B: Part salary.
066C: Part salary.
070: Part salary.
077: None.
078: None.
079: None.

080: No charge to this account was incurred in th Detroit Field during the year 1940. However that expens had it been incurred would have been possible to hav included there in a part for salary compensation.

Account 081: None.
082: Part salary.
083: None.
084: Part salary.
087: None.
088: None.
088A: None.
088B: None.
088C: None.
200: All salary.
209: Expense not incurred in the Detroit Field durin 1940.
5043 201: None.
202: None.
203: None.
204: None.

205: Part salary.
206: Part salary.
207: None.
208: None.
215: All salary.
216: None.
217: Part salary.
220: Part salary.
225: All salary.
226: None.
227: Part salary.
240. None.
400: None.
410: None.
431: None.
500: Part salary.
501: Part salary.
502: Could be part salary.
507: None.
508: None.
510: None.

511: None with respect to salaries of company 5044 employees: that is, compensation to non-employees in the form of fees.

512: Explanation given under 511 applies.

Account 075: Part salary.

5045 Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

A. (Continuing.) Salaries do not constitute any part of the following expense classifications: Accounts 100, 101, 102, 103, 106, 107, 228, 110, 110A, 110B, 110C, 111, 112, 112A, 115, 116, 086, 086A, 086B, 086C.

Account 243, Federal Insurance Contributions, are payments on salaries and commissions and represent, therefore, a component of the compensation of the employes of the company.

Q. Are those contributions under 243 and 244 deductions from salaries or are they contributions by the company over and above the salaries paid? I am not requesting, now, whether they are compensations; just the nature of the expense.

A. This represents the portion paid by the company; not that which is deducted from the salary of the individual.

Q. Is a part of the salary of the individual deducted for Federal Insurance contributions or for State Unemployment Insurance?

A. Yes, sir.

Q. And is that portion which is deducted included in these accounts or is that included in the salary accounts?

5046 A. That portion which is deducted does not appear in any place on the form 189 as an expense to the company.

Q. Well, if it is deducted the company pays it to somebody, doesn't it?

Mr. Hanley: Judge, if your Honor please, we have refrained from making objections to any of these questions but this question is just too argumentative.

Trial Examiner Ballinger: Read the question.

(The question referred to was read by the Reporter.)

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

The objection is overruled. You may answer that question.

A. As an individual my total salary would be shown in the proper account. As an individual I receive that amount of salary minus the proper deduction. The Form 189 reflects my full salary compensation.

The 1% that is deducted is forwarded to a tax-collecting agency.

I fear I misinterpreted your question as to whether that one per cent would then be entered in Account 243. No. It is in the salary account in which my compensation is entered because it is a cost to the company and, as such, should be classified with my salary.

Q. Thank you.

5047 A. Account 244, the same explanation as was given for Account 243, applies.

245: None.

235: None.

The following accounts include, in part, salary compensation:

250, 255, 260, 265, 270, 280, 290, 295, 503, 505, 506, 513, 514, 515.

Account 520: This is an additional form of compensation expended to the employee of the company, both those members on the salary payroll and those on commission compensation basis: 525, the explanation given above under Account 520, likewise applies.

526: None incurred in the Detroit Field during 1940 under present day conditions. This would represent a combination of salary and commission allowances.

Q. In connection, again, with Accounts 243 and 244, is the company required to pay the contribution to Federal Insurance or to Unemployment Insurance on the payments made to commission agents?

A. Oh, yes.

Q. Are those treated as salaries for the purpose of the laws under which these two types of payment are made, represented by Accounts 243 and 244, if you know?

A. Do you mean are the commissions treated as 5048 salaries in the company's thinking, or—

Q. No. Those are payments that you have to make under the law to the tax authorities?

A. That's right.

Q. Are those payments figured on commissions as well as on salaries?

Mr. Hanley: I was wondering if we might not save a little bit of time: We will concede, Mr. Austin, that the "B" station agents are employes of the company and we pay everything that we are obligated to pay by virtue of either state or federal law in connection with employes, and we pay that on "B" station agents.

Mr. Austin: Thank you, Judge. I wasn't clear whether the law covered a compensation paid in the form of a commission or whether the law applied only to employes on a salary basis.

Mr. Hanley: No. It does, Mr. Austin. A commission basis is just simply a different method of figuring compensation for an employee.

By Mr. Austin:

Q. That completes your answer on the various accounts as to inclusion of salaries?

A. It does.

Q. Will you turn, please, to Respondent's Exhibit 99, Page 20?

5049 A. I have the page referred to.

Q. At the bottom of that page there is a reference to accounts 243, 244 and 520. Account 520 is entitled what, Mr. Boatwright?

A. "Annuities and Retirement Plan Expense."

Q. And is it the company's regular accounting procedure to distribute the amount of expense going into this account for the Detroit Field, as between the channels or company's Form 189, according to the percent or proportion of the salaries in each channel, in the other accounts on Form 189, to total salaries?

A. Your statement was not quite complete, Mr. Austin You said only salaries. We include salaries and commissions.

Q. Pardon me.

A. With that modification your statement is correct

Q. And that appears in the text at the bottom of Page 20, does it not, in Respondent's Exhibit 99?

A. It does.

Q. Now turning to Page 92 of Respondent's Exhibi 100, does the last paragraph on that page state the metho used to allocate a portion of the expense in Account 52 to direct shipment channels?

Mr. Hanley: Just off the record, please.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

5050 Trial Examiner Ballinger: On the record.

A. It does.

Q. Why were not the total salaries in each channel or Exhibit 101 used as a basis for the allocation of the tota expense in Account 520 to channels on that exhibit?

A. That would have been an improper allocation, as see it, in this particular case.

Now you will recall that we had different ratios applicable to different portions of the salaries. These ratio were applied to the salaries of the individual whose tim had been measured. Then the percentage of time devote to these particular channels was then applied to that portion of expense so determined.

Had we taken the sum-total of the salaries as our allocating factor, the probabilities are we would have reache a result which closely approximated that which is reported I am not sure it would have been exact, however, becaus a part of the total salary would have been included a different percentage rates; thus, a man in a lower salar bracket would have applicable the two percent coverin his entire income. A man in the bracket above that woul have a different percentage factor applicable to his income and the application of these rates had to be base on the individual salaries and then because we had a distribution of effort of individuals receiving the salary, 5051 we applied that distribution of effort so that we could secure the allocation of this expense in keeping with the manner in which the expense was incurred.

You raise a question. I am not sure that it would change by any appreciable amount had the suggested means of allocation been adopted but the one that was adopted is an extremely accurate one.

5052 Q. Well, on the original allocation in the regular accounting procedure as shown on page 20 of Respondent's Exhibit 99, you state that you allocated this expense to channels on the basis of all salaries and commissions in each channel?

A. Yes.

Q. Now, my question was, if that is a proper method of allocation there and sufficiently accurate, it would have seemed that, if I may make this comment—correct me if it is not so—but it would have seemed to me that the same method could have been used for Exhibit 101, in fact, with a great deal more ease and perhaps a more accurate method than which you have described. My question was simply why was the one method used for the original accounting procedure and the second method used for Exhibit 101?

Mr. Hanley: Just a moment. I am sorry, your Honor, but I just do object to that question. It is argumentative.

Trial Examiner Ballinger: The objection is overruled.

A. Well, your statement that it could be done with a great deal more ease is your stumbling block, as far as I am concerned. The process by which we worked this out led to an automatic allocation which I contend was entirely proper.

Q. Is it true, Mr. Boatwright, that the method used 5053 for Form 189 in allocating this account between channels as described on page 20 of Respondent's Exhibit 99 was not used in the present cost study in making the allocation to direct shipment channel?

A. In allocating among the three direct shipment channels, the procedure was used not exactly the same procedure as is used in the allocation among the tank wagon reseller, tank wagon consumer, and the Other Methods channel on our Form 189.

Q. Now, referring again to the paragraph at the bottom of page 20 on Respondent's Exhibit 99 and to the statement that the charges in Account 243, 244, and 520 are allocated to channel on the basis of all salaries and commissions in each channel to total salaries and commissions for the corresponding month, can you tell me, Mr. Boatwright, what was the total of all salaries and commissions in each of the channels on Form 189 for 1940?

A. I can secure that. I do not have it with me.

Q. Well, that I would like to have.

Mr. Hanley: Off the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. I would like to have the witness state whether 5054 those figures were not necessarily used in making the computation which is described at the bottom of page 20.

Mr. Hanley: Is that something that doesn't appear in 189?

Mr. Austin: No, it does not.

The Witness: Is there a question pending?

(The question referred to was read by the Reporter.)

A. Yes, they were used, and in our illustration we used those which applied to the month of January.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Now, in your worksheets, Mr. Boatwright, do you have the figures for the total amount of salaries and commissions in each of the channels on Respondent's Exhibit 101? And before you answer that, I can recall your attention to the fact that as to the three direct shipment channels, those figures are already in the record. So now I am only asking you whether you have the total salary figures for the tank wagon reseller, tank wagon consumer, and the Other Methods, and Automobile Supplies channels on Exhibit 101.

If you are not clear as to what I am referring to: A moment ago I asked you for the total salary figures in the various channels on Form 189. On Exhibit 101 5055 certain salaries were removed from the 189 channels into the direct shipment channels. We know the amounts that were removed. That is already stated in Exhibit 100, but I wondered whether the total remaining salaries in the original 189 channels were available or are available.

A. My only question is whether I have the dollar value or the ratio among channels. I couldn't answer that at the present time.

Q. Well, if you have that, I would like it; if you haven't, I will be satisfied with the totals on the original 189 channels which were the measuring factors in reaching the computations on Account 520.

A. I am sorry. Your antecedent again is not clear to me. By that do you mean ratios or do you mean the total salary items by channel use in our regular accounting procedure, to allocate these accounts among the three channels, tank wagon reseller, tank wagon consumer, and Other Methods.

Q. Yes. I mean the total salaries.

A. You mean the dollar value of salaries?

Q. That is right. The allocation is made upon dollar value, is it not?

A. Yes, sir. And by salaries, now, we both understand we are still including commissions?

Q. Salaries and commissions.

A. Thank you.

5056 Q. Mr. Boatwright, while we are on that, I understand you are going to look up those figures, and you just indicated that you might also be able to tell me the ratios or percentages of removal from the 189 channel to the direct shipment channel, so that perhaps if I had those by applying it myself we could find out how much salary is left. Is that a correct summary of what you intended to say a minute ago?

A. Well, I merely stated I wasn't certain which of the two I had in my worksheet. Naturally if we have the total dollar value, ratios are simply a process of calculation. You may have either then.

Q. Well, if you have the total dollar value of the salaries on the 189 channels, then the next thing would be to find out how much of those has been taken out so we would know what is left in the original 189 channels.

A. Oh, yes.

Q. So—

A. And that is clear in our Exhibit 100.

Q. Yes. Well, I don't know. Is it?

A. Yes, it is.

Q. Well, you know what I have in mind, anyway, right at the moment?

A. Yes.

Q. So I will pass over it.

A. Yes, I think I understand exactly.

5057 Q. Did I ask you for the total of all salaries and commissions in the Detroit Field for 1940?

A. I don't recall any such request.

Q. That is the other measuring factor mentioned at the bottom of page 20 on Respondent's Exhibit 99, is it not?

A. That is correct.

Q. So that I would like to have the total as well as the component parts that we have just discussed?

A. May I ask to be sure—

Mr. Hanley: May I clearly understand this? Is this a request now, Mr. Austin?

Mr. Austin: Yes, it is a request for certain material that I understand is in worksheets.

The Witness: I merely want to be certain that by your request you mean charged to the Detroit Field or you mean incurred in the Detroit Field. That is my uncertainty.

By Mr. Austin:

Q. I thought I meant incurred in the Detroit Field, Mr. Boatwright, regardless of whether it was paid from the general office or not but—

A. Well, that would still be an easy problem, but your question is for the sum total of salaries by channel, which would include in part my salary. I am on the general office pay roll.

Q. Well, in the allocations made for Account 5058 520 and 243 and 244, are any of the salaries included in the general office accounts used? Isn't this allocation one which we are here discussing made upon the basis of all salaries and commissions in the Detroit Field to all salaries in each channel or all salaries and commissions for the corresponding month?

A. I think that is entirely correct.

Q. I am glad you mentioned that because I see that it is not stated on page 20 of Respondent's Exhibit 99 as to what salaries are referred to; the exhibit simply says "all salaries and commissions in each channel to total of all salaries and commissions for the corresponding month." So I would like to have you state now what salaries and commissions are referred to.

A. That I shall have to get. I would have to check that. I can't answer that from memory.

Q. Well, do you know whether salaries and commissions paid to employees in Chicago and then allocated to the Detroit Field in part are included in the reference on this page as to which we are referring?

A. Again I should have to check.

Q. I think somewhere, Mr. Boatwright, in the exhibit —I won't attempt to turn to it at the moment—I think you stated that wherever general office expenses, which include all salaries, are charged to a field that that salary expense includes everything added on to it in the
5059 nature of insurance contributions, unemployment insurance, or annuities, and also such expenses as traveling expenses, depreciation of vehicles, everything assigned to or due to the work of that employee I understood was added in at the time the expense of that department was allocated to the Detroit Field. Can you tell me whether that is true as a general rule?

A. Your statement is substantially correct. Whether that conforms exactly with the terminology I used, I don't recall.

Q. Yes.

A. But I accept your statement.

Q. Wouldn't it follow from that, that none of the salaries of employees in the general office would be used as a basis for allocation of annuities and retirement plan expense in the Detroit Field?

A. Yes, Mr. Austin, it would, but when you stated your question you placed emphasis on the "all" salaries. That is very comprehensive.

Q. Well, "all salaries" is the term used on page 20 of Respondent's Exhibit 99. Now, I use it in the same sense that you used it in the exhibit. If that will clarify that—

Mr. Hanley: Is that a question?

Mr. Austin: It is an explanation, Judge, to the witness, in view of what I am asking him for.

The Witness: Well, the allocation factor on these accounts is determined upon the salary items as reflected on
the Form 189, but the mechanic who spends part of
5060 his time in E.L.A., part of his time in some other,
and part of his time in still another channel, we won't allocate and follow each of those segments of his time to determine the allocation factor. The allocation factors are based upon the salary and commission expense classifications as revealed by the 189.

Q. And that is what you would be able to supply me, isn't it?

A. Yes, we would be able to.

Q. Why was none of the expense in Accounts 243, 244, and 520 charged to Automobile Supplies?

A. I don't know.

Q. All of the expense going into those accounts is determined by the amount of salaries or commissions paid company employees; is that correct?

A. Yes, sir.

Q. And is it not true that many of the employees of the company whose salaries are involved in determining the payments to be made in Accounts 243, 244, and 520 spend a part of their time on Automobile Supplies?

A. They do.

Q. Then do I understand that you have no explanation as to why none of the expense in those accounts is charged to Automobile Supplies?

A. The only explanation—

Q. Pardon me—following the distribution of sal-
5061 aries of the employees involved?

A. The only explanation that I could offer is that the general accounting department has not deemed that the salaries—the salary items chargeable against Automobile Supplies are of sufficient magnitude to change their allocation procedures.

Q. At the bottom of page 20 again on Exhibit 99, when the statement is there made that the charges in these three accounts are allocated to channel on the basis of all salaries and commissions in each channel to total of all salaries and commissions for the corresponding month, the channels referred to there do not include the automobile supplies channel?

A. No, I was referring to the petroleum products channels.

Q. Still referring to Account 520, annuities and retirement plan expense, page 92 of Respondent's Exhibit 100, we find a statement that under the annuities and retirement plan "2 per cent is applicable to the first $250 per month salary and 5 per cent is applicable to any income over that amount."

Are those amounts of 2 per cent and 5 per cent company contributions or are they deducted from the employee's salary?

A. They are company contributions.

Q. Is there any deduction from the employee's salary for the purpose of annuity and retirement plan similar to the deduction which you described a while ago for the payment of taxing authorities, Federal and unemployment insurance?

5062 A. Oh, no.

Mr. Hanley: If your Honor please, off the record.

The Witness: Wait a minute. I beg your pardon. I would like to correct that statement. There is a deduction from my salary as a contribution. You see, this is all handled through an insurance company, and the company pays part and I pay part. So there is a deduction from my salary.

By Mr. Austin:

Q. But is that deduction from your salary nevertheless included as a part of your salary on the accounting forms?

A. It certainly is.

Mr. Hanley: Judge, how is all of this line of examination material? May I inquire? What difference does all of this make?

Mr. Austin: It is directed to an inquiry into the propriety of using the expense in Account 520 as a basis for cost justification or a difference in cost between jobber customers and between marketing to jobber customers and tank wagon customers.

Mr. Hanley: So, if your Honor please, are we now to understand that the attack of the Government has shifted to an attack upon the primary method of the Respondent in keeping its books as reflected by the Form 189 which is kept and made up by each of the 27 fields of the Respondent? Is that the situation now?

5063 Trial Examiner Ballinger: Judge, I take it, that is a question—

Mr. Austin: Why, yes, Judge. I only object to the word "shifted" because I think that we are here confronted with Exhibit 101, a cost study, which involves seven different channels, four of which were on the 189 and three of which were not. I am just as much interested in what methods of allocation were used by the company as described in its Exhibit 99 as I am with those that you are describing in Exhibit 100.

Mr. Hanley: All right: I think I understand. The bait now centers on a three or four week study by the Commission of the oil business as against fifty odd years in the oil business by the Respondent.

Mr. Austin: Well, at the moment I am not attacking anybody. I am just trying to find out what these expenses are.

Mr. Hanley: This whole attack goes to 189, does it not, Mr. Austin? Let's just get it down so we know what we are talking about, please.

Mr. Austin: It goes to that equally as much as it goes to the allocation shown in Exhibit 100.

Mr. Hanley: Yes.

Mr. Austin: In other words, the two combined result in Respondent's Exhibit 101.

5064 Trial Examiner Ballinger: Proceed.

By Mr. Austin:

Q. Then, Mr. Boatwright, do I understand that the amount of $26,226.38 as referred to in that paragraph is entirely a company contribution over and above and aside from the salaries to the employees?

A. It is.

5065 It is what you have referred to here as a field expense, is it not?

A. That's right, but a field expense of that nature would be reported to the General Office and if paid to the General Office, this one receiver could be paid and then charged back to the field. I don't know who writes the check.

Q. I don't care who pays for it, either. The idea of it being a field expense—

A. It is a field expense.

Q. You also refer to a figure of $130,787.89.

A. Yes, sir.

Q. As a "General Office payment of past annuities and accumulation for future reserves"?

A. Yes, sir.

Q. That figure is the amount charged to the Detroit Field only, is it not?

A. Yes sir.

Q. Will you explain what is meant by "payment of past annuities and accumulation for future reserves"?

A. It is difficult for me to select terminology to more adequately describe that.

The company, in an annuity plan or death benefit plan, in part, and the employes in part, are accumulating toward a reserve for past services of employes of the company and we make payments into the fund of the insurance company to take care of the requirements the same
5066 as any insurance policy that I am acquainted with.

Q. Well, the two percent applicable to the first $250 and the five percent applicable to income over that amount is the company contribution which is determined by the amount of the company contribution which is determined by the amount of the salaries of the Detroit Field, is that right?

A. Yes.

Q. So that we have, there, a company contribution to the retirement and annuity fund of the company?

A. Yes sir.

Q. How, in addition to that $26,226 which the company has paid into the fund, there is here described a much larger amount of $130,787.89. I would like to have you explain the difference between the so-called field cost and the so-called general office payment, and I would like to know what determines the amount of the general office payment?

Mr. Hanley: Judge, I am just wondering, while listening to this line of examination, if it would be of any interest to your Honor and to the Commission if you were fully informed as to what the— I don't know whether you call it the pension plan or retirement annuity plan or what it maybe—that is used by our company, and the method that is used in determining the annuities for the various individual employees?

Trial Examiner Ballinger: The Examiner does not
5067 understand for what reason the questions are being asked but I assume that they are being asked for

the purpose of establishing some basis for some attack upon the report submitted; that is, the survey submitted; and this is cross examination and if there is an objection, it is overruled.

Mr. Hanley: I am not objecting to the question at all, Judge. I am just hoping that I might be helpful. If that is important I would be glad to produce that sort of information. I am not objecting to this question.

Trial Examiner Ballinger: The witness hasn't yet stated whether he can give it now or whether it will be necessary for him to look it up.

Witness: Well, Mr. Austin's question, as I recall it, was what determines the magnitude of the general office portion of this account, is that correct?

Mr. Austin: Yes, that's right. I want to know all about, as Judge Hanley put it.

A. I couldn't give that to you and I think, as Judge Hanley has suggested, that it would be very much better for me to have at least available a copy of the plan so that I could make references thereto, as I do not recall all of the details thereof.

Q. Yes. That is simply stated here in this exhibit as a company contribution for past annuities and accumula-
tion of future reserves and that doesn't indicate to
5068 me whether or not it is an expense which properly can
be used as a basis for this cost justification.

Trial Examiner Ballinger: Does counsel for the Commission desire that information?

Mr. Austin: Yes, I most certainly do. It is a large item and I don't know what it is.

Trial Examiner Ballinger: Can you look it up?

Witness: I don't know whether there would be a copy of the plan in the Detroit office, or not. I think there is. I could find out during the noon recess.

Mr. Hanley: I assure your Honor we can get it; whether it is in Detroit or Chicago. We will get it if it is desired.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Hanley: May I state that the Respondent expects to call Mr. Warmack on the Respondent's case and I assume he will be here. I just don't want to have to issue a subpoena. I would just as soon he be here.

Mr. Austin: He will be here when Mr. Boatwright gets through and I don't assume you will want him until Mr. Boatwright gets through.

Mr. Hanley: Oh, no. I want him when we reach him.

5069 **Trial Examiner Ballinger:** He will be available.

Mr. Hanley: Thank you.

Mr. Austin: I move that we adjourn until 2:30, your Honor.

Trial Examiner Ballinger: The motion is granted and now, at 12:45 P. M., the hearing stands in recess to be reconvened at 2:30 P. M.

(Whereupon, at 12:45 P. M., a recess was taken until 2:30 P. M.)

5070 Afternoon Session.

2:30 P. M.

Trial Examiner Ballinger: Come to order.

Mr. Hanley: If your Honor please, may I have the permission of the Court, and Mr. Austin, to interrupt? There are a number of requests for records and files that the Respondent has been requested for and I would like to supply those which we have ready at this time, if your Honor will allow me. I am just fearful if we wait too long we may overlook something.

May I proceed?

Trial Examiner Ballinger: You may.

Mr. Hanley: Just before the lunch hour it was requested the Respondent supply the formula for employees' death benefits plan and the formula for the retirement plan. I now produce the two documents referred to.

Yesterday there were requested by Mr. Austin completed forms of 189 for the Detroit Field for the years 1939 and 1940. If your Honor please, we are prepared to furnish those forms. However, it may be in your Honor's recollection that we did request that they not be made part of the record unless counsel for the Commission feels that it is essential that they be introduced in evidence. We have them and they may be examined by counsel but unless it is felt that they should be a part of the record, we
5071 just prefer not to have them as part of the record.

Trial Examiner Ballinger: The Examiner will pass upon that question when it arises, both as to the introduction of the forms or any of the contents of the forms.

Mr. Austin: 189?

Mr. Hanley: Yes. Your first request, Mr. Austin.

Mr. Austin: Yes, 189's for the Detroit Field.

Mr. Hanley: Detroit Field for 1939 and 1940.

Mr. Austin: I think it will be necessary to offer the 1940 form 189 and all the material on that form is in Respondent's Exhibit 101 and 100 at the present time, although not exactly so arranged.

As to the form for 1939, my present intention is or was simply to mark it for identification but subject to examination. I did not intend to introduce it in evidence. In other words, I didn't intend to offer it until after I had a chance to see it, and I think probably not then.

Mr. Hanley: Well, if your Honor please, we now produce and hand to counsel for the Commission the forms 189 for the years 1939 and '40, and I don't care to reargue the thing.

Trial Examiner Ballinger: Mr. Austin, will you step up here, and you, Judge?

(The Trial Examiner and counsel confer out of the hearing of the Reporter.)

5072 Mr. Hanley: Now, on the record.

Trial Examiner Ballinger: On the record.

Mr. Hanley: Request No. 2 by Mr. Austin refers to all contracts for the sale of gasoline entered into between the Respondent and Ned's Auto Supply Company covering the years 1936, '37, and '38 or any parts thereof together with any riders or amendments thereto, and copies of any correspondence relating to or modifying the terms of these contracts.

We are unable, your Honor, to furnish anything in response to that request for the reason that there were no contracts, so far as we know. I am told that there may have been what we call a Form 461, which is nothing except a requirements contract for gasoline, and if there was any such contract, I am told that it had no modifications in it at all. It just meant the sale of gasoline at the tank wagon price. The half cent off business which you are concerned with here was a purely oral arrangement, and we just don't have any written contracts and we just haven't anything that we can give in that respect.

Mr. Austin: May I ask whether the Form 461 contract with Ned's is available, if there was one?

Mr. Hanley: I don't know whether there was one or not, Mr. Austin. If it would be helpful, I would be happy to furnish a copy of the Form 461.

Mr. Austin: That is in evidence.

5073 Mr. Hanley: I am rather inclined to think it is.

Mr. Austin: But I rather assumed that if there was a contract it might have been on that form, when I made the request. Ned's at that time was a tank wagon station.

Mr. Hanley: Will you accord me the privilege of investigating the thing a little further? I just made the inquiry this noon.

The Witness: Judge, contracts of the 461 type after no longer effective are not retained in the files for any period of the magnitude of five years. We clean our files periodically. I don't know the exact accepted time in the Detroit area, but it would be very unusual to find the usual [illegible] contract of that type five years after its termination.

Mr. Hanley: If your Honor please, I will make further inquiry and if there is anything in existence in the way of a written contract with Ned's, the Respondent will produce it.

Trial Examiner Ballinger: Isn't it sufficient for the purposes of counsel for the Commission to understand that, if there was a written contract, it was on that form?

Mr. Austin: Perhaps so. If I can establish that, I think I ought to and I will try to establish that by testimony or by someone who would be familiar with it. I take it that Judge Hanley has made an inquiry but that he isn't

5074 too sure himself right now whether even the 461 contract existed, so that, of course, I would like to find out definitely, but I am perfectly satisfied with what Judge Hanley has said for the time being.

Mr. Hanley: I am just repeating, Your Honor, exactly what I was told at the office.

Mr. Austin: Yes.

Mr. Hanley: I just don't know any more about it than that.

Now, off the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

5075 Trial Examiner Ballinger: On the record.

Mr. Hanley: In response to the Commission's request number 3 relative to transportation contracts, the Respondent is now prepared to produce and does produce all contracts in connection with the request which have not been heretofore produced and received in evidence.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Hanley: In respect of Commission's request number 4 having to do with books, records and accounts showing the total amounts of the salaries of the employees assigned to each of the persons whose salaries are charged to Account 000 for the purpose of allocation to all channels on Respondent's Exhibit 101; in respect to that demand, your Honor, we, of course, do have the records of the salaries of individual persons, which salaries were used by Mr. Boatwright and his associates in making the allocation.

Our people just feel very reluctant to make these salaries a matter of public record. I have no objection at all to Mr. Austin or Mr. Warmack or anybody for the Commission checking the use that was made of those figures but it just does seem to me that every purpose in this suit could be served if these gentlemen would look at the figures and check them, without the necessity being imposed 5076 upon us of actually putting them into the record.

Trial Examiner Ballinger: Hasn't Mr. Warmack checked these accounts?

Mr. Austin: He has seen the figures used and, I think, checked the methods used and the account allocation on some of the accounts but I wouldn't want to put in any salaries through Mr. Warmack unless I could put them in through the Respondent's witnesses.

Trial Examiner Ballinger: Without putting in individual salaries could you not lump these three or four salaries and would that be objectionable, if introduced in that form?

Mr. Hanley: No, Judge, I have no objection at all to, say, putting in a total item of salaries and the factoring percentage which Mr. Boatwright used in the allocation. There is no objection to that.

I assume that the dispute, if there is any, here, arises on the question of how we allocated; not on how much any particular individual was paid; and we are perfectly willing to disclose to Mr. Austin or your Honor or anybody designated by the Commission, all of the figures that were used, but we just would very much prefer not to make it a matter of public record. The figures are all available.

Trial Examiner Ballinger: These salaries approach a
trade secret and if counsel for the Commission can
5077 obtain what he is after, without including in the rec-
ord the individual salaries, the Trial Examiner would
suggest that course be adopted.

Mr. Austin: I can't obtain what I am after, your Honor, nor can I properly analyze the account without knowing the amount of the salaries that go in it.

Trial Examiner Ballinger: Can't you, if you know the total amount of the salaries of the Detroit Field?

Mr. Austin: No.

Mr. Hanley: I am just afraid I haven't made myself clear—at least to Mr. Austin. There isn't any objection to Mr. Austin, Mr. Warmack and your Honor, or anybody from the Commission, looking at these individual salaries. If you want to know Mr. Raupagh's salary, or John Doe, or whoever it is, it is there. We will show you that. All I hope to succeed in doing is having that thing kept off a public record. The figures are there. Each individual salary is there and we will disclose those to you.

Trial Examiner Ballinger: Pass that item over, temporarily.

Mr. Austin: Well, your Honor, Judge Hanley was speaking of Account 101 and that was not a request for individual salaries, even though we have been discussing indi-
vidual salaries. The request in connection with ac-
5078 count 101 was for a grouping of salaries. In other
words, as I understand it, that the Account 101 involves stenographic and clerical assistance to the employes whose salaries are included in Account 000 and I asked for a grouping of the salaries in 101 as they were assigned to the supervisory employes for the purpose of allocation in Account 101.

Mr. Hanley: That's another question and, if your Honor please, may I advert to that a little later because I am going to have help from Mr. Boatwright on that?

Trial Examiner Ballinger: You may pass that over.

Mr. Hanley: Number 5: a request has been made for information relative to the area served by the various tank wagon reseller salesmen in the Detroit area for the year 1937. I am just wondering, Mr. Austin, if you meant just what you said, there, or are you just concerned about these three—

Mr. Austin: Concerned about the three, but in asking for records I know of no way of getting information about the three without asking for all the records, but that's all I am interested in, in just these three salesmen.

Mr. Hanley: We are able to give you a very general picture of all of the records but we do have pretty specific information in relation to the three particular salesmen.

Mr. Austin: I much prefer that, Judge.

5079 Mr. Hanley: Then we are prepared to supply that.

In response to that request, your Honor, I now hand counsel a map of the Detroit Area which has on it certain red dots representing retail outlets upon which these three salesmen called and appended to the map is a list of the addresses of such outlets and a statement to the effect that in addition to calling on those outlets, they called on certain competitor stations.

Mr. Austin: That's very helpful, Judge. This, of course, is in connection with the 1937 cost study, Respondent's Exhibit 31-A to 31-Q.

Mr. Hanley: Number 6 is a request for the production of the Respondent's company Form 189 for each of the company's fields for the year 1940.

If your Honor please, we are prepared to produce that. That is a part of the company's records. Every month from every field, of which there are 27, a Form 189 is prepared. It is prepared just cumulatively through the years, so that December reflects the year's business in a particular field.

Trial Examiner Ballinger: The Trial Examiner understood that counsel for the Commission—correct me, if I am wrong in this—that all counsel desired was one item from each one of those forms. Is that correct?

Mr. Austin: That is correct, as stated in the letter 5080 of January 4th, which was put in evidence yesterday.

Mr. Hanley: If I may proceed, your Honor, I think we have it in that form. We have prepared a map showing the area in which our company, under its marketing operations, broken down into the areas of the 27 fields, and we have indicated on that map the particular figure which is the reseller channel cost of selling gasoline in each of those fields for the year 1940. We are prepared to supply that to the Commission, your Honor, and in so doing I wish to say that I think it is wholly immaterial and do not believe that it is pertinent at all, but—

Trial Examiner Ballinger: That question will arise when it is offered.

Mr. Hanley: —it has been requested and we are prepared to supply it.

The Respondent now hands to counsel for the Commission a map which reflects the total cents per gallon marketing cost for tank wagon reseller channel of the Respondent for the years 1939 and 1940 and attention is called to the fact that as reflected by this statement the lowest cost in cents per gallon for marketing under the reseller channel is the cost in the Detroit area, out of 27 fields.

A request was made for the advertising copy for newspaper and billboard advertising of the Respondent, 5081 your Honor.

We are prepared to supply the scratch sheets, or whatever they call them, copies at least, of whatever we used in the way of advertising. In supplying this file, if your Honor please, I request that we may have the opportunity to have Mr. Boatwright explain just what it means. I understand that everything we used in the way of an advertisement is here but I am not personally familiar with just how it may have been used.

Trial Examiner Ballinger: Is that the official file?

Mr. Hanley: I so understand, your Honor, that it is our office copy and our official file.

Witness: It is, your Honor.

Trial Examiner Ballinger: It will be understood that no portion of this file will be physically offered in evidence. Copies or photostats may be made and introduced. The original file will be returned to the Respondent.

Mr. Hanley: We greatly appreciate that, Judge. It is our official file. We don't want to strip it.

Now, your Honor, I reserved a question for Mr. Boatwright on this request number 4, relating to a breakdown of salaries, and before taking up the last request may I ask Mr. Boatwright to please explain what our position is in connection with that request?

5082 Mr. Austin: What request is that?

Mr. Hanley: Number four.

Trial Examiner Ballinger: Off the record.

(There was discussion off the record.)

5083 Mr. Hanley: On the record, please.

Trial Examiner Ballinger: On the record.

Mr. Hanley: It is now understood by counsel for the Respondent that the second portion of request No. 3 made by Mr. Austin has to do with certain freight bills for shipments made to jobbers named in the Complaint, and bulk stations in Detroit.

Am I right about that, Mr. Austin?

Mr. Austin: It relates only to tank car shipments to the four jobbers, because at that time the bulk stations of the company were being supplied by transport truck. This refers to 1939.

Mr. Hanley: If your Honor please, in respect to that particular request, I have to report that upon receiving it I made inquiry of our people as to what we could do in response to it; and just at the time we were talking we were in an office about 25 feet square, and the accountants told me that the records involved would fill one side of that office. I had in mind and I asked if we could not ship our freight bill records up here to Detroit so that Mr. Austin or whoever wanted to could take a look at them. I had a couple of trunkfuls in mind but they told me it would fill one side of the 25 foot office. The fact is, as it is reported to me, that our manufacturing and accounting department keep these freight records. They are kept by days; 5084 they are not segregated by customers or by locations but every day's freight bills throughout the entire territory in which we market come in for that day and may be three inches high or four or five or sometimes a foot high, and they just keep those in that way for the entire year. We just haven't any means of finding out what freight bills apply to any particular customer unless and until a detailed study is made of that whole group of bills. Now, they are available and the Respondent makes them available to the Commission, but we haven't segregated them. We are unable to segregate them. We don't know exactly what Mr. Austin wants, but all of the freight bills are available.

Trial Examiner Ballinger: The Examiner recalls that counsel for the Commission offered in evidence purported copies of certain freight bills with a statement that they had been furnished by a representative or representatives of the Respondent to a representative of the Commission. Objection was made to their introduction by counsel for Respondent and the documents were at that time rejected subject to further proof.

Do these documents that have been called for or requested relate to the same transactions?

Mr. Austin: Yes, your Honor. At the time that I pro-

duced certain sheets which were attached to invoices originally and which was to be furnished by the Respond-
5085 ent, those were objected to by counsel for the Respondent on the ground that they were not the best evidence, and I have got the references to that testimony right here.

In any event, counsel for the Respondent offered to get what he considered better evidence and produce it, and the purpose of the request was simply to call that to his attention and to ask the Respondent to produce evidence of the freight rates which they pay, which would be from their records and which would be satisfactory to them.

Mr. Hanley: Well, now, Judge, I am not just exactly sure what Mr. Austin wants, but if he were to specify them, I can assure you of this—I am repeating now what I have been told by my own accounting people—that it would take several clerks many weeks to extract those particular items from this great accumulation of records.

Trial Examiner Ballinger: The copies or purported copies which Mr. Austin offered in evidence indicate the date of the transactions, the dates of the transactions, and I assume that it wouldn't require a great amount of work to run those down.

Mr. Hanley: That is just a shipment or two, just one or two shipments.

Trial Examiner Ballinger: My recollection was it was five or six. Is that right?

Mr. Hanley: Well, there may have been.

5086 Mr. Austin: I think I offered six or seven of them, and, furthermore, according to those forms the freight rate paid was the same, and I was under the impression, and just from those forms, from the group—I have a whole thick bunch of them—incidentally, I only offered six but Respondent gave us a whole book of them—that the freight rate was the same. If the freight rate was the same for the whole year, why, I don't see that it is necessary to go through so many records or to bring them, if there are sample freight bills for five months of the year, particularly if they show the same rates would be amply sufficient.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Mr. Hanley: May we go on the record, Judge?

Trial Examiner Ballinger: On the record.

Mr. Hanley: I think Mr. Boatwright has solved the quandary for us here. He tells me that it would be possible without too great an amount of labor, by tracing certain shipments through by invoice numbers, to pull certain sample freight bills out of this vast number that I have told your Honor about, and that that could be done in some reasonable length of time without the necessity of reviewing the entire volume of freight bills, and that it will serve as a check test of what we agreed to tell you are the freight rates that we paid. If that will be satisfactory, we will undertake that, your Honor.

5087 Trial Examiner Ballinger: Will that be satisfactory, Mr. Austin?

Mr. Austin: Yes, and then I can examine on those. I would like to have something before me when I put them in.

The Witness: Now, may I ask: You said you would want a sample. Would you designate the nature of the sample that you would like?

Mr. Austin: That would depend partly, Mr. Boatwright, on whether the rate varies. If the rate is the same or of very infrequent variation as to each one of the four jobbers, then the sample could be relatively small, and the least I would like to have would be some bills for each one—in other words, bills showing the rate on shipments to each one of the four jobbers and a bill showing each rate, if there was more than one rate charged to each jobber during the year. Now, if the same rate was charged for all four jobbers, during the entire year, that would only involve the bringing in of four freight bills, one of each jobber, and upon your testimony that those are representative of the entire year and that there was no change in the rate, I would accept it. If there were changes in the rate, then I would want different bills showing the different rates.

Mr. Boatwright: I see. So you want the sample to be representative in two ways: First, among the different receivers of the merchandise; second, over a period of time so as to detect any change in the published freight
5088 rate that may have been made effective during the year '39. Now, that request is limited to the year '39; am I correct in my understanding of that?

Mr. Austin: That is correct. It is the year '39 but it includes all charges paid to railroads in connection with either the shipment of gasoline to the jobber or the return of empty tank cars, if there was a charge on that.

The Witness: There is no charge on that, Mr. Austin. It is just the shipment that has the charge.

Well, then, in keeping with that we shall select, let us say, two tank cars to each jobber on approximately the 15th of each month during the year and trace those particular units through, and by taking it at the 15th, you will notice that there is no bias. I am just taking any arbitrary date. Would that meet your purpose?

Mr. Austin: Yes, even one tank car on the 15th of each month.

The Witness: That's better.

Mr. Austin: However, there is this additional consideration: There are three kinds of gasoline and there are different types of tank cars. I don't believe that makes any difference in the freight rate, but I don't know.

The Witness: It does not.

Mr. Austin: I would like to have that checked so that whoever is on the stand when you introduce those can answer questions along those various lines of variation:
5089 the different grades of gasoline, and so forth.

The Witness: The different grades of gasoline go at the same rate. However, that will be completely checked and verified.

Mr. Austin: I have a lot of those other acknowledgments and invoices that relate, some to Stanolind, and some to Ethyl, and some to Red Crown, and they were divided up that way when given to us and divided for each period in the year according to price changes, meaning gasoline price changes.

The Witness: Yes.

Mr. Austin: And the ones that I introduced before were picked out at random to represent as many different situations as possible, so you might bear that in mind in following these through or, at least, be ready to testify as to any variations in rates due to different size of tank car or for any other reason of that sort.

The Witness: Yes, sir.

Trial Examiner Ballinger: Can't you pass on to the next item?

Mr. Hanley: I am not sure that it is clear before the Court, Mr. Boatwright, as to this request in connection with salaries, Account 000 and 001, if there is something that we are required to furnish there that I haven't sufficiently offered. I would like to have that explained.

The Witness: Well, frankly, I am not entirely cer-
5090 tain on the question, as I read it, as expressed there.

and as I read the question as expressed in Mr. Austin's letter which is now Exhibit 104, because the statement in the letter, Commission's Exhibit 104, differs from this. Whether it is intentional that there should be a deviation or whether in the spoken language we didn't state it exactly—

Mr. Austin: There was an error, either typographical error or I made a slip of the tongue. I don't know which it was, but in the transcript you showed me a minute ago, where it says 000 it should say 001.

Mr. Hanley: They are both here.

Mr. Austin: In dictating to that transcript I did not intend to mention Account 000 at all.

Mr. Hanley: Oh, I see. Then it is a mistake.

Mr. Austin: This says "by that I mean." This is supposed to be an amplification of that first sentence, and where Account 000 appears here, it should be Account 001.

Mr. Hanley: Well, that may clarify a great deal. I don't know.

Mr. Austin: I explained that to Mr. Boatwright a minute ago.

Mr. Hanley: With that correction in mind, Mr. Boatwright, what have you to say about our ability to comply with item No. 4?

Mr. Austin: And also if Mr. Boatwright says that
5091 the request on the record is different from the request under point seven of Commission's Exhibit 104, I would be glad to have him state where the difference lies or what he doesn't understand about it, if anything, because no difference was intended.

The Witness: Well, the difference was in the reference to the account numbers.

Mr. Austin: I see.

The Witness: Which do not correspond with those given in your letter, and that was my difficulty. I don't—or didn't know whether that was an intentional change of account designation or whether there was an error somewhere.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Hanley: In respect of request No. 4 as now modified to refer to Account No. 001, I am informed that our accountants are able to group certain salaries in line with the request without distinguishing any particular individual salary. The Respondent is prepared to make such a grouping and a disclosure not only of the grouping but of the individual salaries to counsel or accountants for the Commission, but would like the privilege of doing that without putting the individual salaries in the record.

Mr. Austin: Do you object to putting the group-
5092 ings in the record?

Mr. Hanley: No, we will put the groupings in.

Mr. Austin: May I ask a question of Mr. Boatwright?

Mr. Hanley: Surely.

By Mr. Austin:

Q. Mr. Boatwright, was it necessary for you to have that information about those groupings, segregations of those groups in Account 001 for the purpose of allocating the salaries or a part of the salaries in Account 001 to direct shipment channels in making your cost study?

A. It was necessary, yes.

Q. So that you have those groupings in your worksheet somewhere?

A. Yes, sir.

Q. And you can give me the groupings assigned to the supervisory official in each case whose salary was used as a basis for allocating the salaries of the employees under him?

A. May I alter your terminology?

Q. Yes.

A. Only to this extent: Where you say "whose salary was used"—"whose distribution of effort" so that we will be consistent throughout.

Q. Yes.

A. That can be done, yes, sir.

5093 Q. Well, may I ask you there: Just as an example, take Mr. Raupagh and assume a certain percentage of his salary appears in each one of these six petroleum product channels on Respondent's Exhibit 101. Now, would the salary of his stenographer be allocated between those channels according to the percentages of Mr. Raupagh's salary in the various channels or according to the hours of Mr. Raupagh, or would it make any difference?

A. It wouldn't make any difference.

Q. It would be the same thing?

A. When you are referring to salary, you are referring to the end. When I refer to the effort, I am referring to the means of arriving at that end, that's all.

Q. I see. Now, it is the same thing in this particular instance because of the fact that these salaries were probably uniform and in most cases only—well, I won't continue that except to ask you whether you agree whether these salaries or hours for this particular purpose would be material in the result reached?

A. The only object of my comment was so that the record would be consistent throughout and clearly understood in terms of the terminology used in the exhibits.

Q. Yes. Thank you.

Mr. Hanley: Now, if your Honor please, the only remaining request here, so far as I know, is that in relation to a demand that the Respondent produce books and
5094 records and files showing the gallonage of sales of Respondent in 1940 of each product sold through commission agents or by commission drivers, and so forth. The answer, your Honor, to that inquiry, is contained in this group of files we sent up here (indicating). I frankly don't know whether there is any way we can give it to Mr. Austin other than to just let him struggle with the records that we have to struggle with. I just don't know. I just think it is good education for Mr. Austin to take a look at what we have been doing for two years.

I didn't do this thing in order to be dramatic at all, Judge, but that's what we have to do to answer these questions, and I don't know whether we can make any better answer or not. It is there. Those are the original records.

Trial Examiner Ballinger: Now, you refer to four large truckloads?

Mr. Hanley: Yes. I think I should say on the record that I am now referring to at least two truckloads of original records which Respondent has furnished.

Trial Examiner Ballinger: How about these over here (indicating)?

Mr. Austin: Mr. Boatwright, on that point, don't you have any existing records which show the amount of gallonage going into the tank wagon channels upon which commissions were paid to "B" station agents and drivers?

The Witness: We have records which do sum-
5095 marize and bring together the results of this group
of employees. We do not have the records quite
as in the form that you ask for them.

Mr. Austin: Did you know that the request on the record yesterday modified the request on Commission's Exhibit 104 to the extent that I did not now ask for the commissions paid on the per gallon basis on the various products? I only asked for the total gallons now.

The Witness: Frankly, I don't recall at the present moment the modified meaning of that.

May I go off the record for just a moment?

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

5096 Trial Examiner Ballinger: On the record.

We will have a recess for five minutes.

(A short recess was taken.)

Trial Examiner Ballinger: Come to order.

Mr. Hanley: If your Honor please, in the statement I am about now to make, I wish to state by way of preface that I understand that Mr. Austin is going to make a modified request, but so far as the request itself is concerned now on the record the Respondent is unable to comply any further than the Respondent has complied by furnishing the original records that are here, physically present in the Court.

Trial Examiner Ballinger: Does counsel for the Commission desire to modify his request?

Mr. Austin: I would rather say explain it, than modify it, but I will restate the request, your Honor.

By Mr. Austin:

Q. Can you supply, Mr. Boatwright, the total gallonage of the various classifications of products sold through "B" stations or commission drivers entering into and accounting for the total commissions entered in Account 021 in the tank wagon reseller and tank wagon consumer channels and by classification of products I mean gasoline, naphthas, refined oils and tractor fuels. If there are any other classifications of products in those channels, I wish you would so state. Otherwise, that is the extent of the request.

5097 Trial Examiner Ballinger: Is this limited to the Detroit district?

By Mr. Austin:

Q. To the Detroit Field for 1940 and I am only asking for annual total gallonage in channels, not the gallonage by individual stations or by months.

A. The gasolines and naphthas would be a consolidated figure of the two classifications. Will that still meet your request? In other words, there may be some stove and lighting gasoline sold to a farmer to use in a gasoline burning lamp. That will be in the classification of gasolines and naphthas without showing separately.

Q. Before answering that may I ask you what percentage of the gasoline and naphtha classification would be naphthas in the gasoline tank wagon reseller?

A. It has always been small enough so that in our analysis and thinking on this subject it has been ignored. Does that meet your question.

Q. Yes.

A. Because that answer is true on a territorial basis. I think it is true of Detroit, specifically, although I couldn't testify to that extent but in our thinking the naphtha part of the tank wagon reseller channel is usually quite small and is so regarded.

Now in reply to your request, we can give you from 5098 the records of the company a summary of the volume which moved through tank wagon commission agents and drivers in the Detroit Field for 1940 by class of products for the full year, classified according to the channels of delivery.

Q. Can you, with equal facility, give the same figures for the tank wagon consumer channel and would any other products be involved if you did?

A. Well, in my thinking thus far I have not included the product Stanolex furnace oil which should be added in any consideration of the consumer channel. Likewise, a separate treatment of Standard tractor fuel should be given in that channel.

That information can be supplied from the record I have in mind.

Mr. Hanley: May I make an inquiry, your Honor?

Trial Examiner Ballinger: You may.

Mr. Hanley: Mr. Boatwright, would it be necessary to go into the detail of, say, Stanolex fuel oil and tractor fuel and these other products in order to make a clear picture of what Mr. Austin has requested?

Witness: I am just not sure how much Stanolex furnace oil or Standard tractor fuel may have been delivered by commission drivers to reseller outlets in the Detroit area which I infer from his comment to be one of the basic reasons for the request. It is quite small.

5099 Mr. Hanley: If your Honor please, I can explain both to the Court and to the witness what I have in mind.

Trial Examiner Ballinger: We will wait for the attention of counsel for the Commission.

Mr. Austin: How is that?

Trial Examiner Ballinger: We are waiting for your attention.

Mr. Hanley: If I correctly understand, counsel is not primarily concerned with tractor fuels and fuel oil and that sort of thing. I just am not sure, Judge, whether or not this computation or calculation or reflection of figures, whatever it is we are expected to furnish, can be done without giving consideration to those products. If it can be so done, I think that is the way we should furnish it. If it cannot be so done, I would just like to know.

Mr. Austin: May I ask the witness another question?

Trial Examiner Ballinger: You may.

By Mr. Austin:

Q. Mr. Boatwright, how is the gallonage distributed for the purposes of reaching the figures on your Form 189, the commission gallonage between tank wagon consumer and tank wagon reseller? Is that all a direct allocation based upon the reports of the commission agent as to the type of customer to whom he made the sales or is there at any point, either as to gallonage or as to dollars, any-

5100 thing other than a direct charge made as between those two channels?

A. No. Commissions are charged direct between those two channels which are predicated upon the compensation paid to the agent.

Q. And is the compensation paid to the agent between these two channels divided between channels at any time on a gallonage basis or on any other basis than the direct separation made by the commission agent himself?

A. No, the commission agent in making out the ticket and the sale automatically makes a separation between the channels.

Q. Then is there any point at which you reach the total amount of commission paid which would be partly in both channels and then you, in some method, or in which you determine, you allocate that charge between the two channels?

A. Not to my knowledge, there is no such point.

Q. In other words, do you determine what gallonage goes into each of those channels from the report of the commission agent himself and then figure your commissions from that point on?

A. Yes, sir.

Q. In the event I will withdraw my request as to the tank wagon consumer channel.

A. You want only, then, if I understand you correctly,
the breakdown of the volume by class of products
5101 delivered by commission agents and drivers as repre-
sented by the tank wagon reseller channel.

Q. Yes. The total for Detroit for 1940.

A. Yes sir. That can be furnished, sir.

Mr. Hanley: If your Honor please, I would just like to recapitulate and see if we know what our chores are, now.

As I understand it we are to furnish a check test on the freight bills, jobbers, in Detroit?

Mr. Austin: Yes.

Mr. Hanley: We are also to furnish certain figures in relation to commission sales which I will not undertake to restate, it having been stated by the witness and, so far as I know, that's all that the Respondent is now expected to furnish.

Mr. Austin: Wasn't that grouping of salaries in Account 001—

Mr. Hanley: Is that a different thing?

Witness: Yes, it is quite different.

Mr. Hanley: All right. Then there are three things; the two I mentioned and the grouping of salaries in Account 061.

Mr. Austin: Yes.

Mr. Hanley: Now may I inquire, Mr. Austin, just what
it is you want in the way of these transportation con-
5102 tracts? I have here a file which was procured in
response to your request and sent to Mr. Boatwright
by our Traffic Department and included in it is a group of exhibits that were photostated and introduced in evidence

in Washington. I don't know what else you want. If you can tell me, I will be glad to give it to you, but I just don't know what your want in addition to what you have.

Mr. Austin: I want the contracts with the transport truck haulers who delivered gasoline for you from your Marine Terminal to the jobbers' bulk plants. That was with a concern, I believe, called Ogden & Moffett.

Witness: I think it was introduced.

Mr. Austin: You asked for it at the time, according to your statement, from Chicago, and weren't able to get it.

Mr. Hanley: If your Honor please, may I ask the indulgence of the Court to take this file with us tonight and look to see what is deficient, here, and we will try to supply it.

Mr. Austin: My understanding is from what was put in evidence, those photostats were contracts which covered only the delivery of gasoline from your own terminal to your own bulk plant.

Mr. Hanley: You may be right, Mr. Austin. I don't know. If you will just give us over night to look at
5103 them, we will see.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Austin: There was one more thing, Judge Hanley, that I don't believe you have handed me this afternoon, and that is those four quarterly distribution of time reports for the Accounting Department.

Mr. Hanley: I think we have them here. We got them out of Chicago last night.

Exactly what time distribution records did you request, Mr. Austin?

Mr. Austin: The reports used for allocation of the accounting employes' time in 1940, and that means the quarterly distribution of time reports for the Accounting Department, December, 1939; March, 1940; June, 1940, and September, 1940.

Mr. Hanley: That's exactly what we have, I guess.

If your Honor please, in response to the request of counsel for the Commission there is now produced by the Respondent and handed counsel for the Commission copies of distribution of time accounting method company schedule number 2 for the Detroit Field for December, 1939; March, 1940; June, 1940, and September, 1940 (handing documents to counsel).

5104 These are supplied as transcripts and are believed by the Respondent to be accurate but are offered subject to check.

Witness. May I modify that statement, Judge?

Mr. Hanley: Yes.

Witness: Those are the official records. That is not a transcript. These are official file copies.

Mr. Hanley: Well, I am just wrong, then, your Honor. I withdraw my remarks and qualify them by saying this is the official record of the company.

Mr. Austin: Now that the official record is here and Respondent has an opportunity to check it, if the Respondent has copies of these here, as we believe it has, perhaps the Respondent, having checked the copies and being sure of their accuracy, will be willing to supply copies for the purpose of offering them in evidence.

Mr. Hanley: If you let me have them over night, I will do that, Mr. Austin.

Mr. Austin: All right.

Mr. Hanley: I will be glad to do that.

5105 Mr. Austin: I would be perfectly willing, of course, to offer those, but Mr. Boatwright says they are original records and I assume that you would prefer to have copies made.

Mr. Hanley: I would just prefer to hand you copies if I may be permitted to do so.

Mr. Austin: Of course, as to any original records, if they should be offered in evidence, the Commission is perfectly willing to have photostats made in Washington and we would have them photostated and return the originals. I don't know whether that question will arise, but that is our usual procedure and I believe the Examiner will confirm that. We are always willing to do it upon agreement that a photostat may be substituted.

Mr. Hanley: We will supply copies of this:

Trial Examiner Ballinger: The Examiner has already announced the Commission's position with reference to that matter.

You may proceed.

Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Hanley: Respondent has supplied counsel for the Commission with certain advertising copy which was used by the Respondent in the year 1940. Respondent is perfectly willing that counsel for the Commission shall 5106 examine the file of tear sheets and copies of whatever may appear in the file, and if the need arises, the same may be received in evidence, but it is the desire of the Respondent to keep that material out of evidence simply because it is thought it will encumber the record.

Now, off the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Hanley: On the statement of counsel for the Commission that, in order to accommodate the witness Blaugh, he desires to examine him out of turn and before the Respondent has closed its case, counsel for the Respondent now states to the Court that there will be no objection to the examination of the witness Blaugh out of turn and that no advantage of any kind will be taken of the fact that said witness is examined out of turn.

Does that cover it, Mr. Austin?

Mr. Austin: Well, I don't think it does completely, Judge, because I have also called some other witnesses, and let's leave Mr. Blaugh out of it for the moment. I will stick to my word on him, in any event. If I don't put him on tomorrow, why, he can go and I will use somebody else.

Maybe this ought to be off the record, your Honor.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

5107 Trial Examiner Ballinger: On the record.

Mr. Hanley: At the request of the Court the Respondent now states that the Respondent does not expect to put in any further testimony in connection with any phase of this case except possibly on the matter of cost accounting.

Trial Examiner Ballinger: And with that reservation your case is now closed?

Mr. Hanley: And Respondent expects to rest its case as soon as the Respondent has concluded its cost accounting testimony.

Will that serve the purpose, Mr. Austin?

Mr. Austin: Yes, I think it will.

(To the Reporter:) Will you read that statement back?

(The record was read by the Reporter.)

Mr. Austin: Then, Judge, it is my understanding from what you have stated that the Respondent will not offer any further direct evidence or redirect examination on any issue except that of cost justification until the Commission has concluded its rebuttal testimony?

Mr. Hanley: Yes, that is my present understanding.

Mr. Austin: In other words, you are reserving all rights of the Respondent to offer testimony in surrebuttal if the Examiner rules that the introduction of any such testimony is then proper.

5108 Mr. Hanley: If the Examiner thinks it is proper, we want to offer it. Of course, I am reserving that right, but I don't propose to call any witnesses, Mr. Austin, except—

Trial Examiner Ballinger: That question hasn't yet arisen.

Mr. Hanley: Except these jobbers on the advertising costs, and Mr. Warmack whom I will examine on the question of costs.

Mr. Austin: That is perfectly satisfactory, your Honor. Off the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Austin: In view of the state of the record at noon, your Honor, I might clean up one or two odds and ends before we adjourn, if it is agreeable with you.

Trial Examiner Ballinger: I would be very happy to have you do it.

Mr. Austin: I would like to have these two booklets marked for identification.

Trial Examiner Ballinger: The Reporter will mark the documents "Commission's Exhibits 107 and 108," for identification.

5109 (The booklets referred to were marked "Commission's Exhibit 107 and 108" for identification.)

By Mr. Austin:

Q. Will you please identify these two booklets which have just been marked for identification, Mr. Boatwright?

A. They are booklets.

Q. Take each one by number.

A. Yes, sir. Commission's Exhibit 108, for identification, is a statement of the retirement plan for the employees of the Standard Oil Company of Indiana, while Commission's Exhibit 107, for identification, is a statement of the employees' death benefits plan issued by the Standard Oil Company of Indiana.

Q. Do those booklets correctly state the practice and procedure of the company in connection with the payment of death benefits and retirement and annuity benefits, and do they also show—well, I will stop there and ask the first question before I add to it.

A. In answer to that question, each booklet in its turn explains the plan in detail under the title of the booklet.

Trial Examiner Ballinger: During what period of time were they effective?

The Witness: The revision date I think is on each of them; thus, retirement plan for employees of Standard Oil Company of Indiana became effective January 1, 1939, was revised September 1, 1939, and it remains
5110 effective today.

The death benefits plan as outlined in Commission's Exhibit 107, for identification, was revised September 17, 1928, and remains in effect at the present time.

By Mr. Austin:

Q. Do these booklets contain information sufficient to permit a determination of the amount of benefits that would accrue to an employee under the one plan or to his beneficiary under the other plan in the case of death or retirement?

A. The Commission's Exhibit 107, for identification, does include a table on page 6 explaining the amounts by which the death benefits accruing to the credit to any individual employee with the passage of additional years of service is outlined.

Commission's Exhibit 108, marked for identification, explains the plan and the method of build-up of annuities for any participant of said plan.

Q. I notice in Exhibit 108, for identification, there are two pages here containing examples of how the plan operates and they are marked "Cancelled." Does that indicate that there has been some change in the method of operation of the plan since this book was issued?

A. I presume it does. I shall have to check whether those pages marked "Cancelled" are a cancellation of the example or whether they are a cancellation of any part of the plan. That I cannot testify to at the present time.

5111 Mr. Austin: I offer both of these exhibits in evidence, your Honor, as explanations of the nature of expense going into Accounts 520, and I think it is 521—no, 520 and 525 on Respondent's Exhibit 161.

Mr. Hanley: Both exhibits are objected to as immaterial and as encumbering the record, not properly directed in point of time within the issues in the pleadings and now being demonstrated to be inaccurate in so far as the ability of the witness is concerned to identify them.

Mr. Austin: I don't quite get what you mean about point of time.

Mr. Hanley: Well, he said one of them didn't fit except from January, 1939. Your suit is in 1937.

Mr. Austin: No, I don't think he did. If you recall, I think the Complaint was filed in December, 1940, and the cost study, in any event, is for 1940.

Mr. Hanley: You are right. I am thinking about a different lawsuit.

Mr. Austin: However, the witness did say that he wasn't sure about two of these pages that are marked "Cancelled." But I still would like to offer them in evidence subject to the right to correct them if the Respondent finds that any of the information contained here is not proper.

Trial Examiner Ballinger: The objection to Commission's Exhibit 107, for identification, is overruled, and 5112 the document is admitted in evidence.

(The booklet referred to, heretofore marked for identification "Commission's Exhibit 107", was received in evidence.)

Trial Examiner Ballinger: The Examiner withholds his ruling as to Commission's Exhibit 108, for identification, until the witness has an opportunity to check, at which time the offer may be renewed.

By Mr. Austin:

Q. Mr. Boatwright, there was one other question that was hanging fire this noon, and that was an explanation of the general office payment of $130,787 to past annuities and an accumulation of future reserves.

Have you had an opportunity to determine the nature of that payment and the way that the annual amounts of such payment are arrived at?

A. No, I have not. My entire period during the noon recess was taken in compilation of the other requests.

Q. Well, there will be, apparently, a period of probably rom now until Saturday, at least, during which you will ıot be on the stand and perhaps you will have an opportunity to get some information on those points in the neantime.

A. I am sure I shall.

Trial Examiner Ballinger: Is it necessary to have this on the record?

5113 Mr. Austin: I don't want it there particularly, your Honor, no.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Austin: Your Honor, I move that the hearing be adjourned until 10:00 o'clock tomorrow morning.

Trial Examiner Ballinger: The motion is granted and, now, at 5:10 p. m., the hearing is adjourned to reconvene February 19, 1942, at 10:00 o'clock a. m., room 859 Federal Building, Detroit, Michigan.

(Whereupon, at 5:10 p. m. the hearing was adjourned to reconvene on Thursday, February 19, 1942, at 10:00 a. m.)

5114 Room 859 Federal Building,
Detroit, Michigan,
February 19, 1942.

Met, pursuant to adjournment at 10:00 a. m., war time.

Before:

Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., attorney for the Federal Trade Commission.

Harold R. Hanley, Esq., 910 South Michigan Avenue, Chicago, Illinois; and

Arthur J. Abbott, Esq., of the firm of MacMahon, Abbott & Roberts, 2230 Buhl Building, Detroit, Michigan; appearing for the Respondent.

5115 PROCEEDINGS.

Trial Examiner Ballinger: Come to order.

The hearing of docket No. 4389, in the matter of Standard Oil Company, is reconvened in room 859 Federal Building, Detroit, Michigan, at 10:00 a. m., Eastern Standard Time, February 19, 1942. The last hearing was in the same room in the same city, February 18, 1942.

You may proceed.

Mr. Austin: Mr. Blough.

Mr. Hanley: If your Honor please, before the witness is sworn, may I now offer to counsel the statement of the distribution of time reports which were requested yesterday? This has been verified now and we think it is accurate, Mr. Austin, and if you want to introduce it, if you will do so and get an exhibit number, I will hand it to our people because I have a copy here and I would like to get it into our record of exhibits.

Mr. Austin: Well, off the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Hanley: There is only one other thing I would like to do, your Honor: I have here a chart which has been

repared by Mr. Boatwright and his associates, which shows in graphic form the organization of our sales
116 department set up and also shows our accounting set up for the Detroit Field and all other fields.

I don't care to offer this in evidence particularly, if there s any objection. I am just perfectly willing to hand it o counsel and to the Examiner on the theory that it may e of some assistance in following what our organization is.

Mr. Austin: It might be of some use to me now in alking with Mr. Blough.

Trial Examiner Ballinger: Judge, if it is of use for the ourposes that you have indicated, it may be of use to oth counsel, Examiner, and the Commission later.

Mr. Hanley: Well, that is my thought, Judge. I just don't care to introduce it in evidence unless it is desired n evidence. I am just getting a little bit alarmed about the size of the record, Judge, but I am glad to let you have it.

Trial Examiner Ballinger: Any of these exhibits that tend to throw some light and clarification on the situation should be introduced in evidence.

Mr. Austin: Well, are we on the record?

Trial Examiner Ballinger: On the record.

Mr. Austin: There is nothing pending. I don't see why we can't go off the record.

Trial Examiner Ballinger: Off the record.

5117 (There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

F. McK. BLOUGH was thereupon called as a witness for the Commission and, having been first duly sworn, testified as follows:

Direct Examination by Mr. Austin.

Q. Will you state your full name and address to the Reporter, Mr. Blough?

A. F. McK. Blough, 138 Kirby Road, Grosse Pointe Farms.

Q. And what is your business, Mr. Blough?

A. Assistant Manager of the Detroit Division of Standard Oil Company.

Q. The Detroit Division is the division with its main office here in the City of Detroit?

A. That's right.

Q. Who is the manager of the Detroit Division?

A. P. A. Raupagh.

Q. How long have you been in the oil business?

A. October 1, 1922.

Q. And will you state what your experience has been since that time and what positions you have held?

Trial Examiner Ballinger: Have you been continuously employed by the Standard Oil Company?

5118 Witness: Yes.

Mr. Austin: He didn't say that he was employed by the Standard Oil Company in 1922, your Honor. At least I hadn't asked him that, up to the present time.

By Mr. Austin:

Q. Were you employed by the Standard Oil Company in 1922?

A. Yes.

Q. Then that was your first connection with the oil business?

A. Yes.

Q. And will you now tell us something of your experience since that time?

A. In the first five years I was with Standard Oil Company I was Superintendent of service stations and general salesman.

Q. Where, Mr. Blough?

A. Mankato, Minnesota.

A member of the sales promotion department, principally concerned with the promotion of sales of motor oil, refined oil, and gasoline.

For three years following July, 1928, I was sales manager of the Sioux City Division. For about three and a half years following 1931, assistant manager of the Huron Division.

Q. Where is that located?

A. Huron, South Dakota; and for slightly more 5119 than one and one half years, assistant manager of the Des Moines Division in Des Moines, Iowa.

From October, 1936, to date, an assistant manager in the Detroit Division.

Q. What was your title in the Detroit Division when you first came, in 1936? You said assistant manager, but was it assistant manager—

A. Reseller.

Q. Reseller.

A. Yes.

Q. And how long did you continue to serve the company in that capacity?

A. Until November 15, 1938.

Q. And did you then become assistant field Manager—wholesale?

A. Right.

Q. And is that your present position?

A. Right.

Q. Will you describe the duties of the assistant field manager—reseller?

A. My duties as assistant manager—reseller, in the Detroit Division, consisted of sales promotion, supervision of the sales promotion department pertaining to reseller operations, promotion of securing new business, super-
vision of reseller salesmen and such activities as
5120 would preserve the business we had in an orderly
fashion and to get new business in that channel.

5121 Q. Well, what is reseller business as distinguished
from other types of business?

A. Reseller business is business where we make a sale which is presumed to be for resale.

Q. What types of customers did you have to deal with when you just spoke about getting new business?

A. Dealers.

Q. Does that mean service stations, retail service stations?

A. Right.

Q. And what other classes of dealers?

A. Such other outlets as sell gasoline.

Q. Does that include the jobbers? They sell gasoline.

A. Yes.

Q. But it does not include the industrial consumers?

A. No.

Q. In other words, the reseller department has to do with sale to all resellers whether they be wholesalers or retailers?

A. In a measure, yes. That is particularly true in the sales of motor oil or greases; not so plain as that in the resale of gasoline because there are many units in the reseller department of our selling organization who make no contact whatever with the jobbers.

Q. But do the sales to jobbers come generally under the head of the reseller department's business?

A. Yes, they do.

5122 Q. Now, I will get into the question of salesmen a little later.

What are the duties of the assistant field manager, wholesale, as distinguished from the assistant field manager, reseller?

A. Well, the duties of an assistant manager, wholesale, consist primarily of the promotion of sales of our merchandise to accounts which, as the title describes, consume the products they buy. The assistant manager, wholesale, is not concerned with the sale of products which will be offered for resale. In addition to that, the supervision of personnel, policing of policy, such other general assistance as an assistant could give to the manager of the division within the channel which the title describes.

Q. What classes of business fall under the jurisdiction of the assistant field manager, wholesale?

A. Manufacturing, agriculture, are the two principal businesses, I presume which furnish our field for sales work.

Q. You said agriculture. Will you explain that?

A. The farmer is an important customer of the Standard Oil Company.

Q. Does the business through the "B" station fall under the assistant field manager, wholesale, or the assistant field manager, reseller?

A. The Assistant Field Manager, wholesale.

5123 Q. Well, that is at least in part a reseller business, is it not?

A. Yes. Yes, I presume that's true.

Q. In other words, there are reseller stations in the commission agents' territory?

A. That's right.

Q. But, nevertheless, does all of the commission agent business fall under the wholesale department?

A. The supervision of the "B" station agent is the function of the assistant manager, wholesale.

Q. That is your present position, is it?

A. That's right.

Q. In the position which you held in 1937 which was assistant field manager, reseller, what employees or classifications of employees fell under your supervision?

A. That portion of the sales promotion department which was regularly assigned to the promotion of sales and keeping of sales records for the reselling accounts.

Those salesmen known as reseller salesmen who called on that class of business. That's all.

Q. You mentioned reseller salesmen. The company has various classes of salesmen, does it not, such as industrial salesmen, and city salesmen, and agent salesmen, reseller salesmen, and so forth?

A. That's right.

5124 Q. And was the reseller salesmen the only class of salesmen under the jurisdiction of the assistant field manager, reseller?

A. Yes.

Q. Then do the other classes of salesmen which I mentioned, including "B" station salesmen, city salesmen, and agent salesmen fall under your supervision in your present capacity of assistant field manager, wholesale?

A. Yes.

Q. I would like you to give me in as much detail as you can a description of the duties of a reseller salesman.

A. A reseller salesman is charged with the responsibility for maintaining what our sales promotion department considers to be a reasonable sales record. Production based on quotas which are predetermined by the sales promotion department as being a reasonable estimate of what he can do in the immediate future for any given period.

Q. Is that what you refer to sometimes as "potential"?

A. Oh, no, no. No, that is a fond dream when you get the potential. We are talking about quotas.

He is expected through his customers to assist them in developing selling methods that may be valuable to them. He is charged with the responsibility of securing new outlets for our products. And I think that briefly describes the work of a reseller salesman.

5125 Q. What customers do they call on—or, I will change that question: What customers and what other people do they call on?

A. They call upon those accounts which lie within geographical limits which have been set up as being their territory. Those are people who are selling our goods. They also call on customers who are selling the products of other companies with a view toward soliciting their business in behalf of this company. In other words, inducing them if we find that account to be desirable in our set up—to induce them to take on the sale of our products.

Q. Would it be correct to say that they call on reseller customers of the company and prospective reseller customers of the company?

A. That's better stated than I did.

Q. I just wanted to be sure I understood you.

What class of salesmen call on tank wagon consumer customers?

A. Outside of—

Q. In the City of Detroit.

A. In the City of Detroit? City salesmen.

5126 Mr. Hanley: If your Honor please, may we have an objection to any questions relating to consumer purchases or consumer salesmen which will be general so I won't need to interrupt counsel in his examination. I object to that as being immaterial.

Trial Examiner Ballinger: A continuing objection to that line of examination is reserved to counsel for the Respondent.

By Mr. Austin:

Q. Does the reseller salesman spend any of his time calling on consumer customers?

A. No.

Q. I am perfectly willing to except, if there is such an exception, a case where an individual salesman may be directed to make a particular call at some time for a particular purpose, but I am talking about the regular course of—

A. The regular course of events—I answered with a little hesitation because some one might have a friend he would go to see, but in the regular assignments, the answer is no.

Trial Examiner Ballinger: In the ordinary course of business that is true, is it not?

Witness: Yes, sir.

By Mr. Austin:

5127 Q. You mentioned the city salesman. What type of customers does he call on and what products does he sell?

A. He sells gasoline, motor oil, greases, diesel fuel, calls on public improvement contractors; calls on transport haulers of various kinds, truckers; calls on some fleet accounts, "fleet" meaning fleets of trucks—

Q. You previously mentioned tank wagon consumer accounts, Mr. Blough, a moment ago, I think, you said that city salesmen call on them, too, is that correct?

A. That's right. These are tank wagon consumer accounts which I am listing now.

Q. Oh; I thought they were probably direct shipment accounts.

A. Some of them are.

Q. And some are tank wagon?

A. Yes.

Q. Did you complete your answer?

A. I don't know:

Witness: Maybe I had better hear it again.

Trial Examiner Ballinger: Read the answer.

Reporter: "A. He sells gasoline, motor oil, greases, diesel fuel, calls on public improvement contractors, calls on transport haulers of various kinds, truckers; calls on some fleet accounts, 'fleet' meaning fleets of trucks—"

A. (Continuing)—and any other consuming account who has any use for our products. 5128

Q. What are the duties of the "B" station salesmen?

A. First, to sell goods to the consuming accounts lying within his geographically outlined territory and, second, to supervise and direct the efforts and activities of those "B" station agents whose points lie within his territory.

Trial Examiner Ballinger: What do you mean by "B" station?

By Mr. Austin:

Q. You mean a commission agent, don't you, Mr. Blough?

A. Right.

Mr. Austin: I am only suggesting the answer because we have been talking in a certain terminology, here, that—

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Does the "B" station salesman then supervise the commission agent?

A. He does.

Q. And does the "B" station salesman call directly also on the accounts in the commission agent's territory?

A. I don't know what you mean by "accounts."

Q. Accounts; customers.

5129 A. He calls on the consuming customers.

Q. I see. And does he have to do with the sale of all of the petroleum products sold by the company? In other words, is his activity limited to particular products or what products does he sell.

A. He is responsible for the sale of any products which can be used in channels other than industrial or products for resale.

Q. Isn't it true, Mr. Blough, that you really have a greater range of products purchased by consumers than you do by resellers?

Mr. Hanley: Just a moment, Mr. Blough, please.

May it be understood, if your Honor please, that the general objection of Respondent to the materiality of this line of examination may apply particularly to "B" station agents. The fact is, Judge, that "B" station agents are concerned primarily with selling to consumers which hasn't a thing in the world to do with this law-suit.

Trial Examiner Ballinger: The objection runs to this entire line.

Mr. Austin: I am a little surprised at that statement due to the fact that there is quite a large entry in the tank wagon reseller column in the cost reports.

Mr. Hanley: Undoubtedly. Perhaps I should, in fairness to the Court and counsel, in view of my objection, 5130 say that the "B" station agent does supply the reseller accounts in his geographical territory but his job also encompasses really what amounts to a daily trip out, soliciting farmers to buy axle grease and insecticides, gasoline, and what have you. It is a consumer business job.

By Mr. Austin:

Q. Well, Mr. Blough, I was just trying to find out what the general duties of the "B" station salesmen were, as to the types of customers and types of products which he sells.

Now, the "B" station salesman is a consumer salesman, isn't he?

A. Right.

Q. And without going into how many products, he sells.

all products which the company sells and which the consumer wants to buy, doesn't he?

A. With the exceptions I have noted.

Q. He has nothing to do with industrial accounts?

A. He doesn't call on industrial accounts nor does he call on reselling accounts.

Q. What salesmen call on the reseller outlets in "B" station territory?

A. The reseller salesman.

Q. Are there certain reseller salesmen assigned to certain "B" station territory?

A. Right. Let me qualify that: He is not assigned
5131 to a certain "B" station territory. He is assigned
to his own territory. It may overlap that of one, two or more "B" station salesmen. You asked the question whether he was assigned to a "B" station territory. He is not. He is assigned to a certain number of reselling accounts.

Q. Let us put it this way: Does he always work out of a salaried station or do these reseller salesmen who call on reseller outlets in "B" station territory work out of the "B" station itself, or—I know that wouldn't be true because the "B" station is a bulk plant. What I am trying to find out is who supervises the salesmen who call on the reseller accounts in the "B" station territory?

A. Their immediate supervisor is a man designated as a specialized salesman. He is a supervising salesman who works them under the reseller sales sales promotion department.

Q. In the Detroit Field office?

A. In the Detroit Field office.

Q. Take the reseller salesman in the City of Detroit. Would you say that they have headquarters in the Field Office or does the salesman have any headquarters at all besides sending in his reports?

A. I am not conscious he has any headquarters anywhere.

Q. That's what was troubling me. I assumed they were
under the direct supervision of the Field Office here
5132 in Detroit and I was wondering who the salesman
who worked around in the commission territory reported to, or where they reported, but perhaps they don't have to report?

A. They make identical reports with those men who operate in the city.

Q. I didn't mean written reports. I meant personal reports. I don't suppose they have to come in every day, or do they? Just try to tell me how these salesmen work who call on the reseller outlets in the "B" territory?

A. They have no springboard from which they have to take off every morning. They operate as a traveling salesman.

They are furnished an automobile. They go through the country from town to town calling on such accounts as come on their route, which is laid out for that week, that month.

They make a written report daily on their calls and sales.

They are supervised, as I said, by this specialized salesman who, in turn, is supervised by the sales manager—reseller, and his staff.

Q. And as far as reseller outlets are concerned, is the entire territory of the company divided up into salesmen's territory so that a salesman has his own territory and own outlets to call on, whether it be in the city or
5133 in the country?

A. That is true.

Q. Could you give me any idea of the size of the territory covered by the salesman calling on the reseller accounts in "B" station territory?

A. By miles, or—

Q. Well, yes; if you can.

A. All right. I am guessing. Let us say a forty mile square; sixteen hundred square miles.

That could vary from something to something, but that is a good guess.

Q. And I suppose that that territory is very much larger than the territory assigned to a salesman in the city?

A. In mileage, yes.

Q. Is that true because the reseller outlets are more widely scattered in the commission agent's territory?

A. Yes.

Q. In other words, is each salesman given approximately the same number of outlets to call on, whether it be in the country or in the city, or does that vary, too?

A. That's the presumption, yes.

Q. Do any salesmen, other than reseller salesmen, call on reseller accounts in the Detroit metropolitan area?

A. You mean as to regular policy or regular assignment or could an accidental call or special—

Q. Regular assignment.

5134 A. No.

Q. Then, now going back to 1937, Mr. Blough, you will recall that Ned's Auto Supply Company was then a tank wagon reseller customer?

A. Yes.

Q. And at that time the salesmen calling on Ned's Auto Supply Company were under your supervision?

A. Yes.

Q. There has been some testimony put in this record referring to three salesmen named Robinson, Meulenberg, and Coutchie, who have, the testimony shows, called upon Ned's Auto Supply at different times during 1937. Do you recall those salesmen?

A. Yes.

Q. And were they the only salesmen who called on—whose duty it was to call on Ned's Auto Supply Company's stations in 1937?

A. Yes.

5135 Mr. Austin: I wonder if your Honor would permit a ten minute adjournment? I intended to bring with me that map and list of customers which counsel for Respondent handed me yesterday and I see that I haven't got it here. I think I will have to go and get it.

Trial Examiner Ballinger: The hearing will stand in recess for ten minutes.

(A short recess was taken.)

Trial Examiner Ballinger: Come to order.

Mr. Austin: I would like to have this sheet marked for identification, please.

Trial Examiner Ballinger: The Reporter will mark the documents as Commission's Exhibit 109-A and B, for identification.

(The map referred to was marked "Commission's Exhibit 109-A" and the document referred to was marked "Commission's Exhibit 109-B" for identification.)

By Mr. Austin:

Q. Mr. Blough, I show you Commission's Exhibits 109-A and B, for identification. 109-A appears to be a map of the City of Detroit with certain marks on it and 109-B is entitled "reseller accounts in territory No. 65, Detroit, 1937."

I wish you would take these two exhibits, for identification, and explain the markings on the map and the 5136 relation of the list to the map and state what the list contains.

A. This map of Detroit has an outline of our 1937 reseller salesmen's territory No. 65, on which in red are spotted the accounts within that territory and the outlets of Ned's Auto Supply in the metropolitan area; and the attached list, 109-B, is a list of the reseller accounts in territory No. 65 called upon by the salesmen in 1937 assigned to territory 65, reseller.

Q. Were the five outlets of Ned's Auto Supply Company in 1937 outlets which were assigned to salesmen's territory No. 65?

A. Yes.

Q. And did the salesmen who were assigned to territory No. 65 during 1937 have the duty of calling on Ned's outlet?

A. Calling on Ned's.

Q. Without going into what their duties were, I simply want to know whether those salesmen were the salesmen that had the duty of calling on Ned's?

A. Right.

Mr. Austin: I offer this map and sheet marked Commission's Exhibits 109-A and B, for identification, in evidence.

Trial Examiner Ballinger: Without objection, it will be admitted in evidence.

5137 Mr. Hanley: There is no objection, your Honor, so far as the exhibit applies to Respondent's Exhibit 31 series. As to any other purpose the exhibit is objected to as being immaterial.

Trial Examiner Ballinger: Can it be limited to the purpose indicated by counsel for Respondent?

Mr. Austin: Well, it is offered as being material to the issue of cost justification in 1937. In other words, at the time that Ned's was a tank wagon reseller station and had a half cent differential is the point.

Mr. Hanley: Upon the statement of counsel the entire exhibit is objected to for the reason that it is not material in the case whether or not a half cent differential was given to Ned's or otherwise inasmuch as the same has been discontinued and any order the Commission may make would necessarily be prospective and not retrospective.

Trial Examiner Ballinger: The objection is overruled. ~~The documents are admitted~~ in evidence as Commission's Exhibit 109-A and B.

(The map referred to, heretofore marked for identification "COMMISSION'S EXHIBIT 109-A" and the document referred to, heretofore marked for identification "COMMISSION'S EXHIBIT 109-B," were received in evidence.)

5138 Mr. Austin: Of course, I should think that if counsel for the Respondent contended that the issue of the one half cent differential in 1937 were immaterial, that then there would be no necessity for the Exhibits 31-A to 31-Q in the record.

Mr. Hanley: I don't think there is. To be quite honest with you, I just don't think that there is any necessity for them, but you changed us with them and I thought we would explain them to you. I don't think it makes any difference at all.

Mr. Austin: Of course the Commission feels it is incumbent upon it to meet the defense interposed upon that issue.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Mr. Blough, does this list of names and locations appearing on Commission's Exhibit 109-B represent entirely a list of reseller customers of the Standard Oil Company in 1937?

A. Those were all reseller accounts served by the Standard Oil Company in 1937.

Q. Does that list contain a list of all the reseller accounts which were assigned to Robinson, Mealenberg and

5139 Contchie, or any one of them during the year 1937?

A. Yes.

Q. There, again, I am speaking of the regular course of their duties.

A. Yes.

Mr. Hanley: Just a moment, please. Would you mind reading me the second question back?

Reporter: "Q. Does that list contain a list of all the reseller accounts which were assigned to Robinson, Meulenberg and Coutchie, or any one of them during the year 1937?"

By Mr. Austin:

Q. Was it the duty of any other salesman of the Standard Oil Company, reseller salesman, or otherwise, to call upon any of these customers?

A. Yes, the T. B. A. man may have called.

Q. What is the T. B. A. man?

A. A man who supervises the sale of tires and batteries. I think he is the only one I haven't named who might have called on those, although that was not a definite and regular assignment, that he should. He may have called.

Q. Was it the duty of any other salesman, or do you know of any time spent of any other salesman, in calling on any of these stations listed in Commission's Exhibit 109-B for the purpose of selling or promoting the sale of petroleum products?

5140 A. No.

Q. Mr. Blough, how does a reseller salesman spend his time at a tank wagon reseller service station selling Standard Oil products?

A. Well, he makes his call on the given station operator. On that day he may have a list of special duties, and probably does have. As he calls, it can open with the introduction of some new advertising material or thoughts.

Q. Would that be a list that he prepared himself or would it be a list given to him by a superior official?

A. It would be program which had been developed by sales promotion.

His first responsibility there, of course, is to get an order for some merchandise but—

Q. When you say "merchandise" do you include gasoline?

A. No. No; our salesmen don't sell gasoline, once an account has been established. They sell the idea of selling gasoline but as to continuing replenishment, our salesmen probably wouldn't mention that.

Q. What do you mean by "the idea"?

A. When he is soliciting a new account he sells the idea to that man of taking on our products, but once our products have made their entry into a reselling account, a reseller salesman spends little or no time talking about continuing deliveries of gasoline.

5141 Q. Well, what time does he spend in connection with sales promotion of gasoline, and—

A. That comes in in the promotion that he gives that dealer, that better use of our advertising and his tie-up with his actions by the advertising that we are currently running. Also with better service that he may give the customer, designed to sell that customer more gasoline; designed to make that customer come back when he might go elsewhere.

Q. When you say customer, now, you are speaking of the man who drives in?

A. I am speaking of the man in the car.

Q. Yes.

A. He may have seasonal programs to sell to a reseller customer, such as spring and fall change-overs.

He may be giving a man a sales talk stimulating him to more service which will get for him, and then for us, the sale of more greases, anti-freeze, motor oil—

Q. Try to direct your thoughts to gasoline as much as possible, although I don't want to exclude these other things.

A. I misunderstood your question, then.

Q. No, the question was as broad as you have answered it. That is all right. But in elaborating any further, I just want to keep your attention directed to gasoline, 5142 particularly as to sales promotional work.

A. Almost everything he does would tend to promote the sale of gasoline because if he was having a discussion with this reseller as to the advantages to the reseller in keeping a spick-and-span station, he presumes that that will have some indirect influence, at least, on the sales of gasoline.

Q. Are you familiar with what is called driveway training?

A. Oh, yes.

Q. Will you describe that, or have you already intended to cover it in what you have said? If not, you might give us a little more description of what is meant.

A. We have used a variety of driveway training. That, under the direction of a good salesman, goes on constantly, driveway training. Sometimes it is more formalized than that, however, by calling a number of dealers, asking them if they want to attend a driveway training school which may be given at some central point from anywhere from an hour to three or four days.

Q. Does the salesman conduct such a school when it is given?

A. The salesman ordinarily does not conduct the school but acts in the capacity of assisting whoever would conduct the school.

5143 Q. Who would be likely to conduct it?

A. It has been conducted by a wide variety of types of people; sometimes people from our general office, people from our sales promotion office, sometimes management of the field.

Q. I don't want to get too far afield on that. Let us get back, now, to the salesman when he is at the gasoline station. What do you mean by driveway training at the service station?

A. Driveway training is a program to develop a better selling technique on the driveway among the dealers.

Q. You mean their approach to and contact with the customers who come into the service station?

A. Exactly.

Q. Did these three salesmen, Robinson, Meulenberg, and Coutchie, in calling on Ned's Auto Supply outlets, in 1937, engage in any sales promotional activities at Ned's outlets?

A. Are you confining me, now, to any one product?

Q. No. You can state what their duties were in calling on Ned's stations; as far as you can recall them.

Let me ask you, first: Were their duties in calling at Ned's stations any different than when calling on any other reseller customers?

A. Yes, somewhat different, in that their work at Ned's Auto Supply was almost entirely confined to the sale
of motor oils and motor greases. Their sales pro-
5144 motion on Ned's driveways was almost entirely con-
fined to the promotion of the sale of their motor oils over Ned's driveways. All of those men worked very hard at that.

Q. Is it your opinion, then, that these salesmen gave more time to motor oils and greases at Ned's than they did at other reseller stations?

A. Yes, I think so, for the reason—

Q. But in time, I mean, a greater portion of the time spent at the station?

A. I know that. That's right.

5145 Q. What sales promotional activities, if any, did these salesmen engage in, in calling on Ned's stations in 1937? Perhaps I should say there that it might have any connection with the sale of gasoline because you have already described certain activities in connection with motor oils.

A. I don't feel that they did anything to warrant the belief that they helped the sale of gasoline on Ned's driveways, not anything.

Q. Why was it that that sales promotional work was not done at Ned's and was done at other stations?

A. I think the principal reason for that was that Ned's felt that such driveway technique as they had, the difference between theirs and ours is not just clear to me, but they felt they were getting along all right on gasoline, didn't need our men to handle that, and the reason for the preponderance of time on motor oil was because we were so vitally interested in raising our ratio of motor oil at those stations, raising the ratio of our motor oil.

Q. You mean at Ned's stations?

A. Yes.

Q. Were there any other reseller customers of the Standard Oil Company here in Detroit in 1937 where the salesmen did not give driveway training?

A. Oh, yes. In the first place, driveway training was voluntary on the part of the dealer. Some don't yield very readily to direction as to their driveway work.

5146 Q. Is that optional then with any reseller station as to whether or not they will have the company salesmen give driveway training instruction?

A. Oh, yes.

Q. Do some of them say that they don't want it?

A. No, some of them don't come close.

Q. What do you mean by "don't come close"?

A. If they are invited to a clinic or a school or a program of driveway training and they object to taking it, there is no need for any fuss about it, they just don't come.

Q. I am referring to the work done with the salesmen. I thought we were talking about the activities of the salesman when he calls at the station.

A. I see. There is quite a difference in my experience in calling with salesmen on work of this kind to the reception given by the dealer. Some of them are very anxious to have their work guided; others are somewhat reluctant to take up new practice. Those who don't take it up, don't take it up.

Q. Does the company insist upon their submitting to the guidance, as you call it, of the sales representative calling on them?

A. No. We urge but we can't—there is a limit beyond which we can't insist.

Q. Well, does it ever happen that the station oper-
ator says that he doesn't want the salesman doing
5147 sales promotional work at his station?

Mr. Hanley: Is that a question?

Mr. Austin: Yes. I am asking if he knows of instances of that. He says it isn't done at Ned's. I want to know whether there are other places also where it isn't done.

Mr. Hanley: Will you read that, please?

(The statement was read.)

Mr. Hanley: Do you understand that, Mr. Blough?

The Witness: Yes.

Mr. Hanley: You may answer.

The Witness: You are asking me for an instance. I can't name an instance but I am sure that there are such instances. In other words, I know people who don't accept this but to set a date on which they refused it, I can't do that.

By Mr. Austin:

Q. I wasn't asking for the date, Mr. Blough, but I wanted to get a general picture of the practice in that respect.

Do you know of any reseller stations now where the company salesman does not engage in sales promotional work in connection with the sale of gasoline?

A. I am not that close to the reseller problem today.

Q. I see. And in 1937 if Ned's Auto Supply Com-
pany had desired the salesmen to engage in driveway
5148 training work at their stations or other sales promo-
tional work in connection with the sale of gasoline,
was that service available to them?

A. Through these men.

Q. You mean through Robinson, Meulenberg, and Coutchie?

A. That's right.

Q. So that if such work was not done, or, at least, if done at all, as I understand you to say—well, strike that.

Did I understand you to say there was little, if any, sales promotional work done by these men at Ned's stations in 1937?

A. I said on gasoline.

Q. On gasoline. And was that because Ned's Auto Supply Company didn't want it?

A. Ned's Auto Supply had their own routine and technique for the sale of gasoline and for filling motorists' automobiles and any help from us apparently was felt to be unnecessary. It was never solicited and in some approaches that were made by salesmen was rather discouraged.

Q. Just so that I am perfectly clear on that point, Mr. Blough, is it true that in 1937 it was the policy of the company to give through its salesmen sales promotional assistance at certain stations in connection with the sale of gasoline, but that at Ned's stations, and some other stations, such sales promotional service was not de-
5149 sired and in those cases it was not given?

A. Right.

Q. Did Ned's various stores in 1937 each order gasoline direct from the Standard Oil Company?

A. Yes.

Q. Those orders were not then always submitted from the Grand River main office?

A. No.

Q. Then so far as the orders for and delivery of gasoline was concerned, those four stations were treated as separate tank wagon reseller customers?

A. No. No. That isn't the situation. The manager of the store or someone to whom he delegated that chore, if they needed gasoline at Jefferson and Manistique would call the Lycaste plant.

Q. And the Lycaste plant would then deliver—

A. The Lycaste plant delivered to Jefferson and Manistique but there—

Q. Well, that is ordering and delivering, is it not?

A. No?

Q. That is ordering and delivering, is it not?

A. They ordered and we delivered.

Mr. Hanley: If your Honor please—just a moment, Mr. Blough—Respondent has no objection to the witness answering as to the fact of how deliveries were made,
5150 but we do object to counsel trying to have the witness make conclusions as to law and facts on what kind of deliveries were made. I repeat, we have no ob-

jection to the witness testifying as to how the deliveries were made or how the orders were given.

Mr. Austin: Well, that is all that was asked.

Trial Examiner Ballinger: Read the question.

(The question referred to was read by the Reporter.)

Mr. Austin: I am perfectly willing to withdraw the question.

Trial Examiner Ballinger: The question is withdrawn.

Mr. Austin: Will you read the previous question and answer?

(The record was read by the Reporter.)

By Mr. Austin:

Q. Do you have any further on that?

A. No.

Q. Did Robinson and Meulenberg and Coutchie during the respective periods in 1937, when they were assigned to this sales territory, call at all four of Ned's stores from time to time?

A. Yes.

Q. Turning to Commission's Exhibit 31-L, it is stated
that Robinson when he was assigned to this territory
5151 spent 35 per cent of his time at Ned's; Meulenberg
spent 25 per cent; and Coutchie spent 25 per cent.
Why did Robinson spend more time at Ned's than the other two salesmen?

A. That's a difference of—

Mr. Hanley: Just a moment. May the witness see that exhibit, please? I don't think he ever saw it in his life until now.

Mr. Austin: Yes.

Trial Examiner Ballinger: The exhibit will be shown to the witness.

(A paper was handed to the witness.)

Mr. Austin: Well, let's see. That one is marked up a bit. I don't think there is anything there that—maybe I ought to give you the original, then, there won't be any question (indicating).

There it is right there (indicating). "Robinson spent 35 per cent at Ned's and Coutchie 25 and Meulenberg 25."

By Mr. Austin:

Q. Are you prepared to answer?

Mr. Hanley: Just a moment. May we have the question?

(The question referred to was read by the Reporter.)

Mr. Hanley: That is objected to because it does not appear the witness has ever testified to or determined
5152 any percentages of time that any salesman spent at Ned's and he cannot distinguish between percentages as between one or the other until and unless he has determined basic percentages which it does not appear in the record that he has ever done.

Mr. Austin: In answer to that, your Honor I will just quote from the exhibit itself, where it says:

"It was estimated by Mr. Raupagh and Mr. Blough that Robinson spent 35% of his time at Ned's, of which 7% was on gasoline. Meulenberg spent 25%, on which 5% was on gasoline. Coutchie spent 25%, of which 5% was on gasoline."

Mr. Hanley: If your Honor please, Mr. Austin, I am sure, is quoting correctly from the exhibit which the Respondent has offered and we did offer it and we are bound by it.

Mr. Boatwright and his associates prepared it and the Respondent is bound by it.

I do, however, submit that an individual witness like Mr. Blough, who never saw this exhibit before in his life, is not entitled to be interrogated about those percentages.

We haven't any objection at all to Mr. Austin's inquiring as to what Mr. Blough knows about the amount of time that these salesmen spent at Ned's Auto Supply
5153 company but it is just obviously unfair to ask Mr. Blough whether 25% or 30% of their time is a proper allocation. He just doesn't. That's obvious, of course.

Mr. Austin: If I could accept that, your Honor, I would move to strike the entire exhibit from the record but I am afraid I can't accept it unless Judge Hanley wishes to bind the Respondent on that statement, because these estimates having been made by Mr. Blough, it is beyond my comprehension why I can't question on them.

Mr. Hanley: I don't know who they were made by.

Trial Examiner Ballinger: The report, apparently, is predicated on a report made by Mr. Blough and Mr. Raupagh.

Mr. Austin: Not a report, your Honor; an estimate.

Trial Examiner Ballinger: An estimate; by those tw gentlemen, and the Examiner will ask the witness: Did you make such an estimate, or did you participate in the making of such an estimate?

Witness: I was—I recall being in a discussion with Mr. Raupagh and Mr. Boatwright and there may hav been others, at the time this subject was discussed.

Trial Examiner Ballinger: Do you recall having indi vidually or in connection with others, having made such an estimate of time?

Witness: Not having seen this estimate, I couldn't have recalled the figures as they are here; from that 5154 very faint recollection of that discussion.

Trial Examiner Ballinger: Have you any knowl edge as to the time these three salesmen spent at Ned's

Witness: I would assume that division of time from my knowledge of their activities, there, to be correct, yes

Trial Examiner Ballinger: And it is your present im pression that the statement appearing in the exhibit was predicated upon some estimate made in which you joined

Witness: Yes, I joined in this; that is, with respect to that part which gives the percentages referred to by Mr Austin; 35, 25, and 25.

Trial Examiner Ballinger: The objection is overruled You may answer the question.

Read the question.

Reporter: "Q. Turning to Commission's Exhibit 31-L it is stated that Robinson, when he was assigned to this territory, spent 35% of his time at Ned's Auto Supply Meulenberg spent 25% and Coutchie spent 25%. Why did Robinson spend more time at Ned's than the other two salesmen?"

Mr. Hanley: That is objected to, further, as imma terial.

Trial Examiner Ballinger: The objection is over ruled.

5155 A. I am unable to answer the question. I just don't know.

By Mr. Austin:

Q. You say that you recall conferring with Mr. Pau pagh and Mr. Boatwright at the time the—at about the time this exhibit was prepared, upon the question of the time spent by these three salesmen at Ned's stations?

A. I never knew—

Trial Examiner Ballinger: When you say "this exhibit," what do you mean?

Mr. Austin: Respondent's Exhibit 31; particularly, 31-L, is the page referred to.

Mr. Hanley: May I ask a question?

Trial Examiner Ballinger: You may.

Mr. Hanley: Do you know when that exhibit was prepared?

Witness: I never knew it was prepared. Here it is.

Mr. Hanley: Then it is objected to as assuming a fact not in evidence.

By Mr. Austin:

Q. Well, do you recall having a conference with Mr. Raupagh and Mr. Boatwright upon the question of the time spent by these three salesmen at Ned's Auto Supply stations in 1937?

A. I recall that in a talk or a discussion or a visit we were having, this subject was brought up and we did talk about it.

5156 Q. Who brought it up?

A. Mr. Boatwright, I believe.

Q. Do you remember when that was?

A. No, I don't.

Q. Well, was it last year or was it two years ago? When was it?

A. It could have been last year. It could have been two years ago. It wasn't brought up with the idea that it was anything I had to do anything further with and—

Q. How much time did you spend on the subject in this conversation?

A. It must have been entirely finished within the half day in which it took place or I would have attached more importance to it than I have.

Q. Did it last a half day?

A. No, I don't mean to say that.

Q. You definitely recall such a conversation, don't you?

A. I recall being asked certain questions about this subject covered in this exhibit.

Q. Do you remember how much time was spent in the discussion of this subject?

A. No.

Q. Was it an hour or two hours?

Mr. Hanley: That is objected to as immaterial.

A. I can't answer.

5157 Trial Examiner Ballinger: The witness doesn't recall.

By Mr. Austin:

Q. Do you recall what opinions or estimates you were asked to make at the time of that conference?

A. Yes, I do. I think it was at that same time that I was asked—

Mr. Hanley: Just a moment. You have answered the question.

Trial Examiner Ballinger: You have answered the question.

By Mr. Austin:

Q. Well, I wish you would state what estimates or opinions you were asked to make and what estimates or opinions you did express?

Mr. Hanley: That is objected to unless the time, place and persons present are indicated, and then it is objected to as immaterial.

Mr. Austin: The persons present have been indicated by the witness when asked about the time, and I can't make it any more definite.

Trial Examiner Ballinger: The objection is overruled.

Mr. Hanley: It is still objected to as immaterial, if your Honor please, because it is all incorporated, now,
5158 in the Respondent's Exhibit 31 series.

Trial Examiner Ballinger: According to the memory of the Examiner he has answered much of this line of examination, but if counsel for the Commission desires to pursue it and will limit the extent further, he may do so.

The objection is overruled.

Read the question.

Reporter: "Q. Well, I wish you would state what estimates or opinions you were asked to make and what estimates or opinions you did express?"

By Mr. Austin:

Q. At that conference.

A. Referring to this exhibit, I must have been in agreement, approximately, with those estimates.

It is also probable that I—

Q. Well, don't tell us what is probable, Mr. Blough. I want to know what you remember about the conference; not what you conclude from reading the exhibit.

A. I am sorry.

I agreed to these estimates.

Q. Did you take any part in making them?

A. Yes.

Q. Do you reach that conclusion from reading the exhibit or is it your independent recollection at this time?

Mr. Hanley: That is objected to as an impeach-
5159 ment of the Government's own witness.

Mr. Austin: I don't think so, because the witness stated a moment ago—

Trial Examiner Ballinger: The objection is overruled.

(The last question was read by the Reporter.)

Mr. Hanley: It is further objected to as calling for a conclusion and an opinion of the witness.

Trial Examiner Ballinger: The objection is overruled.

Mr. Hanley: Do you understand the question, Mr. Blough? If you don't understand the question, you may ask it be read again.

Trial Examiner Ballinger: Read the question.

(The last question was again read by the Reporter.)

Trial Examiner Ballinger: Now what he means by your independent recollection at this time; is your recollection of what transpired refreshed by any matters that may have been brought to your attention this morning?

Witness: Reading the exhibit has been quite refreshing on the subject but—

Trial Examiner Ballinger: Now have you now any independent recollection?

Witness: Yes.

Trial Examiner Ballinger: Will you answer the
5160 question?

Witness: Yes.

A. My recollection is that the figures in this exhibit are correct; or were my opinion at that time.

By Mr. Austin:

Q. And did you also, at that conference, attempt to estimate the amount of time which each of these three salesmen spent at Ned's on gasoline?

A. That, I remember; yes.

Q. Will you tell me just what you remember about the estimates made and the manner of making them? In the first place, did you make such estimates?

A. Yes.

Q. And upon what were they based?

A. Knowledge of the work done by the reseller salesmen assigned to the territory in soliciting and selling Ned's Auto Supply.

Q. Could you have made a similar estimate at that time as to the time spent by these salesmen at any other service station in their territory?

A. I think so.

Q. But you don't remember why you estimated that Robinson spent more time at Ned's during the time of the year that he was in the territory than the other two salesmen spent?

A. There is a difference in salesmen. Robinson's
5161 methods varied somewhat from those methods used
by the other two and whether there was any advantage to us, or not, is debatable, but his methods of approach are slower; not necessarily more thorough.

Q. Would the season have had anything to do with it?

A. I have been trying to recollect that very thing; whether or not the season—as I remember it, Robinson was the salesman in the first part of the year, maybe about four months, four and a half.

Q. Yes: He was assigned from January first to April 16th, which would be three and a half months (referring to Commission's Exhibit 109-B).

A. That would bring him into the period known as the spring change-over period.

Q. Would that affect the amount of time—that is, the percentage of his total time, that he would spend at Ned's?

A. It could.

Q. You still don't recall any definite reason for that estimate?

A. No, I don't.

Q. Now you have estimated—or so it is stated on Respondent's Exhibit 31-L—that each of these three salesmen spent one fifth of their time at Ned's on gasoline. Can you give me an estimate of what part of their time
at other reseller stations they spent on gasoline?

5162 Mr. Hanley: If your Honor please, it now being
12:35, and counsel having asked a question which involves a calculation, assumes a calculation will be made,

it is moved that we adjourn for the luncheon hour, and if the calculation can be made which had been asked for, Respondent will furnish the information at the conclusion of the luncheon hour.

Mr. Austin: I haven't asked for a calculation. We are dealing, here, entirely with estimates, your Honor.

Mr. Hanley: May we have a ruling on the motion, Judge?

Trial Examiner Ballinger: The Examiner understands there is nothing here that requires a calculation. If the witness has any data, records which he desires to consult to refresh his recollection that will enable him to more accurately answer the question, you may have that opportunity. Are there any records that you desire to consult?

Witness: Yes.

By Mr. Austin:

Q. Have you got records, now, going back to the activities of these salesmen in 1937?

A. I am not sure. That's something I would like to learn.

Q. Well, what records did you have before you for the purpose of making these estimates that I referred to

5163 on Respondent's Exhibit 31-L?

A. I had the opportunity to ask questions from immediate staff and an opportunity to examine daily sales reports by the salesmen involved.

Q. Will you look at Respondent's Exhibit 31-L again for the purpose of answering this next question?

(The witness referred to document.)

Q. You will note there, Mr. Blough, that, as I said a moment ago, it is stated that you and Mr. Raupagh estimated that one fifth of the time of each of these salesmen at Ned's Auto Supply Company was spent on Gasoline. Are you following that from the exhibit?

A. Yes.

Q. Would it have been possible for you at that time, with equal facility, to have estimated the time spent by the salesmen on various products at other stations?

A. Yes.

Trial Examiner Ballinger: No such estimate as that was made of the other stations, was it?

Witness: I beg your pardon?

Trial Examiner Ballinger: No such estimate was made with reference to the other stations, was it?

Witness: No.

Trial Examiner Ballinger: So that you didn't examine the records ~~nor~~ consult with any one with reference 5164 to the other stations?

Witness: No.

Mr. Austin: That's just the point, your Honor.

Mr. Hanley: And it is suggested, your Honor, that it is entirely immaterial whether it was or wasn't.

Mr. Austin: Counsel for the Respondent having suggested an adjournment for lunch, I will be glad to comply and, therefore, suggest that we adjourn until 2:00 o'clock.

Mr. Hanley: Counsel for the Respondent withdraws his motion because there was included in it some suggestion that we look up records.

I concur entirely in the motion made by Counsel for the Commission as to the adjournment.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

The motion is granted and now, at 12:40 P. M., the hearing stands in recess until 2:00 P. M.

(Whereupon, at 12:40 P. M., February 19, 1942, the hearing in the above-entitled matter was adjourned.)

5165 Afternoon Session.

2:00 p.m.

Trial Examiner Ballinger: Come to order.

F. McK. BLOUGH, resumed the stand and testified further as follows:

Direct Examination (Continued) by Mr. Austin.

Q. Mr. Blough, are you familiar with all of the activities of the Detroit Field office?

A. No.

Q. Well, if that is too broad you, at least, know what those activities are, do you not, even though you don't know how they may all of them be carried on?

A. Generally, yes.

Q. You have been employed in the Detroit office since 1936?

A. Right.

Mr. Austin: I would like to have these two sheets marked, for identification.

Trial Examiner Ballinger: The Reporter will mark the documents Commission's Exhibit 110 and 111, for identification.

(The documents referred to were marked "Commission's Exhibits 110 and 111" for identification.)

Mr. Austin: Off the record.

5166 Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Austin: In view of the fact that these two charts were submitted by counsel for the Respondent, I suggest that I read the title of each of them and that it may then be proper to offer them without going through the procedure of having the witness identify them.

Trial Examiner Ballinger: You may omit the formal proof.

Mr. Austin: Commission's Exhibit 110, for identification, is entitled "Organization Chart of Sales Department, Detroit Field, October 23, 1941." Commission's Exhibit 111, for identification, is entitled "Organization Chart, Accounting Department, Detroit, Michigan."

May I ask, Judge, if there is any significance to the fact that the date of October 23, 1941, appears on one and no date on the other?

Mr. Hanley: No. I would just like to state that the date on Commission's Exhibit 110 is entirely immaterial. The chart is indicative of the general set up of the organization in the sales accounting departments for several years last past, so the date on that particular exhibit is not of any significance.

Mr. Austin: I offer these two charts in evidence.

5167 Trial Examiner Ballinger: Without objection, the documents are admitted in evidence as Commission's Exhibits 110 and 111.

(The documents referred to, heretofore marked for identification "COMMISSION'S EXHIBITS 110 and 111", were received in evidence.)

By Mr. Austin:

Q. Showing you these two exhibits, Mr. Blough, Commission's Exhibit 110 and Commission's Exhibit 111, Commission's Exhibit 111 is the organization chart for the accounting department and the top employee shown on that chart is the office manager.

You see it here (indicating)?

A. Yes.

Q. The top employee or official on the organization chart for the sales department, Commission's Exhibit 110, is the manager.

Will you tell me whether the office manager is accountable to the manager and under the supervision of the manager?

Trial Examiner Ballinger: If you know.

A. I have never been a manager nor an office manager. I don't know.

Q. Well, don't you know—if you don't, say so, and
there are plenty of people here that do; it was just
5168 to clarify these charts—I wondered whether Mr.
Raupagh who, as I understand, is the field manager,
is in charge of all of the work in the office including the accounting department and the office manager. Would you rather not answer that?

A. I don't know.

Mr. Austin: I thought—off the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

5169 Trial Examiner Ballinger: On the record.

At this time the witness is withdrawn and Mr. Raupagh will be called.

(Witness excused.)

P. A. RAUPAGH was thereupon recalled as a witness for the Commission and, having been previously first duly sworn, testified further as follows:

Direct Examination by Mr. Austin.

Q. Mr. Raupagh, are the office manager and the other employes of the accounting department in the Detroit Field under your supervision?

A. Generally speaking, yes.

Q. And what do you mean by generally speaking?

A. Well, I mean by that that there is quite a distinction between the accounting department and the sales department but the answer would be, generally speaking, yes.

Q. Well, is your authority over the accounting department as full and complete as it is over the sales department?

A. I don't think it is quite as full and complete.

Q. I suppose, Mr. Raupagh, that that is because the accounting department naturally get some instructions as to their method of accounting from the sales research department which, of course—well, is that correct?
5170 Is that what you have in mind? It didn't occur to me when I asked the question but I can understand that it might be true?

A. Well, it is true.

Trial Examiner Ballinger: That's merely method of accounting, is it?

Witness: That's right.

By Mr. Austin:

Q. I just wanted to find out whether you were the person responsible for all of the activities—responsible to the company for all the activities in the Detroit Field, including the accounting department as well as the other departments.

A. I am.

Mr. Austin: That's all.

Trial Examiner Ballinger: You are excused.

(Witness excused.)

F. McK. BLOUGH, was thereupon recalled as a witness for the Commission and, having been previously first duly sworn, testified further as follows:

Direct Examination by Mr. Austin.

Q. Mr. Blough, the Standard Oil Company has a Marine Terminal at River Rouge, does it not?

A. Yes.

5171–5172 Q. Are you familiar with the method of operation of the Marine Terminal, generally?

A. Only in a general way.

Q. Who is in charge of that operation?

A. A man by the name of Ed. Mercer.

Q. Do you know whether Mr. Raupagh has any responsibility in connection with the work at the River Rouge terminal?

A. He does not.

Q. Do you know whether the personnel manager in the Field Office has anything to do with the employment of the Marine Terminal personnel?

A. He does not.

Q. Does the Detroit Field Office have any responsibility with regard to the transportation of gasoline from the Marine Terminal to the company's bulk plants?

A. Yes. Yes; we place the orders for those deliveries from the Detroit Office.

Q. Those deliveries are made by contract haulers, are they not?

A. In some instances, and in some instances by railroad tank car.

Q. When the deliveries are made by transport truck haulers are the contracts for that hauling made and handled in the Field Office?

A. No. Those are made in the general office.

5173 Q. In other words, we have a delivery where it starts at the Terminal and ends up at Field Office territory and I wanted to know which branch of the company's organization, if either, arranged the details and entered into the contracts for that.

A. That is not done here.

Trial Examiner Ballinger: Does the Marine Terminal come under the general manager of this district or is that entirely controlled by the Chicago Office, or do you know?

Witness: That is under the control—

Mr. Hanley: Judge, if your Honor please, I perhaps can clarify this whole thing by saying that the Marine Terminals including the River Rouge Terminal in Michigan is handled by the manufacturing department of our company. The sales department has nothing at all to do with it. If that's important at all in the consideration of this question, of course, we can develop it further, but just for the moment I will say that Mr. Raupagh and his organization in Detroit, or the Chicago sales department, has nothing at all to do with the operation of the Marine Terminal.

Mr. Austin: Well, this latter question, Judge Hanley, was more on the question of transportation from the terminal to the bulk plants. Does your answer go that far or—

Mr. Hanley: I think the witness has made—

5174 Mr. Austin: He says the general office handles those contracts.

Mr. Hanley: Whenever Detroit wants gasoline out of the River Rouge Terminal they make the order and the order is filled and shipment is made, but the Terminal itself is operated by the manufacturing department and they keep the records. That, indeed, is where we are getting these freight bill records that we discussed here in the last day or two.

Mr. Austin: Is that where you got those transport truck contracts that were put into evidence?

Mr. Hanley: No, sir. I got those from the Traffic Department.

Mr. Austin: Chicago?

Mr. Hanley: Yes, sir.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Mr. Blough, at one time when Mr. Boatwright was testifying he made the statement: "We have about six different reseller contracts and I don't recall the terms of each of them." That was at Page 2571 of the record. Are there that many different reseller contracts in use in the Detroit Field?

5175 A. I am no longer directly connected with the reseller function of our business. Anything that I said now would be an opinion. I don't know.

Q. Well, you were formerly in that capacity and I thought you might know what contracts were in use. However, if you don't feel qualified to answer that, I will ask some one else. Do you feel that you don't know just what contracts are in use, now, in the reseller department?

A. I don't know.

5176 Mr. Austin: Off the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Incidentally, Mr. Blough, do you have any recollection sufficient to tell us what contracts and types of contracts were in use in 1937 for the tank wagon reseller customers when you were in charge of that business?

A. Well, I am aware of the usual sales agreement, which is the form 461. I recall the Form No. 385 as being a record of any equipment on loan to a reseller customer. To my recollection, that is all of the usual sales agreements.

Q. Of course, you recognize that the lease is a contract; whether or not it is a sales contract, at least, it is a contract which the company enters into with tank wagon reseller operators; is that correct? Are not a number of tank wagon operators lessees?

A. Yes, but I didn't consider that a sales contract in my answer.

Q. Still referring back to your knowledge of the reseller business in 1937, in what quantities was gasoline delivered to tank wagon reseller customers?

A. In the largest quantity which we could urge them to take at any one time, limited only by their amount
5177 of storage or ability to pay.

Q. I am referring to single deliveries.

A. So am I.

Q. What would be the maximum single delivery?

A. The maximum single delivery would be the capacity of the truck.

Q. And what is that capacity?

A. Well, the usual capacity is 1500. However, I don't guarantee that we didn't make deliveries with some 1600 or 1800-gallon trucks.

Trial Examiner Ballinger: The testimony in the record is that your tank wagons or tank trucks had a capacity of from 800 to 1500 gallons. Have you larger tanks than that?

The Witness: His question was predicated on 1937. We have 3,000-gallon tanks now.

Trial Examiner Ballinger: At that time what did you have?

The Witness: 1500 was the high.

Trial Examiner Ballinger: Maximum?

The Witness: Yes.

Trial Examiner Ballinger: How long have you had 3,000-gallon tanks?

The Witness: Since July 7, 1941.

By Mr. Austin:

Q. What determines the quantity of gasoline to be
5178 delivered at a reseller station by the company's truck, at a single stop?

A. Didn't I answer that?

Q. Well, I am asking you now what determines the amount, and by that I mean is it the amount of the order or is it the amount that the driver decides he wants to leave at that time, or what determines that?

A. Well, we are—

Mr. Hanley: If your Honor please—just a moment, Mr. Blough—this is objected to as not proper rebuttal, having been thoroughly tried out by the Government on its case in chief, and the same is now repetitious and not proper rebuttal testimony. I suggest, your Honor, that this has been gone into in most minute detail by counsel in his case in chief.

Trial Examiner Ballinger: What have you to say to the objection?

Mr. Austin: The testimony now being elicited is in connection with the delivery cost schedules of Respondent's Exhibit 31-A. It may be that some of the testimony at the start of the case would answer some of the questions I am asking now. Frankly, I haven't had an opportunity to go back through all of that testimony to determine whether or not all of these questions are necessary, but I am not going into this at any great length. Unless it is previously answered, it is certainly proper rebuttal.

5179 Mr. Hanley: I withdraw my objection. If counsel does not intend to pursue it at great length, I will be glad to withdraw the objection.

Trial Examiner Ballinger: The objection is withdrawn.

Mr. Austin: It is true, your Honor, that these questions are directed, certainly, to a different purpose and subject than those previously. It is not repetition of my direct. I would like to explain that so that the Examiner and counsel following them, that these questions are directed to rebuttal, to the cost study for 1937, whereas, I must have had a different purpose for my original questions of Mr. Raupagh.

Trial Examiner Ballinger: Read the question.

The Reporter: (Reading) "I am asking you now what determines the amount, and by that I mean is it the amount of the order or is it the amount that the driver decides he wants to leave at that time, or what determines that?"

A. The amount of the order.

By Mr. Austin:

Q. Then is it the practice of the company to deliver to the service station in one delivery the full amount ordered; that is, up to a full tank truckload, or does the practice on that vary?

A. I don't think I understand the question.

Q. Well, I will try and reframe it.

5180 I just wanted to know whether it is the practice of the company to deliver, say, a full truckload of gasoline where the order is for that much gasoline or whether the driver may at his option leave a part of a load in order to leave some more gasoline at another station on his route, and thus give several stations some gasoline on one trip and perhaps come back the next time and deliver another additional load at the same station.

If that is still not clear, it is directed to whether the driver at his option may not, in order to deliver gasoline to several places on one trip, deliver less than a full order at a single station?

The driver would have that option in case of emergency handling, but other than that he delivers such orders as he has when he leaves the plant.

Q. That is getting to the point, Mr. Blough, that I had in mind. Where orders are on hand before the driver starts out, is he given instructions regarding the filling of those existing orders?

A. As to place and quantity.

Q. But it is also true, is it not, and I am sure that this is in the record, that the drivers call on many stations on their route and determine their needs upon the call and don't always know before they start out how much they are going to deliver at a station?

I think in fairness I will say to the witness before
5181 he answers that, when I said that was in the record, I don't know what the answer is, but I remember there was testimony about it. I am not trying to say that Mr. Raupagh or anybody else testified to anything.

You just tell us what you know about it.

A. Fix a time for that and I think I could answer it much better than I can without a time fixed.

Q. Well, in '37.

A. In '37? Yes, there were certain accounts where a delivery was made every day at stations which had a large volume, where the driver knew that he could leave a considerable amount of gasoline each day when he went there. In that case he wouldn't know whether the delivery would be 750 or 850. It would be to bring that storage up to capacity. And each of our "A" stations and—some drivers out of each "A" station had customers of that type. That was in 1937.

Q. Still referring now to 1937, because I understand that that is when your knowledge is most complete, could any service station serviced by the company obtain a full delivery of a tank truck of gasoline by ordering that amount?

A. If he had storage room and the money to pay for it.

Trial Examiner Ballinger: Were there any of them that had sufficient storage room to take that much?

The Witness: To take 1500 gallons?

Trial Examiner Ballinger: Yes.

The Witness: Yes, sir.

5182 By Mr. Austin:

Q. Most of them have that much storage, don't they, Mr. Blough?

A. They have all of them that much—I don't mean that. I was thinking in terms of our company owned stations. They all in the company owned classifications, leased out, have storage for more than 1500 gallons. However, there are three brands of gasoline involved, so that adding the capacity of their tanks doesn't necessarily mean that you could put in a full load of Red Crown gasoline at any given time.

Q. You meant available storage?

A. That's right.

Q. Empty storage?

A. That's right.

Q. Then I understand that it was the policy of the company when a station ordered as much as a truckload of gasoline and had the space to put it and the cash to pay for it, that it was the policy of the company to deliver that full amount in one delivery?

A. We would have done so, yes.

Q. In other words, to deliver a full truckload rather than to make more than one trip to that station and deliver the order in parts?

A. Unless there were emergency orders which would make it seem to the station agent or some of his staff, if they would get the idea that it would be better and
5183 time saving for a number of people to make two deliveries out of that, that would have been done.

Q. That was the exception rather than the rule?

A. I would say yes.

5184 Trial Examiner Ballinger: How does this become material?

Mr. Austin: May I ask one or two questions more, your Honor?

Trial Examiner Ballinger: Certainly.

By Mr. Austin:

Q. Was any better or lower price offered to service stations taking full load deliveries?

A. No.

Q. Referring, now, to tank wagon resellers; than to stations taking smaller deliveries?

Mr. Hanley: Just a moment, Mr. Blough.

Trial Examiner Ballinger: He has answered the question.

Mr. Hanley: I know he said "no" but may we have it made clear by counsel what he means by a smaller or a larger delivery? The implications in this thing, Judge, are just—

Mr. Austin: I really should have said partial load instead of smaller. I think that's the way you understood it, did you not, Mr. Blough? If not, you may re-answer.

Trial Examiner Ballinger: Read the question.

(The question referred to was read by the Reporter.)

By Mr. Austin:

5185 Q. Now by smaller deliveries I mean partial load.

A. No.

Mr. Hanley: Now may it be understood, Judge, that counsel is talking about a tank wagon truck which has a capacity of 1500 gallons, or thereabouts?

Trial Examiner Ballinger: It is so understood. The Examiner intended to make that statement on the record.

Mr. Hanley: Of course, as I understand the law suit, we are talking about the deliveries between tank car deliveries with a minimum of 6,000 gallons as against tank wagon deliveries.

Mr. Austin: Yes, but in 1937 we were talking about Ned's Auto Supply Company and, also, other stations all of whom received deliveries by tank truck. That is correct, I believe.

Trial Examiner Ballinger: That is correct.

By Mr. Austin:

Q. We were speaking this morning about sales promotional activities of reseller salesmen. Where such promotional work is done by a salesman at a service station is any charge made to the service station by the company for that assistance?

A. No.

Q. Are you familiar with the employee in the Detroit Field office known as the safety representative?

A. I know him.

5186 Q. Would you be able to give a description of his services in connection with safety signs, and so forth?

A. You mean his functions and—

Q. Yes. Incidentally, he comes under you, now, doesn't he; as assistant manager—wholesale; or does he?

A. Oh, yes. Adams is known as our safety service adviser and is primarily concerned with the job of preventing accidents among our personnel and to our property in the Detroit Division.

Q. What are his duties in so far as they are connected with, or in so far as they involve expenditure of time or activity at reseller service stations? There has been some reference, here, to safety signs, if that will give you any sort of a lead to what I have in mind.

A. Well, of course, he is in charge of the task of carrying out the activities of a general office safety department. If they specify that a certain type of yellow sign saying "watch out" or words to that effect should be put next to an air compressor, then Adams would do the office part of the work or some girl under his supervision would, which eventually got a little yellow sign sent out to each reseller who had an air compressor.

Adams is concerned with general safety practices at reseller locations but as to the time that our safety supervisor would put in actually in the inspection of re-
5187 selling properties; just practically nothing.

Q. Well, I didn't refer to that. I rather referred to the activities of his department.

Now, to clarify that a little further: Do the activities of his department relate to service stations, reseller outlets; in other words; that is, one classification? Another possibility would be that he and his staff spent their time in connection with company-owned property, such as the bulk plants—by the company-owned property, I don't mean station, I mean bulk plant; the third possibility he spends a good part of his time in connection with consumer customers—so will you state whether this safety work is a reseller outlet proposition or is it something that relates to company owned property or consumers, or where does it take place?

A. In the first place the safety supervisor in the Detroit Division has his first duty to perform inside our own organization, our own personnel and our own property, and when he goes outside of that, that would account for a very small part of his time because he has so much to do with promoting safety among our own people. That is the first place where he is charged with promoting safety, and having got that done, then to look out there on properties from an angle of safety—now I want to get this right—and generally to inquire into equipment from a safety standpoint if we have that in the hands of a 5188 dealer.

Probably 95% or more of his time is taken up internally with our own personnel and with our own properties inside our organization.

Q. And by your own properties are you including company-owned properties leased out?

A. No, you excluded those.

Q. I intended to, yes. I wanted to be sure you were also excluding them.

In so far as the safety representative has any responsibility or performs any service in connection with reseller outlets, such as installation of safety signs, and so forth, are such services or activities engaged in only at the service stations' request, or does the safety department supervise all Standard Oil Company service stations as a matter of company policy?

Mr. Austin: That's all I have. You may have the witness, Judge Hanley.

Trial Examiner Ballinger: Is there any cross-examination?

Mr. Hanley: If your Honor please, I think we have no cross-examination at this time.

My associate asks, however, I move for a recess, if
5189 your Honor please, if that is agreeable.

Mr. Abbott: We would like to discuss whether we desire to cross-examine or not.

Trial Examiner Ballinger: We will stand in recess for ten minutes.

(A short recess was taken.)

5190 Trial Examiner Ballinger: Come to order.

Mr. Austin: May I ask the witness one more question?

Trial Examiner Ballinger: You may.

Mr. Austin: It just occurred to me while I was out.

Mr. Blough, I asked you some questions about the ordering and delivery of gasoline in truckload lots. It is true, isn't it, that in 1937 there were many tank wagon reseller stations other than Ned's Auto Supply stations which ordered and received full load deliveries of gasoline?

The Witness: Yes.

Mr. Austin: That is all.

Trial Examiner Ballinger: You are excused.

(Witness excused.)

Mr. Hanley: If your Honor please there are no questions on cross-examination, but the Respondent at this time desires to make a motion in respect to this witness' testimony:

At this time the Respondent moves to strike the entire testimony of the witness, Mr. Blough, upon the grounds and for the reasons that appear hereafter in the motion. The testimony of the witness falls into two general classifications:

First, testimony in respect to the method of allocation of
time of salesmen; and, secondly, in respect of amounts
5191 of deliveries to reseller customers.

The Respondent moves that the entire testimony be eliminated from the record, for the reason:

First, that as respects allocation of salaries, it is trivial and capricious and frivolous, in that: First, it refers to the one-half cent differential which was accorded to Ned's Auto Supply Company in 1936 to 1938, which differential was eliminated in 1938 and is no longer a matter of issue in this case. Second, that even if it were a matter at issue, it involves in its entirety only .005 cents per gallon, which is so small an amount as to constitute an imposition upon the time of the Trial Examiner and the Commission.

In so far as the second portion of the examination is concerned, it is objected to for the reason that it was fully covered in the main case of the Government and is improper rebuttal.

Trial Examiner Ballinger: I will hear from counsel for the Commission.

Mr. Austin: Well, your Honor, the question of the one-half cent differential in 1936 to 1938 which was accorded to Ned's Auto Supply Company is made an issue by the Complaint, and the defense to that issue has been interposed by the Respondent and a cost justification has been attempted, and unless the Respondent abandons that justification and also moves to strike from the record Respondent's
5192 Exhibit 31-A to Q, I don't think that the motion is well taken.

On the second point that I explained at the time the testimony was elicited, the questions regarding delivery of gasoline were directed to the Respondent's Exhibit 31-B to F, inclusive, and I think that testimony was properly elicited in rebuttal to the cost justification attempted on these pages of Exhibit No. 31.

Mr. Hanley: Judge, may I add to the motion? I should have done so before.

In respect of this motion, particular reference is made to page 11, Exhibit 31-L of Respondent's Exhibit No. 31 series of Exhibits.

Off the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

The motion is denied.

Mr. Austin: In view of counsel's statement I would, if your Honor please, like to make a statement on the record.

Counsel for the Respondent has stated that the amount of the matter in controversy on the question of cost justification based upon difference in selling costs as set forth in Respondent's Exhibit 31 amounted to only five-thousandths of a cent. Actually, as is shown by Exhibit 31-A,
5193 the differential in selling cost between Ned's Auto Supply Company and other reseller stations in 1937,

is claimed to be .074¢. The figure of five-thousandths was simply the amount of selling-cost charged to Ned's but the importance, here, is the differential as between Ned's and other stations.

Mr. Hanley: I assume, your Honor, that having ruled you don't care for any argument on this.

Trial Examiner Ballinger: It is unnecessary. Is there anything farther, gentlemen?

Mr. Hanley: If counsel has nothing further, I want to respond to some requests that were made, your Honor; particularly with reference to the retirement plan that was offered. I have forgotten the exhibit number. Perhaps you have it, Mr. Austin.

Mr. Austin: 108 for identification.

Mr. Hanley: If your Honor please, there was requested some explanation of a cancellation of certain pages in Exhibit 108. I am now informed—

Trial Examiner Ballinger: The cancellation appears only on one page?

Mr. Austin: Two pages.

Mr. Hanley: Pages 19 and 20.

Trial Examiner Ballinger: Yes: 19 and 20.

Mr. Hanley: I am now informed that the reason for that cancellation is certain provisions in the Federal Social
Security Act that made it imperative that the Re-
5194 spondent cancel those various portions of its retire-
ment plan and that such cancellation was made in conformity with Federal law.

Mr. Austin: May I ask a question?

Trial Examiner Ballinger: Yes.

Mr. Austin: Judge Hanley, those two pages marked cancelled, as I read them, showed an example of the application of the plan. Now if the example is out, how much does that affect the plan itself? You stated that that portion of the plan was cancelled. Does that mean that the cancellation of the example indicates that certain of the text is no longer in use?

Mr. Hanley: I don't know. I just assume that whatever those pages portrayed was something that wasn't quite in conformity with the Federal law. All I have, Mr. Austin, is what the treasurer of our company has given us as we offered these things yesterday and he says the reason for this cancellation was because we had to conform to the Federal Social Security Act and that is just all I am trying to tell you. I don't profess to understand just exactly what the reasons are.

Mr. Austin: Thank you, and I suggest, your Honor, that that not be introduced at this time. I would like to have an opportunity to read it and see if I can, upon reading it,
determine whether the cancellation of the example on
5195 those pages indicates a cancellation of some application of the plan itself and if there is any question about that, then I think that that question should be cleared up before that booklet is introduced as stating what the plan is.

Trial Examiner Ballinger: The Examiner will withhold any ruling on the admission of Commission's Exhibit 108 for identification.

Mr. Hanley: If your Honor please, I think it appropriate at this time to indicate that it really is not material what the specific terms of any annuity or retirement or pension policy of the Respondent may be. I concede that it is probably material as to how an allocation of the expense of any such pension or retirement plan may be made but I just suggest to your Honor that it is not material at all as to what the detail of any such plan may be.

Mr. Austin: I would agree with that except to the extent that we are concerned with certain payments made by the general office and certain other expense known as a field contribution and the only purpose in offering the exhibit in the first place was to attempt to throw some light on the nature of the different types of payment paid into the plan by the company.

Trial Examiner Ballinger: Mr. Austin, it is conceded some payments were made, is it not?

Mr. Austin: Oh, yes.

5196 Trial Examiner Ballinger: And that they were made under the plan indicated or set out in Commission's Exhibit 108. That is conceded, isn't it?

Mr. Austin: I can't concede the last part because I am not familiar with that exhibit 108, for identification.

Trial Examiner Ballinger: Well, the testimony in the case plainly indicates or establishes that the payments were made under the plan set forth in Commission's Exhibit 108.

Mr. Austin: Provided that's correct.

Trial Examiner Ballinger: Assuming that the plan here outlined is totally invalid, wouldn't they be entitled to allowance for the amounts paid in?

Mr. Austin: Well, my only question with regard to that booklet is, is there anything stated in that booklet regarding contribution by the company which is no longer followed by the company itself? I want to know what the company's actual practice is.

Trial Examiner Ballinger: You are still following this, according to the testimony.

Mr. Austin: Let us have it in evidence then, your Honor.

Trial Examiner Ballinger: And we certainly, in this proceeding, are not going to try to determine the validity or invalidity of this plan.

Mr. Austin: I agree with that. I want to know the 5197 nature of the expense and not whether or not the plan itself is a good plan or a bad plan.

Trial Examiner Ballinger: The Examiner will withhold ruling on the admission of Commission's Exhibit 108 until he hears further from counsel for the Commission.

Mr. Hanley: Very well, your Honor.

Now, there is one other request. I am trying to clean up these requests as fast as I can, Judge.

In Washington requests were made by Mr. Austin in behalf of the Commission for certain common carrier contracts for haulage of gasoline between River Rouge and points in Detroit. There were furnished at that time what were subsequently marked Commission's Exhibits 92-A to 92-D, inclusive, and Commission's Exhibits 93-A to 93-E, inclusive. Just lately Mr. Austin has requested further information in connection with these contracts and has directed particular attention to the Ogden & Moffett Company. I now have a contract under date of December 9, 1939, of the Ogden & Moffett Company. We have examined it, and it doesn't have any point in it that is involved in this lawsuit.

I produce it because I have been asked to, your Honor, but I object to it as entirely immaterial.

Trial Examiner Ballinger: It hasn't been offered yet

Mr. Hanley: Well, I am producing it, Judge.

Mr. Austin: Your Honor, I was only mentioning 5198 Ogden & Moffett because you asked me if I could give you any line on what I knew about it and Ogden & Moffett was simply a name that one of Respondent's counsel or witnesses mentioned on the record previously. Now what I actually wanted was the contracts under which gasoline deliveries were made to jobbers in 1940. If they weren't made under an Ogden & Moffett contract, then they must have been made under some other contract.

5199 Mr. Hanley: Well, Mr. Austin, I think we gave you that in Washington. I don't know anything else we have. I think we gave you all of that.

Mr. Austin: The company certainly knows how it got gasoline to its jobbers in 1940.

Mr. Hanley: Yes. Yes. These contracts indicate that. The contracts I gave you in Washington indicate how it is shipped——

Mr. Austin: Not according to what is in the record, they don't, Judge, the way I read it.

Mr. Hanley: I am just awfully sorry.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Hanley: If your Honor please, there seems to be some confusion about the understanding relative to the request of counsel for the Commission in connection with common carrier contracts of gasoline from River Rouge to Detroit.

In response to the letter request of Mr. Austin an effort was made by counsel for the respondent to obtain from the traffic department of the respondent all of the contracts that had any pertinence in the entire Detroit area. A number of them are available here in court, including certain
writings many of which obviously indicate on their
5200 face are not pertinent to this case, but if I may be per-
mitted to do so, I am perfectly willing to submit this
file to Mr. Austin and let him choose whatever he thinks may be pertinent, reserving to the respondent the right to object to anything that he offers that we think is not pertinent to the case.

I may say that this file includes certain contracts which were heretofore furnished to the Commission and which have been received in evidence.

Trial Examiner Ballinger: The file may be delivered to counsel for the Commission for examination.

Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Austin: Your Honor, I move that we adjourn until 10:00 o'clock tomorrow morning.

Trial Examiner Ballinger: Motion is granted and now, at 4:05 p. m., the hearing is adjourned to reconvene at 10:00 a. m., Thursday, February 20, 1942, in Room 859 Federal Building, Detroit, Michigan.

(Whereupon, at 4:05 p. m. the hearing was adjourned to reconvene on Friday, February 20, 1942, at 10:00 a.m.)

5201 Room 859 Federal Building,
Detroit, Michigan,
February 20, 1942.

Met, pursuant to adjournment at 10:00 A. M., War Time.

Before: Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., Attorney for Federal Trade Commission.

Harold R. Hanley, Esq., 910 South Michigan Avenue, Chicago, Illinois; and,

Arthur J. Abbott, Esq., of the firm of MacMahon, Abbott & Roberts, 2230 Buhl Building, Detroit, Michigan; appearing for the Respondent.

5202 PROCEEDINGS.

Trial Examiner Ballinger: Come to order.

The hearing of docket No. 4389, in the matter of Standard Oil Company, is reconvened in room 859 Federal Building, Detroit, Michigan, at 10:00 a. m., Eastern Standard Time, February 20, 1942. The last hearing was in the same room in the same city, February 19, 1942.

You may proceed.

Mr. Austin: Will you take the stand, Mr. Feinberg?

CHARLES EVAN FEINBERG was thereupon called as a witness for the Commission and, having been first duly sworn, testified as follows:

Direct Examination.

Trial Examiner Ballinger: What is your full name?

Witness: Charles Evan Feinberg.

By Mr. Austin:

Q. And where do you reside?

A. 2215 West Boston Boulevard, Detroit.

Q. And what is your business?

A: Petroleum products.

Q. How long have you been in the oil business?

A. 14 years.

Q. Are you an officer of the Argo Oil Corporation?

A. Vice President.

5203 Q. When was Argo Oil Corporation incorporated?

A. 1922.

Q. And how long have you been with that company?

A. Since 1928.

Q. Will you describe, generally, the business of the Argo Oil Corporation; the products handled and the nature of the business?

A. At the present time? It has varied, at different times. We have been tank car operators, gasoline distributors, fuel oil distributors.

Q. How long has the company been engaged in the gasoline business? By that I mean the business of selling gasoline?

A. In the wholesale business it has been engaged, for, I would say, fifteen or sixteen years; in the wholesale gasoline business. In the retail gasoline business, since about 1930.

Q. Is the company's business, or has its business in the past ten years been predominantly fuel oil or gasoline?

A. Predominantly fuel oil.

Q. What was the volume of the Argo Oil Corporation sales of gasoline in 1939 and 1940?

Mr. Abbott: That is reflected by Respondent's Exhibits 55-A and 55-B. The exact figures are given.

Trial Examiner Ballinger: The witness may answer.

A. I would appreciate the exact figures. My guess 5204 would be approximately four million in 1939 and about seven million, seven to seven and a half million in 1940.

Trial Examiner Ballinger: You may insert the figures as shown by the record at this point if you—

Mr. Austin: I object, your Honor. That is Respondent's evidence and I don't think we are bound by that.

Mr. Abbott: I just wanted to interpolate that we have some figures on that in the exhibit, already.

Mr. Austin: Of course, I assume those are taken from the State gasoline reports but, nevertheless, I don't think that precludes me from inquiring from this witness.

Trial Examiner Ballinger: It does not.

By Mr. Austin:

Q. Most of the gasoline sold by Argo Oil Company in 1939 and 1940 was purchased from the Ohio Oil Corporation?

A. Yes, it was.

Q. Was the gasoline purchased by Argo from the Ohio Oil Corporation purchased by Argo and sold by it under a brand name?

A. Well, some of it, of course, was. Most of it was unbranded. That is, the customers could put any brand on it they wanted. Some of it was sold as Marathon.

Q. Marathon?

A. Marathon, which is the trade name of the Ohio Oil Company.

5205 Q. Was any of it sold as Linco?

A. In the beginning there was a transitional period of the trade names, that they were changing.

Q. When was that?

A. Early part of 1939.

Q. Was Linco then abandoned and did Marathon replace it as the brand name?

A. Yes.

Q. Did Argo Oil Company have a contract with the Ohio Oil Corporation for the purchase of gasoline?

A. Well, it had at that time. It hasn't, as of today.

Q. At that time, do you mean 1939 and 1940?

A. 1939 and 1940 there was a contract with the Ohio Oil Company.

Q. You say that contract is not now in force?

A. No.

Q. When was it terminated?

A. Actually terminated about March 1, 1941.

Q. And since March, 1941, has the Argo Oil Corporation sold Ohio Oil Company gasoline?

A. None.

Q. What is the extent of the business, the gasoline business of the Argo Oil Corporation now?

Mr. Abbott: I object to that upon ground that it is immaterial as rebuttal testimony, there being nothing 5206 in the testimony thus far as to the sales of the company in the year 1941.

Mr. Austin: Well, your Honor, there was testimony regarding the status of these companies and what they were doing in 1941. I will change that question, however.

By Mr. Austin:

Q. Instead of asking you now, I will ask you whether your gasoline business dropped off in 1941 after you discontinued the Ohio Oil Company gasoline?

Mr. Abbott: Same objection. It is not proper rebuttal testimony.

Trial Examiner Ballinger: The objection is overruled.

A. Yes, it did drop off.

5207 Trial Examiner Ballinger: Was there a marked decrease?

The Witness: Well, we are practically out of the gasoline business.

By Mr. Austin:

Q. Did the Argo Oil Corporation in the Spring of 1941 decide to abandon the gasoline business of the company? By abandoning it, I understand that you still have some business, but what I am getting at is, was there a definite change in the policy of the company regarding its gasoline business in the Spring of 1941?

Mr. Abbott: I object to that on the ground it is not proper rebuttal testimony.

Trial Examiner Ballinger: The objection is overruled.

A. With the cancellation of the contract, we had no alternative but to practically discontinue the business.

Q. Well, I won't pursue that, Mr. Feinberg. I just thought the fact that you ceased to buy from Ohio wouldn't necessarily preclude the company from continuing?

A. No, it didn't.

Q. Is Marathon gasoline now sold in Detroit?

A. No, it isn't.

Q. Will you explain how the Argo Oil Corporation obtained its gasoline from the Ohio Oil Company in 1939 and 1940?

5208 A. What do you mean "obtain"?

Q. I mean—

A. The method of delivery?

Q. The method of delivery and supply.

A. The Ohio Oil Company would have the gasoline delivered either to our bulk plant or to any of our designated dealers by truck train.

Q. Where did the delivery start?

A. Well, it would either start from their storage in the Rouge or from any firm that they had made some trade with.

Q. Does the Ohio Oil Company have a marine terminal here in Detroit?

A. Yes, it has.

Q. Do I understand that when you purchased gasoline from them for delivery to a customer, it was in some cases delivered from the marine terminal to your customer?

A. That's right, sir.

Q. Upon your order?

A. On our order. Instead of delivering to our bulk plant, it was delivered direct to the consumer.

Q. The condition we are discussing existed in 1939 and '40?

A. Yes, sir.

Q. When you say direct to the consumer, you mean
5219 direct to the purchaser?

A. Direct to the man who would resell it. I don't mean the consumer. Pardon me.

Q. Was that transportation from the marine terminal to the purchaser made by transport truck?

A. By truck train, yes, sir.

Q. Who paid for the transportation?

A. Ohio Oil Company.

Q. Did they bill you for the cost of transportation or was that included in the price?

A. It was included in the price, though occasionally if we billed, credit would be given for the billing.

Q. If you purchased gasoline from Ohio Oil Company for delivery to your own bulk plant, was the gasoline delivered F. O. B. your bulk plant?

A. F. O. B. our bulk plant.

Q. So that if you instead directed the Ohio Oil Company to deliver a transport truckload of gasoline to one of your customers, the arrangement with the Ohio Oil Company was the same as if it had been a delivery to your bulk plant?

A. Exactly the same.

Mr. Abbott: Your Honor, may I have a continuing objection to all this line of testimony on the ground that it is not proper rebuttal?

Trial Examiner Ballinger: You may.

5210 Mr. Abbott: I fail to see how this in any way can be considered as rebuttal testimony.

Trial Examiner Ballinger: What is the capacity of the transport truck used?

The Witness: On an average of about 8,000 gallons.

By Mr. Austin:

Q. Did the Argo Oil Corporation ever import any gasoline into Detroit in boat loads or ship loads?

Mr. Abbott: The same objection.

A. No, it did not.

Trial Examiner Ballinger: The objection is overruled.

By Mr. Austin:

Q. Did Argo ever own or operate a marine terminal?

A. No, it did not.

Mr. Abbott: The same objection.

Trial Examiner Ballinger: You have a continuing objection.

Mr. Abbott: Yes, sir. Very well.

Trial Examiner Ballinger: So it is unnecessary to repeat it to each question.

By Mr. Austin:

Q. Did the Ohio Oil Company in 1939 and 1940 restrict or limit the amount of Marathon Gasoline it would sell to Argo Oil Corporation per month?

5211 Mr. Abbott: Just a moment.

I object to that question upon the ground that even if it did, it would be entirely immaterial in this case, not in any way binding upon any party involved in the case and wholly irrelevant to the issues in this case.

Mr. Austin: Your Honor, I might explain that these questions are leading up to the question as to whether or not Argo Oil Corporation ever did supply or offer to supply or was in a position to supply the Citrin-Kolb Oil Company. There was testimony by Mr. Citrin regarding certain alleged offers and negotiations with a representative of the Argo Oil Corporation.

Trial Examiner Ballinger: The Examiner understands these are merely preliminary questions.

Mr. Austin: Yes. And I want to call your Honor's attention to the fact that it appears on the record that the business of the Citrin-Kolb Oil Company was I think over five million gallons in 1939.

Trial Examiner Ballinger: The objection is overruled.

Mr. Austin: It will become material as to whether this corporation was in a position and could supply Citrin Kolb.

The Witness: Will you read the question?

Trial Examiner Ballinger: The Reporter will read

5212 the question.

The Reporter: (Reading.) "Did the Ohio Oil Company in 1939 and 1940 restrict or limit the amount of Marathon gasoline it would sell to Argo Oil Corporation per month?"

A. Yes, there were definite schedules attached to our contract.

Mr. Austin: I would like to have this paper marked, for identification.

Trial Examiner Ballinger: The Reporter will mark the document for identification "Commission's Exhibit 112."

(The documents referred to were marked "Commission's Exhibit 112-A, B, C, and D" for identification.)

By Mr. Austin:

Q. I show you this document marked Commission's Exhibits 112-A, B, C, and D, and ask you if you can identify it?

A. Yes, sir, I can. This is a contract, copy of a contract between the Argo Oil Corporation and the Ohio Oil Company for the delivery of gasoline.

Q. Is that an original contract or is it a copy?

A. It is a photostatic copy of the original contract.

Q. Where did you obtain this photostat?

A. We had to obtain it from the Ohio Oil Company.

Q. Have you read it, and do you recognize it as being a true copy of the original contract?

A. Yes, I do. Yes, I have and do.

5213 Mr. Austin: I offer the contract in evidence, your Honor.

Mr. Abbott: Just a moment. I want to see it.

(Commission's Exhibit 112-A, B, C, and D, for identification, was handed to Mr. Abbott.)

Mr. Abbott: This is objected to upon several grounds: First, that no proper foundation has been laid for the introduction of a photostatic copy, it not having been shown that the original is not available.

Second, upon the ground that it refers to the period between March 1, 1940, through March 1, 1941, which is a period outside the date of the competitive offer made to the Citrin-Kolb Oil Company.

Third, upon the general ground that it is immaterial and not proper rebuttal testimony in this case.

The principal ground is, of course, that it relates to a period which is not within the time covered by the competitive offer which is in evidence in the case.

By Mr. Austin:

Q. Mr. Feinberg, did you search your files for an original copy of the contract?

A. Yes, we did.

Q. And were you able to find it?

A. We were not able to find a copy of our original contract.

5214 Q. Did you ask the Ohio Oil Company then to send you this photostat?

A. We did.

Mr. Austin: Now, in response to the objection, your Honor, as to the period, it does appear from the testimony that sometime in 1939, I think late in '39, but sometime in '39, the alleged offer was made, but my recollection is that those offers were understood to have been continuing and the witness has so testified in many cases.

However, I will ask the witness, if I may, before your Honor rules on the objection.

By Mr. Austin:

Q. What is the date of this contract?

A. The duration of the contract is from March the 1st of 1940 to March the 1st, '41.

Trial Examiner Ballinger: What is the date of the contract?

The Witness: There is no date on it, sir.

By Mr. Austin:

Q. This is it right here, isn't it (indicating)?

A. No. Well, that is March the 1st of '41. It was a renewal contract, sir.

Q. Did the Argo Oil Corporation, to your knowledge have a contract with Ohio Oil Company during the preceding year?

5215 A. Yes, it did.

Q. Was that contract in substantially the same form and did it have—I will ask you at this time whether as to the last page, Commission's Exhibit 112-B, the same figures appear?

Mr. Abbott: Just a moment, now, if the Court please. The question is objected to upon the ground that it is not the best evidence as to the contents of any prior contract, it not having been shown here that the prior contract, if there was any such, could not be produced, and I object to it upon the ground that we have a right to see, if this evidence is to go in, the contract which is now referred to in this last question.

Mr. Austin: I will withdraw the preceding question, in any event, but I would like to ask you this, Mr. Feinberg:

By Mr. Austin:

Q. Was the method of doing business between Argo Oil Corporation and Ohio Oil Company in 1939 substantially the same as in 1940?

Mr. Abbott: I object to that. Just a moment. I object to that upon the ground that it calls for a conclusion of fact which can be supplied by the proper agreement, it having been testified by this witness that there was an agreement covering the year 1939 in writing, which we demand you produce.

5216 Trial Examiner Ballinger: Objection is sustained as to that question.

Mr. Austin: Oh; as to that question. At the present time, I am only interested, your Honor, in putting this contract in evidence and as to the existence of a contract and the method of doing business as shown by this contract between Argo and Ohio during this period, I still offer the contract.

Trial Examiner Ballinger: The Examiner is prepared to rule with reference to the admission of that contract covering the period named in the contract.

Does counsel desire to be heard further?

Mr. Abbott: We merely say that the contract now proposed to be introduced in evidence does not cover the period of the competitive offer which I understand this testimony is intended to rebut.

Trial Examiner Ballinger: The period covered by the contract that this is intended to rebut? What contract do you refer to?

Mr. Abbott: I don't refer to any contract. I refer to a competitive offer which, according to the testimony on page

2149 of the record, was made by Argo Oil Company to Citrin-Kolb Oil Company, which offer, according to the record was made in 1939.

Trial Examiner Ballinger: Doesn't the record dis-5217 close that that was a continuing offer?

Mr. Abbott: I don't think so. It does show that prior to 1939 there had been continuing solicitations by an official of the Argo Oil Company, but I don't think there is anything to show that the offer was made continuing after 1939.

Mr. Austin: In any event, your Honor, this is offered to show the nature of the business of the Argo Oil Company and the arrangement with the Ohio Oil Corporation, and I think it is entirely material for the period covered by the contract.

Mr. Abbott: It might be material for that period, but that period is not in issue here.

Mr. Austin: Well, I think it is. I think that the whole business—as a matter of fact, there is plenty of testimony in the record by Mr. Raupagh as to the business of the Argo Oil Corporation in 1941, let alone 1940.

Trial Examiner Ballinger: The objection is overruled. Commission's Exhibit 112-A, B, C, and D, for identification, is admitted in evidence and limited to the period named in the contract.

Mr. Abbott: Which is 1940 to '41?

Trial Examiner Ballinger: Whatever that period is.

(The documents referred to, heretofore marked for identification "COMMISSION'S EXHIBIT 112-A, B, C, 5218 and D", were received in evidence.)

By Mr. Austin:

Q. I believe you just stated, Mr. Feinberg, that there was some limitation upon the amount of gasoline that the Argo Oil Corporation could purchase from the Ohio Oil Company in each month under its contract?

A. Yes, I did.

5219 By Mr. Austin:

Q. Will you look at this contract, Commission's Exhibit 112, and tell us where in that contract there is any reference to the amount of gasoline which the contract covers?

A. We have a regular schedule, here, of the monthly gallonage of regular and Ethyl for each month.

Trial Examiner Ballinger: That appears on the last page, does it?

Witness: On the last page of the contract, which is part of the contract, sir.

By Mr. Austin:

Q. And what is the meaning of that schedule?

Mr. Abbott: I object to that upon the ground that the instrument speaks for itself. It is not ambiguous and requires no explanation.

Mr. Austin: I think it is ambiguous and requires an explanation.

I suggest that the Trial Examiner look at the contract, if there is any doubt about that.

Trial Examiner Ballinger: Let me see the contract.

(The document referred to was handed to the Trial Examiner by the witness.)

Mr. Austin: I don't believe any one can tell, from looking at that list of figures, how they apply as limitations on monthly gallonage, except from the testimony of 5220 the witness.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

In order to remove any question as to the meaning of the contract, the objection is overruled, and the witness may answer.

Mr. Abbott: What is the question, Mr. Reporter?

(The question referred to was read by the Reporter.)

A: The schedule, as outlined, stated a definite amount of gallons to be delivered of regular and Ethyl gasoline during each month of the contract. For the month of March, 1940, 500,000 gallons of regular—

By Mr. Austin:

Q. You don't have to read that into the record, Mr. Feinberg. That will appear, as far as the figures are concerned. I wasn't clear though, as to whether those were definite monthly requirements or whether the contract showed that there was a certain variation permitted.

A. We are permitted a leeway of ten percent more or less of the figures as stated in the schedule.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

5221 Q. Have there been any instances or were there any instances during 1939 or 1940 where you tried to obtain from the Ohio Oil Corporation, or requested the Ohio Oil Corporation, to sell you quantities of gasoline in excess of your contract schedule?

A. Yes.

Mr. Abbott: I object to any further testimony along this line upon the ground that it is not proper rebuttal testimony.

Mr. Austin: I thought you had a continuing objection.

Trial Examiner Ballinger: You have a continuing objection.

By Mr. Austin:

Q. Can you refer to any particular instance of that kind, and state what happened?

A. There have been occasions when we would require more gasoline and were not able to get it from the Ohio Oil Corporation. There have been others when we were in excess of the amount mentioned.

Q. Well, did a request for additional gallonage have to be made direct to the company or could that be simply ordered at the Marine Terminal and passed upon there?

A. No, it would have to be made direct to the company.

Q. In advance of placing your order?

5222 A. In advance of shipment, yes, sir.

Q. Did the Argo Oil Corporation operate any retail gasoline stations in 1939 and 1940?

A. Yes, it did.

Q. How many?

A. In 1939, three. In 1940, three. That is, part of the year 1940, three. We sold one. I am trying to think of the exact period but I think it was during the early part of 1941.

Q. To how many service stations, if any, did Argo Oil Company sell Marathon gasoline by tank truck delivery in 1939 and 1940?

A. In addition to our own stations?

Q. You didn't sell to your own stations. I am talking about sales, now, to retail gasoline stations.

A. Under the name of Marathon?

Q. Yes.

A. Not more than two or three.

Q. And what price was charged to such retail service stations for delivery of Marathon gasoline in tank car quantities; that is, 1500 gallons or less?

Mr. Abbott: I will ask that the question be deferred until we are given the names of the retail service stations so served.

Mr. Austin: That is entirely improper, your Honor. I don't think the witness can be requested to give the names of any of his customers and I think it would be entirely immaterial. I think it would be also improper on cross-examination in the case if the question arises later. 5223

Mr. Abbott: Is there anything secret about it?

Mr. Austin: It is against the policy of the Federal Trade Commission to require witnesses to put names into the record and the statute specifically prohibits us from making the names public.

Mr. Abbott: They are already in Exhibit 38-A to E, inclusive.

Trial Examiner Ballinger: The objection is overruled. The witness may answer.

Mr. Austin: Your Honor ruling that a witness which I called here, who is not a party to the case, may be asked the names of his customers?

Trial Examiner Ballinger: I am overruling the objection interposed by counsel for the Respondent at this time.

Read the objection.

Reporter: "Mr. Abbott: I will ask that the question be deferred until we are given the names of the retail service stations so served."

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

5224 Trial Examiner Ballinger: On the record.

Now read the last question.

Reporter: "Q. And what price was charged to such retail service stations for delivery of Marathon gasoline in tank truck quantities; that is, 1500 gallons or less?"

By Mr. Austin:

Q. The question is, just as to the price.

A. Tank wagon price was possibly, in one or two cases, a half a cent less to the smaller service station than the posted tank wagon price at that time.

Q. Whose posted tank wagon price?

A. I would probably say Standard Oil Company's posted tank wagon price.

Q. Are you referring to the prevailing major tank wagon price?

A. That's right, if you are talking about small retail establishments taking 1500 gallons or less.

Q. You said you served two or three of that type of customers.

A. That's right.

Q. Are you familiar with the Red Crown brand, Mr. Feinberg?

A. I am.

Q. And with Blue Sunoco?

A. I am.

Q. And with White Star, Texaco?

5225 A. Yes.

Q. Taking those as examples, would you state that those are major brands in Detroit?

A. Yes; I would.

Q. In your opinion did Marathon gasoline have as high a public acceptance in Detroit in 1939 and 1940 as the major brands just named?

Mr. Abbott: If the Court please, I object to that upon the ground that it is irrelevant and improper; no proper foundation laid for any opinion to be stated by this witness as to the relative values of gasolines as compared with Marathon brand which is company-marketed in the year 1939.

We are getting into the realm, now, of expert testimony and opinion as to the relative value and quality of gasolines and this witness, upon the record, is not qualified by any of his testimony thus far to answer that question.

Trial Examiner Ballinger: Isn't it more a question of public acceptance?

Mr. Austin: Of course, your Honor, that's just what it is and we have had all sorts of testimony in the record on that point but—

Trial Examiner Ballinger: The objection is overruled. The witness may answer.

5226 Witness: May I have the question again?

Trial Examiner Ballinger: Read the question.

Reporter: "Q. In your opinion did Marathon gasoline have as high a public acceptance in Detroit in 1939 and 1940 as the major brands just named?"

A. No.

By Mr. Austin:

Q. Did you consider, in those years, Marathon to be a major brand in Detroit?

Mr. Abbott: Just a moment, if the Court please.

I object to that upon the ground that it calls for the opinion of the witness, no proper foundation laid, this witness not being qualified upon the record to answer that question and there further being nothing in the record to indicate what is the meaning of the question now propounded.

Trial Examiner Ballinger: Merely the witness' opinion. The objection is overruled. The witness may answer.

Mr. Austin: The witness has been in the oil business, here, for ten or twelve years, at least; sold its own brand of gasoline.

Witness: May I have the question?

Trial Examiner Ballinger: Read the question, please.

Reporter: "Q. Did you consider in those years, 5227 Marathon to be a major brand in Detroit?"

A. Not in Detroit. Marathon was a newcomer in Detroit and we were introducing it. There are other places, of course, where Marathon, being a product of a major oil company, is considered a major brand, but not in Detroit.

Trial Examiner Ballinger: It hadn't received the public acceptance, then?

Witness: It wasn't known, sir. We were just beginning to distribute it.

By Mr. Austin:

Q. Was there a Mr. Roy Fisher associated with the Argo Oil Corporation in 1939?

A. Yes, there was.

Q. What was his position with the Argo Oil Corporation?

A. He was president of the corporation.

Q. Is he still with the Argo Oil Corporation?

A. No, he is not.

Q. When did his connection with the company cease?

A. October 28, 1941.

Q. Do you know where he is now?

A. No I don't, sir.

Q. Is he in Detroit, to the best of your knowledge?

A. Not that I know of.

Q. Did Mr. Fisher, in 1939, have authority to quote prices or make offers to sell gasoline on behalf of the 5228 Argo Oil Corporation?

Mr. Abbott: Just a moment. I object.

A. Yes, sir, he did.

Mr. Abbott: I'll withdraw that objection.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. And in 1939 were you an officer of the Argo Oil Corporation?

A. Yes, I was.

Q. What was your position then?

A. Vice President.

Q. Was it customary at that time for Mr. Fisher to discuss or talk over with the other officers of the company any proposed deal which he might have, or have in prospect, for the sale of gasoline to a customer whose requirements were in excess of a million gallons a year?

Mr. Abbott: If the Court please, I object to that, as to what the customer was. It is in evidence, here, that Mr. Roy Fisher did make a competitive offer to one of the witnesses whose testimony was adduced by the Respondent and I don't understand that you can rebut an interview on the part of Mr. Fisher, as President of the Argo Oil Company, with Mr. Citrin, by asking a witness if it was
5229 the custom of Mr. Fisher to discuss such offers.

Mr. Austin: Your Honor, I—

Mr. Abbott: I object to the question, upon that ground.

Mr. Austin: The purpose is to put in certain circumstantial evidence, here, which I think I have a right to do, to throw doubt upon the—not necessarily upon the conversation which Mr. Fisher is alleged to have had with Mr. Citrin, but let me point out that we are concerned here, under the statute, with the price of a competitor. That doesn't mean a lot of talk. That means a competitor's price.

It is not contended Mr. Fisher was selling gasoline; it was the Argo Oil Corporation. Therefore, I think it is quite material to determine whether or not the statement, if any, that Mr. Fisher made to Mr. Citrin, or any one else in this case, was simply talk or whether it really did represent an offer of the Argo Oil Corporation or whether the Argo Oil Corporation could have carried out such an offer if accepted, whether or not the price quoted was a price which the Argo Oil Corporation was in a position to give.

I think we are entitled to go into those things regarding the company who is alleged to have made the offer and we certainly are not bound simply to accept the testimony of one Respondent's witness as to what somebody else 5230 said to him and then accept that as a bona fide offer.

Trial Examiner Ballinger: Is it your contention that you can rebut definite testimony to the effect that an offer was made by showing the ordinary course of business or what was done in the ordinary course of business?

Mr. Austin: Well, yes, because, your Honor is assuming, in asking that question, that an offer was made. Now the fact that an officer of the corporation quoted a price to somebody, doesn't necessarily mean that that could ever have ripened into a contract and I think that when a dealer comes in here and says John Jones came up to me and said, well, he would sell me gas for so much, that we have a right to inquire into the circumstances surrounding that and the position of the company supposed to be represented, and its ability to supply, and in order to throw some light upon whether or not there was anything that amounted to a substantial offer.

Trial Examiner Ballinger: Are you an officer of the Ohio Corporation?

Witness: No, I am an officer of the Argo Oil Corporation.

Trial Examiner Ballinger: And did the testimony relate to some offer from the Argo Oil Corporation to—

Mr. Austin: That's right; a conversation alleged to have been said by Mr. Fisher, and it was at the time when 5231 Mr. Fisher was supposed to have called to get a contribution to some campaign and, at the same time, talked over gasoline.

Trial Examiner Ballinger: Where is Mr. Fisher now?

Mr. Austin: The witness says he doesn't know where he is and he is no longer connected with the company.

Trial Examiner Ballinger: You were an officer of the corporation at that time?

Witness: Yes, sir; I have been an officer for 14 years.

Trial Examiner Ballinger: And it would have been necessary for you to have passed upon such an offer?

Witness: No sir, but it would have been necessary to have been discussed with either myself or some other officer of the corporation. It would have been common knowledge.

Trial Examiner Ballinger: Did Mr. Fisher have the power to make such a contract?

Witness: Yes, sir.

Mr. Austin: You see, your Honor, circumstantial evidence in various parts, may not have much weight and altogether it may have considerable weight. This is one question leading to a line of questions which I simply intend to ask to find out what record there is, either in the minds of the officer or in the records of the company regarding any such deal. That may, in itself, amount to very little. I

5232 still think it is competent for whatever weight it may have in building up a picture.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

The objection is overruled.

At the conclusion of the testimony, if counsel for the Respondent so desires, I will entertain a motion to strike unless it does develop something substantial, and unless it does, the Trial Examiner will strike the testimony.

Read the question.

Reporter: "Q. Was it customary at that time for Mr. Fisher to discuss or talk over with the other officers of the company any proposed deal which he might have, or have in prospect, for the sale of gasoline to a customer whose requirements were in excess of a million gallons a year?"

A. Yes, sir.

5233 By Mr. Austin:

Q. Did Mr. Fisher ever tell you at any time during 1939 or 1940 that he had had any conversation or negotiations with the Citrin-Kolb Oil Company or with Mr. Jacob Citrin regarding the sale of gasoline by Argo to Citrin-Kolb?

A. No, sir.

Mr. Abbott: Objected to under the same grounds.

Trial Examiner Ballinger: Well, you have a continuing objection.

Mr. Abbott: Yes.

By Mr. Austin:

Q. Mr. Feinberg, have you searched the books and files of your company for any reference or record of an offer to the Citrin-Kolb Company?

A. Yes, we have.

Q. Did you find any record of any such offer?

A. No, sir, we found nothing.

Q. Do the Argo Oil Corporation's files contain any rec-
rd of any correspondence with the Ohio Oil Company re-
erring to any offer to or negotiations with the Citrin-Kolb
il Company for the sale of gasoline?

A. There is nothing in our files.

Q. It appears on the record, Mr. Feinberg, that the gaso-
ine volume of the Citrin-Kolb Oil Company in '39 and 1940
amounted to about five million gallons annually. Sup-
234 posing, Mr. Feinberg, that the Argo Oil Corporation
in 1939 had found a prospective customer who was
eady and willing to purchase five million gallons of Mara-
hon gasoline a year, in carload lots, at a price acceptable
o Argo. Was Argo in a position to obtain and sell Mara-
hon gasoline to a single customer in that quantity without
irst obtaining the approval of the Ohio Oil Company?

Mr. Abbott: Now, just a moment. If it please the Court,
his is objected to upon the ground, first, that it assumes a
act not in evidence, that the supply was to be entirely
Marathon gasoline, or that it was to emanate entirely from
he Ohio Oil Company; and, secondly, that the question
sked is purely suppositious and speculative and is, there-
ore, incompetent.

Trial Examiner Ballinger: The objection is overruled.
he witness may answer.

A. According to our schedule of deliveries we would
ot have been able to deliver. We couldn't have made the
eliveries without first receiving the approval of the Ohio
il Company.

By Mr. Austin:

Q. Did the Argo Oil Corporation ever sell gasoline on
commission basis?

A. No, sir.

Q. Did you ever have any arrangement with the Ohio
Oil Company whereby the Ohio Oil Company paid
235 Argo a commission or brokerage based upon the
amount of gasoline sold by Ohio Oil Company to a
ustomer obtained by Argo?

A. None that I know of, sir.

Q. Well, do you know whether you ever did?

A. We never did.

Q. Whether you ever obtained a commission or broker-
ge from the Ohio Oil Company?

A. No, sir.

Q. Did your company have authority from Ohio Oil Company to enter into any such arrangement on behalf of the Ohio Oil Company?

A. No, sir.

Mr. Abbott: Just a moment, before you answer that question.

I object to that upon the ground that it is incompetent and immaterial as to whether the Ohio Oil Company ever authorized the making of any such contract as the one now discussed.

Mr. Austin: Your Honor, I think it is now appropriate to call attention to the fact at that point that Mr. Citrin's testimony was that Argo was to act as a broker or commission agent on this proposed deal and were to receive a percentage or commission per gallon.

Trial Examiner Ballinger: The objection is overruled.

The Witness: The answer is "No, sir."

5236 By Mr. Austin:

Q. There is some testimony on the record here, Mr. Feinberg, about a conversation which Mr. Fisher is alleged to have had with Mr. Citrin in 1939 in which Mr. Fisher is related to have told Mr. Citrin about some big deals that he was contemplating in gasoline to be obtained from the Mexican government. To your knowledge was Mr. Fisher at any time contemplating the purchase of gasoline from the Mexican government and importing it into Detroit?

Mr. Abbott: Just a moment. Just a moment.

That is objected to upon the ground that this witness cannot know what was in the mind of Mr. Fisher or what he was contemplating in 1939.

Mr. Austin: I think he can, your Honor. He was a business associate, and I am only asking him to tell me what he knows. If Mr. Fisher talked to him about it, then he certainly knows whether Mr. Fisher was contemplating it, but I don't want to go into specific conversation.

Trial Examiner Ballinger: Read the question.

(The question referred to was read by the Reporter.)

Mr. Abbott: I object on the further ground that any such testimony would be hearsay.

Trial Examiner Ballinger: The objection is overruled.

A. Our first intimation of any deal—

5237 Q. Well, just answer the question, if you can, yes or no.

A. Yes.

Q. Do you know whether Mr. Fisher ever went to Mexico for the purpose of completing any such deal?

A. According to the newspapers, he did. That is as much as we know about it.

Trial Examiner Ballinger: You mean according to the newspapers printed at the time he went to Mexico?

The Witness: I don't know how to answer that. Off the record, your Honor.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Will you please tell us what you know about Mr. Roy Fisher's adventure in Mexican petroleum, Mr. Feinberg?

Mr. Abbott: Just a moment. I object to that upon the ground it is wholly immaterial. The only testimony in the record here is that Mr. Fisher told Mr. Citrin that he was having some negotiations with the Mexican government. Now, as to whether those negotiations were gone through with, or whether they were actually bona fide is wholly immaterial upon the record in this case.

The only testimony is that Mr. Fisher mentioned that to Mr. Citrin, just in passing, and it is at the bottom 5238 of page 2152 of the record, and that is the only reference made to it.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

The objection is sustained.

Mr. Austin: Your Honor, as long as it is being read, I further refer to page 2253.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Did Roy Fisher ever bring into the United States for the Argo Oil Corporation any gasoline from Mexico?

A. None.

Q. Did you at my request examine and bring some information with you, Mr. Feinberg, regarding the prices paid by Argo Oil Corporation for Marathon gasoline in '39 and '40?

A. Yes, we did.

Q. I would like to ask you to state the prices paid, and if the price varies, the times at which different prices were paid?

Mr. Abbott: I object to any testimony as to any period outside of the date of the competitive offer, which is in 1939, and object on the ground that there is no relevancy
between the prices paid in 1940 by the Argo Oil Com-
5239 pany to its supplier, the Ohio Oil Company, for gaso-
line.

Trial Examiner Ballinger: What is the importance of prices in 1940, Mr. Austin?

Mr. Austin: Well, you have got to start sometime, your Honor, and I think that in view of a great deal of the testimony, not only of Mr. Citrin, but the testimony put in by the Standard Oil Company through Mr. Raupagh and others, of the ability of certain competitors, alleged competitors to compete with the Standard Oil Company, and Mr. Raupagh, for instance, named in his testimony a large number of customers that he claims are competitors, and we have had some testimony as to the nature of their business, but relating it particularly to the alleged offer from Mr. Citrin, the offer was supposed to have been to sell at two cents below the prevailing tank wagon price. Now, if I can show, and I propose to show, that Argo Oil Corporation paid that much to Ohio Oil Company, I think that it certainly may be inferred that Ohio Oil Company was in no position, in fact, couldn't have made the offer alleged to Mr. Citrin unless they were going to sell gasoline at a loss.

Mr. Abbott: Well, the Court asked you what was the relevancy of the price paid in 1940.

Mr. Austin: Oh, in 1940? Because of the fact that there is so much testimony in here about this company and others that I think that as to the way they do business,
the amount they sold, and all that, I think that the
5240 price they paid and the price they sold it for is of
some importance in indicating the nature and extent
of their competition with the Respondent, if any.

Mr. Abbott: Well, you still didn't answer the question. I am wondering what is the relevancy of the 1940 prices.

Mr. Austin: I think 1940 and I think 1937 would be relevant, anything since 1936. I have only asked the witness to bring in two years. Mr. Raupagh's testimony about these various companies and other records put in here from people up-state were not confined to any one year. Mr. Raupagh's testimony was related to the existing situation last year, when we were taking testimony, which was 1941. I can turn to that.

Trial Examiner Ballinger: The objection is overruled. The witness may answer both as to '39 and '40.

The Witness: You wanted to know what was paid for oil—for gasoline in 1939?

By Mr. Austin:

Q. Yes. And you may restrict your answer to the so called house brand. Was Marathon the so called house brand of the Ohio Oil Company?

A. In '39 it was Linco, in the early part of '39. It later became Marathon, the same grade.

Q. You don't need to give us the prices on Ethyl.

5241 That is what I meant.

A. All right. On January the 3rd of January, 1939, we were paying 5.85.

Q. Does that mean 5.85 cents?

A. 5.85 per gallon.

Q. Cents?

A. Cents, yes, sir.

For any other period? I mean, do you want various dates for various months or what?

Q. How long did you pay that price and when did you pay a different price?

A. We brought the records for the first six months of January and first six months of February of 1940—rather of '39 and '40, to give you any comparison. I don't know how much further down we went on that.

Q. How long were you selling Linco, and when did you change to Marathon?

A. I think we were notified of the change in the latter months of 1939. The actual change took place following that. I would assume it was the early part of 1940.

Q. Weren't you selling Marathon part of '39?

A. Yes, we were. As far as the—we were selling both brands for a while until the change-over was made completely Marathon. The Linco was entirely eliminated. I

can show the transition of the brands very easily, th
even in 1939 both brands were imprinted on tha
5242 invoices, both Linco and Marathon.

Q. Was the price the same for both brands whe
they were both being used.

A. The price was the same, oh, yes.

Q. You started out with the figure of 5.85 early in '3
How long did that continue and when was there a chang

A. It continued most of '39. I haven't the exact dat
of any changes.

Q. Well, did that continue during the six months
to which you have records there?

A. Yes, I did.

Q. Now, turn to 1940 and tell us what price you pa
for Marathon gasoline and Linco, if any, in 1940?

A. We paid .061 per gallon on the same date in 194

Q. What is 6.1¢?

A. That is 6.1¢.

Q. Did you pay that same price during all of 1940?

A. It would vary as conditions varied in 1940. L
me look over the first six months and I can tell you tha

Q. Yes.

A. For the first six months of 1940 the price prevaile
I don't know about the last six months.

Q. Uniformly 6.1¢ per gallon?

A. That's right.

There is some reference to price to be paid in th
5243 contract which is in evidence as Commission's Exh
bit 112, is there not?

A. Yes, there is.

Q. Will you take that exhibit and state whether th
contract fixes a definite price to be paid at any time by th
Argo Oil Company?

A. It fixes a price with variations depending on oth
market factors.

Q. Is your answer that there is no definite price fixe
in the contract?

A. There is a margin of 1¾¢.

Q. Is that a minimum margin?

A. Based on various factors which fluctuate, so that or
average margin would be about two cents.

Q. Was your average margin in fact two cents pe
gallon under the prevailing tank wagon price?

A. Not exactly. There were times it varied from to 1.90, two cents. It wouldn't exactly be two cents, but it averages about two cents per gallon.

Q. At what prices did Argo Oil Corporation sell Marathon gasoline by transport truck delivery, and that means—

A. Under the Marathon brand?

Q. Just a moment,—by transport truck delivery to reseller customers in 1939 and 1940, and I am speaking about Marathon brand, yes.

Mr. Abbott: Just a moment. You are asking for the
5244 prices of Ohio Oil Company?

Mr. Austin: No, the prices of Argo, at which Argo sold to their distributor or jobber customers, and I refer back to the testimony a while ago that those deliveries were frequently made direct from the marine terminal in the same manner that delivery was made to you.

A. The prices varied, I would say prices ranged anywhere from—

Q. Well, just a minute. I would rather have you state—

A. Exactly?

Q. —specific prices and the number of customers and the period at which you sold at a certain price.

A. Well, that is rather difficult to give you, sir. I would have to break down all the books. We had no stated definite price.

Q. Well, what I mean is, did you, say, in January, 1939—you sold so many customers at one price or so many at another. If you can't give us the number of customers, can you at least give us the prices.

A. The prices would vary anywhere from 6.3 to 6.6 per gallon.

Q. During what period?

A. Periods in '39. I can give you the exact dates of different shipments sold to—

Q. Will you do that?

A. —to different dealers, yes. All I got to do is give you the invoices, but there was no fixed price, unfortunately.

5245 This one here, for instance, is the 16th of August of '39, .067.
